

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

## SWEDISH WATER-POWER DEVELOPMENT.

[From Consul Stuart J. Fuller, Gothenburg.]

It is estimated that the water power in Sweden utilized in accordance with modern methods increased in 1911 by some 80,000 horsepower, aggregating at the close of the year 640,000 horsepower. The value of this power to the nation and its influence in the rapid industrial development going on in Sweden are incalculable.

Water-power developments here are of two classes: Those controlled and operated by the State and those controlled and operated by private interests. Of the increase for the year, 70,000 horsepower was made available by plants privately owned and 10,000 in the Trollhattan plant, owned by the State. The activities of the Government were largely devoted to the earlier construction stages of two large installations in the north, which, together, will furnish 95,000 horsepower when completed, so that the ratio of public to privately owned power actually made available during the year does not constitute a measure of these respective activities. As a matter of fact, the 70,000 horsepower includes many small plants of less than 100 horsepower each, embracing only two installations of 10,000 horsepower or more and only five of over 2,000 and less than 10,000.

### Statistics of the New Power Plants.

Private activities found their field chiefly in southern and central Sweden. The height of the falls utilized varied from 7 feet to 243 feet, but was as a rule less than 49.21 feet. So far as is known, the dams were in all cases built by Swedish firms and the machinery furnished by Swedish manufacturers.

Of the new plants completed during the year, the largest is that at Mockfjärd, utilizing the waterfall known as Stopforsarna and developing 20,000 horsepower from a fall of 75 feet. The power is used for iron works and the installation is owned by Västerdalälvens Kraft Aktiebolag. The next largest is that at Forshult, develop-

ing 10,500 horsepower from a fall of 43 feet. This power is used for iron works and the plant is owned by Uddeholms Aktiebolag of Uddeholm, Sweden.

#### Rebuilt Plants—Incomplete Private Plants.

Of the rebuilt plants, the largest is the municipal plant of Skellefteå, located at Finnforsen, and developing 5,650 horsepower from a fall of 66 feet. The second is that at Domnarfvet, developing 4,700 horsepower from a fall of 20 feet and furnishing power to the iron works of Stora Kopparbergs Bergslags Aktiebolag, by which it is owned. This concern is installing an electrical blast furnace for the production of pig iron, in addition to its other large activities. The third in size is the property of Sydsvenska Kraft Aktiebolag and is located at Ofre Knared. The power, amounting to 3,000 horsepower, is produced from a fall of 32 feet and is sold for general distribution.

Incomplete private plants, both new and those undergoing extension and reconstruction, represented, at the close of the year, a total of about 25,000 horsepower, as compared with over 67,000 horsepower under way at the close of 1910. Practically all of this is represented by two new installations, one to develop 17,100 horsepower and the other 4,600. The largest is at Ljungafors and is owned by Stockholms Superfosfatfabriks Aktiebolag, of Stockholm, manufacturers of superphosphates and other fertilizers. The fall is 128 feet. The power is to be used in the manufacture of calcium cyanamid.

#### Summary of Activities for 1910 and 1911.

The following table constitutes a summary of the activities involving private plants of over 100 horsepower each in 1910 and 1911:

	Number.		Turbine horsepower.	
	1910	1911	1910	1911
Completed:				
New installations	21	12	58,835	38,092
Reconstructions and extensions	3	26	5,550	29,665
Under way but not completed:				
New installations	6	2	59,285	21,700
Reconstructions and extensions	3	1	7,900	1,800

The uses to which the power made available during the year and to be made available by plants begun within the year is to be devoted are as follows: Municipal, 13 plants; iron works, 12; mechanical wood-pulp mills, 8; paper mills, 7; textile mills, 5; chemical works, 1. The Government work completed at the end of the year consisted of the addition of 10,000 horsepower at the already existing plant at Trollhattan.

#### Nature of Uncompleted Works.

Work not completed at the end of the year consisted of preliminary and construction work at Porjus and at Alfkarleby, both in the north of Sweden, where large plants are to be installed by the State. At Porjus the work has progressed well beyond the preliminary stages. A temporary water-power plant has been in operation

since June 25, 1911, furnishing power and light for construction; a number of the permanent buildings have been completed, and large amounts of excavation and of concrete work have been finished. Surveys for the transmission lines have been completed and part of the material purchased. During the year, purchases of equipment included concrete mixers, mine hoists, electric cranes and derricks, machine-shop equipment, locomotive, air compressors, stone crushers, a steam road roller, pumps, electric motors, transformers, and light railway materials. The force employed on the works increased from 350 at the beginning of the year to 970 in October, after which there was some reduction on account of the setting in of cold weather. This plant, when completed, will develop 50,000 horsepower. The location is rather far from existing industries, being in the extreme north of Sweden not far from Lulea.

At Alfkarleby, near the east coast of Sweden and not far south of the town of Gäddede, is the site of the other Government water power. Surveys for this are practically complete and work has been begun on the construction plans. Work at the building sites commenced in the beginning of August. Some temporary buildings for quarters, etc., have been built and considerable excavation and blasting accomplished. A 300-horsepower temporary water-power plant will be installed and in addition two Diesel motors will be provided. At the beginning of 1912 the force at work consisted of about 350 men. This plant is designed to develop 45,000 horsepower.

#### **Available Horsepower—Application of Electricity.**

The total possible horsepower to be found in the streams of Sweden in such shape that it might be utilized is variously estimated at from two to nine million, and it probably approximates four million. The unfortunate feature is that so large a proportion of this undeveloped natural wealth is located in the north and in parts of the country where it is difficult to utilize it to advantage. With the improvement in transmission methods, however, this obstacle may in time become less important.

In addition to its general uses for operating machinery and street cars and for lighting, electricity is used in Sweden in rolling mills, mine hoists, mine drills, magnetic-ore separators, the electrochemical industries (which use large quantities), and the smelting of steel. Lately it has also been used for the reduction of ore to pig iron. The large quantities available have led to its use for the operation of agricultural machinery, thrashing machines, etc., and it is proposed to equalize the consumption throughout the 24 hours in cities by selling power at very low rates during the hours when the load is low, so that it may be introduced into the household for heating, cooking, and other domestic purposes for which, under ordinary rates, it is too expensive for general use. The transmission of power from Trollhattan to Copenhagen has been proposed and is still under consideration.

#### **Manufacture of Electrical Apparatus—Trade.**

As most of the water power is utilized through conversion into electricity, American manufacturers of electrical apparatus and supplies will doubtless be interested. The manufacture of electrical apparatus and supplies is a well-established industry in Sweden, and

the annual production of dynamos, motors, transformers, cables, insulated wire, electrodes, and electric lamps will exceed \$4,500,000 in value, to say nothing of the large production of telephone and telegraph apparatus.

The latest detailed figures available for exports and imports are those for 1909. According to these, the exports of dynamos for that year were valued at \$194,860. The distribution was world-wide, and it is interesting to note that 30 per cent of the exports went to Canada. Motors exported reached a value of \$59,343 and transformers a value of \$4,930. These two articles were widely distributed.

The importation of dynamos and motors seems to be decreasing. Of the dynamos imported in 1909 Switzerland furnished 60 per cent and Germany 30 per cent; of the motors, two-thirds were from Germany and the remainder from Switzerland; 60 per cent of the transformers came from Germany and the remainder from Switzerland. The values were as follows: Dynamos, \$78,429; motors, \$148,294; transformers, \$95,799.

Prior to December 1, 1911, the duty on imported dynamos, motors, and transformers was 15 per cent ad valorem. The tariff that went into effect then altered this to a specific basis, the present duty running from 15 to 55 öre (\$0.0402 to \$0.1474) per kilo (2.2046 pounds). Some idea of the relation that this bears to the value may be gained by considering the average value per kilo of imports in 1909, which was as follows: Motors, \$0.47; dynamos, \$0.42; transformers, \$0.33.

Electric lamps (incandescent filament) are both imported and exported. The imports are about twice the exports and in 1909 were valued at \$110,979. Ninety-five per cent came from Germany. Both exports and imports are increasing. The import duty on carbon-filament lamps is 1.50 crowns (\$0.402) per kilo. The duty on metallic-filament lamps has now been raised to 4 crowns (\$1.072) per kilo. The average value per kilo of the imports in 1909 was \$2.17.

Accumulators, practically all from Germany, were imported in 1909 to a value of \$130,362. This import shows a tendency to decrease. The duty on imports is 6 öre (\$0.0161) per kilo. Imports of rheostats, of which 90 per cent came from Germany, amounted to \$202,601 in 1909. They also show a tendency to decrease. Meters, the same proportion of which came from Germany, amounted to \$116,674.

By far the leading port in the importation of electrical apparatus and supplies is Stockholm. Supplies for the Government plants are generally purchased by advertisement and bids; but so short a time is allowed between the time of advertising and the limit of time for receiving bids that American manufacturers interested in such work would find it necessary to have a representative on the ground.

#### Consular Trade Conferences.

Consul General Amos P. Wilder, of Shanghai, China, advised the Department of State, under date of February 17, 1912, that he expected to arrive in San Francisco on March 14, and that after spending about two weeks in California he would proceed to Madison, Wis. The consul general will later proceed to Washington, D. C., where he may be addressed in care of the Department of State.

**ELECTRIC STREET RAILWAYS IN BOHEMIA.**

[From Consul Joseph I. Brittain, Prague, Austria; see also Daily Consular and Trade Reports for Feb. 18, 1911.]

The following table shows the names of the various street-railway lines in Bohemia, together with the number of passengers carried and the receipts in 1911, and gains over 1910:

Lines.	Passengers.	Receipts.	Increase over 1910.
Prague.....	54,825,203	\$1,661,831	\$175,673
Aussig.....	3,539,702	75,024	7,165
Bruz-Johansdorf.....	1,122,474	39,223	2,944
Budweis.....	654,068	17,445	1,201
Galons.....	2,028,413	111,325	1,010
Marienbad.....	520,970	20,378	1,779
Pilsen.....	2,537,141	47,600	4,332
Reichenberg.....	2,647,710	75,018	3,908
Teplice.....	2,211,825	60,119	2,625

The electric street-car service of Prague was greatly extended during the past year, one line having been built beyond the castle and other attractions on the hill overlooking the city. For 4½ cents tourists may now visit points to which they were formerly obliged to take a carriage at a cost of \$1 to \$2 for each trip. There were 9,315,203 more passengers carried in 1911 than during 1910. On January 1 the fare was increased on all the lines in the city. For short distances it was advanced 17 per cent and for long distances 10 per cent, and monthly tickets at reduced rates were withdrawn. The wages of the employees were not changed. During 1912 the lines will be extended some 9 miles.

The company, which is practically the municipality of Prague, now owns 351 passenger cars, 13 freight cars, 8 snow plows, and one sprinkler. It employs 951 conductors and motormen, 42 switchmen, 76 track cleaners, 543 common laborers, and 56 officials. The cars are not heated during the winter months.

**BRITISH COLUMBIA HERRING CATCH SMALL.**

[From Consul Abraham E. Smith, Victoria, Canada.]

Under the Canadian regulations the herring season closes March 1. The herring did not commence running till late in the past season, and fishermen were hopeful that the closing date might be postponed, but, as the fish had commenced to spawn, the closing regulations were rigidly enforced, that next season's run might not be impaired.

During 1909-10 the catch at Nanaimo, the headquarters of the herring industry, reached 25,000 tons. A great deal of this found a market in the Orient, where there is always a good demand for British Columbia fish, while a quantity was shipped to the United States, some to eastern Canada, and some to England. During the 1911-12 season, just closed, the packers at Nanaimo shipped for export only about 12,000 tons of herring. No cause has been found for the scarcity of herring in the waters about Nanaimo, although some have advanced the theory that the presence of whales in the vicinity drove the smaller fish into shallow waters.

**CONSTRUCTION WORK ABROAD.****SPAIN.**

[From Consul Charles S. Winans, Seville.]

**Extension of Water-Supply System.**

Plans for increasing Seville's water supply call for filtration and distribution of a large quantity of river water, which will furnish an opening for the sale of large supplies of plumbing and hardware goods.

The present system has long been considered inadequate for the population of over 150,000. It partly includes the ancient Roman open aqueduct which brings the water 9 miles from low hills. The source of supply is pure, but the transmission system is condemned. This water is now used as a supplementary supply for fire protection, and in a few houses, for which the municipality collects a small rental.

The greater part of the water system is controlled by an English company, which for household use has brought a supply by pipe, under pressure, from the hills. The company's water rent is paid by the landlord on the basis of the value of the house, meters not being employed. A residence renting for \$22.50 to \$32.40 per month is charged \$1.80 per month. This potable supply, however, is not available for several hours each day, hence the company proposes installing in every house its river-water system also. The latter is pumped from the Guadalquivir without filtration and sent through 25 miles of city mains for street flushing, etc.

**Construction of New Plant.**

The English company is about to expend some \$750,000 on the installation of a new waterworks. The water will be brought from the river by gravity to a sand-and-gravel filtration plant, whence it will be forced through the city by pumps; 25 miles additional mains will be laid, the old mains renovated and incorporated with the new filtered water system. Thereafter unfiltered water will not be used.

The proposed plan calls for the maintenance by the English company of two separate systems, and that every house now using its water will probably also install its filtered river-water system, which will furnish for drinking, cooking, and other household purposes water at about half the charge for the potable water.

The new plant will be erected without contract, under the direction of the company's local engineer, although tenders for supplies must be sent to the chief engineer of the Seville waterworks, Mr. F. S. Courtney, 25 Victoria Street, Westminster, London, England, headquarters of the concern. When the contracts between the city and company are duly signed there will be an excellent chance for American firms to furnish pumps, piping, engines, etc. A good market will also doubtless be created at Seville for hardware and plumbing supplies. [A special list of Seville dealers in such goods may be obtained from the Bureau of Manufactures, Washington, D. C.]

**ROUMANIA.**

[From American Minister John B. Jackson, Bucharest.]

**Improvements in the Capital City.**

It is announced that the municipality of Bucharest will in a short time expend more than 1,000,000 francs on local improvements. Among other things, a number of public lavatories are to be con-

structed and several watering carts are to be purchased. It is said that negotiations have been begun with a French automobile factory with a view to creating an autobus service. In addition, the construction of a large new city hall (Primaria) is contemplated as soon as funds for the purpose are available.

#### **Construction Work Throughout Roumania.**

The construction of modern—if relatively small—hotels and other buildings, public and private, is contemplated in several places in Roumania, and the purchase of furniture and sanitary fittings will be necessary. In the Monitor Oficial for February 28 bids to be presented on March 18 were invited by the Ministry of Justice for the installation of the entire water and sanitary system in the new palace of justice which is to be constructed at Jassy. Comparatively few Roumanian houses have modern sanitary conveniences, and so far as I know there is no agency for American articles of that kind in this country. For the Jassy building alone about 50 water-closets and 30 urinals, as well as a considerable number of stationary wash-stands and other toilet fittings are required, and it seems that it might be to the advantage of American manufacturers to pay some attention to Roumanian needs.

#### **GERMANY.**

[From Consul Herman L. Spahr, Breslau, Prussia.]

#### **Construction Work in Breslau District.**

*Highway.*—The contract for constructing a macadamized highway from Riegel to Simsdorf has been awarded to Mildner & Wulf, Jauer, Silesia.

*Sawmill.*—August Kranz & Soehne, Bunzlau, Silesia, have bought and will rebuild a steam sawmill that was destroyed by fire. The mill will be operated in connection with their lumber yard.

*Sugar warehouse.*—A sugar factory at Pakosch, Posen (Zuckerfabrik "Union A. G.") is about to build a storehouse for sugar. The contractor is Carl Tuchscherer, Spezialbaugeschaef, Lohestrasse 56, Breslau, II.

*Workmen's colony.*—At Mikultschuetz, upper Silesia, The Borsig Works will build this year for their workmen a village of 67 houses, a school, and a supply canteen. Address, Die Borsig'sche Verwaltung, Mikultschuetz O/S.

*Bakery.*—A cooperative bakery is being erected for the Vorschussverein Ohlau at Baumgarten bei Ohlau, Silesia. Also at Cammerau, Kreis Schweidnitz, a new bakery is to be built for Baekermeister Gustav Tamm, Schoenbrunn, Kreis Schweidnitz, Silesia.

#### **TURKEY.**

[From Consul General G. Bie Ravndal, Constantinople.]

#### **Plans for Public Works.**

Djavid Bey, ex-minister of finance, has been appointed Minister of Public Works. Following is a translation of an interview given by him to a representative of Le Jeune Turc, which paper states that, of all the ministries of the Turkish Government, it is undoubtedly upon that of public works that falls the greatest share in the work of uplifting the Empire.

**Plans for Railways—The American Chester Project Still Alive.**

My program consists of (1) railroads, (2) ports, (3) irrigations, (4) roads, (5) public works of local interest.

I shall give special attention to the railroad development, which I consider as the most important of public works in hand. I shall endeavor to complete the already existing extension lines, and especially to have railroads penetrate into the regions of Anatolia hitherto not blessed by that powerful agent of economic progress.

The railroad constructions I have in mind could according to my plans be finished within 10 years; I have classified them in the following order: (1) Black Sea line, (2) Adriatic line, (3) Chester Railroad project, (4) Bagdad-Bassorah line, (5) connection of the Angora line with the Samsun-Sivas line.

The construction of the Black Sea lines, which ought to form the railroad system of eastern Anatolia and cover the Vilayets of Trebizond, Bitlis, Van, Erzerum, Sivas, will be intrusted to the "Regie Générale de Chemin de Fer," which has already made the preliminary investigations that will soon be submitted to me. It is this society also which will undertake the construction of the Adriatic or Albanian lines, which it is at present surveying. Corps of engineers are now working near Janina. Five more groups will start in a few days for other points in Albania. The survey of the Karaferia sections has been practically finished.

Regarding the Chester project, it is naturally with its promoters that we shall carry on negotiations.

As to the Bagdad-Bassorah line, I propose to enter into serious negotiations with the British Government to settle once and for all the conflicting interests which the construction of that section of the Bagdad Railroad has created.

Lastly, the construction of the Angora branch of the Samsun-Sivas line will be turned over to the German Anatolian Co.

Thus we shall give our railroad construction an international character, dividing it among the various competing financial bodies in such a way that their rivalry will not hinder the realization of my plans.

The construction of all these lines, during the 10 years that it will last, will involve an annual charge of £T1,500,000 (\$6,600,000). But it can be surmised that, with the receipts of the proposed new lines as they are one by one put in working order and with the increasing receipts of the already existing railroads, this charge of £T1,500,000 will steadily decrease.

This heavy schedule of railroads can be realized if it is only carried out in a methodical way, with the firm determination to carry it through. I indeed hope that with the cooperation of all well wishers and persons following the progress of Turkey with interest, who realize that we must "hustle" to save ourselves, I shall bring the work to which I mean to devote all my energies to a successful close. It will be a great step forward for our country when we shall have laid on a sound basis the foundations of these railroads, which will connect all the Provinces of this Empire.

**Harbor and Port Works.**

We must not forget that Turkey, owing to her geographic position, is a country called upon to play an important part in the maritime world, and we must therefore set ourselves to perfecting the administration of our ports.

The surveying of the ports of Samsun and Trebizond is actually being conducted by the National Bank of Turkey. On the Black Sea we mean to construct ports at Heraclea and Ineboli. On the Aegean Sea we shall build a large harbor at Dedeagatch, the plans of which are in the hands of the Council of State; also a small port at Cavalla. We can foretell the enlarging of the port of Saloniki, which must be done to meet its ever increasing commerce.

We are also thinking of constructing two ports on the Adriatic Sea, but their positions have not yet been fixed upon; also two ports on the Syrian coast, to be chosen from either Jaffa, Haifa, or Tripoli.

**Irrigation Enterprises.**

As to irrigating lands, we shall take in hand the regions of Mesopotamia, Adana, of the Bardar, the Boyana, the Maritza, and the Jordon. In a few days we shall lay open the contract for the irrigation of Mesopotamia.

The matter of making the Boyana navigable is considered by all as one having both political and economic importance, and we shall turn our efforts toward it.

**Building of Good Roads.**

Roads may well be placed side by side with railroads as the powerful means of developing the economic life of our Provinces. I shall hasten the completion of the great general plan for the Empire's roads, which is now being carried on.

We have had to make certain modifications in the contract with the French company, "l'Entreprise Française des Routes." After a lengthy discussion at the opening of my administration, I arrived at a happy conclusion with M. Loucheur, director of the said society, which was satisfactory to the interests of both State and company. Similar amendments were proposed to the German society, which is undertaking the building of the roads in Macedonia.

The French company has completed the survey of an important part of its field. I shall hasten the examination of the plans laid before the ministry. As soon as the weather permits, this society could, working on the territory already surveyed, push its work considerably. We can count on having in construction during the course of the year a good length of road throughout the Provinces.

In four years we shall have in the rough regions of Anatolia 6,000 kilometers (3,728 miles) of roads scientifically built and able to stand the test of time.

In the Provinces there are several minor works of public improvement which ought not to involve a greater expenditure than £T5,000 (\$22,000), and which ought to be attended to by the local authorities.

I have addressed a circular letter to the governors and mutessaris to the effect that they send me detailed accounts of the necessary improvements in the territory under their jurisdiction. I shall make the necessary appropriation for their completion at the beginning of the fiscal year.

---

**TRIPOLI-IN-BARBARY.**

[From Consul John Q. Wood, Tripoli, North Africa.]

**Construction Work on the New Port.**

Since January, two wharves have been constructed at a cost of \$20,000 each, one just east of the customhouse and the other east of the Castle. On account of the lack of facilities for handling the large increase of freight arriving at this port and especially of landing the same, the Government decided to construct these piers of wood; they extend from shore about 400 feet and are about 30 feet wide. Two small landing jetties for passengers have been run out from points to the west of the customhouse and immediately in front of the quarantine station. These improvements have been greatly instrumental in relieving the congested condition of the port, which has become the scene of great activity during the last few months. Now an average of 30 steamers and 20 sailing vessels are daily seen in the harbor, besides the naval boats and some smaller craft engaged in the sponge fisheries. Several tugboats have come here from Italy, and large scows and lighters are employed in the Government service. Gradually apparatus for handling large and bulky freight is arriving, so that it is possible to land over 2,000 tons daily. Steamers are consigned here with coal from England, lumber from Trieste, cattle and grain from Argentina, building materials and merchandise from Hamburg, besides the many arriving from Italy with military supplies and material and machinery for the new railroad being constructed. Already the contract for the first breakwater to be built at the new port of Tripoli has been awarded to an Italian firm at Rome.

The new harbor will have two breakwaters, one running from the Spanish fort along the line indicated by the ledges extending over a mile to the northeast; the other, starting from a point near the Hamadie fort in Sciara Sciat, will run a little to the northwest. When

the work is completed the port will be thoroughly protected from the heavy storms from the northeast and northwest and will make Tripoli one of the safest harbors in the Mediterranean. One part of the port will be reserved for the naval ships. Merchant steamers drawing 30 feet will be unloaded at one of the three docks that will run south from the first-mentioned breakwater; and machinery of the latest models will be installed on the piers, to facilitate loading and unloading. Over 15,000 soundings show the feasibility of dredging the harbor at a reasonable price, and contracts for this work will be awarded later in the year. The stone to be used has been located in a district only  $2\frac{1}{2}$  miles from the city, and already the contractor has arrived and begun to construct a railway line to the quarries. The contract price for the first breakwater is 2,600,000 lire (lire = \$0.193), and the successful bidder is well and favorably known as an efficient builder of harbor works. The name of the firm is on file at the Bureau of Manufactures, as well as the names and addresses of contractors and engineers interested in the public improvements now in progress or soon to commence in other places in Tripolitania besides the city of Tripoli.

#### **Railroad Construction.**

The most important event in the development of the agricultural and mineral resources of this land took place when the Government decided to construct a railroad to Ain-Zara, about 8 miles south toward the rich grazing hills of Gharian and the olive district, which lies 80 miles inland. All of the soil between the mountain range and the sea should give splendid crops of barley and wheat under intelligent cultivation and provide sufficient freight to make the railroad a paying investment for the State. The line is nearly completed, and two 39-ton locomotives have been landed, while two others are still on steamers in the harbor. An effort was made to disembark the first locomotive, "Tripoli," on February 22, but on account of a miscalculation of the depth of the water it had to be postponed until February 25, when appropriate exercises were held amidst great enthusiasm.

About 150 workmen from Italy, regular employees of the railroad department of the State, have been here for over a month; ordinary laborers are receiving 7 francs per day, and section bosses 12 francs, while in Italy they receive, respectively, one-half those wages. The ordinary Arab and Negro laborer of Tripoli is earning  $2\frac{1}{2}$  francs per day, while last year at this time he was glad to receive  $\frac{1}{2}$  franc per day when he could find work. The line has the standard colonial gauge, 95 centimeters (a fraction over 3 feet), and a steel rail is being used, commonly spoken of as a 27-kilo rail (being the weight of 1 meter). All of the rolling stock is of Italian manufacture except the locomotives, which come from Berlin. No passenger cars have yet arrived.

#### **STRAITS SETTLEMENTS.**

[From Vice Consul General D. Milton Flgart, Singapore.]

#### **New Sewer System.**

Information has been received that the plans for the new Singapore sewer system are nearing completion and that the project will probably be thrown open to bids by May, 1912.

## CANADA.

[Press clipping, from Consul Fred C. Slater, Sarnia, Ontario.]

**February Building Permits.**

Canadian building permits in cities for February, with the advantage of one extra day, show 185.6 per cent increase over February, 1911. Port Arthur is in first place, showing a 2,465.2 per cent gain. The largest actual gain is reported from Victoria, \$1,488,130, two-thirds of the total being for additions to legislative buildings there. Even with this amount deducted, Victoria would show a 166.8 per cent increase over last year. Calgary, Toronto, and Winnipeg follow in the order mentioned.

[From Montreal Gazette.]

**Construction of New Line to Toronto.**

One of the most important contracts let by the Canadian Pacific for years is that with the Toronto Construction Co. for building the new Lake short route to Toronto, at a figure approximating \$12,000,000, or about \$64,865 a mile. Work has already been started on this big job, which comprises 185 miles of track, and it is arranged that the line shall be turned over ready for operation within two years.

This line is the practical outcome of the necessity for double-tracking the Canadian Pacific Railway between Montreal and Toronto. But the original line runs through a country which is not only immensely expensive from a construction and operating point of view, but is not particularly rich in furnishing either through or local traffic. The new line will branch from the present main line at Glen Tay, 15 miles west of Smiths Falls, and run southwest to the lake shore, tapping such business centers as Belleville, Trenton, Cobourg, Oshawa, Port Hope, and all the leading towns along the lake, rejoining the main line at Agincourt for entry into Toronto.

**THE TEA TRADE SITUATION.**

[From the London Financial Times.]

In any computation of the world's tea production difficulty is encountered through the fact that where the figures for Ceylon, Java, and Japan are compiled for years ending December 31, those for India and China are for a "season" that ends three or four months later; consequently, while exact figures for the first three sources can be ascertained, those for the last two must be estimated. This can be done, however, with some precision, and with the following results for the current season: Ceylon, calendar year 1911, 188,000,000 pounds; Java, calendar year 1911, 50,000,000 pounds; Japan, calendar year 1911, 43,000,000 pounds; India, season 1911-12, 268,000,000 pounds; China and Formosa, 1911-12, 143,000,000 pounds; Natal, etc., 3,000,000 pounds; total, 695,000,000 pounds.

**Brick Tea—Consumption No Longer Exceeds Supply.**

This total is an increase of about 35,000,000 pounds upon that offered for sale in the previous season, and it does not include the brick tea made in Hankow and other factories for Asiatic trade. This reached 86,000,000 pounds in 1910, but to what extent it has been reduced by the disturbances at the end of 1911 is not yet known. It is a business apart from what is understood as "the tea trade," although not without influence upon it, since the manufacturers have taken to buying about 15 per cent of their materials outside China.

How near to this total of 695,000,000 pounds does the world's consumption approach? A decisive answer can not be given. The records of imports are so carefully kept and progress so regularly in the United Kingdom, Australasia, and Canada that the annual consumption there can be closely calculated; but in some countries the imports vary so much from year to year that consumption has to be estimated from the average of several years' trade, while from others no reliable statistics are obtainable. From such statistical records as exist it is difficult to account for even as much as 665,000,000 pounds annually. Two explanations of this discrepancy are offered: First, that a large quantity of tea is used in countries from which no returns are obtainable; secondly, that traders hold large supplies in reserve. Be that as it may, prudence requires recognition of the fact that quite as much tea as is needed is being produced; that stocks which had fallen too low are being replenished; consequently, that it can no longer be said that consumption has outstripped supply.

**The Result of High Prices—Java's Rise.**

The position reached is the natural outcome of the high price paid for the commonest tea during the last 18 months. This has stimulated larger purchases of it from China;

it has encouraged some of the growers elsewhere to pack any sort of leaf, stalk, siftings, or dust that will sell; it has discouraged those who might have made better crops if there had been inducement; and it has lowered the standard of quality used almost everywhere. This will not be good either for producers or for consumers in the long run.

Java's rapid growth as a tea-producing center is attested by the fact that while the total exports from that island in 1909 amounted to 34,767,200 pounds, in 1911 shipments advanced to 50,361,000 pounds, 22,649,000 pounds of which went to the Netherlands and 15,501,000 pounds to the United Kingdom. About 90 per cent of Japan's exports goes to the United States, where Japanese tea is still in request. The declared value of the green tea was at the rate of 13½ cents per pound, and the quantity taken shows that it is able to avoid the prohibition of "faced," or artificially colored, tea in the States. The black tea's value was 13 cents per pound, and of the dust the average was only 3½ cents per pound, confirming what was said some time ago about this being imported, not for use, but probably for the manufacture of caffeine.

### American Imports of Tea.

The variations in American purchases of tea and the advance made by Japan, with a gain of 29,304,052 pounds while China lost 32,411,635 pounds of this trade, can be seen from the following table of tea imports into the United States during certain of the last 18 years:

Years.	From China.	From Japan.	From all countries.	Value.	Average per pound.
	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>		
1894	50,405,188	37,980,937	88,518,717	\$14,144,243	\$0.151
1895	54,700,333	36,941,394	91,253,458	13,171,379	.135
1900	42,283,189	33,949,550	84,815,107	10,558,110	.124
1904	53,157,332	42,700,127	112,905,541	18,229,310	.161
1905	43,122,798	41,970,050	102,706,599	16,230,858	.158
1906	37,466,719	37,812,684	83,621,750	14,580,873	.175
1907	31,231,259	37,411,653	80,368,490	13,915,544	.161
1908	27,233,278	46,944,430	94,149,564	16,309,870	.173
1909	33,633,377	44,072,162	104,484,560	16,553,082	.158
1910	24,394,663	50,124,392	98,108,439	16,631,686	.160
1911	17,993,553	57,284,989	104,165,654	18,317,171	.176

### HUNGARIAN GOVERNMENT SUPPLIES.

[From Consul General Paul Nash, Budapest.]

Hungarian law requires that all articles used by the Government, by State institutions, railways, industries, etc., and by industrial or other companies subsidized by the State shall be of Hungarian manufacture, except when it can be shown that an article needed is not made in this country or is not procurable here in a suitable quality and at a reasonable price. The Minister of Commerce has the power to grant exceptions in certain cases even when an article is obtainable here, but this power is no doubt provided as a means to avoid excessive prices being charged for articles furnished to the Government. The Minister of Commerce has recently issued a decree giving a list of articles which may be purchased from foreign manufacturers by the State, public institutions, etc., without a special permit from the ministry, as follows:

Stitching machines, ammeters (except those used for instructional purposes in schools), gum arabic, awl punches, asbestos, velvet, thread buttons, shoe buttons, shoe machinery, stone buttons, alarm clocks, wall paper, graphite crucibles, rubber mattresses, hair clippers, violin strings, knitting needles, typewriters and parts, carbons for arc lamps, calorimeters, rubber stamps for hand use, barometers, lithographic stone, tracing cloth, meter measures capable of being wound or folded, microscopes (except those used in schools), tracing paper in rolls, minium paint, printing stone, scissors, clocks, watch glasses, pumice stone, slates, slate pencils, planimeters, platinum articles used in laboratories, polymeters, tinfoil paper, saddlers' needles, sponges, glass beads, fountain pens, sewing-machine needles, voltmeters (but not for school demonstration).

**INTERNATIONAL EXPOSITION AT GHENT.**

[From Consul General Henry W. Diederich, Antwerp, supplementing report in Daily Consular and Trade Reports for Feb. 24, 1912.]

The exposition at Ghent will cover 260 acres, and it is already expected that the limits will have to be extended to find room for exhibitors. The Salle des Fêtes will be in the Park of Courtrai, and alone will cover 8½ acres. It will be constructed of substantial material and remain as a permanent memorial.

The opening event on April 27 will be an exhibition of flowers on a grand scale, covering 70,000 square feet. What may be expected can be well imagined when it is remembered that Ghent is probably the greatest center in the world for flower exportations.

The buildings are already in an advanced stage of completion. For encouraging exhibitors to be ready in time, the committee has resolved to allow 25 per cent reduction on the rent of space to all whose stands and exhibits will be completely finished on the opening day. The rates for space in the industrial hall are 50 francs (\$9.65) per square meter, with an additional 45 francs (\$8.68) or 25 francs (\$4.82) per running meter (3.28 feet) along the façades. The rate for stands or pavilions in the gardens will be 25 francs per running meter with a depth of less than 1 meter, or 25 francs per square meter for over 1 meter depth. The entire world's fair at Ghent will be divided into 22 large groups, a detailed description of which is given in the catalogue just issued. The exposition may be continued till November 15, 1912.

---

**American Night Industrial Schools.**

What sort of bread-and-butter efficiency training does the educational system of this country offer the young workman who wants to better himself by going to an industrial school out of shop hours? This question is touched on by Charles R. Richards, director of Cooper Union for the advancement of science and art, New York City, in a publication just issued for free distribution by the United States Bureau of Education, Washington, D. C. Mr. Richards finds that just now evening schools have the most pupils of this sort, but points out the advantages which would accrue if America should follow the example of Germany in allowing workmen to get off in the daytime without having their wages docked, in order to raise their efficiency by attendance at an industrial school.

Other types of schools which occupy important places in industrial training in this country are the intermediate industrial or preparatory trade schools, the trade school, the evening school, the part-time school, and the corporation or apprentice school. These are also discussed. Dr. Richards finds that the economic factors involved in the conduct of these schools are of two kinds: First, the cost to the community of running the schools; and, second, the cost to the pupils of attending the schools.

---

**Canadian Government Aid to Railways.**

The Canadian Government is stated to have submitted to Parliament proposals to renew or grant subsidies in aid of railway and bridge construction to the amount of nearly \$23,000,000.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8462. Cement works.**—An American consular officer has forwarded a communication from a business man in his district in which he expresses a desire to interest Americans in the erection of cement works in a territory containing a vast amount of cement stone of the first quality, of which he holds the right of exploitation. He writes that he will gladly furnish to interested persons or firms more details, as well as samples, photographs, etc.
- No. 8463. Hand corn grinders.**—A business man in a European country informs an American consular officer that he is interested in the possible purchase of American hand corn grinders. The inquirer has received a number of propositions from manufacturers of milling machinery intended for large establishments, but he is not interested in devices of this character at present. He desires to import hand corn grinders for the preparation of stock feed.
- No. 8464. Machinery of various kinds.**—An American consul in the United Kingdom has received an inquiry from a merchant in his district in which he states that he would like to get in touch with manufacturers in the United States of the following machinery: Revolving and oscillating air-heated pans used for coating pills and other chemists' goods, and machinery for cracking nuts, almonds, and apricot stones. He writes that he has orders on hand from the colonies, and is anxious to get in touch with good houses at the earliest possible moment.
- No. 8465. Street-cleaning machinery.**—A commission representing a foreign municipality has recently been investigating the subject of mechanically-driven vehicles for street cleaning and has studied the systems in use in other cities. As a result of its investigations it has recommended that a sum be included in next year's estimates for the purchase of five machines, of a type to be approved after the results of various trials have been ascertained. As this may be an opportunity for American manufacturers of mechanically driven street cleaners, it might be to their advantage to communicate with the superintendent of street cleaning in the city in question.
- No. 8466. Turkish raw silk.**—An American consul in the Levant furnishes the name of a prominent exporter of Broussa silk who wishes to establish relations with American importers of this article.
- No. 8467. Tombak plate.**—An American consular officer in Germany reports that a firm in his district is in the market for 3,000 kilos (6,613 pounds) of Tombak plate (Tombakblech). He furnishes references. Prices should be quoted f. o. b. certain cities. Correspondence, which should be in German, should be addressed direct to the firm referred to.
- No. 8468. Rosin and benzine.**—A business firm in a European country wishes to purchase rosin for soap-making purposes in lots of about 50 tons. The firm also wishes to purchase benzine for domestic purposes in lots of 50 tons. Exceptional bank references are furnished, and correspondence may be in English. The consular officer furnishing this information also states that the firm is a large purchaser of glucose and other materials from American firms.
- No. 8469. Cottonseed oil, tallow, lard, and corn oil.**—A business man in Germany informs an American consular officer that he is desirous of representing American manufacturers of cottonseed oil, tallow, lard, and corn oil in that country. He furnishes references. Correspondence, which may be in English, German, or French, should be directed to the inquirer. If necessary, he would be willing to visit the United States to make the necessary connections.
- No. 8470. Automobile agency.**—An American engineer, who has been connected with various manufacturing concerns in Europe for the past 15 years, the last 4 of which he has been with an automobile company, would like to secure an agency for an American automobile. He informs an American consul that he will gladly furnish references.

- No. 8471. Copper exchange.**—Consul James E. Dunning, of Havre, France, reports the creation of a copper exchange in that city to take the place of the indirect buying through London where the French have heretofore had to deal. Latham & Co., of Havre, an influential house with American bank connections, would like to hear direct from Americans interested and can give any required assurances as to responsibility.
- No. 8472. Rubber stockings and bandages.**—An American consular officer in Germany reports that a business firm in his district would like to get in touch with American manufacturers and exporters of first-class rubber abdominal bandages, rubber stockings, and bandages.
- No. 8473. Machine for cutting bristles and fibers.**—The publishers of a trade journal in the United Kingdom have written to an American consulate that they would like to secure the name of the manufacturer of a brush makers' machine for cutting bristles and fibers, fitted with a steel circular knife, which it is believed is produced in the United States.
- No. 8474. Plumbing goods and sanitary supplies.**—The plumbers in a European city are in the market for plumbing goods and sanitary supplies, for which there will be a large demand upon the completion, the coming summer, of the new water-works system now being constructed to bring water for domestic uses into the city. An American consul writes there are no wholesale dealers in such goods, but furnishes a list of the leading plumbers with whom it would be advisable for American firms to correspond.
- No. 8475. Agricultural implements.**—A business firm in the West Indies, having offices in a number of cities, informs an American consular officer that it is desirous of receiving a proposition for granting an exclusive agency for the selling of agricultural implements, such as plows, harrows, cultivators, planters, etc., from some manufacturing concern that would be willing to provide for demonstrating and consignment of stock and such other needs as the situation demands, and through which a market may be created and sales made.
- No. 8476. Incubators and poultry supplies.**—An American consul in France is in receipt of an inquiry from a person who is about to engage in chicken raising on a large scale in his district for catalogues, with export price lists, of high-class and thoroughly reliable incubators taking at least 300 eggs. This information is desired at the earliest possible moment, and the information, which should also cover general poultry farm supplies, would best be sent direct to the consulate where it will receive careful attention.
- No. 8477. Silk goods.**—An American consular officer, in a European country has received an inquiry from a business firm in his district for the names of the American manufacturers of silk goods known as the "Sun-ray silk," sample of which accompanied the report and will be loaned by the Bureau of Manufactures. This firm desires to deal direct with the manufacturers of this article.
- No. 8478. Catalogues for consulate.**—American manufacturers are requested to renew their catalogues which have been filed in the American consulate general's office, Singapore, Straits Settlements. It is stated that many of these catalogues are not up to date. Interest is being aroused in these files, and concrete results in the shape of orders to American manufacturers have already been obtained.
- No. 8479. Paper towels.**—A firm of direct importers and sole agents for certain lines of paper goods in the United Kingdom informs an American consular officer that it would like to secure the names of American manufacturers of paper towels, such as are perforated and prepared in rolls.
- No. 8480. Olive oil.**—An American consul reports that an exporter in a Mediterranean country who has been engaged in the olive-oil trade for many years desires to establish relations with some American firm to represent him as agent in this line. Correspondence should be in French.
- No. 8481. Foodstuffs and fancy groceries.**—A British firm of merchants and commission agents has indicated to an American consular officer its desire of securing additional agencies for American foodstuffs of all kinds. This firm specializes in American fancy groceries.

**WOOL SALES POSTPONED BY COAL STRIKE.**

[From Consul Augustus E. Ingram, Bradford, England.]

The British coal strike has caused a considerable number of Bradford mills and workshops to resort to short time, not only in order to economize the coal supplies but also to mitigate the effects of decreased employment by spreading it over an extended period.

One of the most noticeable evidences of the coal strike has been seen in the congested condition of the Bradford conditioning house. Merchants are reluctant to transfer their wool and other goods to the railways, as the companies will not accept any responsibility for delay in transit of traffic, train service being greatly curtailed, and all merchandise is accepted by them at the sender's risk.

The postponement of the London wool sales, which should have opened on March 5; is an event almost without precedent, but no other course was possible as the wool after purchase might have lain indefinitely in London. The London selling brokers' committee now definitely announce that the next series of sales will begin on April 11, the list of arrivals closing when 250,000 bales are reported. The date of the third series of wool sales is changed to June 11 (instead of April 30), the quantity limit, if any, to be fixed later. As to any alteration in dates for the remaining series of the year, nothing has yet been decided.

Prices in the Bradford wool market remain remarkably firm, and it is an indication of the inherent strength of the market that the national coal strike has so far failed to depress prices. Apparently, demand keeps up fully with supply.

---

**UNIFORMS FOR ITALIAN ARMY.**

[From Consul Chapman Coleman, Rome.]

In response to requests for information concerning the goods intended to be used as uniform material for the Italian army, I have, after investigation, to report as follows:

The Italian Government has adopted, and to some extent already introduced, for the army uniform (for soldiers, not for officers) the materials of which samples are forwarded [and will be loaned by the Bureau of Manufactures]. On these samples the prices paid by the Government are noted, as are also the seasons, summer or winter, for which their use is intended. The Italian Government does not contemplate the use of khaki for uniforms.

Knapsacks are covered with the furred skins of goats, or other animals, canteens are of wood, and coverings of cloth are not used for either.

---

**Bound Volumes of Daily Consular and Trade Reports.**

The Government Printing Office will supply regularly in quarterly volumes, with complete 32-page indexes, bound sets of Daily Consular and Trade Reports from January 1, 1912. The price is \$1.50 per volume or \$6 per year, in order to cover the cost of the index and binding. Those desiring the bound volumes should write to the Superintendent of Documents, Government Printing Office, Washington, D. C.

## FAR EASTERN SHIPPING SITUATION.

(From Consul General George E. Anderson, Hongkong, Feb. 14, 1912.)

The developments in the shipping world of the Far East during 1911 were altogether in the direction of improvement. Freight rates were raised—along the coast during the year and with the United States, Europe, and the rest of the world at the season's close—but service was increased and improved as well, and in spite of the 10 per cent advance in freights shippers seem to be better satisfied with the situation.

The agitation for improved pay and bettered conditions for officers and men employed in the shipping of the Far East was expected to increase the cost of freights, and the low margin of profit for owners under the best conditions also demanded consideration. That the advance has been no greater under the circumstances is taken as a careful balancing of interests, which indicates permanence and is satisfactory.

The improved services to be noted consist not only of more regular steamship lines but in the greater size, speed, and general effectiveness of the vessels employed. During the past year or at the beginning of the present year, new services have been established between Hongkong and various portions of the Far East on the one hand, and the United States, Denmark and other north European countries, Austria and other south European countries, India, the East Indies, Australia, the South Seas, and South Africa.

### Effect on American Trade—Japanese Subsidies.

This extension has naturally affected services to and from the United States in that it has afforded increased distributing power for Hongkong in its relation to American trade. Nearly all regular passenger lines have augmented their facilities by putting on newer and larger vessels. Along the coast conditions have so improved that some of the coasting companies have paid dividends for the first time in several years.

The shipping situation in the Far East continues to be dominated by the Japanese. The policy of reorganization of subsidies, of con-

solidating and improving services, and at the same time of extending services in new lines has been followed successfully. Details of the amounts to be paid to the subsidized lines just issued by the Department for Communications at Tokyo, have received the interested scrutiny of marine circles of the Far East as a dominating factor in the situation. The total amount in round figures is \$5,451,400, a decrease from the previous fiscal year of \$19,100.

The lines receiving subsidies and the amounts thereof are as follows, at exchange of 2 yen to the dollar: European, \$1,598,730; North American, \$2,223,642; South American, \$364,958; Australian, \$212,891; southern Pacific, \$37,500; Yangtze, etc., \$380,000; Kobe-Dairen, \$50,000; Yokohama-Shanghai, \$137,500; Kobe-North China, \$65,000; Vladivostok, \$12,500; Hondo-Hokkaido, \$25,000; China-Chosen (Korea), \$6,250; Tsuruga-Vladivostok, \$157,500; Special subsidies, \$25,000. The list given does not include subsidies for new lines. It is significant that the increases are for improving foreign lines already established.

#### Many New Vessels.

The chief improvements contemplated by existing lines are those of the Nippon Yusen Kaisha. This company has under construction five new ships for the lines to Europe and to the United States, and it is now announced that two of these vessels are to be put into service in the course of the next few weeks between Hongkong and Seattle. The new steamers are the *Yokohama Maru*, building at Nagasaki, and the *Shidzuoka Maru*, under construction at Kobe. The *Yokohama Maru* will replace the *Tamba Maru* sailing from Japan about June 1. The *Shidzuoka Maru* will replace the *Inaba Maru* later in the summer. It is understood that the *Tamba Maru* and the *Inaba Maru* will be employed on one of the Indian routes. The new vessels have a gross tonnage of 6,200, a length of 400 feet, breadth molded of 50 feet, and depth molded of 30 feet. They have been constructed to carry 28 saloon passengers and 350 in the steerage. The propelling machinery consists of two sets of triple-expansion engines supplied by steam from double-ended marine boilers, and their contract speed is to be a mean 15 knots.

It is also announced that the company has ordered from the Mitsu Bishi shipbuilding yard a steamer of 15,000 tons to be placed on the European run, which vessel is expected to be completed in August, 1913, and one of 6,500 tons, to be allotted to the American line and to be completed in June of next year. From the Kawasaki shipbuilding yard has been ordered a steamer of 15,000 tons for the European line to be completed in October, 1913, one of 6,500 tons for the American line to be completed in November, 1913, and one of 3,500 tons for the Shanghai line to be completed in the same month. The company has also ordered from a British shipbuilding yard a 3,500-ton steamer for the Shanghai run, to be completed in May, 1913.

The construction of so many vessels is understood to have regard for the extension of the company's business to the east coast of North and South America through the Panama Canal. It is the announced intention to run steamers to New York and Brazil, and the company is now making preparations for a Yokohama-New York service for which it is considered that 11 steamers of 8,000 to 10,000 tons will be needed. In the meanwhile its new vessels and improved equip-

ment will afford a fortnightly schedule from Hongkong to Seattle. It has not yet been decided whether Manila will be a regular port of call for steamers of the line.

#### Other Extensions of Service.

The extension of the service of Japanese vessels in other directions continues. During the past year the Nippon Yusen Kaisha established a service between Japan and Calcutta by way of Hongkong, improvements in which are promised. The Japanese Government has decided to start a new monthly service from Kobe to Hongkong, Singapore, Saigon, Java, and Sumatra, using three steamers, and has also arranged for a subsidized line from Japan to the South Seas by way of Hongkong commencing with the fiscal year in April. For this latter service provision is made for a subsidy of \$37,500 for the fiscal year 1912-13, \$75,000 annually for the following two years, and \$37,500 for the fourth year. The service is to consist of two steamers, each over 20,000 tons gross, and with not less than 10 knots speed, not less than 12 voyages a year, with the ports of call and the freight and passenger rates to be controlled by the Government. The company has been organized in Osaka and is known as the Nanyo Kisen Kaisha, or South Sea Steamship Co.

There has been a notable advancement in the connection of Hongkong with other parts of the world through steamers other than Japanese. The Austrian Lloyd has just inaugurated a fast monthly schedule between Shanghai and Trieste by way of Hongkong, Singapore, Colombo, and thence to Suez, in addition to the service it has had by way of Bombay. The vessels are of about 8,000 tons burden, are finely equipped and modern in every way, and make the trip from Hongkong to Trieste in 30 days, with railway connections taking passengers from Trieste to London in 39 hours. The Rickmer's Line, including an equipment of 15 steamers, with headquarters at Bremerhaven, is extending its service to Japan and North China by way of Hongkong. The British India Steamship Co. has established a new service of modern passenger boats between Rangoon and Japan by way of Hongkong. The Indra Line, trading between New York and the Far East, is putting on new steamers like the *Indraghiri*, recently launched at Glasgow, which will carry about 9,000 tons dead weight and is provided with refrigerating installation for the transport of provisions. These steamers will also carry a limited number of passengers.

#### Improved Connections with United States—Oil Fuel.

Connections with the United States by way of the Pacific are improving in the character of ships and general service given. In addition to the better service of finer ships of the Nippon Yusen Kaisha above noted and the new ship of the Toyo Kisen Kaisha announcement is made that the Pacific Mail Steamship Co., the American line, is constructing four new boats not only to increase its facilities on the Pacific but also to inaugurate a fine new passenger and freight service between New York and San Francisco by way of the Panama Canal and in connection with its line to the Far East with Hongkong as the terminus. It is announced that these ships will be 680 feet long and 75 feet beam, will carry 300 first-cabin and 200 second-class and 300 third-class passengers, and will be able to make 17 knots per hour and to handle 17,000 tons of

freight. The Canadian Pacific Line also is completing two new 15,000-ton ships which will be put into use a year hence, after which time the company will maintain a fortnightly schedule between Vancouver and Hongkong by way of Japanese and Chinese ports. The present mail contract of the company, which will be revised when the new boats are put into commission, provides for a subsidy or mail subvention of about \$73,000 per year for a monthly service.

It is a notable fact that the new steamers of the Canadian Pacific, the Pacific Mail, and some other lines are provided with oil burners. For some time past the Toyo Kisen Kaisha has been experimenting with the *Shinyo Maru* as to the comparative cost and other merits of oil fuel and coal. Similar experiments on the part of the Canadian Pacific Co. in its coast service have resulted in reports favoring oil.

#### **Manila a Rising Port of Call—Panama Canal.**

One feature of recent shipping changes in Hongkong is the increasing number of vessels for both Europe and the Pacific coast which call at Manila. Most of the mail steamers for Europe now call there on their way to Europe, and the steamers of the Toyo Kisen Kaisha for the Pacific coast and other lines, such as the Bank Line, now make Manila regularly. There is increasing transshipment of cargoes from Europe and the United States at Manila for Japan and North China, which also is significant, and the island authorities are giving attention to the matter of facilities for this transshipment business.

The overshadowing fact in the entire situation is the approaching opening of the Panama Canal. All steamship lines trading to or in the Pacific Ocean are improving their service, are building more and faster steamers, and are arranging their agencies and supply depots with the canal in mind; and it is becoming more and more evident in a practical way that, while trade in this part of the world is not that first to be considered and is not trade in which much has been expected from the canal, that waterway is profoundly to affect and eventually to revolutionize most oriental business, with the United States at least.

[Previous articles by Consul General Anderson on Far Eastern shipping have appeared in Daily Consular and Trade Reports for Dec. 5, 1910; Mar. 15, May 15, June 24, Aug. 12, and Oct. 28, 1911.]

---

#### **AMERICAN TEXTILE CONVENTION.**

The American Cotton Manufacturers' Association will hold its annual convention in Washington, D. C., April 2, 3, and 4, 1912. Among the addresses to be delivered will be one by Hon. Charles Nagel, Secretary of Commerce and Labor. The Bureau of Manufactures will exhibit samples of cotton goods from many foreign countries. These samples have been gathered by the department's commercial agents and by American consular officers, and represent the grades and styles of fabrics in greatest demand in countries which afford an opening for the sale of American woven goods.

---

*Portland cement production* in the world is now said to be 25,000,000 tons.

**DRIED FISH FOR EUROPE.**

[From Consul Horace Lee Washington, Liverpool, England.]

American firms seeking information as to a possible market in Liverpool for dried fish are advised that the only dried fish likely to appeal to the trade is the small cod, weighing about 1 pound and realizing \$98 to \$107 per ton, including containers. This fish is handled packed in barrels containing up to 4 hundredweight (448 pounds) and arrives principally from Newfoundland. The larger cod, of which an abundant quantity is caught by trawlers from the coasts of Scotland, Ireland, and Iceland, comes into this section and when dried is exported to other countries, the United States included.

Six wholesale Liverpool firms, however [whose names may be obtained from the Bureau of Manufactures], state that they will be pleased to receive samples and prices of dried fish from American exporters. They would require this information before being able to express an opinion as to the possibilities of a market. In the opinion of the trade here, the great markets for dried fish are Spain, Portugal, and Greece.

With regard to the market for lobsters, it is the opinion of the six firms that were interviewed that unless lobsters are imported alive into this country there would be no demand for them, as the purchasers prefer to boil them alive, and thus be assured of their freshness. It may be stated that the experiment has several times been made of importing lobsters alive from Canada, but the consulate has been informed that these experiments were not successful, as a large number died on the way. The supplies of lobsters for this district come from Scotland and Ireland, and are landed in Liverpool alive each morning. The prices range from 16 cents to 36 cents, according to the season and the demand.

[From Consul General A. M. Thackara, Berlin, Germany.]

**Market for Smoked Salmon.**

Preserved salmon is imported into Germany in large quantities, as is shown in the following figures, which give Germany's import and export of that product in metric tons (2,204.6 pounds) during the years 1910 and 1911, not including fresh salmon:

	1910	1911		1910	1911
Total imports.....tons..	4,227	4,549	Total exports.....tons..	55	61
From Denmark...do..	168	142	To France.....do..	7	8
From Russia.....do..	.1	102	To Austria-Hungary.....do..	19	32
From United States.....do..	4,047	4,291	Value of exports.....	\$32,000	\$39,270
Value of imports.....	\$1,609,832	\$1,732,402			

The above statistics do not separate the salmon in tins from other prepared salmon.

At one of the large grocery stores of Berlin, Read's red salmon in oil is retailed for 2.50 marks (59½ cents) per avoirdupois pound. Smoked salmon in tins put up in Germany is sold for 1.40 marks (33½ cents) a half kilo (1.1 pound) and ordinary smoked salmon retails for 2 marks (47.6 cents) per half kilo.

[A special list of Berlin dealers in smoked fish may be secured from the Bureau of Manufactures.]

## GERMAN DEVELOPMENT OF THE HYDRAULIC RAM.

[From Consul General Robert P. Skinner, Hamburg.]

An interesting hydraulic plant was put in operation at Hull-an-Oste in the district of Stade in October last, a plant operated by the ebbing and flowing of the tide, the purpose of which is to drain about 1,360 acres of marsh lands which lie  $2\frac{1}{2}$  to 3 feet below sea level.

Obviously any contrivance capable of recovering lands of this type, which are so characteristic of the northern plain of Germany and particularly of Schleswig-Holstein, renders an immense service. The plant at Hull has given such good results that a similar project, considered three years ago by the Government of Oldenburg and subsequently abandoned after the expenditure of a large amount of money, has been planned anew, and it is announced that building operations will begin very shortly. These projects should not be confused with others having to do with the control of tidal energy, to which some newspaper attention has been given recently in this country and which are alleged to be of doubtful importance.

### Hydropulsor Installations.

By means of a device denominated the hydropulsor, the flowing tide, against which the shore line at Hull is protected by dikes, passes through a mechanism which, being set in motion, lifts an equal volume of landlocked water and delivers it in a reservoir, where it is impounded until the tide ebbs. At this point the hydropulsor automatically ceases to operate, and the accumulation of water in the reservoir drains out into the sea, the process repeating itself at an annual cost stated to be 75 cents per hectare (2.47 acres) as against \$2 to \$3 for the same drainage operations were they undertaken by steam power. These costs contemplate operation, interest, and amortization. The Prussian Minister of Agriculture was so interested in the initial enterprise at Hull that he procured \$10,000 from the Government to assure the carrying out of the plan.

An earlier and smaller plant is in operation on the Rittergut of Dretzel, in the Province of Saxony, where the natural drainage is insufficient and the land of little value. Drainage by suction pumps had failed utterly and the hydropulsor was mounted in a well already in existence and which was in connection with a conduit leading to the main drainage ditch. The lift of the hydropulsor in this case is  $3\frac{1}{4}$  to 4 feet, and the hourly output of drainage water taken up from the wet ground amounts to 98 cubic yards, for which 156 yards of power water are necessary. This drainage plant cost \$625, and the proprietor is said to be entirely satisfied with the results.

Experimental plants may be seen also in the technical high school at Charlottenburg, in the city of Berlin, and at the works of the builders of the machinery, the Ottensener Eisenwerk, A. G., at Altona-Hamburg.

### An Improved Form of Montgolfier's Invention.

The successful operation of the Hull plant seems to demonstrate that the project of lifting water beyond its own level has passed its purely experimental phases. The central idea, that of securing cheap and efficient drainage, is quite apart from the often-discussed idea of winning electrical energy from the changing tides, although this result, under certain circumstances, is attained with the hydropulsor.

The construction of the plant at Hull was made possible by the development of the original invention of the "water ram" by Joseph Michel Montgolfier. Montgolfier's ram consisted of a tank to contain the power water, a conduit, two automatic valves, and a delivery conduit with delivery air vessel. The water, being let out of the tank, is bound to escape through the cut-off valve, whereby a gradual acceleration in the current takes place until the accelerating velocity causes the cut-off valve to close of itself. When the escape is suddenly stopped, the entire water mass being still in motion, the recoil produced is called the water hammer.

The original ram of Montgolfier was serviceable only for small volumes of water, as the repeated action of the water hammer strained the machine, and especially when the diameter of the valves exceeded 1½ inches. An improvement on Montgolfier's apparatus was brought out recently by Adolf Abraham, a German surveyor of public works, who, instead of battering or hammering valves, provided a revolving valve that brings the power water in regular turns in connection with the discharge conduits. This device is called the hydropulsor. When the entering or power water has reached its utmost velocity of flow the revolving valve makes a turn, thus bringing the impulse of the power water to bear on the water standing in the discharge conduit, lifting it beyond its level and causing it to overflow at the orifice. Owing to the work thus performed the pressure at the intake subsides, thus causing the revolving valve to make another turn, whereupon the pressure water flows in a second time, accomplishing a new acceleration and a repetition of the former processes, which is renewed indefinitely.

#### Possible Usefulness on the Panama Canal.

It is claimed that the hydropulsor is capable of delivering the largest volumes of water, the only limits being those imposed by the manufacturers of machine parts. Indeed, plans have been worked out for a plant at Muenden, on the Weser River, to accommodate a flow of 54 cubic meters (14,265 gallons) of water.

In his lecture before the Union of German Engineers of the State of Hamburg, Dr. F. C. Schulz stated that the new device was intended to perform the work which only a combination of hydraulic machinery and a pumping station otherwise could accomplish and where there was an extremely limited fall of water such as would not justify the erection of a power plant with the ordinary hydraulic machinery. The invention is one, therefore, which should be of practical value in the utilization of innumerable rivers where the fall is slight.

Another application of the hydropulsor might be made on locked waterways, the inflow of which must be carefully husbanded. By passing the water discharging from the locks through the hydropulsor, the very force of the flow would enable the same amount of water to be lifted above the high level of the lock water and poured back to replace the amount lost. If, for example, a shortage of water should be encountered upon the opening of the Panama Canal for traffic, it would be possible, conceding the claims of the German inventors to be demonstrated at Hull, to render the canal independent of the reservoir system for the retention of water during the dry season by the installation of a sufficient equipment of hydropulsors.

**OZOCERITE AND CERESIN.**

[From Consul General Charles Denby, Vienna, Austria.]

Ozocerite was exported from Austria in 1910 to the amount of 25,540 centners [the metric centner, or quintal, is equivalent to 220.46 pounds], worth about \$700,000. Of these shipments, 22,500 centners went to Germany, 1,475 to France, and 536 to the United States. There was in the same year an import of 160 centners, valued in the customs returns at about \$4,000, of which 101 centners came from Asiatic Russia, the remainder being reimports.

Ceresin was exported in 1910 to the extent of 11,637 centners, valued at about \$310,000, chiefly to Germany (3,192 centners), Italy (1,248 centners), Spain (1,061 centners), and 471 centners to the United States. The imports of ceresin into Austria in 1910 were 188 centners, of which 11 centners were from Brazil, the balance being reimports from Germany.

Consular records show a declared value of \$312,309 for the shipments of ozocerite and ceresin that were invoiced through the American consulates in Vienna, Prague, Reichenberg, Carlsbad, and Trieste during 1910.

[Compiled in the Bureau of Manufactures.]

**Appearance and Uses.**

Ozocerite, or native paraffin, is described in a standard reference work as "a yellow, brown, and sometimes green, waxlike substance, originally found in Moldavia and Austrian Galicia and more recently in Emery and Uinta Counties, Utah, where it occurs in the form of small veins in Tertiary rocks. It consists chiefly of a mixture of hydrocarbons, is greasy to the touch, and melts between 56° and 63° C. (132.8° and 145.4° F.). It finds some use in the manufacture of candles as an adulterant of or substitute for beeswax and in the concoction of ointments and pomades. A residual product obtained in purifying ozocerite, having a hard waxy nature, is combined with india rubber and used as an insulating material (okonite) for electric cables." Another special use of ozocerite is its employment, in the form of bottles, as a container for hydrofluoric acid.

In Allen's Commercial Organic Analysis it is stated:

Ozocerite, known also as cerezin, cerite, or mineral wax, usually occurs in the neighborhood of petroleum springs and in association with bituminous sandstone, clay-schist, gypsum, and common salt. Though not very abundant, ozocerite occurs in many parts of the globe, the most remarkable and best-known deposit being that in the Miocene rocks of Galicia, on the slopes of the Carpathian Mountains, and also on the Wallachian side of the range. It is also worked on the island of Tschelken in the Caspian and at Swatow-Astrow, near Apsheron, where a variety called "neftgil" is found. It exists in Turkestan, and a valuable deposit has been found in Utah. Its commercial interest is chiefly as a source of ceresin, though liquid hydrocarbons are also obtained by the distillation of the inferior kinds.

Crude ozocerite varies much in appearance. The finest varieties are transparent, of a pure yellow or greenish color, and can easily be kneaded between the fingers. Crude Galician ozocerite is a scaly or waxy substance, with a resinous fracture. It is usually brittle, but as hard as beeswax. It becomes negatively electric by friction and exhales an aromatic odor. According to Lach (*Chem. Zeit.* 13, 831), the so-called ozocerite from Colorado does not yield ceresin, but is suitable for paraffin making. It begins to distill at 360° and yields 90 per cent paraffin and oil and about 5 per cent of residuum. Caucasian ozocerite yields about 58 per cent of a second-quality ceresin.

**American Deposits and Imports.**

In Bulletin No. 285 the United States Geological Survey gives the result of its investigation of the Utah field, where it found ozocerite

deposits in the vicinity of Colton, near Soldier Summit, and near Midway Station, Colton being 7 miles southeast and Midway 3 miles west of Soldier Summit. These deposits occur in shales, shaly sandstones, and limestone strata in the lower part of the Tertiary deposits of the "Wasatch" group. The mineral occurring at these three points has essentially the same physical appearance. At the time of making its investigation the survey found that ozocerite had been exploited commercially at five or more localities, five mines having been equipped with more or less complete facilities for exploitation and three plants having been established for separating the product from the associated rock materials. Concerning separation methods then in vogue in Utah, the bulletin says:

The manner of separating ozocerite from the associated rocks is a simple process. The plan consists of a steam boiler and engine, a crusher, and steam-heated vats. The soft rock and ozocerite mixture is crushed and run into long vats with narrow bottoms containing water kept at a boiling temperature. The ozocerite melts at a temperature of 54° to 70° C. and floats off as a liquid into cooling vats, while the rock is driven out along the narrow bottom of the vat by revolving screws. On cooling the ozocerite is remelted in dry pans to remove the content of moisture.

Ozocerite is not separately recorded in the American official statistics, imports of this substance being included under the heading "mineral wax." In the calendar year 1911 the United States imported 5,280,363 pounds of mineral wax, worth \$393,621, in contrast to 7,880,697 pounds, valued at \$606,040, in 1910.

### ENGLISH WOOL INDUSTRY.

[From Consul Augustus E. Ingram, Bradford.]

The following items have been collected from local newspapers:

A number of Wensleydale rams have been sent to the Netherlands, and dealers state that the cross between these rams and the native Dutch ewes produce the finest carcasses passing through their hands. In 1910, a Wensleydale shearling wether, one of the famous Wensleydale-Scotch Mountain (Blackface) cross, was awarded the third prize alive and the second in the carcass competition at Smithfield.

The 1912 conference of the Wensleydale Long-Wool Sheep Breeders' Association will be held at Doncaster June 29, in connection with the Royal Agricultural Show, which takes place July 2, 3, and 4.

At the recent meeting of the Wensleydale Blue-Faced Sheep Breeders' Association and Flock Book Society, held at Hellifield, Yorkshire, it was stated that the Wensleydale fleeces proved invincible in the "any or long-wool class" at the last royal show.

The Leicester Sheep Breeders' Association states in its annual report that the industry has been depressed for several years owing to the low prices of mutton on the hoof. In competition with other long and short wool breeds at the fairs, Leicester rams without exception realized the best averages.

#### **Mercerization of Wool.**

A chemical process, somewhat similar to the mercerization of cotton, is now being successfully applied in Barmen to Bradford-spun worsted yarns. The yarn is entered not into caustic alkali, as with the mercerization of cotton, but into a bath of bisulphite of soda, a chemical which exerts a shrinking action upon wool. This action is resisted by mechanical tension, and the process is continued for some 5 minutes at a high temperature, until the wool assumes a gelatinous or rubber-like elasticity. The yarn is removed into a weak mineral acid solution, boiled under relaxing tension for an hour, and is finally rinsed and dried. The resemblance to mercerization is thus close in detail, and is similar also in its effects. The elongation is very much greater, amounting to 33 per cent, so that the yarn which goes into the process as 28's 2-ply comes out of it as something near 35's 2-ply. Mercerizing enhances the strength of cotton, and "bembergizing" does not perceptibly impair the strength of wool. The treatment leaves the yarn in possession of a quite creditable handle and brings forth a luster yarn out of nonlustrous wool. An English patent for the process was taken out in 1910 by Dr. Emil Elsesser, of Langefeld, Westphalia, but, so far as can be learned, the process has not been utilized commercially as yet in England.

**GERMAN TRADE IN HORSE-RADISH.**

[From Consul General Robert P. Skinner, Hamburg.]

The fact<sup>1</sup> brought to my attention that American farmers can not grow horse-radish of first-class quality in competition with the horse-radish being shipped in large quantities from Hamburg to the United States, notwithstanding the American import duty of 25 per cent ad valorem, is not more surprising than that a number of other agricultural and horticultural products are being shipped from Germany to the United States. The declared value of horse-radish exported from Hamburg to American ports was \$111 in 1909, \$321 in 1910, and \$23,917 in 1911. During these same years seeds, etc., were shipped from Hamburg to the United States to the following values:

Articles.	1909	1910	1911
Seeds.....	\$1,079,872	\$1,174,599	\$1,357,718
Lily of the valley roots.....	74,729	95,950	173,240
Plants.....	25,063	30,114	32,221
Flowers.....	5,362	6,576	19,563

It will be noted that there has been a considerable increase from year to year in the value of each of the articles mentioned above.

The German horse-radish trade has developed considerably within the last few years, chiefly in consequence of a thriving export trade. The land in this vicinity is favorable to the cultivation of this crop, and the Germans themselves are perhaps the largest consumers of horse-radish in the world. The total exports of this root to all countries and the officially ascertained value thereof have been as follows during the last four years:

Years.	Tons.	Value.
1908.....	3,961	\$348,908
1909.....	3,551	316,302
1910.....	4,114	324,870
1911.....	4,121	310,352

These official figures show that while exports have increased, the market value of the produce exported has decreased.

**Cold-Storage Speculation—Local and Export Prices.**

There is said to be quite a speculative side to the business, which resulted last spring in the accumulation of a stock of 10,000 bundles of German horse-radish in cold storage in New York.

In the public markets of Hamburg 16.6 cents is the ordinary retail price of a bundle of 10 sticks of good horse-radish weighing 5.5 to 6.6 pounds. In the same market 60 sticks can be had for 71 to 95 cents, according to the quality. One dealer was prepared to sell 500 bundles of 60 choice-quality roots for 85.6 cents per bundle. These terms were quoted to a casual inquirer from this office. Commission merchants who operate on a large scale naturally secure better terms. One such large dealer supplies the following details in regard to the trade:

The very best roots come in bundles of 10 sticks for our own market and for the American and Russian trade. The prices now vary

<sup>1</sup> My correspondent states: "Horse-radish can not be grown by the American farmer for less than 4 cents per pound." [The same statement is made by growers at Washington, D. C.]

between 26 and 33 cents per bundle. Second-class sorts in bundles of 10 sticks for the local market and for America are worth from 14 to 19 cents per bundle. This sort is also tied up in bundles of 15 or 16 sticks for the export trade, in accordance with prices quoted in particular export markets. The above best and second sorts are frequently packed loose in bags and are then sold by weight. The present price is from \$2.85 to \$3.57 per 50 kilos (110 pounds). A third sort is made up in bundles of 20 sticks and is usually exported on a commission basis to England. The prices of this grade depend upon the English demand, which is very considerable.

---

### SWISS TRADE NOTES.

[From Consul General Robert E. Mansfield, Zurich.]

#### Good Tourist Trade in Prospect.

The prospects are good for an excellent tourist season in Switzerland during 1912. Many new hotels have been built in the resort places during the past year and plans are being made for the entertainment of an unusual number of tourists. The Swiss Government is being urged to create a Federal office, to supplement the society now engaged in the promotion of the tourist traffic which is maintained by the various cantonal governments, and to expend \$200,000 a year in attracting tourists. With the \$800,000 which the railways, hotels, and local development spend each year for the same purpose, this would mean an expenditure of \$1,000,000 a year for the encouragement of a trade which annually brings many millions into the country.

#### Prejudices against Automobiles—Building Activity.

The contention between the peasants and the motorists in Switzerland becomes more acute each year as the number of cars on the country roads increases. Local legislation has made motoring difficult in some places and impossible in others. These communities are so distributed throughout the country that they make travel disagreeable, and this feeling of hostility to motorists has resulted in keeping many strangers from bringing their cars into Switzerland.

The general activity in the building trades and the public improvements in progress in all the important cities and towns evidence the general commercial prosperity and industrial progress of Switzerland. In Zurich a large number of modern business blocks and office buildings have been completed within the past year, for all of which there is a demand at good prices. Hundreds of new residences and apartment houses have been built and occupied during the year, indicating a rapid growth in the population of the city.

---

### NEW BICYCLE LAMP IN HOLLAND.

[From Consul Frank W. Mahin, Amsterdam.]

A new electric bicycle lamp has been introduced in Amsterdam, for which electricity is generated by the operation of the bicycle. A small wheel attached to the shaft of the dynamo rests on the front or rear wheel of the bicycle, making many revolutions for each one made by the larger wheel. When the lamp is not needed, the little wheel can be set free from the bicycle wheel by a lever. A very powerful light is obtained at a speed of 15 kilometers (9.32 miles) an hour, but sufficient light is obtained at even less speed.

**PAPRIKA OR PIMIENTO TRADE.**

[From Consul Robert Fraser, Jr., Valencia, Spain.]

Spice millers in the United States seek information regarding the preparation of paprika or ground Spanish pimientos, which are raised in this district.

A dispute of long standing has existed between the Spanish farmers who grow the pimientos on the one hand and the millers and merchants on the other regarding the practice of adding olive oil to paprika. The farmers have always opposed the practice, which they regard as adulteration, and frequently invoked Government action to have it declared illegal. The evidence accumulated at the various Government investigations, however, failed to establish the growers' contention that the practice of adding a little pure olive oil was in any way harmful or prejudicial to health, while millers and dealers in the product maintain that a little oil is necessary for the better preservation of paprika and to minimize waste in handling and packing. The oil imparts cohesion to the mass and prevents the considerable loss which takes place in handling and transporting dry-ground pimientos in jute bags to packing stores and to the interior of the country and Spanish island possessions.

The latest official regulations on the subject prohibit the admixture of oil with pure paprika.

The trade, both home and foreign, in paprika is increasing yearly, as it not only enters largely as flavoring and coloring matter in all the sausage factories of this country, but is exported to Argentina and other South American republics, Cuba, Austria, France, Germany, and the United States.

---

**AMERICAN MARKETS AND STATISTICS.**

It is learned from the Bureau of Chemistry at Washington that paprika in which olive oil has been introduced is for the present admitted into the United States under the pure-food regulations, provided the labels state that it is ground in oil. However, it is considered more desirable that oil should not be added, as it gives the paprika an unreal, higher color and conceals the "ash" or waste matter. The value of paprika depends largely on the degree of high red color, which can best be determined when no foreign substance has been added. Its most extensive use is in catsup and sausage.

Paprika is imported in its ground state because attempts to grind these peppers in the United States have not been economically successful. They are ground cheaply in the little water-power mills of Spain and Hungary, whence comes the chief supply, the paprika not being grown in this country. The imports in the fiscal year 1911 of all kinds of capsicum, or red pepper (dutiable at 2½ cents per pound), were 5,242,285 pounds, having an average unit value on shipment of 10.6 cents. Imports in 1910 were 4,319,763 pounds, and in 1909, 4,711,947 pounds, having respective unit values of 9.1 and 8.2 cents. The Hungarian paprika is quoted on the market at about one-third higher prices than the Spanish.

The word "pimiento" as applied to peppers should not be confused with "pimento," the allspice of commerce, and which is mainly purchased from Jamaica—about \$200,000 worth yearly. Allspice has a unit value on shipment of about 3 cents a pound and comes in

duty free. Black and white pepper also enter duty free, being imported in the fiscal year 1911 to the extent of 23,193,416 pounds, having an average unit value of 7.3 cents.

The process of preparing canned pimientos, which are also exported from Spain to the United States, was described a few years ago by the American consular agent at Bilbao as follows:

After being taken from the bush or vine the pimiento is placed in a vapor bath, where it remains a short while to facilitate removing the skin. The skinless fruit with its own juice is then hermetically sealed in tin cans, which are subjected to a second vapor bath. This terminates the process of canning. No preservative, such as vinegar, brine, or chemical product, is employed.

#### **Inspection of Imported Paprika.**

In his annual report, Dr. H. W. Wiley, Government chemist, makes the following statement with reference to the aggregate work at the laboratory in New York, and the inspection there of paprika:

The New York laboratory is chiefly concerned with the inspection of imported food and drug products. During the past fiscal year about 100,000 invoices of food and drug products have been inspected, representing a total value of merchandise of \$180,000,000.

In connection with the inspection of paprika and ground red pepper the study and detection of the adulterants commonly used have been continued. The refractive index of the nonvolatile ether extract of a large number of samples has been determined. The results indicated that when the conditions of drying the extract are properly controlled the refractive index, as well as the iodine number, will furnish evidence in the detection of added oil. As a result of collaboration of several chemists with the associated referee on spices, a provisional method for the detection of added oil in paprika was adopted in 1910 by the Association of Official Agricultural Chemists. In preparing the better grades of paprika only the shells and part of the seeds are used, the stems and placenta being removed. In order to utilize these by-products they are sometimes added to the cheaper grades, and as the addition of extra stems unquestionably injures the quality of the finished product, it has been the practice to subject samples to careful microscopical examination in order to detect this sophistication.

---

#### **COALING CHARGES AT FRENCH PORT.**

[From Consul James E. Dunning, Havre.]

The average charge for coaling and trimming ships at Havre is \$0.36 per ton. For vessels which, on account of their construction and the location of the hatches, need more labor and time to coal, the charge rises to \$0.48 per ton.

If coaling be done from the wharf, and barges are not used on the opposite side of the vessel at the same time, the rate of coaling in the port of Havre varies, according to the vessel, from 100 to 150 tons per day of 8 hours. When barges are also employed the rate is doubled.

The Compagnie Generale Transatlantique (French Line) owns special apparatus for coaling its liners, with which the coal is passed down a tubular "chute" into the bunkers. The consulate is informed that it is possible to put 500 tons on board in an 8-hour working day by this method.

It may be safely assumed that charges for coaling and trimming, as likewise the average rate of coaling, are the same for the port of Marseille as for this port.

---

The Mineral Resources of the United States, for 1910, part 1, Metals, 796 pages, and part 2, Nonmetals, 1,005 pages, have just been issued. Applications for copies should be addressed to the United States Geological Survey, Washington, D. C.

**RUSSIA'S CHEMICAL INDUSTRY.**

[From Consul John H. Grout, Odessa.]

The present output of the chemical industry in Russia represents the considerable value of \$77,250,000 per year. The principal items of this production are inorganic acids and salts, gunpowder, paints and lacquers, organic dyes, and superphosphates. The chemical factories are nearly always close to the leading industrial centers and consequently frequently far away from the regions producing the raw materials. This circumstance has often led to the importation of raw material from abroad, which, brought by sea, came far cheaper.

Young as the chemical industry is in Russia, it has in many lines become strong enough to monopolize the Russian market. Such lines are sulphuric acid, certain other acids, soda, and chlorate of lime. It seems probable from the present outlook that the production of sulphuric acid will be the one among Russian chemical productions which in the near future will attain the greatest development. The reason for this lies in the fact that wonderful as has been the fertility of the black-earth soil of Russia, that fertility shows serious signs of exhaustion, and fertilizers begin to be more understood and employed. Foremost among these fertilizers are superphosphates, of which Russia will eventually require enormous quantities, and to produce these, for each 72 pounds 36 pounds of sulphuric acid is required. For nitrogenous fertilizer Russia will have to depend upon foreign countries until the considerable water powers available in the Caucasus are utilized.

As regards sulphate of ammonia, the coke ovens in the Donetz Basin are expected to turn out shortly much of the total requirement. A good beginning has already been made.

---

**CENSUS OF URUGUAY.**

[From Consul Frederic W. Goding, Montevideo.]

The census statistics of Uruguay, taken in 1908 and now available, afford the following summary:

Population, 861,464 Uruguayans and 181,222 foreigners, the latter consisting of 62,354 Italians, 54,885 Spaniards, 27,789 Brazilians, 18,600 Argentinians, 8,341 French, 1,444 Turks, 1,406 Swiss, 1,324 British, 1,112 Germans, 1,109 Austrians, and 182 United States citizens, the balance being of many nationalities. The density for the entire Republic was 5.57 persons per square kilometer (0.386 square mile), and of the Montevideo Department, 463.7.

The population of the capital cities was: Montevideo, 291,465; Paysandu, 20,953; Salto, 19,788; Mercedes, 15,667; Minas, 13,345; Melo, 12,355; San Jose, 12,197; Rocha, 12,200; Florida, 10,606; Durazno, 10,597; Rivera, 8,986; San Eugenio, 8,857; Canelones, 8,523; Trinidad, 8,317; Colonia, 8,021; Treinta y Tres, 7,718; San Fructuoso, 7,546; Fray Bentos, 7,359; and Maldonado, 4,421.

---

**Drills for Mining in Manchuria.**

Mining at Fushun collieries in Manchuria is now done with pick and shovel, but it is learned by Consul General Fred D. Fisher, of Harbin, that the introduction of drills is contemplated.

**THE DEVELOPMENT OF TURKEY.**

[From the Near East.]

**Establishment of Factories.**

Industries in Turkey are mostly quite primitive. There is a tendency to start factories on a small scale, but the supply of labor seems likely to prove a difficulty. A glass factory on the Golden Horn, belonging to the Civil List Department, has been leased and is now being worked under British management. It employs 250 hands and turns out about \$10,000 worth of glass bottles, etc., per month. There is one other glass factory working in Constantinople at Pasha Bagtche, on the Bosphorus; it employs 350 hands and produces about \$15,000 worth of glass monthly. An Ottoman company has been formed, under British management, with a capital of \$90,000, to manufacture soap; the works are on the Golden Horn, and produce about 50 tons of soap per month.

A brick and tile factory has started work at Pasha Bagtche, on the Bosphorus, on a small scale, and is to be considerably extended. A company has been formed for starting a floating dock at Stenia, on the Bosphorus. Two cement factories have been established with local capital at Guebze, on the Gulf of Ismidt, and the cement is on the market at the price of 12 piasters per sack of 50 kilos (about 48 cents per 100 pounds).

The Turkish Government cloth mills at Kara Mursal and Ismidt have been equipped with new machinery, and manufacture the khaki woolen cloth required by the army. At Panderma there is a woolen yarn spinning mill belonging to the Oriental Carpet Manufacturers' Co., which produces 2,750,000 pounds annually and employs 140 hands. At Smyrna a weaving mill has been opened with a producing capacity of 500,000 meters (about 546,000 yards), which will be increased this year to 1,200,000 meters (about 1,312,000 yards). It will employ 300 to 400 hands.

Industrial companies in Turkey are allowed to import their machinery free of duty, and are given an undefined preference for Government contracts. An industrial law was before the Chamber to allow free importation of raw material and other advantages, but was not passed during the last session (ended January, 1912).

**Irrigation Schemes.**

Preliminary contracts have been made with the National Bank of Turkey for the irrigation of some 400,000 hectares (hectare=2.47 acres) of land in the Meander Valley, Province of Smyrna. Preliminary surveys have been carried out for the bank by a British firm, and a definite agreement with the Government is under discussion. Preliminary contracts have been made with the Anatolian Railway Co. for the irrigation of 500,000 to 600,000 hectares in the Adana Plain, and with a British firm for work in Mesopotamia connected with the new Hindieh barrage and the Habbanea escape. The "Régie Générale des Chemins de Fer" are surveying the Rivers Drin, Boyana, and Kiri in the Province of Scutari, Albania, with a view to regulating them, and have also other irrigation schemes in hand.

---

**AGRICULTURAL MACHINERY COMPETITION IN URUGUAY.**

An international competition for power agricultural machinery is to be held in Uruguay from May to October, 1912. It has been organized by the Rural Association of Uruguay, under the auspices of the Ministry of Industries, and will embrace seven classes: Steam plows, motor drag plows, traction plows, harrows, cultivators, seeders, and mowers.

Applications for admittance to the competition must be made in writing prior to May 1, and must state the indicated power of the motor and its guaranteed effective power, guaranteed effective traction, weight, guaranteed surface work, fuel consumption, and price of machine f. o. b. Montevideo. A drawing of the machine, giving its principal measurements, must also accompany the application.

Only regular trade types of machines will be admitted to the competition, after the payment of a nonrefundable entrance fee of \$50 gold. Gold and silver medals and diplomas will be awarded by a jury after practical working trials of the various machines, these trials to take place between May 1 and October 1. More detailed information of the competition is contained in a prospectus that will be loaned by the Bureau of Manufactures.

**ROUMANIAN BUDGET SHOWS FINANCIAL STRENGTH.**

[From American Minister John B. Jackson, Bucharest, in continuation of reports in Daily Consular and Trade Reports for Feb. 27 and Mar. 25, 1912.]

In the budget for the fiscal year 1912-13, just submitted to the Roumanian Parliament, the revenue is estimated at \$97,579,436 (an increase of \$5,250,000 over the estimates for the current year—which has already produced a proportional "excédent" of more than \$7,500,000 during its first nine months), with estimated expenditure amounting to \$96,595,190 (or about \$5,800,000 more than for the year 1911-12). For the first time in Roumanian history the budget exceeds one-half a milliard of francs (\$96,500,000).

In connection with the budget the Minister of Finance has announced a proposed loan of \$67,550,000, in order to cover the conversion of certain existing loans and to provide funds for the continued development of the railway system, the completion of the port of Constantza, the drainage of the Danubian marshes, the purchase of forests, and the needs of the army. In place of certain 4 per cent bonds which are at present redeemable at undetermined dates through the method of drawing certain numbers by lot at regular intervals, it is proposed to create perpetual 4 per cent bonds in which the funds of public institutions, etc., can be invested permanently, to the amount of about \$30,000,000 (or about one-tenth of the whole public debt of \$300,000,000). By this operation, the annual amortization having been \$5,800,000, a budgetary expense of \$580,000 a year will be saved, and the administration of these public institutions will be simplified, as it will no longer be necessary to replace by other securities those which have been redeemed by lot.

**INDUSTRIAL NOTES FROM LOWER CALIFORNIA.**

[From Consul Frederick Simplich, Ensenada, Mexico.]

*Wheat damaged by drought.*—A long drought has been broken by rains, but it is believed this relief came too late to insure a normal wheat crop. Toward the end of the drought many cattle were dying for lack of pasturage.

*Wharf destroyed.*—The new wood and steel wharf at Ensenada, erected at a cost of about \$60,000 by American capital, has been almost totally destroyed by storms. The city is without a wharf at which vessels can dock.

*Moving-picture films.*—An American motion-picture concern has sent a company of 15 performers to Ensenada, where plays depicting western and Mexican life are being given and picture films taken. These films, after development and censorship, will be exhibited in the United States.

*No regular calls by American vessels.*—The North Pacific Steamship Co.'s steamer *Eureka*, which for several months past has been run on a twice-a-week schedule between San Diego and Ensenada, has been withdrawn from this service. The Mexican steamer *Victoria*, of the Compañía Naviera del Pacifico now has a monopoly of this business. The Pacific Coast Steamship Co. has withdrawn its regular monthly vessel from the Mazatlan-San Francisco run. No American vessel now calls regularly at this port.

## COMMERCE OF DUTCH WEST INDIES.

[By Consul Elias H. Cheney, Curaçao, Feb. 14, 1912.]

During 1911 the island of Curaçao underwent the severest drought recorded since the establishment of the United States Weather Bureau office here, in 1898. The rainfall for the year was only 15.16 inches, of which 6.92 inches fell during January and February.

The rainy season generally extends from October to February, during which period in 1910-11 the rainfall was 17.55 inches, while in the 1911-12 season the fall was only 2.71 inches. While the island was covered with verdure for nearly six months last winter, the only green to be seen this winter is where there are wells or windmills. There are about 500 windmills on the island, all of American make.

In Bonaire and Aruba, neighboring islands, conditions have been no better. Water is scarce, being brought in by mule carts and boats. The distilled-water plant installed about a year ago is working fairly satisfactorily, and produces about 50 tons of good water a day, which is supplied to steamships and to the residences of the wealthy. The supply is not adequate to the demand. The common price for water is 5 colonial cents (2 cents American) for a 5-gallon can.

The ordinary source of water supply for the city is found in the cement-lined cisterns of houses, catching water from the tile roofs. These cisterns hold a year's supply of water for a family—about 70,000 gallons—and the water so kept is of excellent quality. In an ordinary winter the rains would fill these cisterns three or four times.

As a result of the drought there can be no crop, and animals are dying in the country districts. There is also much scurvy there, owing to the lack of fresh food. Most of the food supplies will have to come from New York, and the imports of hay and corn meal already show large increase. The season in which rain may be expected is now past, and any considerable fall during the first six months of the year would be out of season. It is thought that it will take the islands many years to recover from the effects of this drought.

**Straw-Hat Industry—New Tramway.**

During 1910 the Government, in cooperation with the Business Men's League, established a school of instruction in hat making, and sent a commission to Venezuela (where the straw is grown) and to Porto Rico to study the best methods of manufacture. As a result the hat-making business of Curaçao is on a much stronger footing than formerly. The number of women who can make the better grades of hats has largely increased, the demand has grown, and prices have advanced. From \$59,143 in 1910 the exports of hats rose to \$129,624 in 1911.

During 1911 a new gasoline-motor tramway  $1\frac{1}{2}$  miles long was put into operation on the east side of the channel, replacing the old one-donkey car. The new road is up-to-date, with modern rails, good roadbed, and two commodious cars, each accommodating 30 passengers. The service is half-hourly—quarter-hourly in rush hours. There is no public conveyance of any kind on the west side of the channel, although that part of the town has fully half of the population.

**Sisal Culture—Phosphate Deposits.**

The prevailing drought of the past year operated rather discouragingly, but by no means disastrously on the experiments in the culture of sisal on this island. It seems proved that the plant does better with a reasonable amount of rain, but that it can live, producing less bountifully, with even less than 10 inches of rain a year. The disease which developed during the more humid seasons has apparently disappeared and the plants are now healthy, as far as can be seen. Only small amounts of sisal have as yet been shipped, not large enough to appear in the export statistics. The quality is very fine, and the Curaçao Sisal Cultivation Co. is not discouraged. The company intends to experiment with artificial fertilizers during 1912, and is ready for correspondence with fertilizer companies. No fertilizers have ever been imported, but the island affords an excellent place to test the use of fertilizers in dry climates. Many tons of goat manure are annually shipped from Curaçao to other islands in the West Indies.

A year ago hope was entertained of the resumption of work by the Curaçao Phosphate Co. These works have been idle 16 years or more, owing to a disagreement between the colonial Government and the company as to the royalty to be paid by the company. Phosphate is abundant here and of good quality, and the exports would more than double with the development of these deposits. So far this hope has not been realized, but the Government seems determined to push the problem to a solution.

**Harbor Improvement Desired—Navigation—Population.**

The demand is still great for the substantial improvement of this port, in view of the coming opening of the Panama Canal. The proposal of a foreign company, made a year ago, to make extensive improvements of the harbor, including the building of a dry dock and the widening of the channel, in return for a concession granting the right to impose port dues, was thought to be prejudicial to the reputation of Curaçao as practically a free port with light

port charges and was rejected by the Government. The only shipping change made during 1911 was the substitution of a sailing vessel for the little intercolonial steamship *Princes Juliana*, which was found to have insufficient power. The steamship arrivals during 1911 numbered 363, with a total tonnage of 850,832. Of these, 153 were American, principally arrivals of the Red D Line. The sail arrivals numbered 1,175, of 44,921 tons. Except on the Red D Line vessels and an occasional naval vessel, the American flag has practically disappeared from this port. The establishment of a parcel-post system with the United States, which took effect January 1, 1912, caused much satisfaction.

The health of the island was excellent throughout 1911, with the exception of the scurvy previously mentioned, and no cases of infectious diseases have been reported during the past three years. The population of Curaçao is given in the last official report as 32,585, Aruba 9,357, and Bonaire 6,383.

#### Exports to United States.

The principal increase in exports from Curaçao during 1911 was in the item of straw hats, which were all the production of this island, save a few from Aruba and Bonaire. The only other significant change was in skins, which showed a large increase. These are not the product of the island, but are gathered up by small schooners running to other islands and to Venezuelan ports. Much of this trade formerly went to Europe, before the duty was removed from hides in the United States. The decrease in exports of divi-divi was due in part to the drought and in part to the diminished demand in the United States. The increased European demand for hardwoods greatly decreased the export to the United States.

The exports to the United States and Porto Rico during the past two years, as invoiced at this consulate, were as follows:

Articles.	1910	1911	Articles.	1910	1911
UNITED STATES.			UNITED STATES—continued.		
Aloes.....	\$222	\$1,574	All other articles.....	\$6,107	\$5,000
Bark, mangrove.....	1,648		Total.....	203,460	304,602
Coffee.....	4,485	22,429	PORTO RICO.		
Divi-divi.....	5,430	1,040	Bark, mangrove.....	2,033	1,043
Guano.....	11,450	10,778	Corn.....	4,542	
Hats, straw.....	59,143	129,624	Fertilizer.....	876	1,399
Phosphate.....	5,621	2,834	Peanuts.....	3,182	367
Seeds, castor.....	7,871	792	Skins, goat.....	3,906	
Skins:			All other articles.....	1,861	2,351
Deer.....	1,806	3,491	Total.....	16,403	5,160
Goat.....	57,287	107,621			
Sheep.....	4,256	5,909			
Other.....		1,066			
Woods.....	38,134	11,845			

There were no exports to other American dependencies.

#### Total Trade of the Colony.

The imports into Aruba are almost entirely included in those for Curaçao. The exports from that island in 1910 were valued at \$216,904, of which \$44,895 were aloes, \$21,030 gold, and \$97,066 phosphate. The Bonaire exports totaled \$65,605, of which divi-divi made up \$29,299, charcoal, \$9,194, and salt, \$8,555. The charcoal

all came to Curaçao, as did much of the divi-divi, the latter being reexported to Europe.

The total imports and exports of the colony during 1910, the latest year for which figures are available, were as follows:

Articles.	Value.	Articles.	Value.
<b>IMPORTS.</b>		<b>IMPORTS—continued.</b>	
Animals, live.....	\$9,422	Provisions—Continued.	
Bags and barrels, empty.....	14,509	Meat products—

### INCREASE OF CURRENCY IN PARAGUAY.

[From Consul Cornelius Ferris, jr., Asuncion.]

By a law promulgated January 12, 1912, the issue of paper money of the Republic of Paraguay was increased from 32,500,000 pesos to 65,000,000 pesos. The Paraguayan paper peso is worth  $6\frac{1}{2}$  to 9 cents in American currency, varying with the daily fluctuation of the rate of exchange with Argentine gold. It is believed that the business of the country can absorb a much larger volume of currency than the amount heretofore in circulation, and that the new emission will not greatly increase the rate of exchange.

The executive authority is authorized to disburse the amount of the new emission in payment of arrears under the national budget and in meeting expenses incurred by the revolution now in progress. To this end the Government has arranged for the deposit of 10,000,000 pesos of the new emission in El Banco de la Republica, of Asuncion, for which it is to receive 500,000 pesos Argentine gold (equal to \$482,500 American currency), or at the exchange rate of 1 Paraguayan peso for 4.8 cents in American money.

An agricultural college is to be erected in the near future by the Mexican State of Sonora, but Consul Louis Hostetter, of Hermosillo, says that construction has not yet been started. The consul sends the names of two agricultural experiment stations now there.

## NOTES FROM INDIA.

[From Consul General William H. Michael, Calcutta.]

**New Stamps—Foreign Trade—Wheat Exports.**

The new postage stamps bearing the portrait of King George V were placed on sale at Indian post offices March 1.

The foreign trade of the port of Calcutta for the 10 months ended January 31, 1912, was: Merchandise—imports \$146,718,689, exports \$221,479,204; treasure—imports, gold \$19,193,975, silver \$5,870,278; exports, gold \$46,830, silver \$210,565.

The total exports of wheat from Karachi during the year ended December 31, 1911, amount to 1,041,336 tons, in contrast to 865,403 tons in 1910. These figures make Karachi the chief wheat-shipping port in the British Empire.

**Groundnut Crop—Long-Staple Cotton.**

The final memorandum of India's groundnut crop for the season 1911-12 gives the total area under this legume as 1,200,900 acres in the three Provinces which produce groundnuts to a considerable extent—Burma, Bombay, and Madras. In 1910-11 the area was 951,900 acres. The total yield is estimated at 542,200 tons of unshelled nuts, against 503,200 tons in the preceding season.

During January cotton from American seed was sold at Lyallpur and Sargodha at prices ranging in the former city from \$2.90 to \$3.16 a maund (82½ pounds), according to quality. The auction at Sargodha realized \$2.82 a maund, while native cotton was \$2.49 a maund. The cotton there was very poor. The ginning factories in Lyallpur are now buying Indian-grown American cotton at higher prices than the native fiber, and ginning it separately. This is a most important step toward the establishment of long-staple cotton as a paying crop for Indian cultivators.

[From Consul Edwin S. Cunningham, Bombay, Feb. 20.]

**Warehouse Fire—Breeding Kankrej Cattle.**

The worst fire which Bombay has experienced in a number of years occurred on the Cotton Green February 20, when 41,692 bales of cotton were destroyed or damaged. The financial loss is estimated at \$1,750,000.

Considerable interest has been shown in breeding the well-known type of Kankrej cattle in other parts of the world than India. During the last three years over 300 bulls have been purchased by Japan, and a great many others have been shipped to Brazil and other South American countries. A breeder in Cuba is now making inquiries concerning the possible importation of animals from Gujerat into that Republic.

**Uses of the Soap Nut.**

Natives of India find many uses for the dried, fleshy berries of the soap-nut tree. These "nuts" are employed as detergents, and by the dyers of India are supposed to possess special merits in the preparation of certain dyes. In Kashmir the soap nut is preferred to the European soaps for washing shawls; in other parts of the country it is specially valued for washing silks, and is used by Indian jewelers to restore and brighten silver plates and ornaments tarnished by exposure. The soap is also used medicinally.

It is only during the last few years, however, that this fruit has been exported to European markets. None, it appears, has been shipped to America, but recent inquiries at this office make it apparent that exporters are anxious to obtain a market in the United States for this article. The Indian soap nut, it would seem, corresponds to and can be put to the same uses as the quillai bark (*Quillaja saponaria*) from Chile.

#### Final Cotton Estimate.

The final general memorandum on cotton crops for the season 1911-12 for the whole of India has been summarized by the Director General of Commercial Intelligence and published in the Indian Trade Journal, under date of February 15, 1912, as follows:

This memorandum summarizes the provincial reports of the cotton crop up to February 1 and compares them with those for the two previous seasons. The total area in all territories reported on is now computed at 20,393,000 acres, which marks a net decrease of nearly 10 per cent on the 22,595,000 acres (revised figures) at this time last year. The total estimated outturn is 3,135,000 bales of 400 pounds, as against 3,853,000 bales (revised figures) for last year, representing a decrease of 18.6 per cent. To this figure might be added some 1,000 bales estimated as the production in native states in Bengal which make no returns. But doubt is thrown upon last year's estimate by a comparison of it with the sum of new exports and internal consumption, this latter being computed on a basis arrived at in agreement with the Bombay Cotton Trade Association (Ltd.). The following statement compares the figures for the last three years ending September 30:

	1909	1910	1911
	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>
Net exports.....	1,990,000	2,826,000	2,302,000
Mill consumption.....	1,700,000	1,652,000	1,551,000
Consumption outside mills (conjectural) <sup>1</sup> .....	450,000	450,000	450,000
Total.....	4,200,000	4,928,000	4,303,000
Deduct estimated yield.....	3,692,000	4,718,000	3,853,000
Deficit.....	508,000	210,000	450,000

<sup>1</sup> Substituted after renewed consultation with the Bombay Cotton Trade Association (Ltd.), for the figure of 750,000 formerly estimated.

#### Prices—Imports of Cotton from the United States.

The course of prices is indicated by the following figures, which represent the price of Broach cotton at Bombay per candy of 784 pounds, for the month of December, during the last six years: 1907, \$87.90; 1908, \$71.35; 1909, \$91.45; 1910, \$114.80; 1911, \$81.75.

The Bombay Cotton Trade Association estimates that about 200,000 bales of American cotton will be imported during the current (1911-12) season. The Bombay Port Trust report states: "The figures [for the year 1909-10] include 4,850 bales of American cotton, as against 18,885 bales in 1908-9 and 28,963 in 1907-8." From this it is apparent that the demand for the present season has considerably increased over that of any preceding year. American cotton is purchased in the usual course of trade by firms here buying in Liverpool or an American port.

[From the London Times.]

#### Upper Jhelum Canal Works.

Good progress is being made with the Upper Jhelum Canal, which, begun more than seven years ago, is one of the three sections of the great triple canal project being carried out in the Punjab. The main purpose is to enable the Upper Chenab and

Lower Bori Doab Canals to supply water in the winter months to a large tract of arid country in the Sialkot, Gujranwala, Lahore, Multan, and Montgomery districts. The canal will also incidentally irrigate some 300,000 acres in the Gujerat district.

The canal, which has a length of 88 miles, takes off from the left bank of the Jhelum at Fort Mangla, the point where the river emerges from the Himalayas. The path of the canal has to be cut through the lower hills to a depth of over 100 feet. As it crosses the natural watershed of the outer Himalayas and cuts through the northern slopes of the low hills known as the Gujerat Pabbis, it encounters numerous torrents with sandy beds and deep slopes. During the greater part of the year the beds are dry, but during the monsoon they are filled with raging masses of water. This feature of the country has necessitated high embankments, deep cuts, and many large drainage works. On the southern slopes of the Pabbis the torrents are deltaic in formation. It is calculated that the total discharge of all the torrents if they flowed simultaneously would be about 614,000 cubic feet a second, but fortunately they are not in flood together, and usually each is in flood only for a few hours at a time.

The 3 miles of cutting at the headworks at Mangla is the heaviest part of the undertaking, and excavations are carried on night and day. A light tramway being found inadequate, a broad-gauge plant is being put down, with 6 steam navvies, a like number of tank engines, between 300 and 400 tip-wagons of 15 cubic yards capacity, 15 miles of broad-gauge track, and about forty 1,000-candlepower lamps, with telephonic and telegraphic plant. Work has been in progress on the cutting since the beginning of last year, and since January there have been continuous night and day shifts. Apart from this cutting, which will not be finished until the autumn of next year, the channel excavations will aggregate a total of 780,000,000 cubic feet. Most of it is in light soil, and consists of deep cuts with long embankments, necessitating the employment of many miles of tramway track, the lead out frequently being as much as three-quarters of a mile long. These long embankments could not be safely erected until the works required to pass the torrent discharges had been constructed. The cost of the channel excavations alone is estimated at £440,000 (\$2,141,260).

[Reference to the Jhelum irrigation works was made in Daily Consular and Trade Reports on Jan. 12 and Oct. 7, 1907.]

### CHILEAN PRODUCTION OF NITRATE.

[From Consul Alfred A. Winslow, Valparaiso.]

The nitrate production of Chile during 1911 exceeded any previous record, reaching 54,784,271 Spanish quintals (quintal=101.41 pounds) against 53,596,000 quintals for 1910. The business was prosperous, notwithstanding the low prices for the first six months of the year, which in March fell as low as \$1.66 United States gold per Spanish quintal on board steamer on this coast. Prices gradually advanced to \$1.94 in October.

During the year much work was done on new nitrate works which are to be completed in 1912. The capacity of these works is about 18,000,000 quintals per annum, and Congress has authorized the President to put still more nitrate lands on the market.

The consumption of nitrate during 1911 increased 108,000 tons. The United Kingdom consumed 10 per cent more than in 1910, the United States 10 per cent, Holland 7 per cent, Belgium 7 per cent, France 4 per cent, and Italy 12 per cent, while Germany consumed about 4 per cent less. The committee in charge of the nitrate propaganda in foreign markets did some effective work during the year and is thoroughly organized for the 1912 campaign. This organization is strongly backed by the Chilean Government.

The prospects for 1912 are good, with an increase of 517,500 Spanish quintals for the first 15 days over the same period of 1911, and at better prices. Nitrate constitutes about 80 per cent of the exports of Chile, and supplies about 60 per cent of the revenue of the Government.

**BRITISH INDUSTRIAL NOTES.**

(From Consul Albert Halstead, Birmingham.)

**Motor Lifeboats and Sprinkling Carts.**

There are 19 motor lifeboats in use on the coasts of Great Britain, of which 15 were built specifically for this purpose and 4 are lifeboats of the old type converted.

The use of gasoline motors for various purposes continues to increase. One of the interesting new developments is the construction of a watering cart with a capacity of 550 gallons, equipped with a 42-horsepower engine that not only propels the vehicle but also operates a pump, which is of assistance in spreading the water as well as in filling the tank.

**Lighting Device—Puddlers' Wages—Automatic Pistols.**

A new device to light the steps of automobiles at night has been placed on the market. It is attached to the lower edge of the side door and consists of a heavy brass hood in which is a metallic-filament lamp with a small trigger by which the contact is made or broken according to whether the door is open or shut.

The annual report of the Midland Iron and Steel Wages Board, which controls wages in North and South Staffordshire, Shropshire, Lancashire, South Yorkshire, North and South Wales, Cheshire, and Derbyshire, shows that the rate of wages for puddling was \$2.13 per ton during the whole of 1911 as compared with \$2.07 in the previous year.

While provincial gunmakers have been passing through a period of considerable stress, it is stated that the automatic-pistol industry is satisfactory. A Birmingham firm has received an order for high-velocity automatic pistols for the British Navy, this same concern having also recently supplied the London police with .32 automatics.

**Coventry's Railways—Self-Starters—Motor Lawn Mowers.**

The city of Coventry, which has been growing rapidly by reason of the development of the automobile industry, decided some time ago to take over the street railway companies operating in the municipality. As a result of arbitration the price has been fixed at \$983,675 as a going concern. The costs of the arbitration, which the city will pay, are said to be about \$24,300.

The question of self-starting of automobiles has received much attention in the last few months in England since the new models of American cars have arrived. Some of the best British motor-car makers, who in their designs for 1912 provided no self-starters, are devoting no little attention to determining the best type for future designs. In this connection a prominent technical journal remarks: "Owing to their being more readily fitted to existing engines, it is anticipated that we shall see more of acetylene starters than of other kinds in the near future."

British manufacturers have been gradually improving their gasoline-driven lawn mowers so that those now on the market are said to give much satisfaction. The new lawn mowers are manufactured in sizes from 24 to 42 inches by one firm, while another company makes one of 30 inches. Sufficiently powerful motors with reliable reversing gear are used, as well as a powerful brake. In England motor lawn mowers are very popular, particularly on large estates. Special

attention is also being devoted to the construction of horse-drawn mowers for cutting rough golf courses; these are of light draft and speedy in operation.

#### **Automobiles for Japan—A Gasoline Electric Car.**

The Board of Trade Journal states, on the authority of the German consul at Kobe, that openings for business motor vehicles in Japan have much improved, as both State and communal authorities as well as transport companies intend to employ them for the carriage of passengers and goods. The vehicles should be capable of hard wear, as the roads in the mountainous districts are very bad and there is a scarcity of experienced chauffeurs and mechanics. On account of the narrow streets cars ought to have short and narrow bodies, easily steerable front wheels, strong brakes, and strong rubber tires.

The Great Western Railway Co. is operating experimentally a gasoline-electric passenger car on one of its services. This car is manufactured on designs made by the British branch of an American electric company in the Birmingham consular district jointly with the railway officials. It has a 40-horsepower gasoline engine coupled direct to the dynamos, from which the current is taken to two electric motors on the axle. It has accommodations for 44 passengers and is much lighter than the steam rail cars used by the railway company, the weight per passenger being 700 pounds as against 1,512 pounds on the steam cars. The car has a gasoline storage capacity sufficient to run it 250 miles at a speed of 35 miles per hour.

#### **Milking-Machine Trials.**

The following item from the Hardwareman and Ironmongers' Chronicle may be of interest to American makers of milking machines:

The Midland Agricultural and Dairy College has been carrying out an experiment with what appears to be a new pattern milking machine of the suction type. One of the objects seems to have been to compare it with hand milking, for both quality and quantity. We gather that the yield diminished more rapidly with the machine than it did when the cows were milked by hand; and when cheese was manufactured from the milk it was found that although the greatest possible care was taken to keep the tubes of the machine properly cleaned and in good condition good quality was much more uncertain in the case of milk drawn by machine than where drawn by hand. Milking machines are used in some large herds, particularly in America; but in our country a suitable machine for a small dairy herd has not yet met with any acceptance among dairy farmers.

Notwithstanding the criticism, it would seem that with proper introduction a suitable milking machine might be sold in the United Kingdom.

---

### **TRADE EFFECT OF INTERNATIONAL EXHIBITIONS.**

As indicating the probable effect on the trade of the United Kingdom of the Latin-British Exhibition to be opened in London in May, a contributor to the Times of that city points out that, according to French statistics, British exports to France rose from \$152,540,000 in 1908, the year when the Franco-British Exhibition was held, to \$170,643,000 the following year, \$178,877,000 in 1910, and \$197,020,000 in 1911. Similarly, it is pointed out, the Japanese-British Exhibition at London in 1910 stimulated commercial relations between Japan and the United Kingdom, British exports growing, as shown by Japanese records, from \$42,941,000 in 1909 to \$47,161,000 in 1910 (the year of the exhibition), and \$55,356,000 in 1911.

**AMERICAN RAW COTTON IN CHINA.**

[From Vice Consul General W. Roderick Dorsey, Shanghai.]

No American raw cotton was imported into China during the 1910-11 season, but between 40,000 and 50,000 bales were contracted for in October, 1911, for 1911-12. This demand for American cotton is unusual, due principally to the holding back of the Chinese cotton crop by the farmers, in the hope of higher prices, and also to the low price of American cotton, which enabled the local mill owners to assert their independence of the farmers by purchasing supplies in America for the early season operations.

When the farmers might have brought out their cotton holdings later, they were deterred because of the disturbed state of the country. Since the beginning of 1912, with quieter conditions around Shanghai, native cargoes have arrived freely, but below normal years, and exports to Japan have been resumed. Local mill consumption has been less than in preceding years because of an almost complete cessation of operations by native plants on account of financial stress attendant upon the revolution. It is not believed that the acreage of cotton has been reduced, as the farmers made good profits last season.

There will be no more orders for American cotton this season, and it is believed that a local demand for the American product can only be created in years of exceptionally low prices in the United States or of short crops or disturbed conditions in China. That purchased this season was all imported direct by European or Japanese houses through their American agents. In 1910, in addition to supplying the demands of the local mills and the millions of hand looms throughout the country, China exported 332,615 bales of 500 pounds each of raw cotton, of which 294,600 went to Japan. In the same year China imported 63,770 bales, of which 58,162 came from British India.

---

**ARGENTINE FROZEN MEAT IN NETHERLANDS.**

[From Consul Frank W. Mahin, Amsterdam.]

An illustrated pamphlet has just been published by the manager of an Amsterdam warehouse company regarding the desirability of importing frozen meat from Argentina—a subject which has been much discussed in the Netherlands lately.

The pamphlet considers the climate, pastures, methods of breeding, and sanitary conditions generally relating to the slaughter of cattle and the treatment of beef in Argentina, all the conclusions being favorable. It reasons that Argentine frozen meat has the same feeding value as Dutch meat, and is much cheaper, therefore answering the needs of the poorer classes who can not buy Dutch meat. The pamphlet says that while Argentine beef can be delivered, import duty and all other charges and expenses paid, at Amsterdam meat shops for 9 cents (United States) a pound, the dealer here pays at the Amsterdam abattoir between 17 and 18 cents a pound for first quality Dutch beef, 14½ cents for second quality, and 12 cents for third.

It is claimed that imports of frozen meat would not affect the prices of Dutch beef, as the former would be eaten by people who now use horses flesh or no meat at all.

## NOTES FROM THE RUSSIAN FAR EAST.

[From Consul John F. Jewell, Vladivostok, Siberia.]

*Japanese shipbuilding brisk.*—Travelers from Japan report much activity in the Japanese shipyards, where 100 steam trawlers are under construction, it is stated.

*A gold deposit of exceptional richness* is rumored to have been recently discovered at the Luibavinsky mine, on the River Onon, about 200 miles from Chita. It is reported that there is more than 1 pound of gold to 1½ tons of gravel.

*Railway management.*—The management of all express trains on the Trans-Siberian Railroad has been turned over to the International Sleeping Car Co. Through express trains, without transfer, have been introduced on the Vladivostok-Moscow line.

*New bank proposed.*—The Mutual Credit Banks of the Russian Far East are working for the organization of a special Siberian real estate bank. It is proposed to organize the new bank on the lines of one of the European Russian real estate banks.

*The Russian Volunteer Fleet* has purchased 5 new steamers, and will this season start an improved steamship service between Vladivostok, Kamchatka, and Anadir. While navigation is open 9 steamers will be put on and 18 round trips will be made from Vladivostok.

*Drainage machinery.*—At the request of the governor general of the Priamur district, the Department of Domains has appointed Engineer Stakle, chief of the hydrotechnical branch of the Amur Expedition, to visit the United States to observe the latest American methods of reclaiming swamps and the machinery and outfits used for this purpose.

*An agricultural school* is to be established at Nicol'sk-Ussurisk. This school will be the first of its kind in the Russian Far East. The Ussuri Cossacks also desire to establish a similar school at Station Bikin. They are willing to subscribe a fund of 10,000 rubles (\$5,150) for its establishment and to pay 1,200 rubles (\$618) per annum toward its support, and also grant 500 dessiatines (1,350 acres) of land for the purpose.

*Telegraphic communication* between Imperial Harbor and De Castries is to be established, according to the Priamursky Vedomosti. The only stations of importance on the Russian shore of the Japanese Sea and the Tartar Straits at present are De Castries and St. Olga. In 1911 the line was completed up to Sizimi Bay, a distance of 57 miles. The length of the entire line will be about 220 miles. Another line is to be constructed from Cape Pogibi to the village of Ribnoe, on Sakhalin Island.

*Government bank desired.*—A Russian paper reports that, in order to avoid a trade depression, particularly in the fishing industry, the governor general has again approached the Minister of Finance with a request for the establishment of a Government bank at Nikolaiefsk. A previous request for such a bank met with the reply that its opening would be premature and an offer to enlarge the activities of the local Government treasury. In the meantime, the local branch of the Russo-Asiatic Bank received instructions to diminish the credit extended to local firms, which resulted in much concern among the local merchants, who applied to the governor general for assistance.

**BRITISH BANK OF SOUTH AMERICA.**

A press résumé of the annual report of the British Bank of South America (Ltd.) for 1911 states that the 10,000 new shares offered in March of last year were fully subscribed and that the amount called up, \$500,000, was added to the bank's reserve fund, raising the total thereof to \$4,000,000.

The gross profits for the year, after allowing for rebate of interest on current bills and drafts, for interest on deposits, and making full provision for bad and doubtful debts and contingencies, are said to have amounted to \$1,951,330, to which should be added the balance brought forward, \$334,360. After deducting all charges of the head office and branches (\$775,515) and income tax and Government taxes in Brazil and the River Plate country (\$74,860) there remained \$1,435,315 available.

About \$250,000 of this sum was transferred to the reserve fund. No deduction was necessary for depreciation of capital employed in South America, but \$100,000 was transferred to the bank-premises account, reducing the amount thereof to \$629,600; \$50,000 was carried to the pension and benevolent fund, which, with interest at 5 per cent, now amounts to \$334,150; and \$35,000 was set apart for payment of a bonus to the staff. A dividend of \$2.90 per share was paid in September, 1911, and a further dividend of a like amount and a bonus of \$2.45 per share, both free of income tax, was recommended, making for the year a distribution of 17 per cent, free of income tax, on the paid-up capital of \$3,649,875.

The lease on the bank premises in London has been renewed for 80 years and one effected for adjoining real estate whereon a new building is being erected. The steady and continuous development of the bank's business and the progress which has taken place in the countries where it is established may, it is stated, in the near future make an increase in its capital desirable, and action along this line may be taken by its directors.

---

**NOTES FROM EASTERN AFRICA.**

[From Consul Alexander W. Weddell, Zanzibar.]

*Faster mail service.*—Owing to the development of the German East Africa Central Railway, from Dar-es-Salaam, mails from the coast reach Ujidi, on Lake Tanganyika, in 20 days.

*New bank opened.*—Local newspapers announce the opening at Tanga, German East Africa, of a branch of the Handelsbank of East Africa. This bank has been formed in Berlin with a capital of 3,000,000 marks (\$714,000).

*Busoga Railway.*—Following a notice issued by the Governor of the Uganda Protectorate, the newly opened railway line from Jinja, on Lake Victoria, to Kakindu and Namasagali, toward Lake Kioga, will be known as the Busoga Railway. The formal opening of this railway took place on January 1, 1912. Since that date two steamers, a tug, and several lighters, have been shipped in sections to Kakindu, where they are being put together for use on Lake Kioga. [The announcement of the opening of this railroad appeared in Daily Consular and Trade Reports for Feb. 27, 1912.]

## BRAZILIAN BUSINESS NOTES.

[From the South American Journal.]

**City improvements.**—The municipality of Cruzeiro, Sao Paulo, proposes to negotiate a loan of \$100,000 gold for the repurchase of its debt and to cover improvement works.

**Railway shops.**—The Paulista Co., it is stated, has sold to the Sao Paulo Railway its workshop of Jundiaby for \$320,000, and has established its new workshops at San Carlos.

**New bank, tramways, etc.**—A French capitalist, M. Homolle, is in Cuyoba, capital of the State of Matto Grosso, with a view to establish a bank and to acquire several concessions and enterprises, notably the contract for the tramways of that town.

**Railway line.**—Engineer Brant Carvalho had requested from the government of Sao Paulo a concession to construct a railway line which will join the Alto da Serra to S. Bento de Sapucahy, passing through Mogy das Cruzes.

**Patents.**—Senhor Soraes, jr., General Director of Industry and Commerce, who had been sent to Europe to study the service of granting of patents and provisional patents, had been charged by the Minister of Agriculture to elaborate the law which will be submitted to Congress in order to insure its conformity with international conventions.

**Foreign trade.**—The value of the exports from Brazil during 1911 amounted to \$325,271,468, as compared with \$310,006,438 in 1910 and \$308,331,829 in 1909. The value of the imports into Brazil for 1911 was \$256,941,545, as compared with \$235,574,837 for 1910 and \$179,690,125 for 1909. During 1911 the value of the following exports increased over that of the previous year: Coffee by \$71,711,076, cacao by \$1,296,985, and cotton by \$404,835, while rubber decreased by \$48,851,816, and tobacco by \$3,197,205. The value of the excess of exports over imports during the last three years has amounted to \$271,403,228.

**Railroad ties.**—The lack of available labor in this country is exemplified by the fact that recently the Madeira-Mamore Railway imported no less than 100,000 sleepers from Australia. When it is considered that the line runs through forests where there are over 200 varieties of trees this seems rather singular. The company, however, maintains that it is cheaper for it to import as stated than cut down trees and make sleepers on the spot, owing to the fact that labor is scarce and dear. A London contemporary recently remarked that Brazil, which is one of the richest timber countries in the world, is also a large importer of that commodity.

[From the Brazilian Review.]

**Bank notes.**—The American Banknote Co. embarked eight cases of notes for the Caixa de Amortisação on the steamship *Verdi*. The notes consist of 250,000 of 10\$000 and 150,000 of 50\$000 each (value \$3.24½ and \$16.22 each in American currency).

**Flour.**—Canadian flour shippers are likely to find an active competitor in the Argentine Republic, which is making a bold bid for the flour trade of the West Indies. In the Bluebook of Barbados for 1910-11 Argentine flour appears for the first among the imports. The Argentine Republic supplied Barbados with 3,751 barrels of flour, while the United States furnished the island with 47,400 barrels and Canada with 29,660 barrels. Argentine flour was also delivered in Trinidad last year. Several steamship lines, including the Booth Steamship Co., Lamport & Holt, the Lloyd Brasileiro and the Houston Line, call at one or more of the West Indian islands on their voyage between South America, New York, and Boston.

## KRUPP PURCHASE OF NORWEGIAN ORE.

[Press dispatch from Christiania.]

The great Krupp Iron Co., of Essen, Germany, has appeared on the industrial horizon of Norway. The Dundert Iron Ore Co., founded in 1892 to work the large ore deposits in Nordland, met with great difficulties, sinking \$11,000,000 of Anglo-American capital. The property embraces nearly 100,000,000 tons of ore. After a prolonged suspension, work again has been begun at the mines, the Krupp company offering to invest \$1,000,000. It is calculated that during the first year 200,000 tons of ore will be produced. Of this amount the Krupp concern wants half and its offer has been accepted. These are the largest mines in Norway and the prospect of their successful operation and expansion is of the deepest interest and importance to the country.

**ROUMANIAN STATISTICS.**

[From American Minister John B. Jackson, Bucharest.]

The following statistical information just obtained from the Roumanian Ministry of Agriculture may be useful to American manufacturers who wish to increase the exportation of agricultural machines to this country.

In 1911 there were 6,021,168 hectares (hectare=2.47 acres) under cultivation in Roumania, of which about 30 per cent was in farms of an average of 486 hectares, while the remaining 70 per cent was in farms of less than 100 hectares with an average of 3.6 hectares, there being 3,763 farms of more and 1,109,539 of less than 100 hectares. There are several hundred farms ("exploitations") of more than 500 hectares. There are in all 29 agricultural schools or experimental stations. More than 5,000,000 hectares are devoted to the production of cereals, more than 2,000,000 being to corn (maize) and almost an equal surface to wheat.

**A Decennial Census.**

A law has been passed ordering the taking of a general census of the population of Roumania every 10 years, beginning with 1912, at a date to be fixed by royal decree. The estimated population of Roumania at present is about 7,000,000, based on statistics showing the excess of births over deaths, without taking immigration into account. The last census was taken in December, 1899, and it is contemplated to take the next one on December 14, 1912.

**MALAYSIAN RUBBER STATISTICS.**

[From Vice Consul General David M. Figart, Singapore, Straits Settlements.]

In a supplement to Grenier's Rubber News particulars are given regarding 67 of Malaya's leading rubber companies, and the following interesting facts have been deducted therefrom:

The capital of the 67 companies is \$25,232,000 (United States currency), with an average issued capital for each of \$376,600. The total planted area is 133,820 acres, or an average of 1,997½ acres for each estate. This would give a capitalization value per acre of about \$190.

The total output at 400 pounds per acre will be 53,501,300 pounds, or 798,527 pounds for each estate; at 600 pounds per acre, which is possibly a little too high for an ordinary plantation, the yield will be 80,256,000 pounds, or an average of 1,197,850 pounds. With 1 shilling (24 cents) per pound profit, at 400 pounds per acre, the total profit will be \$12,840,312, or \$191,645 for each estate, giving an earning capacity of 51 per cent. At 600 pounds per acre, the profit will be \$19,261,440, or \$287,474, for each estate, representing an earning capacity on the capital of 76 per cent.

At a meeting of the Planters' Association of Malaya, at Kuala Lumpur, on January 7, 1912, it was decided that the association should be represented in the New York Rubber Exhibition, to be held this year.

**Brazil Employs American Agricultural Expert.**

The Department of Agriculture announces that Mr. C. E. Craig, an instructor in agronomy at the School of Agriculture of Purdue University, Lafayette, Ind., has been engaged as agronomist in the Polytechnic School at Porto Alegre, Brazil.

*New British consulates* are urged by the London Chamber of Commerce to be established in Russia at Omsk, Nizhni Novgorod, Novorossisk, Tomsk, Kasan, and Astrakhan.

**FREE MARKETS A SUCCESS.**

[From American Minister Nicolay A. Grevstad, Montevideo, Uruguay.]

The experiment with free markets established at Montevideo (described in Daily Consular and Trade Reports for February 27, 1912) appears to have met with greater success than was expected by the conservative element of the community. The patronage by the people of small or moderate means has been general and steady, owing to the undisputed fact that some of the staple articles of food, for instance, certain grades of meat, are obtained at the free markets at notably lower prices than those prevailing before these markets were established.

The newspaper *El Tiempo*, of Montevideo, says that the free markets have begun to demonstrate their influence toward lowering the cost of living. Merchants and butchers who did not choose to establish booths in these public markets have found themselves compelled to meet the new competitor by lowering their prices. In an editorial this paper predicts further price reductions as a result of purely private efforts prompted by the free markets. The largest slaughtering house in the city stands ready to furnish cheaper meats in much greater quantities than at present; the retail butchers, by some system of cooperation, expect to reduce their expenses, so that they can sell cheaper, and other organized efforts, backed by men of means, are likely to be made to lower the price of meat to the poorer people. These notable developments are attributable to the competition of the free markets and the lessons they have taught.

It is the prevalent opinion here, expressed also by *El Tiempo*, that the rise in the prices of necessities in recent years has been caused by speculators. Whatever may be the value of this view, it is apparent that the price lowering which the free markets have brought about has been due to the elimination of middlemen's profits; in some instances the services of two middlemen (jobber and city seller) are dispensed with in the handling of articles sold in the free markets, and it is chiefly the consumer who gets the benefit of this saving of costs.

---

**CANADIAN HAY EXPORTED TO THE UNITED STATES.**

[From Consul Fred C. Slater, Sarnia, Ontario.]

The exportation of hay from Canada to the United States has increased greatly in the last 2 or 3 years and during the 10 months ended January 31, 1912, amounted to 516,361 tons, valued at \$3,883,155. The Provinces furnishing this hay were as follows: Quebec, 365,182 tons; Ontario, 142,819 tons; New Brunswick, 7,054 tons; Prince Edward Island, 1,245 tons; Nova Scotia, 56 tons; and Yukon, 5 tons. During the same period the United States exported 14,573 tons, valued at \$237,272, to Canada, most of this going to British Colombia and the Yukon Territory. The shipments from this consular district, as indicated by the invoices certified at this consulate, amounted to \$55,397 in 1911, as against \$1,754 in 1910 and \$365 in 1909. The better quality of hay is grown in this part of Ontario and sells for \$12 to \$16 a ton on the local market. With the freight, duty, and profits of the various dealers, the consumer in the United States must pay \$25 to \$30 per ton.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8482. Guns and bicycles.**—An American consul reports that a firm in a Mediterranean country desires to be put in touch with some American firm with a view to importing guns and bicycles. Correspondence should be direct with the inquirer and must be in French.
- No. 8483. Corundum.**—A business firm in a European country has written to an American consulate that it would like to communicate with firms in the United States able to supply rock corundum, as well as artificial corundum products. The firm writes that these articles are necessary for it as raw material for the manufacture of emery wheels.
- No. 8484. Currants.**—A currant exporter in Greece informs an American consulate that he desires to secure some reliable American firm to represent him in the United States in the currant trade. Correspondence should be in French.
- No. 8485. Cotton yarns.**—American Minister John B. Jackson, of Bucharest, Roumania, reports that the Roumanian Ministry of the Interior will receive bids until April 16, 1912, for 12,000 kilos of cotton (yarns); 6,000 of No. 12 and 6,000 of No. 10, for use in making military cloth in the prison at Craiova. Detailed information as to the requirements and conditions can be obtained upon application at the "Direction Generale" of the ministry, No. 3, Strade Vasile Lascari, Bucharest, Roumania. The yarn must be of a quality and strength suitable to the use to which it is to be put. While the quantity is small, there is a possibility that through obtaining a contract to supply it useful connections would be established and more important contracts could be obtained in the future if the matter were to be followed up.
- No. 8486. Representation of American firms.**—A business man in England has made known to an American consular officer his desire of obtaining the representation, if possible, of one or more American firms, preferably engineering, for Great Britain. He states that he will furnish satisfactory references; that he has recently terminated an eight years' appointment as manager of the Japanese branch of a British firm, and that he has good connections in England.

## PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

- No. 560. Panama Canal supplies.**—Sealed proposals, in triplicate, will be received at the office of the General Purchasing Officer of the Isthmian Canal Commission, Washington, D. C., until April 18, 1912, for furnishing the following supplies, covering the annual estimate for the period ending June 30, 1913: Galvanized roofing, steel rope, nuts, babbitt metal, pig iron, pig tin, slab zinc, pig lead, solder, hand cars, push cars, wheelbarrows, shovels, picks, monkey wrenches, pipe wrenches, nails, hack-saw blades, hose clamps, hammer and pick handles, mop handles, corn brooms, stable brooms, scrubbing brushes, lanterns, garbage cans, brass unions, manila rope, cotton canvas, leather, toilet paper, fire clay, rosin, caustic soda, and crude carbolic acid. (Circular No. 693.) Tenders are also invited until April 8, 1912, for supplying hand cars, push cars, nuts, nails, hack-saw blades, hammer handles, cotton waste, manila rope, cotton canvas, metallic brown, and soap. (Circular No. 694.)
- No. 561. Aluminum canteens and cups.**—Sealed proposals, in duplicate, will be received at the Rock Island Arsenal, Rock Island, Ill., until April 8, 1912, for furnishing and delivering at the arsenal 23,085 aluminum canteens and cups, complete, in accordance with specifications and sample, which can be obtained from the commanding officer at the arsenal.
- No. 562. Bituminized fiber.**—Sealed proposals, in duplicate, will be received at the office of the Chief Signal Officer, War Department, Washington, D. C., until April 8, 1912, for furnishing the Signal Corps one carload conduit, bituminized fiber, orangeburg, 3-inch, socket joint (approximately 25,000 feet), including 20 gallons of coupling mixture. (Proposal No. 577.)
- No. 563. Dredging.**—Sealed proposals for dredging in Connecticut River below Hartford, Conn., will be received at the United States Engineer Office, New London, Conn., until April 16, 1912, and then publicly opened. Information on application to A. E. Waldron, Captain, Engineers.

## FOREIGN COMMERCE OF HAVRE.

[By Consul James E. Dunning.]

The improvements in the port of Havre, France, which, when completed, will cost approaching to \$20,000,000, are advancing satisfactorily.

The undertaking includes the extension of the present port southward into the Seine. The deepening of the main entrance channel is nearly completed, and thus the largest passenger steamers may enter the outer portion of the port at all stages of the tide. The Floride lock was completed and opened for service in October.

### Additional Service, Havre to New York—Mail Subsidies.

These enlargements were made necessary to accommodate the new French liner *La France*, which will enter the Havre-New York service early the coming spring. This ship is the largest constructed in France. It is 715 feet 3 inches in length, with a displacement of 27,000 tons, a gross tonnage of 23,000, and with turbines employed as motive power. The *Rochambeau*, another new vessel, began operations between Havre and New York September last.

The mail subsidy granted the Compagnie Generale Transatlantique for its Havre-New York service in 1897 has been continued to the end of the present year. [A copy of the convention accompanied this report.] The mail subsidy granted the French Line for its fast passenger service between Havre, the West Indies, and Mexico was renewed at the beginning of 1911. In consequence, the company announced the laying down of two new fast steamers for this service.

### French Merchant Marine.

The total number of steam vessels above 100 tons in the French merchant marine in 1911 was 616, with a gross tonnage of 1,471,333 and a net tonnage of 855,093. There were 281 vessels of 51,642 gross tons under 100 tons. French economists and shipping experts profess considerable anxiety over the condition of the merchant marine,

pointing to the fact that France stands at the foot of the list of nations in number of merchant steam vessels, and being led by Japan, Norway, Germany, England, and the United States.

In November, 1911, the French Senate approved the new law for the autonomy of the great French ports, by which each will be rendered independent of appropriations made for or obligations borne by the others.

#### The Coffee Market.

The prices of coffee in the Havre market increased considerably compared with 1910. The average price per bag during December, 1910 and 1911, respectively, of the several grades entering into this trade was as follows: Porto Rican, \$17.47 and \$20.94; Malabar, \$16.79 and \$19.40; Mexico, \$15.83 and \$19.69; Port au Prince, \$14.76 and \$17.37; and Rio Superior, \$14.38 and \$17.27.

The total imports of coffee during 1911 amounted to 1,214,416 bags, against 1,574,351 bags the previous year. The exports amounted to 1,525,687 and 1,662,066 bags for the two years, respectively. The stock on hand at the end of 1910 was 2,566,650 bags, against 2,255,379 bags in 1911. Of the total imports of coffee in 1911, 1,897,809 bags were Brazilian, 126,241 bags Haitian, 169,854 bags from Central American countries, and 61,475 bags from India, Ceylon, and Malabar.

#### Imports and Sales of Cotton.

Conditions in the cotton trade were satisfactory, especially the last six months of 1911. Large supplies of American cotton were received, thus protecting the industry from undue speculation. The large American crop influenced the market prices, as spot cotton sold at \$18.72 per 100 pounds in January, \$19.10 in April, and dropped to \$11.60 in October. Full middling decreased from \$19.25 in January and \$19.83 in May to \$12.16 in December.

The imports of American cotton during 1911 amounted to 1,023,651 bales, against 716,253 bales in 1910 and 1,151,253 bales in 1909. The following table shows the receipts and sales of cotton at Havre during 1910 and 1911 and the stocks on hand at the end of each year:

Countries.	Receipts.		Sales.		Stock on hand.	
	1910	1911	1910	1911	1910	1911
	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>
United States.....	716,253	1,023,651	996,901	984,448	180,428	219,631
India.....	32,822	22,025	33,268	20,668	1,545	2,157
Other countries.....	34,046	35,959	39,733	31,682	3,024	5,037
Total.....	783,221	1,081,635	1,069,902	1,036,798	184,997	226,825

#### Market for Lumber—Immigration—Industrial Enterprises.

Havre continues to be one of the important markets of Europe for building and cabinet woods, the trade in which was active during 1911. There was a continuous demand for mahogany, cedar, lignum-vitæ, walnut, ebony, tulip, box, and similar woods, the imports (with the exception of rosewood) increasing and the prices advancing. The following were the principal imports of cabinet makers' woods during 1911, in metric tons: Mahogany, 17,601; tulip, 6,421; boxwood, 2,226; ebony, 1,173; pencil wood, 869; lignum-vitæ, 701; and maple 605. Pitch pine is the principal North American wood imported, but it reaches the market from British sources.

The number of passengers leaving the port for the United States during 1911 was 60,440, composed of 4,723 first-class, 16,839 second-class, and 38,878 third-class passengers. Those arriving at Havre from the United States numbered 42,606, consisting of 4,194 first-class, 7,899 second-class, and 30,513 third-class passengers.

The only manufacturing establishments of importance in the city of Havre are the building of torpedo vessels and other small steamers, the manufacturing of guns, armor plate, and electrical appliances, and the canning of American salmon and other foods, the latter being an American enterprise recently started.

#### Revenue from Government Railway.

The deficit of the Western State Railway, owned by the Government, and the line which connects the Havre district with Paris and central Europe, amounted in 1911 to about \$12,000,000, as against \$8,000,000 during 1910 and \$3,000,000 during 1909, which was the highest mark reached under the private ownership relinquished to the State in 1909. There was, however, a large increase of revenue, against which large sums were expended for improvement of permanent way, rolling stock, higher wages, pensions, and employees' indemnities. An extensive scheme of terminal improvements and suburban electrification is in progress by the Government.

The project for a second railway line between Havre and Paris is being energetically advanced by the chamber of commerce, and in consequence is likely to materialize. More than 70 per cent of the French goods shipped to the United States goes via Havre and at times the railway facilities are inadequate.

#### Exports to the United States—American Horses.

The total exports to the United States invoiced through the Havre consulate during 1911 were valued at \$3,184,192, a slight increase over the preceding year. The following were the principal articles for the two years:

Articles.	1910	1911	Articles.	1910	1911
Aeroplanes.....	\$1,686	\$7,992	Horns, ox.....	\$12,134	\$4,185
Alimentary pastes.....		57,758	Horses.....	95,376	70,723
Antimony.....	72,733	58,829	Liquor: Benedictine.....	96,195	165,437
Automobiles and parts.....	5,970	1,666	Macaroni.....	60,759	
Balloons.....		2,027	Oils:		
Bristles.....	6,428	64,499	Colza.....	41,187	59,193
Bronze, sheet and ingots.....	1,409	10,685	Peanut.....	15,308	1,731
Casim.....	37,648	23,971	Oleostearin.....	16,919	7,209
Cheese:			Pebbles, flint.....	75,020	42,478
Brie.....	5,216	3,575	Pepper.....	3,760	17,299
Camembert.....	176,472	215,138	Quartz.....	219,664	
Font l'Evêque.....	4,636	5,028	Rubber, crude.....	1,289,780	1,649,120
Providence.....	2,531	2,759	Seeds:		
Roquefort.....	18,883	1,324	Clover.....	82,683	61,751
Other.....	8,252	4,266	Hemp.....		12,285
Cocoa.....	24,862	82,487	Vegetable.....		10,521
Copper, ingots and scrap.....	48,922	1,477	Shells.....	12,074	22,404
Cordage, old.....	16,317	110,294	Thread.....		13,338
Drugs.....	240	10,013	Tin ingots.....	6,601	67,012
Dye-wood extracts.....	64,694	15,734	Trees and plants.....	35,063	54,847
Feathers, culture.....	56,550	30,229	Wine.....	7,599	7,338
Furniture, antique.....	922	15,641	Wood, ebony.....	6,935	20,548
Glycerin.....	59,753	12,014	All other articles.....	157,315	23,238
Hides and skins:			Total.....	3,033,774	3,184,192
Cow.....	63,942	99,361			
Goat.....	85,411	26,028			

Although no shipments of quartz gold to the United States are credited for 1911, the usual quantity was exported. These exports

go to England and are transshipped to the United States, therefore are credited to the last port of departure. Although the value of the cheese shipped during 1911 was greater than for the previous year the quantity was smaller. The increased value was on account of the foot-and-mouth disease among milk-producing cattle.

During 1911 considerable shipments of American horses were made into France for breeding and racing. These stables are brought into the country on account of the decline of racing in the United States, and toward the end of 1911 plans were made to find permanent farms for these animals in the Havre district.

Statistics showing the imports from the United States into the port of Havre will not be available until later in the year.

### NEW SYSTEM FOR GENERATING GAS.

[From Consular Agent U. W. Burke, Fremantle, Western Australia.]

The "Autogene" air-gas system, invented by P. C. Booty, of Perth, Western Australia, is a device for manufacturing gas from gasoline and air—98 per cent air and 2 per cent gasoline vapor.

The apparatus is simple, consisting mainly of a patent valve and carburetor by means of which gas of uniform quality is automatically supplied to the service irrespective of the fluctuation of the load. No more gas is generated than is needed for immediate consumption. Connected to the valve is an air pump of simple form surmounted by a gasoline tank and air holder. The pump may be operated by a weight-driven, electric, or water motor, or by a hot-air motor supplied with gas from the system.

The gas produced is not poisonous, and as there is no storage of gas the insurance companies do not charge extra premiums. The mixture is used for lighting, heating, and power purposes. The light is said to be white and of a very good quality, and there is a total absence of smoke or smell. As the system supplies its own air there is no depletion of oxygen in the room where the gas is being consumed. The outfit is capable of producing 1,200 cubic feet of gas for each gallon of gasoline used.

The system seems suited for a variety of purposes, such as laundry work, mining, metallurgy, laboratory work, heating, and cooking. It makes it possible for a family living far from a gas works to enjoy the advantages of a gas ring, griller, gas stove, bath heater, etc.

### Electrical Exhibition at Boston.

Under the auspices of the Edison Electric Illuminating Co., of Boston, Mass., an electrical show will be held in that city in the Mechanics Building from September 28 to October 26, 1912. The exhibition is to be held solely for educational purposes, and practically all the electric lighting companies in New England will take an active part in the enterprise. It is also expected that foreign manufacturers in the electrical field will be represented at the show, either by exhibits of machinery or by displays of catalogues, illustrations, and other literature, for which space will be allotted. Further information in regard to the exhibition may be obtained by addressing H. W. Moses, manager, 1912 Boston Electric Show, 39 Boylston Street, Boston, Mass.

**CONSTRUCTION WORK ABROAD.****CANADA.**

(From Consul General David F. Wilber, Vancouver.)

**Opportunities from British Columbia Construction Enterprises.**

Firms in the United States which desire to take advantage of the building activity in British Columbia for the sale of construction supplies or equipment are again urged to secure personal local representation here. This is particularly necessary in the case of manufacturers of material, devices, or equipment for use in construction work. At the time that news of most of the building enterprises becomes public here, and especially before the announcement can be made in Daily Consular and Trade Reports, local dealers have usually arranged to place their lines. Those at a distance are usually prevented from bidding, where tenders are called for, by the very short period that generally intervenes between the call for tenders and the closing of tenders, both on public and private works, even should they be promptly advised.

A great deal of building is going on in Vancouver. During February the permits in Vancouver alone were 270 for buildings of the value of \$1,200,740, as follows: Offices and stores, \$423,235; apartments, \$305,605; factory and warehouses, \$152,535; dwelling houses, \$292,105; repairs, \$27,260.

**How American Equipment May Be Introduced.**

Many American devices and specialties used widely in the United States and having much to commend them are unknown here, to judge by their absence from new buildings and from the advertising and displays of hardware and other dealers. A vigorous campaign inducing local building supply dealers to "feature" these specialties and architects to include them in the building plans seems to me to be the only way of getting a proper share of the opportunity that exists. Probably too much emphasis can not be given to the point that architects should be interested. They have the very best occasions to exhibit such specialties to the persons who intend to build. It is unnecessary for them to commend or advance any particular make of article, but they can prevent the builder of a house or other structure from not incorporating, either through ignorance or by oversight, devices that would increase the building's usefulness, convenience, or comfort to the owner or add to strength or beauty of the building. A list of the local architects has been forwarded and may be had from the Bureau of Manufactures by any American concern interested. I would suggest, however, that, if possible, salesmen should call on the architects rather than attempt to interest them by mail, and that the activity of the architects and dealers in building supplies should be carefully "followed up." This may cause incommensurate expense at first but will pay in the long run. Direct personal representation is highly desirable, even though articles may be sold partly or entirely through jobbers, to "jog" the salesman from time to time, to arrange for concerted and efficient display and advertising, and to prevent other makes being substituted.

While this is less true of machinery and some sorts of expensive equipment, it is a plan of much merit even for such lines. I have noticed that the firms whose goods are used locally are the firms

which have local, tax-paying members of the community interested in their sale. Several American firms which are following the plan outlined (from their nearness to the market and the efficiency with which the plan is carried out) have driven their English and other competitors from the field in their respective lines.

One of the most successful representatives of an American line here, though his product is sold only through the jobbers, spends all his time in the field calling on the retail dealers and others interested, getting their orders (to be filled by the jobbers), arranging for public displays, advertising, etc., concertedly by the different retailers, for which his firm furnishes advertising, display cards, free samples, etc., and seeing that no complaints regarding the goods or the methods of the firm are allowed to pass unattended to or unexplained. The competition he met at first was keen. Now he practically has the field to himself.

In all the lines connected with building, the British Columbia field could be profitably worked by many American firms who have heretofore given it little or no attention, if they go after the business in a vigorous manner and along proper lines. Some suggestive trade notes follow:

**Smelter.**—F. M. Sylvester, assistant general manager of Granby Consolidated Mining & Smelting Co. (Grand Forks, British Columbia) is quoted as stating that the proposed smelter at Goose Bay, British Columbia, will be built this spring for treating northern British Columbia and southeastern Alaska custom ores, besides the company's Hidden Creek copper-gold ore.

**Paper mill.**—It is stated that C. B. Pride and associates, of Spokane, Wash., have definitely announced that they will erect a \$300,000 pulp and paper mill at Nelson, British Columbia, which is to have a capacity of 35 tons daily, manufacture envelopes, paper boxes, etc., in addition to pulp and paper, employ 300 hands, and be operated by electrical power generated from the Kootenay River by a \$100,000 power plant which they will erect.

**Railway.**—It is announced from Prince Rupert that the Pacific and Peace River Development Syndicate is to start building a railway this summer from Dunvegan to Bella Coola, over the shortest route from the Peace River district to the Pacific, to be completed within two years.

**Sand and gravel plant.**—It is reported that the Port Moody Sand & Gravel Co., of Port Moody, British Columbia, will establish a rock quarry, sand and gravel bunkers, wharves, crushers, pumping plant to obtain sand from the bay, etc., at that place, to be operated by electric power supplied by the Western Canada Power Co., of Vancouver.

**Municipal telephones.**—It is stated that Penticton, Summerland, and Kelowna, British Columbia, will establish municipal cooperative and automatic telephone service in place of or in addition to the Okanagan Telephone Co. (Mr. Ronnie, secretary, New Westminster, British Columbia). A. L. Moreland, of the Summerland Board of Trade, appears in the reports as one of the movers for the new service.

**Cable telephone line.**—It is stated that President Farrell, of the British Columbia Telephone Co., will let the contract for a two-pair \$150,000 submarine telephone cable, to connect Vancouver and Nanaimo (30 miles distant), to an English firm.

**Telephone train dispatching.**—It is reported that the Canadian Pacific Railway is proceeding rapidly with its plans for train dispatching on its western lines by telephones.

**New telegraph lines.**—Of 4,500 miles of new telegraph lines to be strung by the Canadian Pacific Railway Co.'s telegraphs, about 1,000 miles will be in British Columbia.

**Oil fuel.**—Not only is oil-burning installation being made on the Grand Trunk Pacific Railway and Canadian Pacific Railway coastwise steamers, but the latter road is planning to use oil as fuel on its western railway lines. Locomotives equipped for oil fuel for the Esquimalt and Northern subsidiary line (on Vancouver Island), it is reported, are to be supplied shortly.

**Oil tanks.**—The Canadian Pacific Railway will erect a 40,000-barrel oil tank at Esquimalt, British Columbia, for fuel for the Esquimalt & Northern Railway.

**Electrification.**—It is rumored that the Canadian Pacific Railway Co. will electrify its line between Castlegar Junction and Rossland, British Columbia, a representative

of the General Electric Co. having assisted in the investigation, and that tenders have been called for.

**Substation.**—It is rumored that the British Columbia Electric Railway is planning a \$100,000 power substation at the intersection of Earl's Road and its New Westminster interurban line.

**Gas plants.**—The North Vancouver Gas & Coke Co. (North Vancouver, British Columbia) and a London, England, firm are seeking a franchise from that municipality for establishing a gas-lighting system, and action is pending. The city of New Westminster is considering a by-law appropriating a sufficient sum to establish a municipal gas plant. I understand that there are a number of towns in British Columbia which could support gas plants or other lighting systems.

**Power plant and laundry.**—Building permits have been issued for a \$120,000 structure for the Hotel Vancouver, to house a power plant and laundry.

**Laundry.**—The Victoria Steam Laundry, Victoria, British Columbia, is erecting a new laundry.

**Bed factory.**—It is reported that the Dominion Bed Manufacturing Co., which has a branch in Kent, Wash., will soon establish a branch factory here, capacity about 250 beds per day.

**Brass works.**—The British Columbia Brass Works (Ltd.), capital \$40,000, of New Westminster, British Columbia, is to erect a small plant.

**Sawmill.**—It is reported that the Canadian United Lumber Co. (Ltd.) will immediately erect and equip an electrically driven modern saw and planing mill at Coquitlam.

**Machine shop.**—A \$40,000 machine shop equipment is to be bought for the city of Vancouver water system, under the direction of Superintendent Maddison.

**Fishing vessels.**—It is reported that A. L. Hager, western manager of the New England Fish Co., of Boston, Mass., who will leave shortly for Boston, will purchase two fishing boats of the *Gloucester* type, about 125 feet over all, 25-foot beam and 12-foot draft, equipped with heavy service auxiliary gas engines.

**New ferry.**—Plans and specifications have been presented at North Vancouver for the new ferry steamer and wharf amounting to \$156,000; \$130,000 to be expended on ferry No. 4, the construction of which will be commenced on June 1 and completed before May 1, 1913.

**Motor fire equipment.**—Nanaimo will probably adopt a by-law appropriating \$15,000 for motor vehicles for its fire department. Presumably tenders will be called for.

[From Consul Abraham E. Smith, Victoria, British Columbia.]

#### Building Progress in Victoria.

The bank returns and building permits for January and February show that the remarkable growth of Victoria is likely to be continued during 1912, and that the figures will exceed those even of the past two years. Statistical comparisons follow:

	Bank clearances.			Building permits.		
	1910	1911	1912	1910	1911	1912
January.....	\$7,390,767	\$9,013,716	\$11,902,510	\$128,985	\$151,455	\$319,885
February.....	6,404,570	9,078,881	12,610,627	151,700	182,940	1,671,070
Total.....	13,795,337	18,092,597	24,513,136	280,745	334,395	1,990,955

Plans are out for the new large seamen's home near the ocean wharf, with accommodations for 30 or 40 seamen. While erected under the auspices of the British and foreign sailors missions, it will be open to seamen of all nationalities.

Contract has been awarded to Parfitt Bros. for the new Anglican St. John's Church on Quadra, cost, including electric and plumbing fixtures, over \$100,000. Excavation and basement walls are completed, the edifice to be finished in October. The indirect heating and ventilation systems will be used.

A \$17,000 apartment house, with stores, has been commenced. The contract for the new \$373,000 high school has been let to a local company, the electrical work costing \$17,700 and plumbing \$11,500,

while an 8-room \$25,000 school building has also been ordered. The Sound Construction Co., of Seattle, has secured contract for a \$100,000 4-story store and office structure with basement, for Dr. O. M. Jones.

The Grand Trunk Pacific Railway Co. has ordered 10,000,000 feet of lumber, mostly bridge-building material, from the Victoria Lumber & Manufacturing Co., of Chemainus, for delivery in Manitoba. The order will fill 50 cars and will be shipped chiefly by the Great Northern.

Considerable interest has been aroused in Victoria by the announcement that the Canadian Pacific Railroad is to be double-tracked between Spences Bridge and Hope, from which latter point the double track will be later continued to Vancouver. The proposed improvement as already laid out will involve an expenditure of \$20,000,000 to \$25,000,000, and the work, it is understood, will be commenced this autumn.

[From Consul R. S. Chilton, Jr., Toronto.]

#### **Competitive Plans for Technical School.**

The board of education invites competitive plans for a new technical high school to be built in Toronto. The competition is restricted to architects or firms of architects practicing in Canada; \$1,000 will be paid to the winner of the competition, to be merged in the amount of the commission when the work goes on, while \$800 is to be paid for the second and third best designs. The architect will receive 5 per cent commission on the whole cost of the building proper as distinct from the engineering work.

The site is 300 by 813 feet, and the building is not to exceed 220 feet in depth. It is not to exceed 5 stories in height. A severe, practical, and dignified treatment of the exterior is desired. Great weight will be given to the question of disposition of glass area of window and roof lights.

The building will be used for a night school as well as a day school for both sexes. The building is to contain classrooms, lecture rooms, laboratories, workshops, drafting rooms, gymnasium, baths, administrative offices, power plant, coat rooms, locker rooms, lavatories, and other necessary accessories, and must be thoroughly fire-proof. It is intended to expend about \$900,000 in the building and equipment. Intending competitors should address Dr. A. C. McKay, principal, Technical High School, Toronto.

Tenders for materials and construction will no doubt be invited in due time. A copy of the printed report of the advisory industrial committee, giving full particulars of the competition is forwarded [and will be loaned to those interested by the Bureau of Manufactures].

[From Consul Harry A. Conant, Windsor, Ontario.]

#### **Many New Buildings and Factories.**

With new buildings valued at more than half a million dollars already in prospect, Windsor contractors are preparing for the opening of the season in the expectation that the total volume of building for 1912 will far exceed that of any previous year.

Among new buildings are business blocks with an estimated value of \$150,000. Most important is the \$80,000 Masonic temple building, for which ground will soon be broken. A \$50,000 business block is contemplated, and contracts have been awarded for two smaller blocks and another at \$9,000.

Work is about to start on a \$50,000 public school and St. Alphonsus's separate school, to cost \$35,000, while a \$30,000 academy has been decided on by the Ursuline Sisters.

It is estimated that \$300,000 will not cover the cost of new residences for which plans are already being made. One building company alone is to erect 150 houses and another 75 houses. In the east end of the city alone 100 houses are to be built this spring on new streets opened last year.

Many new factories will be erected. A new \$75,000 plant is planned by Frederick Stearns & Co., and construction will follow a public vote March 28 on the granting of customary exemptions for this factory and a new factory which is being built by the Canadian Sirocco Co., a branch of the American Blower Co.

[From report of British Trade Commissioner for Canada.]

#### **New Railways in Alberta.**

The provincial government of Alberta is planning to guarantee bonds for over 1,600 miles of railway for that Province. Of this construction 1,405 miles will be built by Canadian Northern Railway branch line companies holding charters from provincial or Dominion governments. The guaranteed lines of railways will cover the Province with a network extending from Fort McMurray, in the northeast, and Peace River Landing, in the northwest, to Pincher Creek, in the southwest, and the international boundary south of Medicine Hat.

#### **DANISH WEST INDIES.**

[From Consul C. H. Payne, St. Thomas, supplementing report in Daily Consular and Trade Reports for Feb. 23, 1912.]

#### **Proposed Harbor Works at Charlotte Amalie.**

For the contemplated improvements in the harbor of Charlotte Amalie, a portion of the eastern section of this harbor, estimated at 6,000 to 8,000 square feet, has been ceded by the Danish Government to a syndicate of Danish capitalists. Extensive improvements are contemplated, such as dredging, building strong walls, warehouses, piers, coal yards, ice and electric plants, and all necessary facilities for accommodating ships and cargoes in large numbers and quantities. The preliminary work, such as sounding, surveying, and mapping the area, is now in progress. So far as can be learned here, it is the purpose as soon as this work is completed and plans and specifications made which will be accomplished within the present year, to give contracts for portions of the work so as to have it ready for the anticipated increase of trade when the Panama Canal is opened. The East Asiatic Co. (Ltd.) is the local representative of the syndicate that is reported to contemplate the expenditure of \$6,000,000 or \$7,000,000 upon this work.

#### **ASIATIC RUSSIA.**

[From Consul John F. Jewell, Vladivostok.]

#### **Improvement of Port of Vladivostok.**

The Russian Minister of Trade and Industry has, with a few minor changes, approved the project for improving and enlarging the Vladivostok commercial port. The project refers to improvements both in "Golden Horn" Bay and in "Amur" Bay (harbor for junks).

The first part of the project provides \$2,800,000 for a wharf 300 feet long between Yegersheldt and the Volunteer Fleet wharves and lumber yards on Cape Churkin. In connection with this a railroad

line will be built from Pervaia Retchka (First River) via Gnilyo Ugol to the southern shores of "Golden Horn" Bay, and surveying the same will begin early in the spring of 1912.

The complete project for improving the port contemplates the expenditure of about \$10,000,000 in enlarging the area, the construction of a floating commercial dock, wharves, repair shops, warehouses, and a naval hospital, which will be done as soon as possible.

It should be noted also that, in order to cope with the increasing commerce and importance of the port of Vladivostok, two new ice breakers have recently been ordered by the Government, and that they will be constructed at the Baltic works.

### BELGIUM.

[From Consul General Henry W. Diedrich.]

#### Port Improvement at Antwerp.

A plan for making Antwerp the largest port in the world is embodied in a bill which the Belgian Government has laid before the Parliament at Brussels. The plan calls for the betterment of the course of the River Scheldt by rounding off the sharp bends within 5 miles downstream from Antwerp, and is a modification of the project of 1905. The Antwerp side of the river is to be thrown back and curved so as to present, with the existing quay system, a regular concave water front about 9 kilometers (5.59 miles) long, leaving the existing inner dock system intact. The left bank is also to be thrown back into another curve a little farther downstream. There is nothing to prevent the building of the river walls at once, and if this is done they may be completed in four or five years. The total length of the proposed deep-water quays along the river front may be carried to 10½ miles.

[A map and more detailed description of the proposed harbor improvement may be obtained from the Bureau of Manufactures. Articles upon the improvement of Antwerp's harbor appeared in Daily Consular and Trade Reports for Nov. 5, 1908, Feb. 14, 1911, and Feb. 12, 1912.]

### AUSTRIA-HUNGARY.

[From Zentral-Anzeiger für das öffentliche Lieferungswesen, Vienna.]

#### School Building—Factory—Canals, etc.

The town council of Vienna has approved plans for a large mixed school in the fourteenth district to cost \$200,000.

A \$1,000,000 company has been formed, under the regis of the Anglo-Austrian Bank, for erecting a sugar factory in Cservenka, Hungary. Work is to be begun in the autumn.

Among a number of irrigation and canalization concessions granted by the Mähren Landtag are the following: Banking up the Moschtienitz and the Bystrziczka, cost \$500,000; damming the Luhatschowitz, \$100,000; regulating the Rivers March and Thaya, \$900,000; for constructing a dam in the communal districts of Plamenau and Stichowitz, \$500,000; regulating the Zwitta in its upper reaches, \$3,300,000.

### SERBIA.

[From Nachrichten für Handel, Berlin.]

#### Many New Buildings Planned.

Proposals for allocating the following sums for the purposes indicated have been discussed in the present session of the Servian Skupschina at Belgrade: University requirements, including erection of a building for technical section, \$156,000; build-

ing a national library, \$78,000; building for the Academy of Science, \$40,000. The following further grants have also been proposed: Erection of a gymnasium, \$50,000; other school requirements, \$150,000. From the sanitary funds are allocated: Lunatic asylum, \$310,000; completion of public hospital in Belgrade, \$545,000; erection of a hospital in the interior, \$545,000; and for improvements at three Servian spas, \$136,000.

### EGYPT.

[Reuter dispatch from Cairo.]

#### Million Acres to Be Reclaimed.

The Council of Ministers has approved the Lower Egypt drainage scheme, involving the reclamation of 950,000 feddans (978,500 acres) during the next four years, at a total cost of \$12,500,000. The first sod in the operations was cut on March 23 at Inshab in the presence of Lord Kitchener, the ministers, and other eminent persons.

### BRAZIL.

#### Establishment of Iron and Steel Industry.

A decree has been passed in Brazil which grants power to Mr. A. Thun, or to a company which he may form, to establish in the municipal district of Ouro Preto, Minas Geraes, blast furnaces capable of producing 50,000 tons of pig iron annually, this amount to be increased by 10,000 tons until a yearly capacity of 100,000 tons is reached. The plant is also to be suitable for the manufacture of rolled iron and steel. The contract provides for the granting of certain State privileges for the encouragement of the iron and steel industry in Brazil. [An article giving details of concessions offered by the Brazilian Government for the exploitation of the iron and steel industry there appeared in Daily Consular and Trade Reports for Apr. 8, 1911.]

### ARGENTINE TRADE NOTES.

[Compiled by Consul General R. M. Bartleman, Buenos Aires.]

*Buenos Aires' population* on January 31, 1912, was estimated at 1,365,806.

*Sugar.*—It is officially stated that there were in operation in the Province of Tucuman in 1911, 29 sugar mills, with an output of 147,181 tons. The price received was \$3 (\$1.27 United States currency) per 10 kilos (22 pounds).

*New bank.*—A cablegram from New York announces the formation of the Argentine Banking Co., which, it is reported, will have its headquarters in Buenos Aires and a branch in New York. The capital is said to be \$20,000,000 gold.

*Subway.*—The bill granting a concession to Lacroze Bros. & Co., for constructing a subway from Chacarita to the port of Buenos Aires, has been passed by both houses of the Argentine Congress and will soon be promulgated as a law.

*Fewer holidays.*—By a decree recently issued by the Argentine Government, four holidays, or feast days, are eliminated from the Argentine calendar. They are February 2, March 25, and the celebration of the feast of Corpus Christi, which this year falls on June 6, June 24, and September 8.

**A CARPET FOR ROADS.**

[From Consul General John L. Griffiths, London, England.]

A lecture was recently delivered by a member of the road board before the Royal Institution of London on "The road, past, present, and future." The lecturer said the problem was to find the best mode by which a road should be constructed so that its surface would not be broken by traffic, so that the transit might be easier for both passengers and goods, a road which would form neither puddle holes nor exude mud from vehicles and create no dust when the weather was dry. One thing was universally recognized, that the road of the future should be a truly bound road in which, whatever kind of stone was used, the stone should be held together so that it would form a crust.

The lecturer suggested that what he called a carpet or an elastic skin should be adopted as the covering. The carpet, he thought, should be made of bituminous material mixed with sand and placed on the roads in various thicknesses according to the nature of the traffic. It should go on in liquid form, solidifying quickly, but always remaining resilient and compressible, and so integrating with the crust of the road that there could be no shifting of the surface below.

The advantage of such a carpet it was said would be to permanently protect the crust, and just as a carpet on the floor softens the step so would this carpet for the roads silence the noise and reduce the shock of rolling vehicles. It was admitted that the original cost of a road so laid would be more than that of a mud-bound road, but spreading the cost over a series of years it would probably not be so great, since the crust of the road itself would not have to be renewed.

**MACHINERY FOR INDIA.**

[From the official Indian Trade Journal (Calcutta) of Dec. 14.]

It is often difficult for a local capitalist in India to obtain the expert advice and assistance needed for estimating the requirements for and cost of a plan for any given purpose. In recent years, however, the central Government and certain of the provincial governments in India have appointed officers, one of whose functions it is to procure and supply information of this kind. These officers report that they receive many bona fide inquiries from persons qualified financially and by intelligence to establish useful works; and the article suggests that manufacturers would do well to get in touch with the officers and assist them with estimates and quotations.

In a country such as India it is necessary to direct the attention of an inquirer such as indicated to openings for the development of the country's resources and to assist him to consider the questions of raw material and of demand for the finished product before he is ready to concern himself with the plant required for the industry. Again, different manufacturers make different parts of a plant, and quotations for one part have no practical interest for the would-be works owner in the absence of quotations for the other parts. These are mentioned as some of the causes why the efforts of agents and travelers of British machinery manufacturers often give somewhat disappointing results.

The article finally suggests that manufacturers, when supplying estimates for part of a plant, should get into touch with makers of complementary parts, who might furnish similar estimates for the rest.

*British South African trade* in January made a good showing for the new year. Imports were valued at \$17,500,000, or \$1,000,000 more than in January, 1911, while the \$26,500,000 worth of exports were \$1,900,000 greater.

## FOREIGN TARIFFS.

## CHILE.

[From Diario Oficial, Chile, Feb. 13, 1912.]

**Changes in Rates of Import Duty.**

The Government of Chile has passed a law changing in many respects the existing rates of customs duty, most of the changes being in the way of an increase. Some of the increased rates are to remain in effect permanently, and others are imposed merely for a term of three years; the higher duties have been enacted for the purposes of reducing the State debt. The law goes into effect April 13, 1912.

All articles dutiable *ad valorem*, included in articles 1 to 5 of the tariff law of December 23, 1897, are made subject to an increased duty of 5 per cent of the official valuations specified in the tariff. All articles dutiable at specific rates included in article 6 of the tariff law of December 23, 1897 (excepting only sugar and wheat flour, included in Nos. 7, 8, 9, 10, and 18 of that article), are made subject to an increased duty of 10 per cent of the rates specified in the tariff. The law provides that these increases in the specific rates and in the *ad valorem* rates shall remain in force for the period of three years from the date they become effective.

All articles enumerated in article 7 of the tariff law of December 23, 1897, as free from customs duty, are by the present law made subject to a duty of 5 per cent of the official valuations specified in the tariff for such articles, with only the following exceptions: Print paper without size, and the articles included in the following numbers of article 7 of the tariff law of 1897: 5, 19, 20, 32-34, 36, 47, 48, 56, 59, 71, 81, 82, 84, 85, 93, 95, 103-105, and 116 (altars, reliquaries, ornaments, sacred vessels, and other objects intended for religious services, when imported by the religious associations, monasteries, or churches by which they are to be used; coal; maps, plans, etc.; effects of foreign diplomatic agents and of Chilean diplomatic agents returning from abroad; armament imported by the Government; travelers' baggage; flotsam and jetsam; fresh fruits; implements and parts thereof, not otherwise dutiable in the tariff, for use in agriculture, mining, fine arts, trades, and manufacturing; yarns of vegetable fiber or wool for weaving; printed books, catalogues, etc.; Chilean coins; immigrants' household effects; samples that would be subject to a duty of less than 2 pesos; gold dust and ingots; crude petroleum; fishery products of Chilean vessels; cotton seed; plowshares; copra; and wheat); also pack mules; beasts of burden for travelers; yarn for weaving cotton fabrics and machines for use in cotton mills, the free importation of which is provided for, by a special law, for a period of 22 years from 1898; and all other articles entitled by special legislation to free importation for a determinate number of years. The duty thus imposed on articles enumerated in the free list in the tariff act is permanent.

The stipulations relating to customs duties existing in any Government contracts remain unaffected by the provisions of the present law.

**Duty on Automobiles.**

By the law of February 13 the rate of duty applicable to automobiles is fixed at 15 per cent *ad valorem* instead of the rate of 60 per cent *ad valorem*, which the customs authorities have been collecting

on automobiles under the general classification of vehicles. (See Foreign Tariff Notes, No. 5, p. 137.)

#### **Tariff of Magallanes.**

The law provides that the tariff of Chile shall be in force in the Territory of Magallanes for the following articles: Bran, mineral water, pepper, alcohol, spirits of wine, liqueurs, brandy (sweetened or not), starch, vetches, playing cards, barley, beer, cigars and cigarettes, pickles, brooms and brushes (except nailbrushes and toothbrushes), vermicelli, beans, dried fruits, fruits preserved in their juice or in alcohol, crackers and biscuits, flour of all kinds, condensed milk (sweetened or not), vegetables (fresh, dried, or preserved), wood, corn, butter, potatoes, fodder, cheese, common salt, sole leather and tanned hides and manufactures of leather (with the exception of leather belting for machinery), tobacco in the leaf or cut, vinegar, and wines.

The Government is authorized to spend 200,000 pesos for the establishment of a customhouse at Punta Arenas.

### **COLOMBIA.**

[From Diario Oficial, Colombia, Dec. 12, 1911.]

#### **Admission of Samples Through the Parcel Post.**

The Ministry of the Treasury of Colombia, in response to inquiry, has given a ruling on the customs regulations for the free admission into the country of samples coming through the parcel post. The decision is that only such samples, imported through the mail, shall be admitted free of customs duty, as small pieces of cloth or other matter which can easily be cut off and which shall not be fit for use. This explicitly excludes single gloves, single stockings, and single shirt cuffs unless such articles shall have been so mutilated as to render them unfit for use.

The question arose because certain importers, claiming that gloves, etc., imported singly by parcel post were entitled to free entry as samples, were thus seeking to evade the payment of the customs.

[From Diario Oficial, Colombia, Dec. 14, 1911.]

#### **Customs Duty on Wines.**

A new schedule of the rates of duty to be collected on wines upon importation into Colombia has been enacted and is to go into effect six months from the date of publication (i. e., June 14, 1912). There are certain changes in the rates of duty and in the customs regulations. [A copy of the new schedule is on file in the Bureau of Manufactures.]

### **PERU.**

[From Nachrichten für Handel, Industrie und Landwirtschaft, Jan. 19, 1912.]

#### **Customs Treatment of Trunks, etc., Containing Samples.**

A decree of November 22, 1911, instructs the Peruvian customs authorities to collect duty on trunks and hand bags which contain sample collections. In case the trunks, etc., are in bad condition, proportional reduction of the duty will be made. If the trunks, etc., are reexported within a period of 90 days from the time of their importation into the country, the duty collected will be refunded;

after the period of 90 days no claim for the refund of duty will be recognized. The identity of the trunks, etc., must be established before the duty is refunded.

### URUGUAY.

[From *Mitteilungen des Handelsvertragsvereins*, Jan. 20, 1912.]

#### Dutiable Goods Sent by Mail.

Dutiable goods sent by mail to Uruguay should not be sent in letters, and should not be sent as printed matter or samples. This rule is frequently broken by those unfamiliar with its existence. The postal authorities refuse to deliver all parcels of samples and printed matter containing dutiable goods (including parcels with more than five private post cards, visiting cards, colored engravings, etc.), and sealed letters containing dutiable goods are confiscated.

### VENEZUELA.

[From reports by Consul Thomas W. Voetter, La Guaira, and *Chargé d'Affaires* Jefferson Caffery, Caracas.]

#### Tariff Classifications.

The following articles, not specially mentioned in the customs tariff of Venezuela, have been classified by the customs authorities, and are subject to the rates of duty set forth below:

Metal collar buttons and cuff buttons, even containing ivory, bone, celluloid, and similar material, without gold or silver, class 6, tariff No. 474, dutiable at 2.50 bolivars per kilo (about 22 cents per pound); to be declared as "*prendas falsas*" (imitation jewelry).

Elastic cords and braids of linen, cotton, or wool, class 7, tariff No. 493, dutiable at 5 bolivars per kilo (about 44 cents per pound).

Wooden tobacco pipes, even with mouthpiece of rubber or celluloid, class 4, 1.25 bolivars per kilo (about 11 cents per pound).

Melted hog's lard, class 3, with surtax of 50 per cent of the duty, 0.375 bolivar per kilo (3.28 cents per pound); to be declared as "*manteca de cerdo fundida*."

Cork sawdust with glue, class 2, dutiable at 0.10 bolivar per kilo (0.87 cent per pound); to be declared as "*aserrín de corcho con cola*."

Automobiles and accessories, class 1, dutiable at 0.05 bolivar per kilo (0.438 cent per pound); the accessories mentioned shall be dutiable at this rate only upon their importation with the particular automobile on which they are to be used, all on the same consular invoice.

Ground rice in grains and ground rice in chips, class 3, dutiable at 0.25 bolivar per kilo (2.189 cents per pound); to be declared as "*arroz molido en forma de granos*," and "*arroz molido en forma de birutas*."

Cassimeres containing threads of silk in the warp, class 7, tariff No. 504, 10 bolivars per kilo, plus 10 per cent *ad valorem* (87.5 cents per pound, plus 10 per cent *ad valorem*); this rate is the same as the rate on cassimeres of pure or mixed wool.

Cotton embroidered or open-work fabrics, weighing more than 130 grams (4.589 ounces) per square meter (meter=39.37 inches), class 5, tariff No. 355, dutiable at 1.25 bolivars per kilo (about 11 cents per pound).

Labels or trade-marks to be used inside of hats, class 4, dutiable at 0.75 bolivar per kilo (6.6 cents per pound); to be declared as "*etiquetas ó marcas de fábrica que se usan en el interior de los sombreros*."

The rates as converted above are the rates specified in the tariff of Venezuela. The duties actually to be paid amount to 1.565 times the figures given above, since there are surtaxes of 56.5 per cent of the rates specified in the tariff.

*Rural mail delivery* in Canada is to be greatly perfected, about \$200,000 being placed in the supplementary estimates therefor at Ottawa.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8487. Lumber for orange and lemon boxes.**—An American consular officer reports that most of the lumber used for boxes for shipping oranges and lemons, amounting to about 2,000,000 boxes annually, is imported into his district from European countries. After studying the situation carefully, he has suggested to a prominent merchant to place a trial order in the United States for an amount sufficient to supply the demand of the coming season, and in accordance with this suggestion he has made a request for American manufacturers to send estimates for supplies which will be needed. Copy of the complete report, giving dimensions of the woods needed, method of shipping, how prices should be quoted, and persons to be addressed, will be sent to interested firms by the Bureau of Manufactures.
- No. 8488. Cargo boats.**—An American minister reports that a European Government has authorized a credit of \$579,000 for the purchase of two additional cargo boats for use on its existing lines. An American consular officer, who is at present on leave of absence in the United States, is of the opinion that the orders for these boats will go to a certain European firm. He adds, however, that there will probably be an opportunity for American firms to secure orders for chain, cable, and various other supplies needed for the equipment of these vessels. Any American firms interested in this proposition would do well to get in touch with this officer while he is in the United States.
- No. 8489. Hydraulic irrigation machinery and agricultural implements.**—A resident of a Latin-American country has recently secured a concession from the Federal Government to erect hydraulic irrigation works for irrigating his vast properties. An American consular officer suggests that American manufacturers of such machinery as will be needed, as well as all kinds of agricultural machinery, should correspond direct with this person in Spanish. Catalogues and other descriptive matter should be sent at once.
- No. 8490. Supplies for new naval academy.**—An official in a South American country has informed an American consular officer that he would be glad to receive catalogues, preferably in Spanish, of the following articles for use in the naval academy in the country in which he is located: Beds (150 will be needed), tables and chairs, table linen, and cutlery. He also wishes to receive bids on a complete modern gymnasium outfit, with rowing machines having sliding seats. All communications should be sent direct to this person.
- No. 8491. Electric-power plant.**—By communicating direct with a resident of a Mexican city, an American consular officer reports that firms in the United States may be able to find a sale for electrical power machinery. This person is planning the erection of a hydraulic water plant for the purpose of generating electric power, as well as for electric lighting.
- No. 8492. Electrical machinery and waterworks supplies.**—A British publication recently announced that the Local Government Board would hold an inquiry at Nuneaton (near Birmingham) into an application for permission to borrow \$36,500 for providing new plant and buildings in connection with an electrical undertaking. There is time for any electrical apparatus manufacturer in the United States to write to Nuneaton to secure information regarding this plant. The water committee of Nuneaton is recommending a scheme costing \$73,000 for further extension of headings, laying of pipe, equipment of pumping station, etc.
- No. 8493. Telephone switchboard and accessories.**—The Post and Telegraph Department, Brussels, Belgium, has called for tenders for the installation of a telephone switchboard and accessories. Specification No. 1108 may be obtained from the Bureau des Renseignements, 15 Rue des Augustins, Brussels, Belgium.
- No. 8494. Railway.**—Tenders are invited by the municipality of Reguengos, Portugal, for the construction of the first section of the Guadiana Railway. The estimated value of the contract is placed at \$486,650, and tenders will be received through local agents only.

## WINE PRODUCTION ABROAD.

### NEW ZEALAND.

[From Vice Consul General Henry D. Baker, on special detail.]

About 1,000 acres in New Zealand are now under grape culture for wine. The vineyard acreage would probably be much larger except for uncertainty over the policy of continuing or prohibiting the sale of alcoholic beverages. The New Zealand Viticultural Association recently represented to Parliament that the grape-growing and wine-making industry of the Dominion has been greatly discouraged by the present licensing act, and has requested that the law be amended by exempting New Zealand wines from its operation.

Under this act each of the 68 licensing districts of New Zealand must vote every three years on local licensing, and also national prohibition or continuance must be decided by a general vote throughout the Dominion. The chief justice of New Zealand, in a recent suit, gave his opinion that in no-license districts wines could not only not be sold, but could not be made. At the general elections in New Zealand, on December 7, 1911, no districts made changes, and although 108,036 votes were cast for national prohibition and 91,497 against, yet national prohibition was defeated, as the percentage in favor of it was 54.15, whereas the percentage required to carry the issue was 60. Had national prohibition carried, it would have suppressed the present wine industry, except possibly for the export of wines, and the trade in imported wines would have had to stop also.

### What Wines Can Be Produced.

New Zealand grapes, which grow chiefly in the northern part of the North Island, produce good wine of the claret and moselle type. The commissioners of the late Franco-British Exhibition spoke with especial favor of the brands sent from Auckland. An acre of grapes in the northern part of New Zealand can easily be made to yield 500 to 700 gallons of wine per year. New Zealand can not compete with hotter countries in producing full-bodied wine of high alcoholic per-

centage, and the local grapes do not have sufficient saccharine matter for ports, burgundies, or sherries without artificial assistance, but for light popular wines, such as clarets and moselles, climate and soil seem well suited.

About seven years ago the New Zealand Agricultural Department established a viticultural experiment station in the North Island to demonstrate to intending vine growers the most suitable varieties of resistant American stocks on which to graft the best wine and dessert grapes, with information on the art of wine making. No fresh capital, however, has for several years been invested in the industry. The recent annual report of the New Zealand Department of Agriculture mentioned that no appreciable increase of vineyard area had taken place, but rather the reverse, for which the risk of no license being carried was accountable.

#### Imports—Market for California Wines.

Owing to the uncertainties of the local wine trade domestic output is not likely to gain; consequently imported wines will probably continue to meet most of the New Zealand demand so long as their sale is permitted. The imported wines come mostly from Australia, United Kingdom, and South Africa, Australia supplying 65,139 gallons, United Kingdom 44,546 gallons, South Africa 23,320 gallons, and British Columbia 1,959 gallons. Only 1,268 gallons were supplied by the United States.

Australian wine containing not more than 40 per cent proof spirit pays in duty 5s. (\$1.22) per gallon; wine other than sparkling and Australian, containing not more than 40 per cent proof spirit, pays 6s. (\$1.46) per gallon; sparkling wine containing not more than 40 per cent proof spirit pays 9s. (\$2.19) per gallon; and wine of any kind containing more than 40 per cent proof spirit pays 16s. (\$3.89) per gallon. With South Africa there is a reciprocity treaty which has given a great impetus to the sale of South African wine in this Dominion. South African wines other than sparkling pay only 2s. (40 cents) per gallon duty, and sparkling wines 5s. (\$1.22) per gallon. During 1910 excise duty was paid on 153,435 gallons of wine for home consumption in New Zealand, which represented a per capita consumption of 0.147 gallon.

It would seem as if there ought to be a larger trade in Californian wines, now that San Francisco has direct steamship service with Wellington, the capital of New Zealand.

---

#### ALGERIA.

[From Consular Agent H. Elford, Oran.]

The wines all along the coast of the Algerian Province of Oran, when properly made, are of good quality and greatly sought after from a commercial point of view.

The wines produced from vines grown in the plains in the vicinity of Oran (red soil, clay, and flint) are of average color and sometimes have a sharp taste. Those from the hills (clay and chalk soil) are finer in quality, stronger, and more steady. To the west of Oran the vineyards on the coast, and particularly those of Bou-Sfer, give wine of quite a superior quality.

At St. Cloud (east of Oran) grape gathering commences earlier than elsewhere and the wine shipped to France before others is used to

freshen up the French wines of previous years, rendering them again fit for commercial purposes. The St. Cloud wines are strong and have a rich color, but are sometimes a little sweet. At Perragaux the vines produce a large quantity of wine, but the quality is below the average and the greater part of it is distilled.

**Improved Methods—Inland Grape Centers.**

The same characteristics which are more or less common to all the wines of the Oran region are also to be found in those of Mostaganem. They are, as a rule, a little weaker; their color is not so dark; generally they are of a more delicate flavor, and they have a decided taste of the fruit.

In these different regions of the Oran coast the wines are made from excellent grapes of perfect ripeness, yet they have always sold 2 or 3 francs less per hectoliter (franc = 19.3 cents; hectoliter = 26.417 gallons) than those of the Sahel, which are similar. This inferiority is due solely to the unfavorable conditions under which the Oran wine is made; but wine growers are taking more care, and there is already a noticeable improvement.

The vineyards of the inland regions, Mascara, Tlemcen, and Sidi-Bel-Abbes, produce wines which are of decidedly finer quality; they also possess a stronger, more decided taste of the fruit, and are brighter in color. Their superiority is due principally to the altitude. In these high regions grape gathering does not commence until the end of September or October. Fermentation being effected under more favorable conditions, the wines are of a better quality.

The wines produced in the region of Tlemcen are of great delicacy, rich in color, and of remarkable freshness. They keep well. The most important places of production are Tlemcen, Mansourah, and Ain-Fezza.

**Vigorous Plants—Intermediate Zone.**

In the region of Sidi-Bel-Abbes the vineyards are half in the plains, half on the hills. Some are exposed to the spring frost which at times destroys all the young shoots; but such is the vigor of the vines that the second shoots bear almost as much fruit as the first ones would have borne. The Sidi-Bel-Abbes wines are good, fresh, and of a rich color, which they retain fairly well. Those from the hills are the best.

Apart from the vineyards surrounding the town of Sidi-Bel-Abbes the most important places in that region are Sidi-Lhassen, Oued-Imbort, Sidi-Ibrahim, and Ain-Trid.

The Mascara vineyards are old, but they give the best wines in the Province, very strong, of excellent quality, mellow in taste, and of a rich velvety color. The white wines on the hills (clay and chalk soil) are produced mostly by native plants that give remarkably good wine, 14° to 15° in alcohol, and considered among the best in Algeria. The wines of Saida, with less color, vie with those of Mascara, but the superiority is rather on the side of the latter.

Between the wines of the coast and those of the inland region are those of an intermediate section, of which the town of Ain-Temouchent is the center. The vineyards there, owing to the fertile volcanic soil, the situation, and the altitude, can be compared to those of Sidi-Bel-Abbes and Mascara. The wines contain a high degree of alcohol and are of bright color. They have the same defects as the wines of the coast but to a smaller extent; they are not so acid, for instance, and have

no racy taste. The best places for their production are Hammam-Bou-Hadjar, Les Trois-Marabouts, Sidi-Daho, and Chabat El Laham.

#### Production by Districts.

The following table will give an idea of the importance of the production in 1910:

Districts.	Acreage.	Gallons.
Oran.....	76,000	38,482,276
Bel-Abbes.....	36,730	13,849,555
Mascara.....	11,880	3,072,800
Tlemcen.....	8,600	3,080,495
<b>Total.....</b>	<b>123,300</b>	<b>58,485,130</b>

In general the vineyards of the Department of Oran are in excellent condition, although the phylloxera has caused much damage in some sections.

[In the July 30, 1910, issue of Daily Consular and Trade Reports there appeared an article on Algeria's wine industry.]

### FRANCE.

[From Consul Wm. Bardel, Rheims.]

An official report of the total production of wine in France, including that of Corsica, Tunis, and Algiers, gives the amount of wine made during the year 1911 as 1,427,196,309 gallons, valued at \$304,663,715. A comparative statement of the production of wine from 1899 to 1911, inclusive, shows the following figures:

Years.	Production in gallons.	Value.	Years.	Production in gallons.	Value.
1899.....	1,285,567,183	\$265,064,042	1906.....	1,568,133,514	\$207,962,253
1900.....	1,933,614,505	263,627,700	1907.....	1,987,181,214	243,912,327
1901.....	1,684,889,738	200,559,104	1908.....	1,821,187,293	210,926,645
1902.....	1,155,885,021	181,072,277	1909.....	1,669,373,021	221,636,495
1903.....	1,102,406,170	214,000,853	1910.....	983,680,529	278,104,985
1904.....	1,964,689,113	263,303,136	1911.....	1,427,196,309	304,663,715
1905.....	1,713,888,244	193,106,998			

According to these figures, the production of wine in the year 1911 is valued higher than that of any of the other 12 years here quoted. While the average price per gallon for the wine produced in the year 1911 was 21.4 cents, that of champagne, which, among the above-reported figures appears as amounting to 3,642,085 gallons, valued at \$10,813,139, cost \$2.97 a gallon—a price higher than ever before paid for champagne wine.

[For the French wine production of 1911 by Departments, see Daily Consular and Trade Reports dated Jan. 13, 1912.]

### ITALY.

[From Consul General James A. Smith, Genoa.]

According to a report of the Bureau of Agricultural Statistics, the total area in Italy under wine-grape cultivation is 4,477,000 hectares (11,062,868 acres).

The vintage of 1910 was a partial failure. In 1911 better results were obtained, the total production of grapes reaching 6,514,000

metric tons (metric ton=2,204.6 pounds). From this amount 2½ per cent should be deducted for grapes not used in wine making, leaving a net total of about 6,350,000 metric tons. On an average basis of 66.6 liters (17.594 gallons) of wine for each 100 kilos (220.46 pounds) of grapes, the total production of wine in 1911 was 42,300,000 hectoliters, or 1,117,441,100 gallons. The approximate yield in 1910 was 773,834,585 gallons, and in 1909 1,591,627,052 gallons.

The production of grapes by Departments was as follows:

Departments.	1909	1910	1911	Departments.	1909	1910	1911
	<i>Met. tons.</i>	<i>Met. tons.</i>	<i>Met. tons.</i>		<i>Met. tons.</i>	<i>Met. tons.</i>	<i>Met. tons.</i>
Piedmont.....	1,200,800	726,300	765,300	Abruzzi and Molise.....	456,200	121,400	262,000
Liguria.....	142,400	81,400	92,400	Campania.....	1,020,500	258,600	464,700
Lombardy.....	420,800	282,700	318,400	Apulia.....	1,200,200	516,800	782,100
Venetia.....	542,500	343,300	514,000	Basilicata.....	97,600	38,300	65,100
Emilia.....	936,900	653,900	928,200	Calabria.....	181,430	93,200	140,700
Tuscany.....	797,300	422,300	624,800	Sicily.....	893,050	641,440	685,200
Marches.....	605,600	179,500	335,900	Sardinia.....	200,300	91,200	113,400
Umbria.....	359,500	81,000	161,300				
Latium.....	557,800	162,500	265,500	Total.....	9,612,730	4,673,540	6,514,000

[Other references to Italy's wine crop appeared in Daily Consular and Trade Reports on Sept. 8, Nov. 15, and Dec. 15, 1911.]

### COMMERCIAL TRAVELERS IN SWITZERLAND.

[From Consul George Gifford, Basel.]

For the first time in a quarter of a century an American commercial traveler, or at least a traveler for an American house, last year called at the Basel consulate. He was offering articles which one would least expect to sell here in competition with domestic manufactures. He reported that he had done very well in Germany and merely wanted information about the Federal license he must have with a view to the conquest of Switzerland also. From a letter afterwards received it appeared that in Switzerland, too, he had done very well.

Of the 35,382 commercial travelers licensed in Switzerland in 1911, 28,520 were Swiss. The 6,862 remaining were distributed as follows: Germany, 4,791; France, 1,313; Italy, 330; Austria-Hungary, 206; Belgium, 93; England, 75; Netherlands, 36; Spain, 11; Luxemburg, 2; United States, 1; Denmark, 1; Sweden, 1; Norway, 1; Russia, 1. In 1910 three licenses were granted to Americans and in 1909 only one.

**Lines Handled—License Fee.**

It is interesting to note the different branches in which the foreign travelers, more than two-thirds of them Germans, were engaged in 1911: Textiles, 1,988; machinery, 194; metals, 655; jewelry, watches, clocks, and watch materials, 326; fancy goods, 220; food products and tobacco, 643; leather and manufactures, 390; glassware, 103; objects pertaining to literature and art, 642; manufactures of cement, clay, and stone, 156; chemicals and drugs, dyes, 341; wood and woodwork, 265; oils and grease, 91; waste and manures, 10; rubber goods, 110; articles of straw, rattan, and bark, 41; agencies, 58; various articles, 629.

It may be repeated here that a traveler simply taking orders from commercial houses pays no fee for his license, but if he visits private houses, the charge is \$30 a year.

**RUBBER INDUSTRY OF THE UPPER ORINOCO.**

[From Consular Agent William D. Henderson, Ciudad Bolivar, Venezuela.]

Above the rapids of Atmes, at which point river steamboat navigation stops, Hevea rubber trees are first met on the Orinoco River on Raton Island, above Maipures. From the mouth of the Vichada River to San Fernando de Atabapo, the capital of the Amazonas territory of Venezuela, there is only a small number of Hevea trees, and these are on the banks of the Orinoco. The output of this section is about 300 quintals [probably the Spanish quintal of 101.4 pounds] of fine rubber and sernamby per season. San Fernando de Atabapo, located at the junction of the Atabapo and Orinoco Rivers, and diagonally opposite the mouth of the Guaviare River, is the chief trading town of that section, and there the rubber gatherers come at the end of the season to ship their rubber to Ciudad Bolivar. There are numerous shops there, and much business is done during April and May. In the last few years the rubber crop has reached 3,500 to 4,000 quintals of rubber and sernamby, but there have been years in which the crop amounted to 500 quintals more.

From San Fernando de Atabapo up the Orinoco River to a point called Barbilla permits for exploiting rubber are granted, but only along the river. According to trustworthy information there are no Hevea trees in this region except as far as the floods reach on the banks of the Orinoco. There are quantities of other rubber trees, but these are not worked. The caucho and sernamby extracted along the river above San Fernando de Atabapo are calculated at 1,000 quintals a year. In the past few years rubber trees which yield about 100 quintals a year have been discovered along the Ventuari River.

The Casiquiare River region is the chief rubber-producing area. From the junction of that river with the Orinoco to the Rio Negro the rubber trees are more plentiful and the population larger. It is estimated that the total production of rubber on the Casiquiare River and its tributary, the Siapa, amounts to 3,000 quintals in an average season.

The extraction of rubber generally starts in September, the date depending on the state of the river floods, and lasts until March or April. Each workman is given an "estrada" or division, comprising 300 to 500 trees, which he cleans, preparatory to tapping. Each tree yields on an average 1 ounce of sap at a tapping. About half of this is lost in preparation, and there is a further loss of one-third after it is cured and made up into balls. The workmen, most of whom are Indians, are paid for the rubber they extract in proportion to the price at Ciudad Bolivar, and provide themselves with food. The women help in tapping and smoking the rubber. [An article on the Orinoco rubber forests appeared in the Daily Consular and Trade Reports for Sept. 22, 1909.]

---

**Consular Trade Conferences.**

Consul Henry C. A. Damm, of Cornwall, Ontario, Canada, reports that he will leave his post on April 1, 1912, to spend 21 days leave of absence in the United States. He may be addressed at 656 Madison Street, St. Charles, Mo.

**URUGUAYAN RAILWAY DEVELOPMENT.**

[From American Minister Nicolay A. Grevstad, Montevideo.]

Work has just been started on a connecting 35-mile line of the Midland Railway Co. from Tres Arboles to Piedra Sola, in the Department of Tacuarembó, the contract announcement of which appeared in Daily Consular and Trade Reports for January 12, 1912. The constructor is Engineer Juan Storm, a well-known railroad builder. He is working a force of 600 men and expects to have the new line ready for operation in about a year. The 91-mile line from Fray Bentos to Algorta, finished last year, was also built by Mr. Storm.

The new line, although comparatively short, is of great importance, especially to the river cities of Fray Bentos and Paysandu, as it will give each a fairly straight through line to the border city of Rivera, the northernmost point of the Department of Rivera. Paysandu, with upward of 20,000 inhabitants, is probably the greatest livestock center of Uruguay. Fray Bentos, the capital of the Department of Rio Negro, is a city of some 8,000 people. It has been made a port of entry, which will add greatly to its importance as a distributing point.

American exporters seeking a market in the interior of Uruguay should not overlook the two important cities of Fray Bentos and Paysandu, on the Uruguay River. When the new connecting line is finished a large section of Uruguay can be reached easier and more cheaply from Fray Bentos or Paysandu than from any other distributing point in the country.

---

**PROPOSED JAMAICAN-CANADIAN LINE.**

[From Consul Nicholas R. Snyder, Kingston, Jamaica.]

Attempts have been made to interest the Government and the merchants of Jamaica in the establishment of a steamship line between this island and Canadian ports, but so far these efforts have not been successful. The vessels of the various American companies plying between British West Indian ports and the United States are said to be able to handle the freight of Jamaica from and to Canada quite satisfactorily. The United States is the best market for the products of Jamaica and the chief center for purchasing supplies.

---

**The Extensive German Forests.**

Consul General A. M. Thackara, of Berlin, states that Germany's area of forest lands is about 34,500,000 acres, or about 27 per cent of the whole area of the country. About 11,000,000 acres of forest lands belong to the various State governments of Germany, 5,500,000 acres are public forests; over 600,000 acres belong to Kings and Princes of various States, while 16,000,000 acres are privately owned.

---

*Russian fertilizer factory.*—A factory is to be erected at Baku, Russia, to work fish waste for manures. The enormous quantities of fish obtained in the Caspian Sea lead the promoters to hope that the new venture will enable Russia to supply its home demand for fertilizers.

**MOTOR CYCLES IN THE TRANSVAAL.**

[From Consul Edwin N. Gumanus, Johannesburg, South Africa.]

It is estimated that there are over 1,000 motor cycles in Johannesburg and probably 500 more along the Reef, which is known as the Witwatersrand mining district. During 1911, 801 motor cycles were registered in this city, not including those registered in other municipalities along the Reef. From January 1 to February 8, 1912, 590 motor cycles were registered in Johannesburg. The figures for the other towns are not available. There are probably over 1,000 gasoline automobiles in use in Johannesburg, but only one electric.

The streets in Johannesburg and the larger towns of this consular district are well paved. The country roads, on the whole, are not considered good, though they will compare favorably with the average country districts of the United States. The license fee for any motor cycle in Johannesburg is \$2.50 a year. The retail price of petrol varies from \$4.38 to \$5.59 per 10-gallon case, according to quality.

The average prices for the better grades of motor cycles, with free engines, are \$353 to \$365. The standard model, with fixed engine, sells for \$304 to \$316. Other makes, of cheaper grade and construction, range in price from \$255 to \$304 for free-engine models, a slight reduction being made for standard models in this class. The side car, consisting of a third wheel and seat to be attached to motor cycles, is becoming popular here, the additional cost varying from \$48.66 to \$146, according to frame and fittings. Motor cycles for ladies, open-frame model, are being introduced into Johannesburg, the price being the same as for the ordinary motor cycle.

The names of the motor cycles most in use here, in order of numbers and prominence, are as follows: Triumph, Bradbury, Matchless, Humber, Rover, Bat, B. S. A., Precision, New Hudson, Zenith-Gradua, Rudge-Whitworth, Ivy, and Scott, all of British manufacture. A German motor cycle, the N. S. U., has been sold here to some extent, in the past, but is not at present represented here. The Indian, an American make, is now being introduced here and is meeting with fair success. Other motor cycles on this market include the Singer, Rex, Royal Enfield, the James, Forward, New Comet, Abington, King Dick, and Douglas, of English make, and the F. M., of Belgian manufacture.

Engines of motor cycles for sale here should have a clearance of at least 5 inches, owing to the numerous stones encountered on outside roads. The tires universally used here are 2½-inch. The customs duty on motor cycles is 15 per cent ad valorem, with 3 per cent preference in favor of the British product. [A list of motor-cycle dealers in Johannesburg may be obtained from the Bureau of Manufactures.]

---

*Canadian National Exhibition.*—In forwarding the names of the officers of the Canadian National Exhibition held annually in Toronto the latter part of August or the first of September, Consul R. S. Chilton, jr., adds: "This exhibition is probably the largest of its kind on the continent and affords an excellent opportunity for the display of American goods as well as for the study of Canadian progress and requirements." The names referred to are obtainable from the Bureau of Manufactures.

**MAINTENANCE OF BRANCH HOUSES IN HONGKONG.**

(From Consul General George E. Anderson.)

The cost of opening a Hongkong branch of an American manufacturing or exporting concern depends, of course, upon the nature of the undertaking. Three general elements are to be considered in the matter—the foreign manager and assistants, if any; the Chinese staff, and expense for rent and office maintenance.

Probably a reasonable start in business could be made upon the following monthly basis, figuring the gold equivalent of the Hongkong currency at 43 cents to the dollar:

Monthly expenses.	Hong-kong currency.	United States gold.	Monthly expenses.	Hong-kong currency.	United States gold.
Foreign manager.....	\$600	\$258.00	Broker.....	\$50	\$21.50
Rent of premises, telephone, etc.....	200	86.00	Boy and coolie.....	25	10.75
Stenographer and bookkeeper.....	125	53.75	Miscellaneous.....	20	8.60
Shroff.....	25	10.75	Total.....	1,045	449.35

In most lines of business in Chinese ports the entire trade of the establishment hinges upon the native staff, which is represented in the first place by the comprador. The comprador is the Chinese middleman, through whom the foreign firm deals with Chinese customers or through whom purchases from Chinese producers are made. In addition to the comprador, one or more "shroffs," or Chinese cashiers and bookkeepers, must be had. The actual business of buying or selling is generally done through a "broker," who is, in fact, a salesman or a buyer in the Western sense, the Cantonese word for "buyer" and "salesman" being the same.

The first "extra" or addition to the establishment outlined above would have to be an assistant manager drawing a salary of about \$2,000 gold per year. Allowance, too, must be made for reasonable leaves of absence, for continuous service in the Tropics or in most parts of the Far East is impossible.

Few concerns sending men into this field handle a single line of goods. Most of them are general import and export commission houses, and the great mass of the business of the Far East is done through such houses.

[Consul General Anderson's complete report on the maintenance of branch houses in Hongkong, from which the foregoing extracts have been taken, will be loaned, upon request, by the Bureau of Manufactures.]

**PAPRIKA PEPPER PRICES IN SPAIN.**

(From Consul Robert Fraser, Jr., Valencia.)

With reference to the paprika or pimiento trade described in Daily Consular and Trade Reports for April 2, it may be stated that the average prices paid here for peppers by canners are 20 to 30 cents per arroba of 27½ pounds delivered at the factory. The canning process is carried out exclusively by girls and women earning 14 to 27 cents a day of about 11 hours, and the product is sold f. o. b. this port in the neighborhood of \$3.10 per case of 50 half-kilo (1.1-pound) tins and \$3.60 per case of 100 quarter-kilo tins.

**SANITARY MEASURES IN RICE CULTURE.**

[From Consul Frank Deedmeyer, Leghorn, Italy.]

Rice cultivation in the Province of Lucca, Italy, is subject to certain rules, promulgated by royal decree and supplemented by provincial regulations, which have for their object, primarily, the safeguarding of the health of the public and of those engaged in this industry.

No rice plantation can be established nearer than 1.24 miles to any city or town of more than 10,000 inhabitants, within 984 feet of one having less than 10,000 inhabitants, 656 feet of any burial ground, or 164 feet of any isolated dwelling. The waters used to flood rice fields must not be derived from basins, pools, or ponds; must not contain impurities; and must be kept moving constantly. Weeds and roots are to be carried off the fields daily or covered with earth to a depth of not less than 2 feet.

No person is allowed to lay out a new rice plantation without first giving notice to the mayor of the nearest community, furnishing a written description of the territory, its area, and a topographical map thereof. The public authorities, after a report from the provincial health officer, pass on each application. As a rule permission is granted only if the proposed site is unfit for dry cultivation.

**Rest Periods—Official Inspection.**

Persons working in the rice fields must be allowed one hour of rest after each of the two principal meals of the day, and no person can work longer at any time than three and one-half hours, while harvesters must have three hours of rest in two working days. Those engaged in thrashing must be given one hour of rest in every six hours of work. Posted notices about the field must state these legal rest periods.

Each community to which laborers from the outside resort in the harvesting and shelling of rice is furnished medical aid and drugs at public expense. The quarters, especially the sleeping rooms, are inspected regularly by the health officer, who also prescribes the character and the minimum quantity of food to be supplied. This cost is assessed upon the cultivators of rice in the respective communities. The law, through a system of deposits to be made in the local savings banks by the owners or managers of these plantations, secures the wages of the laborers.

---

**SALE OF ENGLISH SHIRE STALLIONS.**

[From Consul Homer M. Byington, Bristol, England.]

At a meeting of the Shire Horse Society, at Islington, March 7, 1912, the following resolution was adopted:

Haying in view the large and valuable market for draft horses existing in the United States and northwest Canada, which at present is almost exclusively supplied by Percherons, Belgians, and Clydesdales, it is desirable that a subcommittee be appointed by the council to devise a scheme whereby the suitability of Shire horses to the requirements of this market may be made known in those countries by advertising and otherwise, and that all other advisable means be adopted to obtain a share of this large and lucrative trade.

At the horse show held at Islington March 4 to 9, 3-year-old Shire stallions sold at auction from \$306 to \$3,168.

**EDUCATIONAL GROWTH OF A CANADIAN PROVINCE.**

[From Consul General David F. Wilber, Vancouver, British Columbia.]

The fortieth annual report of the public schools of British Columbia shows the total enrollment for the year ended June, 1911, to have been 45,125 in all schools and colleges under provincial jurisdiction, an increase of 5,303, or more than 10 per cent, over the previous year. The number of boy pupils is given as 23,277 and of girls 21,848.

The grand total of attendance by all pupils enrolled was 6,024,268 days, an increase of 521,831. The average actual daily attendance was 32,165, an advance of 4,069. The percentage of regular attendance was 71.27, the highest in the history of the public schools of this Province.

The total number of teachers was 1,179, a gain of 142. Of this number, 16 were employed in the colleges, 71 in the high schools, 499 in the city graded schools, 263 in the rural municipality schools, and 330 in the rural and assisted schools.

The cost to the Province of education proper was \$715,734, and of new schools, etc., \$286,074. The amount contributed by the people in incorporated municipalities and school districts was \$1,639,714, making a grand total cost of education for the Province under all heads of \$2,641,522, or \$724,386 more than in 1910.

**Many New Buildings.**

A number of new buildings will be necessary to provide sufficient accommodation for the rapidly increasing school population. A \$50,000 school is to be built at Nelson, British Columbia. The provincial Government grants \$36,000 to Kamloops toward a \$50,000 structure, \$50,000 to Penticton, \$17,500 and a portion of the cost for manual-training equipment to Cranbrook, and various amounts to other cities for school buildings. South Vancouver will spend \$135,000 in extending its present buildings and \$185,000 in new buildings. New Westminster and Chilliwack plan complete and up-to-date high-school buildings. At Kerrisdale \$68,000 will be spent for new schools, at Nanaimo \$50,000, and at North Vancouver \$40,000. Plans have been requested for the \$1,500,000 provincial University of British Columbia, for a competitive prize, by Dr. Young, the minister of education.

American firms desiring to supply the new equipment necessary for these buildings should lose no time. They are most likely to place their equipment by tendering through local firms. Attention should be given to the provisions of the British Columbia companies act, which imposes certain restrictions upon foreign corporations doing business in this Province.

As British Columbia is being settled rapidly, many new schools will be built, and firms whose goods are known to the authorities as serviceable and desirable should find a good market here.

---

Consul General John L. Griffiths, of London, reports further increases in British foreign trade in February. Imports aggregated \$290,626,027, or \$17,755,245 over February, 1911. Exports reached \$182,446,686, or \$8,940,778 higher.

**CONSTRUCTION WORK ABROAD.****CANADA.**

[From Consul Robert S. Chilton, Toronto, Ontario.]

**New Branch of Canadian Pacific Railway.**

Recent press publications here give the details of a contract made by the Canadian Pacific Railway with Deeks & Hinds, of 48 Scott Street, Toronto, for the building of a branch leaving the present Toronto-Montreal line at Agincourt and rejoining it 20 miles west of Smiths Falls, a total distance of 198 miles. The value of the contract is said to be about \$10,000,000 and the work is to be completed in two years. A single track is to be laid, but the bed will be made wide enough to accommodate a double track when needed. The new line will follow the north shore of Lake Ontario, taking in nearly all the towns now served by the Grand Trunk and the recently inaugurated line of the Canadian Northern, which now runs from Toronto to Trenton and is to be extended to Ottawa. With the Toronto & Eastern electric line, which is to operate over the same territory, these three roads will give this region exceptional transportation facilities.

[From Consul Harry A. Conant, Windsor, Ontario.]

**New Automobile Body Factory.**

A factory for the manufacture of automobile bodies is to be established at Windsor by the new National Body Co. (Ltd.), which is being incorporated with a capital of \$100,000 by several Detroit and Canadian capitalists. A 3-acre site has been purchased and the company proposes to break ground some time in May, after the usual exemptions have been granted by the city council, for a 2-story brick factory, 300 by 55 feet. Plans are already being prepared for the building, which will cost about \$35,000.

[Additional notes from Consul General David F. Wilber, Vancouver.]

**Harbor Works, Business Blocks, Schools, etc.**

*New docks.*—It is stated that 75 per cent of the following sums will be spent by the following-named companies for docks and wharves in British Columbia: Vancouver Dry Dock & Shipbuilding Co., Vancouver, British Columbia, \$1,214,150; British Columbia Marine Railway Co. (Ltd.), Esquimalt, British Columbia, \$3,000,000; Grand Trunk Pacific Railway Co., Prince Rupert, British Columbia, \$2,000,000; Esquimalt Grading, Dock & Shipbuilding Co., \$2,637,800; Canadian Vickers-Maxim Co., Montreal, \$4,000,000; British Canadian Shipbuilding & Dock Co., Sydney, Nova Scotia, \$6,000,000.

*Wharf.*—The Canadian Pacific Railway Co. has let to O'Brien, McCaughey & Lemcke, Fairmont Hotel, Vancouver, the contract for its \$40,000 dock at New Westminster, British Columbia.

*New hotels.*—(1) The Dominion Construction Co., 35 Canada Life Building, Vancouver, has contracted with Dr. T. H. Wilson, 407 East Hastings Street, Vancouver, for a 6-story brick and wood, 75 by 122 foot store and hotel building, after plans drawn by Architect L. E. Gordon of this city, and is also getting ready for minor contracts. (2) J. C. M. Keith, of Victoria, British Columbia, is preparing plans for two frame hotel buildings at Kelowna, British Columbia.

*New bank buildings.*—(1) H. L. Stevens Contracting & Engineering Co., Pacific Building, Vancouver, will build for Molson's Bank a 6-story, 25 by 120 foot building for its east branch in Vancouver. The upper floors will be leased as offices. This bank's head office is at Montreal, Quebec, Canada. (2) The Bank of Canada will erect a new building at Nanaimo for which F. M. Rattenbury, architect, Victoria, British Columbia, drew the plans. (3) The Northern Crown Bank (head office, Win-

nipeg, Manitoba, Canada) has called for plans from architects Horton & Phipps, Victoria, British Columbia, for an 8-story brick and concrete building.

**New office buildings.**—(1) A \$520,000 office building will be erected by McConnell, Abbot & Drayton. The architects are Wallington & Wheatley, of Davis Chambers, Vancouver, British Columbia. (2) The Burrard Construction Co., 301 Pacific Building, Vancouver, will erect a \$30,000 store and office building for Thompson Bros., and is ready to arrange for minor contracts. Stuart & White, of the Metropolitan Building, Vancouver, are the architects. (3) A. J. Bird, Winch Building, Vancouver, is architect for a \$60,000 4-story building. (4) Parr, McKenzie & Day, 570 Granville Street, are architects, and B. Davidson, 1012 Broughton Street, Vancouver, is contractor for James Borland's 8-story brick store and office building. (5) Henry Birks & Sons (Ltd.) (head office, Montreal, Canada), of this city, are to erect a 10-story, absolutely fireproof building, the main floors of which will be occupied by their jewelry establishment.

**Theaters.**—(1) Allan B. Stroud, Carter Cotton Building, Vancouver, is architect for the \$40,000 vaudeville theater to be built at Nanaimo by James Young, of that city. (2) A. M. Kennedy, stated to be president of the Affiliated Theaters Co., and formerly with the American Film Co., of New York, N. Y., is reported to erect a \$75,000 moving-picture theater, to be among the best equipped in Vancouver.

**New churches.**—(1) The Methodist congregation of Lynn Valley, North Vancouver, plans to erect a small new church building. (2) Work has commenced on the \$20,000 South Hill Baptist Church; Rev. J. N. Redman, pastor. (3) An \$80,000 church building is being erected by Parfitt Bros., of Victoria, for the St. John's congregation at Victoria; W. Ridgeway Wilson, Pemberton Building, Victoria, architect. (4) A cathedral, called Christ Church, will be erected by the Anglican Church at Victoria. (5) Bresemann & Durfee, Holden Building, Vancouver, are the architects for the \$75,000 Congregational Church. (6) St. Andrew's Anglican congregation of Prince Rupert, British Columbia (Bishop Du Vernet), will build a \$26,000 church here. (7) Canon White, in charge of the Anglican Church at Nanaimo, is arranging for erecting a larger church building.

**Residences.**—(1) J. W. Fordham Johnson is erecting a \$15,000 residence at Shaughnessy Heights, this city. (2) Honeyman & Curtiss, 821 West Pender Street, Vancouver, are architects for W. F. Brougham's \$12,000 residence at Point Grey. (3) Hugh A. Hodgson, Carter Cotton Building, Vancouver, is architect, and McPherson & Sinclair, of this city, are contractors for Mr. Hunting's \$25,000 residence on Shaughnessy Heights. (4) C. W. Pothbury, of Vancouver, is the general contractor for Dr. Johnson's \$15,000 residence.

**New apartments.**—(1) Dr. Robert Telford, Vancouver, will erect a \$500,000 apartment building, faced with stone, brick, and terra cotta, this spring. (2) S. B. Bird, Loo Building, Vancouver, is architect for a \$70,000 apartment house for Kee Lee. (3) Parr, McKenzie & Day, 570 Granville Street, Vancouver, are architects for K. Tsuchida's 4-story brick store and apartment. (4) The Dominion Construction Co. (Ltd.), 35 Canada Life Building, Vancouver, will build T. F. Patterson's \$135,000, 99 by 131 foot, 8-story apartment; W. D. Van Sicken, 51 Canada Life Building, Vancouver, architect. (5) The same contractors and architect will erect a similar apartment, with 77 suites, 6 stories, 66 by 132 feet, for C. G. Muller, at 1127 Robeson Street, which will cost \$125,000. (6) A building permit has been issued for a \$35,000 store and apartment building, of reinforced concrete and thoroughly fireproof, for Capt. H. Fybus.

**Y. M. C. A.**—A large Y. M. C. A. building is shortly to be erected in Vancouver. The architects are Shattuck & Hussey, of Chicago.

**Schools.**—Robert McLean & Co., this city, were awarded the contracts for the Florence Nightingale (\$56,300) and Cecil Rhodes (\$53,000) schools for the city of Vancouver.

**Warehouse.**—Thomas Hooper, Winch Building, Vancouver, is architect for McLean Bros.' \$60,000 reinforced concrete warehouse.

**Jail.**—A jail to accommodate 100 prisoners is to be built by the provincial government on South Vancouver Island. (Address Minister of Works, Victoria, British Columbia.)

**Open-air stadium.**—Plans have been completed for a \$300,000 open-air stadium and auditorium in Stanley Park, to be larger than the one at Tacoma, Wash., by Heath, Gove & Neuse, architects, Metropolitan Building, Vancouver, and it is expected that contracts will be called for shortly.

**Concrete waterworks reservoir.**—The Graff Construction Co. (515 Crary Building, Seattle, Wash.) has been awarded contract for a \$32,729 water-system supply reservoir for the city of Kamloops, British Columbia.

**MEXICO.**

[From Mexican Daily Herald.]

**Contract Signed for New Railroad.**

The contract for a railroad from Balsas to Zihuatanejo was signed by the Department of Communications on March 22 for the Government, and Henry Weics in representation of the Mexican Pacific Co. A Government subvention of \$6,000 gold per kilometer (0.62 mile) is granted, due to the importance of the line.

The new line will start from Balsas and will follow the left bank of the railroad to Zihuatanejo, on the Pacific Coast. The construction of a branch line also is under consideration, to start at a point called Las Palomas, in the State of Guerrero, and connecting with the hacienda Las Balsas at a point called El Organal.

The work of locating the line must begin within 30 days under the terms of the concession, the railway company being obligated to notify the Department of Communications 15 days in advance of commencing work.

During the first year, counting from the date of signing the contract, the company must complete 100 kilometers of track from Balsas and 50 kilometers from Zihuatanejo, the work to begin simultaneously at the two terminal points. In the period of 20 months, 50 kilometers of the road from Las Palomas to the connecting point must be finished.

The constructing company obligates itself to pay \$300 per month to the fund for the upkeep of the bureau of railway inspectors and to bind its contract has deposited in the National Bank \$52,000 in Government bonds.

**New Gulf Coast Line.**

The completion of a contract between the Department of Communications and the National Railways for a line from Vera Cruz to Tampico and thence to Matamoras has been officially announced. The concession calls for the construction of two lines, one commencing at San Francisco station on the Interoceanic Railway, 45 kilometers from Vera Cruz, following the Gulf coast north to Tamos, on the San Luis & Tampico Railway, 13 kilometers from Tampico. The second line is to commence at a point between Tampico and kilometer No. 54 of the line from Tampico to Monterey, and follow the coast north to Rosita on the line between Matamoras and Monterey, 9 kilometers from the latter city.

The company is also authorized to construct a branch from a convenient point between San Francisco and Tamos to connect with Honey station on the line from Pachuca to Zacualtipan, or with Beristain on the Hidalgo Railway, or with a convenient point on the line now operated by the National Lines in the district of Tulancingo. This branch is evidently for the purpose of direct communication between Mexico City and the line to be constructed from Vera Cruz to Matamoras, and its exact location must be approved by the Department of Communications before construction begins.

Mexicans are to be given the preference in employment, and the Spanish language must be used. Foreign experts may be employed with the consent of the department. The company binds itself to complete 100 kilometers within two years, and an additional 100 kilometers each subsequent year, the entire distance to be completed in 10 years. Either steam or electricity may be used as motive power. The Government agrees not to grant any subsidy for the construction or operation of a railroad during the next 10 years within 15 kilometers on either side of the new line.

**PERU.**

[From Consul General W. Henry Robertson, Callao, supplementing report in Daily Consular and Trade Reports for Sept. 29, 1911.]

**Concession for Building the Ucayali Railway.**

The Peruvian Senate, by a vote of 25 to 5, on February 27, adopted the modifications requested by the American concessionaires in the concession which has for several years been sought for the building of the so-called Ucayali Railway. As the modifications in question had already been passed in the Chamber of Deputies by a vote of 76 to 24, the measure now goes to President Leguia for his approval, which will undoubtedly be granted.

This concession covers one of two routes to the Ucayali River that were under consideration for connecting Lima with Iquitos and the Amazon Valley. The road is to be built from Goyllarisquisca, on the Cerro de Pasco Railway, via Huanuco, and should prove of great commercial value to this country, whatever may be the financial return upon its securities, by opening up the vast and rich territory in the eastern part of the Republic under direct communication between the Pacific and Atlantic Oceans through the water transportation of the Amazon. The road is estimated to cost \$10,000,000 gold, on which the Government of Peru guarantees 6 per cent under security of the income from the tobacco tax, and it is expected that actual construction work will be begun within the next four or five months.

When the concession has been finally approved by President Leguia this office hopes to transmit a more detailed report upon the venture.

#### ENGLAND.

[From Consul Albert Halstead, Birmingham.]

**Road from Birmingham to Wolverhampton.**

The municipal surveyors of Birmingham, Wolverhampton, and the intervening towns have decided to recommend the construction of a road 100 feet wide, with a carriageway of 35 feet, two gravel footpaths of 8 feet each, and a grass margin between the footpath and the carriageway on one side with a width of about 41 feet, to be utilized in the future for an electric traction line. The road is to have trees planted in three rows. The cost of the proposed road, which will be 9.353 miles long, is placed at £120,000 (\$583,980).

#### NOTES FROM FRENCH WEST INDIES.

[From Consul F. T. F. Dumont, Guadeloupe.]

**Interest rates.**—The customary interest rate on property mortgages, personal notes with two indorsees, personal property, and collateral is 6 per cent; on crops, 5 per cent.

**Electric-light concession.**—On account of a lack of capital, nothing has been done in the matter of the concession for the electric lighting of Basse Terre and Pointe à Pitre, mention of which was made in Daily Consular and Trade Reports on May 12, 1911.

**Household lighting.**—Very few houses or buildings in Guadeloupe have any light other than candles. Even kerosene is little used, the consumption being but one gallon per head per year. The import duties make it impossible for the people, who are poor, to use either kerosene or gasoline, the former retailing at 28 cents a gallon and the latter at 68 cents.

**Marketing American securities.**—The real purpose of Guadeloupe's only bank (Banque de la Guadeloupe) is to assist the agricultural interests of the colony. It does not purchase bonds. Further, there are no brokers in stocks or bonds. It is possible that securities of this nature could be placed through the notaries of the colony, a list of whom is obtainable from the Bureau of Manufactures. French notaries usually are in position to make or recommend investments to their clients.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

**No. 8495. Two transports and a tugboat.**—A dispatch has been received from an American minister inclosing a copy of a law, with translation, authorizing the purchase by a foreign Government of two transports and a tugboat at a total cost of \$723,800. The transports are to have a carrying capacity of 5,000 to 6,000 tons of coal. They are to be acquired by licitation and must be new boats.

**No. 8496. Coal.**—An American consular officer in a European country reports that a coal shortage will soon be felt in the country in which he is located, especially in shipping circles. This country imports about \$20,000,000 worth of coal annually, and a discussion of the situation with many prominent men has lead the consular officer to believe that it would be possible, under certain conditions, to import American coal. These persons would like to receive propositions regarding this matter from American coal exporters at the earliest possible moment. Copy of the complete report, giving further details, will be sent to interested firms by the Bureau of Manufactures.

**No. 8497. Automobiles, athletic goods, technical goods, machinery, and novelties.**—The Bureau of Manufactures is in receipt of a communication from a business man in Germany stating that he desires to form connections with American manufacturers of automobiles, athletic goods, technical articles, machinery, and technical or other novelties in this line. He is a member of a firm enjoying an excellent reputation in that country, being at present engaged in the leather-belting trade.

**No. 8498. Woolen cloth.**—An American consul in the Near East reports that certain grades of woolen cloth manufactured in Europe find extensive sale in his district. He has forwarded samples of this cloth and furnished the dimensions in which it commonly arrives, as well as the terms, price quotations, and other particulars. He writes that if American manufacturers can cut these prices and will send samples and full specifications he will submit them to interested persons.

## PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

**No. 564. Panama Canal supplies.**—Sealed proposals, in triplicate, will be received at the office of the general purchasing officer of the Isthmian Canal Commission, Washington, D. C., until May 21, 1912, for the purchase of the Porto Bello rock-crusher plant equipment, consisting of rock crushers, boilers, condenser, engines, and rock-conveying system, offered for sale by the Isthmian Canal Commission, which are no longer needed. (Circular No. 696.)

**No. 565. Construction of post-office buildings.**—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., for the construction complete (including plumbing, gas piping, heating apparatus, electric conduits and wiring, and interior lighting fixtures) of the following buildings: (1) Until May 2 for post office at Crowley, La. The building is to be of one story and mezzanine, and has a ground area of approximately 5,100 square feet; fireproof first floor; stone facing, and tile and copper roof. (2) Until May 4 for post office at Hillsboro, Tex. Building is to be approximately 4,350 square feet in ground area; one story and mezzanine, faced with stone and granite to first floor with brick above, terra-cotta trimming and tile roof; the first floor only is of fireproof construction. (3) Until May 7 for post office at Olympia, Wash. Building is to be approximately 5,500 square feet in ground area, two stories and attic; with granite facing to first floor, limestone or sandstone above, and tin roof; the first floor only is of fireproof construction. Drawings and specifications of these buildings may be obtained from the custodians of sites at the various points or of the Supervising Architect.

**No. 566. Vacuum-cleaning system.**—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until May 1, 1912, for the installation of a vacuum-cleaning system in the United States post office at Oklahoma City, Okla., in accordance with drawing and specification, copies of which may be had at the office of the superintendent, Oklahoma City, or of the Supervising Architect.

## AN ENGLISH INDUSTRIAL CENTER.

[By Consul Benjamin F. Chase, Leeds.]

Leeds has a more varied line of industries than almost any other city in England, and no one industry predominates. The following is a review of industrial conditions in the Leeds district during 1911 as appeared in a Yorkshire publication:

During 1911 trade in the Leeds district showed a distinct improvement over the previous year. Locomotive builders had some good Indian and colonial orders during the year, but they had to cut prices to a minimum in order to meet competition. Machine-tool makers were slack for the greater part of the year. Textile-machine makers were well employed, and a branch of local engineering that greatly improved during the year was the manufacture of traction engines and agricultural implements, in which a satisfactory export trade was done. Toward the end of the year steel manufacturers secured some heavy orders for fittings used in the construction of railway wagons, but, generally speaking, the steel trade was anything but busy. The continued expansion in the employment of reinforced concrete brought increased orders to local makers of constructional iron and steel work, but in this department foreign competition was especially keen, and in Leeds there were several cases of foreign steel being set into buildings because the price was lower than that quoted by Leeds makers. Those firms that have taken up work in connection with motor engineering have done well in these branches, and Leeds has supplied large quantities of springs, axles, propeller shafts, and other important components of automobiles to some of the biggest firms of builders in the country.

The census taken in Leeds last year proved a disappointment, as the increase in the population in the past 10 years was but 16,600, the total population being 445,568. There has been a large exodus to the United States and Canada, during the early months of 1911 the number leaving averaging 200 to 300 per week.

### Number of Textile Mills, Spindles, and Looms in the District.

There are 156 mills, including both spinning and weaving in woollens and worsted, with 636,578 spindles and 16,451 looms, in the Leeds consular district. Of these, 33 mills are in the city of Leeds, with 114,213 spindles and 2,892 looms, and 123 mills, with 522,365 spindles and 13,559 looms, outside the city. Of the latter the greatest number are in Morley, a suburban town with 11 mills having 31,150 spindles and 830 looms, and Batley (founder of the shoddy industry) with 15 mills having 66,080 spindles and 2,318 looms.

There are also 54 woolen and worsted weaving mills which do no spinning in this district with 4,799 looms, of which 16 mills with 834 looms are within the city and 38 mills with 3,765 looms in the balance of the district, the greatest number in any one place being at Pudsey, 7 mills with 705 looms.

There are 17 flock manufacturers in the consular district, of which 3 are in Batley and 3 in Leeds; 87 mungo and shoddy manufacturers, 25 in Ossett, 13 in Batley, and 7 in Leeds; 22 yarn spinners with 74,646 spindles; 2 hosiery manufacturers; 10 rug and blanket makers; and 36 carpet manufacturers.

There are 5 cotton spinners and doublers with 143,000 spindles, and one cotton spinner with 24,000 spindles, using American cotton.

#### **Conditions in the Textile Industry.**

From all reports the trade in textile goods was exceptionally good during 1911. The output being in the cheaper grades of cloth, a big demand came from India and Japan, which kept the mills busy early in the year. Fancy worsted suitings and light covert coatings were in demand, and tweed manufacturers were also busy. The high price for raw materials and keen competition, however, cut down the profits. The better-made fabrics are in demand for the Continent and South America and the cheaper grades for Canada, Australia, and the home market. Ladies' costume cloth of varied colors, especially a reversible tweed for jackets, had a big trade up to the time of the coronation. There was also a demand for blue serges, although taking the year through gray was the best seller here and on the Continent.

In midsummer labor troubles caused a falling off in the demand for heavy cloth for overcoats, ladies' mantles, and rainproofed cloth, but later in the year the demand was good and orders from the colonies kept up well. The demand for tweeds and serges seems to be swinging now to nap cloths.

In the heavy woolen and shoddy district of Dewsbury and Batley business was unusually good. Trade with Japan before the new tariff went into force kept many mills running night and day. Much of the cloth made here enters into the ready-made clothing for South African and home demand, and the balance goes to Canada and Australia. There are no exports in this line to the United States. Large shipments of cheap grades of cloth were sent to India.

#### **American Rags on the Market—Rug and Blanket Trade.**

Large quantities of American rags are imported into this district, averaging about 100 bales or 35 tons a week and are used in increased quantities at the Leeds and Morley mills. Formerly these rags were sent to be sold by the auctioneers here, but during the past year many exporters came over and dealt directly with the manufacturer. Imports were low late in the year, owing to advance in ocean-freight rates. During most of the year the call for American rags was not as good as for Continental, and the market seemed overstocked with them, thus bringing down the prices. If American dealers would watch the market and not glut it and lose profits in storage charges, they could soon command the situation to a great extent.

Rug manufacturers had a busy year, a great proportion of the exports being for South Africa, and late in the year Canada became

a heavy buyer. Not to exceed \$1,000 worth were sent to the United States during the year.

Blankets were in fairly good demand until late in the year, when army supplies for Italy and Turkey caused a boom in that trade.

#### **Trade in Ready-Made Clothing.**

Ready-made clothing for men, women, and children is an important industry in Leeds, not only in large factories, but at the homes. Two or three small shipments of ready-made overcoats were made to the United States, but unless the duties are reduced the trade is not likely to be of much importance. The requirement of the trade boards act of a minimum wage and that the employee shall be paid for all time on the premises has had some effect on this trade. Formerly when work was slack the worker could engage in work for himself and remain on the premises.

The bulk of the trade in ready-made clothing is with South Africa, and it seems that if American manufacturers can meet the price they would find a better field for development in that country than in this market, except for the higher-grade clothing. The clothing manufacturers have a special-measure department, and many clothiers take measurements and send the order to the manufacturers, who make up the suits in their factories. This is a growing practice. The Leeds clothing factories produce all styles from the business to the full-dress suit.

#### **Shipments of Textile Machinery.**

There has been a decrease of about \$5,000,000 in the value of shipments of textile machinery from the district during the past five years. A local publication, in its review of the trade for 1911, mentions two new machines for the treatment of raw materials—one to remove foreign substances from fibrous matter and the other to reduce the length of fine wool in order that it may be readily handled in the machinery. [Samples of raw cloth, uncut, cut wool, yarn, and finished cloth produced on the latter machine, and copies of the claims will be loaned by the Bureau of Manufactures.] Regarding the one to remove foreign substances, the publication says:

This is entirely a mechanical process, the machine comprising a helically bladed device arranged to rotate in a perforated drum that itself rotates in a reverse direction. The helically bladed device consists of single-bladed sheet-metal stampings arranged alternately and in opposite directions upon a tube formed with two spiral grooves proceeding from opposite ends toward the center of the shaft so as to divide the comb into two reversely acting sets of strikers.

The shipments of worsted machinery invoiced through this consulate to the United States for 1911 amounted to \$45,517, against \$103,321 in 1910. Other textile machinery, including flax and jute spinning machinery, silk machinery, etc., in 1911 was \$48,810, and in 1910, \$58,828.

#### **Leather and Shoe Trade.**

The leather industry improved over 1910. The price of raw materials was higher and the margin of profits on shoes was alleged to be less than formerly. The Admiralty on the latest contracts required that the uppers for shoes should be made of chrome-tanned box calf, and did not specify that this should be of British manufacture. Heretofore the leather used has been vegetable tanned. The leather

to be used under the new contract is mostly of American or German production. Leeds furnished all of this leather heretofore, and one manufacturer estimates the loss as \$250,000 a year. The leather industry in the district is declining, but shoe manufacturing is increasing.

Leeds originally produced heavy shoes, but after finding the American make of lighter and more artistic appearance in greater demand that line was taken up. Low shoes for both men and women were in demand during the year. The American shoe stores here seem to be doing a good business, and when they once get a person to wear their shoes they have his trade. Some patent novelties of American make for supporting the instep are seen in shoe-store windows. White shoes and athletic goods were in demand during the summer season. The cheaper grade of American shoes for working people, selling for about \$2.75, should find a market in this district.

The Leeds technical school for shoe operatives began its fall term with 100 students. The instruction includes clicking, closing, machine and hand lasting, rough-stuff cutting, and finishing. New machinery has been added since the special report made on this institution [see Daily Consular and Trade Reports for Oct. 27, 1910].

#### **Soap Industry—Acreage under Cultivation—Building Operations.**

Owing to the strikes and the high prices of soap materials, conditions in the soap industry were not as good as in 1910. The American cottonseed oil hard soap is in demand for wool scouring.

There were 48,438 acres planted in wheat in the West Riding of Yorkshire during 1911, and the output averaged 32.87 bushels per acre against 30.34 for the preceding year. The acreage in oats was 78,653. The number of pigs raised in the district was 121,325 against 93,678 for 1910. The total area of land under cultivation last year was 14,648,104 acres, which shows a decrease of over 1,000,000 during the past 10 years. The agricultural machinery used in the district is imported mostly from the United States and Canada.

The development of the new coal area in Doncaster has brought a large number of people into that district and hundreds of houses have been built recently. The town hall of Leeds is to be remodeled and a teachers' training school and a telephone exchange building are to be constructed. It would be well for American manufacturers of builders' supplies to get in touch with the builders.

#### **Iron and Steel Industries.**

Leeds at one time occupied the leading position among English cities in the manufacture of iron and steel, but, owing to the improved means of transportation in other centers, conditions have changed. The rates from this city by rail to Liverpool and Hull are \$2.68 to \$2.92 per ton, and for this reason seaport cities have an advantage over Leeds.

Locomotive builders early in the year were busy with orders, chiefly from India and South America. Toward the end of 1911 orders for traction engines increased. Makers of other rolling stock had good orders from India and South Africa. The annual output of locomotives in Leeds is estimated at 300, ranging from the plantation engine of 4 tons to the locomotive of 130 tons for the colonies, India, and South America.

Trade in agricultural machinery was good early in the year, orders coming from India, South Africa, and European countries. One firm sent plowing engines to the United States, consisting of traction engines with drums and wire rope for hauling the plow across the field. Shipments of agricultural machinery were made to the Philippines, Porto Rico, and Hawaii.

Rolling mills were busy with work chiefly for ship and boiler plates. Large orders for war materials, torpedoes, and cartridges for the British Government were placed with one firm here.

Inquiries for machinery for use in mints came from Italy, the Netherlands, and Turkey. Mining and waterworks developments in South America, Australia, and China brought orders for pumping machinery. The demand for oil-mill machinery is not so great as when the soya bean first came into prominence. One firm in Leeds is making areoplanes and another a fine type of aero engines.

#### Output and Prices of Coal.

There are approximately 400 collieries in Yorkshire with 147,000 employees, and the average output is 32,000,000 tons per annum. Owing to uncertain labor conditions prices of coal increased during 1911. Germany and the Netherlands, which usually took about one-third of the coal exported through Hull and Grimsby, bought 400,000 tons less. Heavier shipments to Egypt, France, and South America, however, helped to make up the decrease. Increased freight rates following advances in wages to seamen and railway employees have injured the trade.

Prices of coal at the Yorkshire Coal Exchange for the first week of 1912 were:

South Yorkshire best hard, \$3.20 to \$3.30 per ton at Hull; best Derbyshire top hards, \$2.86 to \$2.92 per ton at Grimsby; West Yorkshire peanut, \$2.31; South Yorkshire peanut, \$2.43; South Yorkshire slack, \$1.95 to \$2.19 at Goole; West Yorkshire Hartley, \$2.68 at Goole; West Yorkshire ranch slack, \$1.83 at Goole; best Barnsley hards, \$2.49; Barnsley seconds, \$2.31 to \$2.37; best washed and screened steam nut, \$1.95.

#### Developing the Doncaster Coal Fields.

The development of the Doncaster coal fields is attracting people from all sections, not only miners but manufacturers and store-keepers. It is expected that Doncaster will become the metropolis of Yorkshire.

In sinking the shafts for coal in the new field methods novel to this region have been adopted. The older shafts were from 9 to 11 feet in diameter; those put down now range from 18 to 23 feet. The provisions to prevent collapse in sinking are described in a local publication as follows:

One method is by tubbing, which consists of rings of heavy cast-iron plates in segments jointed with stiff flanges and heavy bolts, the rings being caused to descend as the sinking proceeds. At another mine freezing is used. A number of tubes, 3 or 4 inches in diameter, are driven into the ground in a ring around the site to be excavated, and within these tubes are other smaller tubes in which a freezing mixture is kept constantly circulating. At another mine the German cementing process is adopted. In this process cement in a fluid form is pumped into the strata under great pressure and as it "sets" it forms a sort of solid concrete.

#### Extension of American Trade.

Data showing the imports of American goods into the district are not available. While some items, such as machinery, come direct, the larger part comes through importing houses at seaport towns.

In most lines a branch agency in Leeds would accomplish little, while a live agent stationed in one of the seaport towns, who would be in a position to make several calls in the interior towns during the year, could accomplish much to extend American trade.

Firms can not too soon appreciate the importance of advising the consuls of representatives in their territory. Recently one firm wrote this consulate as to the prospects for introducing its wares and sent catalogues and price list. This office, as is its practice, set out to interview dealers in that line, only to find after visiting a couple that the firm already had a representative here who supplied the local trade. Another firm wrote saying it had never sought this market; the result was that we found its goods in common use and could only suggest means to extend its trade.

A suggestion has been made at the consulate that American machinery for making rope and twine could find a market in England. There is no large industry of that kind in this consular district.

American automobiles are popular here and several are in use, but there is room for more of the cheaper priced cars. No change in construction seems necessary, as many users prefer the American styles to those made in England. Motor cycles are much used; but the question of price is important, as low-priced ones are made in England.

#### Exports to the United States.

The value of the articles invoiced through the American consulate at Leeds for shipment to the United States during 1911 was \$814,902, a decrease of \$83,413 compared with the previous year. The principal articles and their values for the two years were as follows:

Articles.	1910	1911	Articles.	1910	1911
Cocoa and confectionery.....	\$9,722	\$12,123	Oils and greases.....	\$58,124	\$31,754
Dyestuffs.....	24,147	20,021	Paper stock.....	5,265	9,459
Gas burners.....	53,169	40,492	Safety lamps.....	7,078	2,318
Hair.....	46,500	56,023	Steel rods.....	18,255	20,316
Hides and skins.....	8,891	5,826	Woolens.....	29,072	23,263
Household effects.....	7,083	4,270	Worsted.....	11,155	9,510
Iron.....	191,615	185,716	Yarn.....		
Leather.....	35,902	70,035	Cotton.....	6,320	6,282
Linens.....	6,274	5,545	Waste spun silk.....	8,353	6,413
Machinery.....	243,941	201,733	All other articles.....	81,216	91,904
Malleable castings.....	15,102	11,299			
Nails.....	21,058		Total.....	806,315	814,902

The shipments declared for Porto Rico were valued at \$85,910 in 1911, against \$98,762 for 1910. Those to Hawaii amounted to \$30,983, a gain of \$21,757 over 1910; and those to the Philippine Islands were valued at \$21,179, a decrease of \$1,978. Practically all the shipments to the American insular possessions consisted of agricultural machinery.

#### Destruction of Rats in Japan.

According to Consul George N. West, the Japanese city of Kobe is especially interested in the extermination of rats as a prevention against epidemics of plague. A reward of 2½ cents gold is offered for each one brought in, and last year 354,291 rats were killed on which this reward was offered. [A special list of Kobe importers of drugs and chemicals may be had from the Bureau of Manufactures.]

## CHINESE GINSENG MARKET.

[From Consul General Amos P. Wilder, Shanghai.]

The best paying variety of ginseng in this market is the wild, from Chosen (Korea) or Manchuria, which sells at \$40 to \$150 per pound. The American and Japanese products range at much lower values in this market, their declared c. i. f. values per pound for 1910 being as follows in United States currency:

	Value.		Value.
American:		Japanese:	
Clarified—		Clarified—	
First quality.....	\$10.70	Third quality.....	\$1.00
Second quality.....	4.00	Fourth quality.....	.88
Fourth quality.....	.00	Crude—	
Crude—		First quality.....	2.50
First quality.....	2.20	Second quality.....	.95

It is not anticipated that the demand for the American product will increase very much as long as Japan and Chosen can maintain their proportions.

The amount of American ginseng, mostly clarified first quality, imported last year was 1,872 catties (2,496 pounds), valued at 40,790 haikwan taels (about \$26,514). The amount of non-American ginseng, mostly Japanese, imported last year was 64,969 catties (86,625 pounds), valued at 141,561 haikwan taels (about \$92,015).

The customs duty per catty (1½ pounds) on ginseng is given in the following table in haikwan taels. The value in United States currency of the haikwan tael varies as silver fluctuates, being placed at \$0.667 by the United States Treasury on January 1, 1912.

Classification.	Duty.
Clarified or cleaned:	Taels.
First quality, value exceeding 11 taels per catty.....	1.100
Second quality, value 6 to 11 taels per catty.....	.375
Third quality, value 2 to 6 taels per catty.....	.220
Fourth quality, value not exceeding 2 taels per catty.....	.080
Crude:	
First quality, value exceeding 2 taels per catty.....	.220
Second quality, value not exceeding 2 taels per catty.....	.072
Wild, 5 per cent ad valorem.	

[From Vice Consul Thomas P. Thompson, Foochow.]

The present prices for American ginseng in Foochow range from \$3.58 to \$13.43 gold per pound, depending upon the quality, size, color, and shape of the roots. The smaller roots at \$3.58 a pound are most desired here. Of the American ginseng, the red-colored wild roots bring the highest prices, while the large cultivated roots are not desired, as customers often mistake them for false ginseng. The wild American root is worth 30 per cent more than the cultivated, and the Korean about 50 per cent more than the wild American. The market for American ginseng is not very large at present, owing to financial conditions and the cheapness of Japanese ginseng. There are no regular foreign dealers in ginseng at this port, the trade being entirely in the hands of Chinese, who import from Hongkong.

American ginseng is commonly known here as Hsiyang (Western Ocean). It is divided into two kinds, Lau Shan (Old Mountain) and Hsin Shan (New Mountain). There is a kind of ginseng raised in

Japan which is known here as Shih-ki (Small Fountain). It is white and hard and attractive in appearance, but is much inferior to the American ginseng. It is cheaper than other varieties. A kind of Korean ginseng is considered the best and is sold for the highest price, being mostly favored by high officials and rich men of this place.

[From Consul General George E. Anderson, Hongkong.]

#### **Hongkong Market Depressed.**

The revolution in China has seriously interfered with the imports of ginseng, and for the past five or six months the Hongkong market for the root has been greatly depressed. While this is the chief market of this drug, the chief consumption is in North China. Owing to the disturbed condition of affairs in that portion of the country, particularly dangerous for such valuable goods as ginseng, it has been difficult to distribute the stocks imported and the ability of consumers to buy has also been impaired. The ginseng imports into Hongkong during 1911 amounted to about 84,000 pounds, practically all of which came from the United States. The total imports in 1910 amounted to 94,000 pounds, in 1909 to 160,800 pounds, and in 1908 to 145,933 pounds. Japan and Chosen (Korea) furnished a considerable portion of the supply in the earlier years, but at present absorb all their production in home consumption or in limited direct export to North China.

Prices during the earlier portion of 1911, and in fact until the revolution broke out, were firm and stocks ran rather low, amounting to only 14,000 pounds at the beginning of the sale season in March, 1911, as compared with 47,400 pounds in stock at the same time in 1910 and 45,400 pounds in stock in March, 1909. At the close of 1911 stocks ran down to 9,799 pounds and prices had fallen off, on an average, about 65 cents gold per pound from those of the same season a year ago. By the last of January, 1912, stocks increased to 18,200 pounds, and on the Chinese New Year (Feb. 19) they amounted to 22,000 pounds. So long as stocks continue to increase, with demand more or less quiet, low prices may naturally be expected, but the dealers agree that with the resumption of normal conditions, particularly in North China, there will be an increased demand and probably a rapid advance in prices. The record of the past Chinese year in the trade was not satisfactory, in spite of satisfactory prices, for the volume of supplies was small during much of the season, and a portion of the time the quality was not such as to bring the best returns.

---

#### **URUGUAYAN PUBLICITY BUREAU CREATED.**

[From American Minister Nicolay A. Grevstad, Montevideo.]

At the extra session of Congress a publicity bureau, under the Department of Industries, was created for making known the resources of the country and arranging for the exposition of its products in other lands. The director's annual salary is fixed at 3,000 pesos (\$3,102), two section chiefs receive 1,200 pesos (\$1,240.80) each, and four assistants draw 480 pesos (\$500.64) each. The translator at 840 pesos (\$868.56) and a photographer at 960 pesos (\$992.64) complete the staff of the office. The annual budget of the bureau aggregates 38,460 pesos (\$39,767.64), which does not include traveling expenses.

## ICELAND WOOL.

[From Consul Augustus E. Ingram, Bradford, England.]

The sharp fluctuations in the value of Great Britain's imports of sheep's or lambs' wool from Iceland and Greenland is seen in the following official statistics:

Fiscal years.	Total im- ports.	Total value.	Average value per pound.
	<i>Pounds.</i>		<i>Cents.</i>
1906	276,466	\$40,027	14.47
1907	202,377	43,876	21.68
1908	273,910	32,522	11.88
1909	385,576	54,841	15.00
1910	133,126	25,846	19.41

Recent developments and suggested changes in the wool industry of Iceland are set forth in the following clipping from a local newspaper:

Iceland wool is perhaps most generally known as a knitting material suitable for making articles like "clouds and fascinators," while the coarser portions are of value in making high-class pile carpets. The production is some 2,000,000 pounds a year, and the quality is roughly divided according to districts; that from the eastern side of the island the finer, and that from the western the coarser, more kempy, and cotted. Much of the clip is consumed in the United States, into which country Iceland wool is allowed entry on the same terms as Scotch black-faced, Donskoi, Asiatic, East Indian, and other low wools, and is shipped by Danish and English merchants.

With the object of gathering information useful to growers of this wool, Mr. Einarsen, of Reykjavik, was sent to England and to America by the Iceland administration, and certain recommendations have been made to the Government by him: (1) That wool be washed at a central station to remove all but 8 or 10 per cent of grease, thus doing away with the system under which each farmer washes his own wool. (2) That suitable washing machinery for the station be obtained. (3) That the wool be well prepared before washing by the removal of gray wool and dirt. (4) That all Iceland wool be marked with an export trade-mark and a number indicating the district of origin. (5) That all wool be divided into grades: First grade, to be all white and well-washed wool, free from stained fiber; second grade, to consist of stained and badly-washed wool and britch locks; third grade, black wool; fourth grade, mixed gray and black. It was further recommended that skin wool should be kept separate from fleece, and that Icelandic exporters should sell and ship their produce to American manufacturers direct and without the intervention of middlemen.

Iceland is a Danish dependency, and it is possible to recognize in these recommendations for a cooperative washing station, an export trade-mark, careful grading, and direct dealing an echo of the policy that has been adopted in the butter trade and in other Danish agricultural affairs.

## American Imports of Iceland Wool.

Iceland wool is embraced in class 3 of the American customs wool schedule. The official records of the United States show imports of unmanufactured wool from Greenland, Iceland, etc., as follows:

Fiscal years.	Total im- ports.	Total value.	Average value per pound.
	<i>Pounds.</i>		<i>Cents.</i>
1906	342,415	\$83,230	24.59
1907	776,839	196,264	25.32
1908	179,108	41,032	22.91
1909	390,385	48,856	12.51
1910	683,166	123,061	19.14

There were no imports from these islands in the fiscal year 1911.

**STEAMSHIP SERVICE FOR TRIPOLI-IN-BARBARY.**

[From Consul John Q. Wood, Tripoli, North Africa.]

A new steamship service has been instituted by the Societa Nazionale di Servizi Maritimi between Syracuse, in Sicily, and the port of Tripoli-in-Barbary. The new steamer *Tripoli* is making two weekly trips, leaving Syracuse on Saturdays and Tuesdays at 6 p. m. and arriving at Tripoli on the following days at 4.50 p. m. The return trips are on Mondays and Thursdays at 11 a. m., and the vessel arrives at Syracuse at 9.50 on the following mornings. One can thus leave Rome Fridays and Mondays and reach Tripoli in 45 hours and vice versa. A new steamer is being built especially for this run, so as to cut the time down to 30 hours.

The steamship company has established a branch office in this port on account of the increased traffic and will equip its new apartments with office furniture, a part of which should come from America. The main office is located in Genoa.

The company's regular service will be maintained under the following schedule: Line VIII, Naples-Tripoli and return (weekly); Line XIX, Genoa-Cagliari-Tunis-Tripoli and return (weekly); Line XX, Genoa-Naples-Tripoli-Tobruk and return (weekly). It is expected that a direct service will also be established between Benghazi and Syracuse. This would take away the importance of Line XX, which runs along the coast, touching at Benghazi, Derna, and Tobruk.

In addition to the above schedule of sailings for Tripoli, there is a weekly service between Marseille, Tunis, and Tripoli conducted by the French Touaché Line, subsidized by the French Government.

**EFFECT OF COAL STRIKE ON POTTERIES.**

[From Vice Consul Roger C. Trevellick, Burslem, England.]

Interest in the use of substitutes for coal in firing pottery kilns has been aroused by the coal strike, which threw out of employment about 30,000 miners in the north Staffordshire coal fields and so handicapped most of the 220 potteries in the federated borough of Stoke-on-Trent that 50,000 pottery workers lost employment. Owing to the proximity of the coal fields few pottery manufacturers ever lay in a large stock of fuel.

One large manufacturer here who has been experimenting with oil and other fuels has succeeded in firing enamel kilns by means of a mixture of waste slack and a chemical compound, which is a trade secret. Owing to the use of this valuable invention the concern has been put to little inconvenience by the coal strike and has kept 800 of its employees at work. The firm is also experimenting with a new method of firing biscuit ovens. For this purpose a mixture of best coal, marly slag, and a chemical compound is used. The marly slag, it is said, is usually rejected at the coal mines, owing to its lack of ordinary combustible qualities.

Much has been said concerning the possible use of oil for firing potters' ovens, but so far as can be ascertained few efforts in this direction have been made here. One of the oldest and most prominent manufacturers informs me that his firm is planning to use oil for its boilers in the future.

**BRITISH ENTERPRISE IN BUENOS AIRES.**

[From a textile correspondent in London Financial Times.]

The decision of a metropolitan firm of distributors to register a small South American company under Argentine law, with a capital of £25,000 (\$121,663), is viewed with satisfaction by leading export firms who have for some years observed with growing uneasiness the development in Buenos Aires of large distributing businesses controlled by Spaniards, French, Germans, and Italians. Some of these concerns, originally established as retail organizations, have added wholesale departments, and many of their purchases of fancy goods, hosiery, and made-up articles are made on the Continent.

**Argentine People Seek High-Priced Goods.**

Paris has for a long time irresistibly attracted the South American buyer, where he pays high prices for goods often of English origin. At the same time Manchester, Bradford, Belfast, and other centers in the United Kingdom have of late years increased their business in piece goods, although not in proportion to the great Argentine developments alone rendered possible by the investment of many millions of English capital in the railroad and other undertakings of the Republic. The prevalence of the Spanish language and of a large Italian population in Argentina has greatly assisted the efforts of textile exporters in Barcelona and the Italian centers. The latter now possess a special trade with South America in colored cotton suitings and trousseings, Busto Arsizio being the chief seat of manufacture. Italian bleached shirtings are also making some headway in South America. At Monza, in Italy, where there is a good deal of hand-loom weaving, there is a moderate output of tapestry and upholstery cloths, much of which goes to Buenos Aires, as do fancy waistcoats of cloth woven at Chieri. The bulk of the Italian export trade in cloth is done through shippers in Milan and Genoa, a large business, however, passing through houses in Manchester, Hamburg, and Paris. Some of the Italian manufacturers are directly represented in the Argentine capital, with which a large trade is done.

**Wealth in Evidence.**

It may be added, in connection with the London project referred to above, that Buenos Aires shops are filled with beautiful and costly goods, that daintily attired and bejeweled women with splendid equipages throng the shops of the city at certain hours, and that the prosperity of years is clearly visible in the daily life of the largest center of population south of the Equator. Buenos Aires is much more to Argentina than is Paris to France, and it certainly offers room for the energies of a certain class of distributors. It need scarcely be stated, however, that local knowledge is necessary, and this can chiefly be found amongst the representatives of the great export houses in the leading textile export centers.

---

**NEW GREASE EXTRACTOR.**

A new German system for the extraction of grease from animal offal is based on extraction by naphtha or some similar solvent. The material under treatment is placed in a closed digester, into which is pumped the solvent, previously vaporized and heated. As the gas comes in contact with the moist cold surface of the offal some of it is condensed and filters down to the bottom of the vessel, taking with it a certain proportion of fat and moisture. This product is then passed to a distiller, where the solvent and the water are evaporated and sent to the condenser, while the fat or oil remains behind. This procedure is continued for 8 or 10 hours until the material is dry and free from grease. It is stated that at Oldenburg, where the first plant of this kind was erected, the fat obtained is of a light-yellow color, and is used by soap factories at Hamburg, while the residue finds a ready sale in the form of meat meal for feeding pigs and poultry. If desired all but 1 or 1½ per cent of the fat can be removed, but in practice it is found more economical as regards coal and solvent to allow about 2½ per cent to remain.

**MAILING ADVERTISING MATTER TO AUSTRALIA.**

[From Consul Henry D. Baker, Hobart, Tasmania.]

Officials of the Hobart post office have informed me that a considerable amount of advertising matter from the United States, including catalogues and periodicals issued as the trade organs of different firms, reach Tasmania without any provision for the payment of duty thereon.

In the case of about 90 per cent of such advertising matter the persons to whom it is addressed decline to pay the tariff charges and delivery is not accepted; therefore, unless American firms will arrange for payment of duty, it would be better for them not to go to the trouble and expense of sending it here.

**Australian Tariff Charges.**

The duty on manufactures of paper having advertisements thereon, including price lists, trade catalogues, show cards, posters, etc., is, under the Australian tariff act, 12 cents per pound or 35 per cent ad valorem, whichever yields the highest return. The money necessary to cover the duty on advertising matter sent to Tasmania (or to any part of the Commonwealth of Australia) may be sent to the deputy postmaster general of the State to which it is addressed, and the matter mailed should then be marked on the wrapper to the effect that the amount of the duty has been forwarded under separate cover to that official.

Magazines or trade papers are admitted into Australia free. When the primary object of such publication is to furnish general information, and it can be used, acknowledged, or sold as such, the fact of its containing a number of advertisements will not make it dutiable. However, when the primary object is clearly that it should be used as a vehicle for disseminating advertisements or calling attention to the advertisements of articles for sale, it is deemed dutiable as advertising matter. All circulars or market reports are dutiable as advertising matter except when merely quoting the ruling prices of products, without intending to advertise any one firm or person, in which event they may be admitted free.

Many pamphlets and booklets extolling patent medicines, issued by manufacturing chemists in the United States, never reach the persons to whom they are addressed in Tasmania. Advertising literature that makes extravagant claims as to the curative properties of medicines is barred from admission into Australia under the trade and commerce act, which forbids any untrue or misleading descriptions of goods intended for this market.

**Waiving Duty—Short-Paid Postage.**

When the total duty on any one mail addressed by any one American consignor to any one State of the Commonwealth does not exceed 24 cents, payment of duty is waived. If duty on advertising matter is not paid by the American firm sending it, the addressee, in order to receive it, must pay the duty by means of postage surcharges, ranging from 2 cents for 3½ ounces up to 12 cents for 16 ounces. In case the consignor has an agent in the Commonwealth, the duty may be paid by such agent on the total weight of any one mail.

There is considerable complaint here that mail from the United States does not bear sufficient postage and so requires payment of

penalty postage on the part of the recipients. Many American firms appear to think that the postage to all British possessions is the same as to the United Kingdom, and so put only a 2-cent stamp on a letter that requires a 5-cent stamp. This is not only very annoying to persons here receiving many American communications, but it also occasionally creates enough delay in delivery to prevent, in the case of urgent letters, reply by the following mail. Letters arriving in Tasmania by the San Francisco mail have only half a day to be answered before the mail for the United States goes out via Vancouver, so that with such close connection delay arising from insufficient postage may occasionally result in great inconvenience.

---

### ITALIAN CHEESE-MARKING REGULATIONS.

[From Consul Leo J. Keena, Florence.]

A new law relative to the marking of adulterated cheeses will go into effect in Italy on June 5, 1912, of which the following provisions are part:

The stamping of the word "Margarinato" and the trade-mark of the factory on the cheese must be clear, indelible, and made with a stamp containing letters of such a size as to be easily read. If this marking is altered or hidden in further handling, whoever shall offer the cheese for sale is required to restore the original marking so as to make it perfectly legible.

Cheese containing margarine must be entirely colored outside in red, with an aniline color called by the trade "Rosso Scarlatto Vittoria." This coloring must be done before the cheese leaves the factory or is exhibited for sale. If the color is altered or weakened in its later handling, it must be restored by whoever offers the cheese for sale.

Each year the Ministry of Agriculture, Industry, and Commerce will indicate the bureaus of chemistry authorized to make cheese analyses, outlining the district for each laboratory, to which samples of all cheese inspected must be submitted.

[The full law, in Italian, and a translation of the inspection requirements may be obtained from the Bureau of Manufactures.]

---

### PIG PRODUCTS IN SCOTLAND.

[From Consul Howard D. Van Sant, Dunfermline.]

A considerable business in the tanning of pigs' hides is done in Scotland. In curing the best Wiltshire bacon, the hides are not removed, but in preparing the other grades the hides are taken off. When tanned, these hides are used for saddle leather, book bindings, purses, and furniture coverings. There seems to be an increasing interest in pig raising in Scotland. It is said here that the best grade Scotch bacon can not be excelled. The sales of American bacon in this country are also steadily increasing, and American lard is finding favor among the buyers of high-class pork products. A large share of the nearly \$100,000,000 worth of bacon and allied products imported into the United Kingdom during 1911 was for Scotland, the trade increasing particularly during the winter months when the demand increased on account of the higher prices of meats. The competition for the Scotch trade appears to be keen among the American, Canadian, Australian, and Argentine shippers, and the home producers are trying to enlarge their stock to meet this increasing trade.

**ELECTRICITY IN BRITISH MINING.**

In a paper on the use of electric power in the working of coal mines, read before the Manchester (England) Geological and Mining Society, Charles D. Taite said that the aggregate horsepower supplied to collieries in Lancashire by the Lancashire Electric Power Co. was at present about 3,000, and this would shortly be increased by work in hand to about 4,000. For some reason Lancashire had been slower to adopt electrical methods than other colliery districts. In the Newcastle district the three power companies were supplying electrical energy at the rate of over 55,000,000 units per annum for colliery purposes. In South Wales 12,500 horsepower was being taken from the power company's mains, and a further 3,500 horsepower was contracted for. In the Clyde Valley district about 8,500 horsepower was either connected or contracted for, while in Yorkshire the present connections were 4,000 horsepower, with an additional 2,000 horsepower contracted for; included in these supplies were three winding gears and three more were to be installed. Possibly the age of the pits had something to do with the backward condition of Lancashire collieries electrically, but where coal was most difficult to win the most modern methods were essential in order that the costs might be kept at the lowest possible figure.

---

**FIRST ANNUAL NATIONAL GAS ENGINE SHOW.**

The first annual National Gas Engine Show, to include everything in gas power and allied lines, will be held in Milwaukee, Wis., June 17 to 22, inclusive, in connection with the convention of the National Gas Engine Association. This is in accordance with plans laid at the last meeting of the association in Cleveland. The place of the show will be the Auditorium, where about 100 exhibition spaces have been laid out.

The central portion of the main floor will be devoted entirely to engines of various kinds, and these will be shown in actual operation on gas or gasoline. All engines will be suitably muffled and shown under actual running conditions, a feature that will make the show absolutely unique in exhibits of gas engines. Outside of State and county fairs, it has heretofore been almost impossible to make arrangements to show engines in operation on their natural fuels. Not only will there be shown the stationary or heavy-duty type of engine, but there will also be the small farm engine, the marine and automobile and possibly aeronautic motor. Space adjoining the building will provide an arena for tractor exhibits.

Surrounding the engine spaces will be spaces allotted to the manufacturers of accessories, showing batteries, spark plugs, coils, magnetos, lubricators, and all allied or accessory lines.

---

*Exterminating the brown-tail moth.*—Consul Charles A. McCullough, of St. Stephen, reports that a vigorous campaign of extermination is being carried on in the Canadian Province of New Brunswick by the division of entomology against the brown-tail moth, about 2,100 nests having been taken up to March 22. The consul's complete report on this subject has been forwarded to the Department of Agriculture.

**TAX LEGISLATION IN URUGUAY.**

[From American Minister Nicolay A. Grevstad, Montevideo.]

The Uruguayan Congress recently passed a law concerning the taxation of real estate in all Departments of the Republic except the Department of Montevideo, where the assessment and taxation of real estate and real property are governed by special legislation. This law may be regarded as a codification of several previous enactments, which are annulled or repealed by it, and as an attempt at creating a better and more complete system for the assessment and taxation of rural, urban, and suburban real estate in the specified 18 Departments.

Under the law, the tax is assessed on the value of the property, which, as regards urban and suburban property, means the value of the soil and improvements of all kinds; while the tax on strictly rural property is assessed on the bare value of the land without improvements or crops. The tax rate for the fiscal year 1911-12 is fixed at 6½ mills.

**Revision of Assessed Values.**

The owner of real estate or lands is granted the right to demand a revision of the assessment up or down. That it should be considered a privilege to be permitted to pay a higher tax than that assessed by the proper authorities may appear somewhat strange at first sight. The explanation is found in the doctrine prevailing here that the assessed valuation represents the true value of the property at condemnation proceedings. The owner is supposed to pay taxes on the true value, and his acquiescence in an assessment binds him to accept a price not exceeding that value whenever the property is needed for public purposes. The result is that in this country the owner is always anxious to aid the assessor in listing his property at its true value, or a little above rather than below the real value.

A notable provision of the law enacts that owners of farm lands, not exceeding 50 hectares (123.55 acres) in extent, of which at least 60 per cent is devoted to agriculture, may be permitted to pay only 50 per cent of the tax, without incurring any risk at condemnation sales on that account. The penalties assessed against delinquent taxpayers are unusually high under the new law.

[A translation of the new law is on file in the Bureau of Manufactures.]

---

**SISAL FROM HAWAII.**

[From the Honolulu Bulletin.]

Sisal is coming to the fore as an island product that in a short time will be one of the chief exports from the Territory. The new sisal mill that is to be located at Poughala will have the latest in the line of machinery for preparing the fiber.

The sisal company will have two mills to take care of the plants that are growing on the 1,150 acres that have been planted. There are some 700 more acres yet to be planted. From 45 to 60 bales a month have been going out of the Territory, the most of it being shipped to the Tubbs Cordage Co. at Oakland, Cal. In March, 1912, the sisal company made its first shipment of sisal to the Portland Cordage Co. at Seattle. The bales weigh about 600 pounds, worth about \$100 a bale.

---

Coal was retailing at St. Michaels, Azores, at \$14 per ton in mid-March, reports Consul Creevey. A special list of dealers there may be had from the Bureau of Manufactures.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8499. Machinery for extracting oils.**—An American consular officer in Canada reports that a business firm in his district is interested in machinery for the extraction of vegetable, animal, and fish oils, with a view to obtaining the agency for a good line covering the territory in which it does business.
- No. 8500. Portable wooden houses.**—An American consulate in Mexico has been requested by a local commission merchant to furnish a list of American manufacturers and exporters of portable wooden houses, to be shipped knocked down and ready for assembling at port of destination. The same person wishes to be placed in communication with buyers of the following articles: Tortoise shell, chicle, cedar, mahogany, guayacan, and ebony. Interested persons should address the inquirer direct, and correspondence should be in Spanish.
- No. 8501. Army shoes and blankets.**—A business man in the Levant informs an American consular officer that he would be pleased to receive catalogues and prices from American manufacturers of shoes and blankets, suitable for use in the army.
- No. 8502. Outfit for a string factory.**—An American consular officer in the Near East reports that a resident of his district would like catalogues and prices of a complete outfit for a string factory, 20 to 25 horsepower, water development.
- No. 8503. Sawmill machinery.**—The sawmill of a Canadian lumber company, valued at over \$75,000, was recently destroyed by fire, together with considerable quantities of lumber. An American consular officer states it is probable the company will rebuild the mill at once, and manufacturers of sawmill machinery would do well to take up the question of equipment for a new mill with the company at once.
- No. 8504. Plant for manufacture of sheet zinc, etc.**—An American consular officer reports that a business firm in Mexico is planning a plant for the manufacture of lingots of zinc, refined and crude; zinc dust; zinc in filiform; and the alloying of zinc in lingots as well as sheet zinc. It would be well for Americans who manufacture such equipments as are necessary for this plant to correspond direct with the company named in the report.
- No. 8505. Wire-rope fittings and attachments.**—A business firm in Canada informs an American consular officer that it desires correspondence with manufacturers of steel and malleable iron clamps, clips, open and closed sockets, and other fittings and attachments for use in connection with wire ropes. American manufacturers should give this matter attention at the earliest possible moment, as an immediate reply is desired by the firm in question.

## PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

- No. 567. Motor generator sets and controlling panels.**—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until April 27, 1912, for two 100-kilowatt motor generator sets and controlling panels at the navy yard, Puget Sound, Wash. Specifications can be obtained on application to the bureau or to the commandant of the navy yard named.
- No. 568. Lock keepers' houses.**—Sealed proposals for building two 2-story 7-room brick lock keepers' houses at Dam No. 28, Ohio River, near Huntington, W. Va., will be received at the United States Engineer Office, Wheeling, W. Va., until April 27, 1912, and then publicly opened. Information on application to F. W. Altstaetter, Major, Engineers.
- No. 569. Officers' quarters.**—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until May 4, 1912, for one officer's quarters at the navy yard, Boston, Mass. Plans and specifications can be obtained on application to the bureau or to the commandant of the navy yard named.

## CHINA'S COMMERCIAL AND INDUSTRIAL PROGRESS.

[From Vice Consul General W. Roderick Dorsey, Shanghai.]

An analysis of the chief articles of import into China, based upon the customs returns of 1910, from which analysis Hongkong has been excluded except in those cases where it is known to produce and is a bona fide supplier to China, shows that out of 129 items Great Britain holds first rank with 43, Japan 30, United States 13, Germany 9, and Belgium 7. Great Britain was placed second 13 times, Japan 20, United States 7, Germany 17, Belgium 5; and in third place Great Britain is seen 7 times, Japan 14, United States 7, Germany 8, Belgium 6. This establishes the fact that the energetic operations of American producers are confined to a more limited field than those of their principal competitors, Great Britain, Japan, and Germany. [A statistical review of China's foreign trade during 1910 was published in Daily Consular and Trade Reports on Oct. 28, 1911.]

There was an extraordinary outward movement of China's raw cotton in 1910; both quantity and value having about doubled, 166,271,200 pounds, valued at \$18,573,214, representing this country's unusual contribution to the world's markets. High prices in America and India engendered a strong demand in Japan for the Chinese fiber. By reason of such unprecedented foreign demand local supplies were dearer than ever before, and mills were obliged to bring in Indian cotton to meet their requirements.

### Cotton Cultivation—Iron Works.

An interesting feature of this trade is the increasing production of the staple in North China. Cotton moving from Tientsin to native and foreign ports in 1910 amounted to 16,666,600 pounds, five times as much as was shipped through the same port in 1909. Hankow, whose shipments of raw cotton have of recent years shown decreases, came forward with an increase of 22,750,000 pounds. The short crops in other countries and the high prices offered to China seem to have tempted the growers in many sections, and this is doubtless responsible principally for the unprecedented sales. It is also true that larger

areas were under cotton cultivation than in the past, replacing opium, and these new sources have supplied a goodly portion of the yield.

It is well that this is so, for the farmer, convinced by this auspicious season that cotton is a profitable crop, will have less reason to persist in the precarious growing of the opium plant. Official encouragement has been given to founding associations to study cultivation of the plant. In several Provinces, principally Szechwan, Shantung, Chihli, and Yunnan, officials have distributed seeds, both native and foreign, without cost, and have sent instructors to teach the farmers improved methods of cultivation. Particular success is said to have attended the experiments carried on in Chihli Province.

The Hanyang Iron Works at Hankow had a busy year and are still unable to meet the demand, notwithstanding the fact that an additional blast furnace was opened in May. According to the report of the Hankow Commissioner of Customs 130,000 tons of pig iron were turned out during 1910, of which 29,000 tons went to Japan and 15,000 tons to the Pacific coast of America. Japan desires a greater supply, and America is making a strong effort to become a larger buyer, as it is claimed that the steel manufactured from this iron has proved to be of the finest grade. These works also turned out 33,250 tons of rails and fastenings for use on China's railways (an increase of 5,000 tons over 1909), which are said to be of such excellent quality that the works voluntarily subjected them to a much more severe test than is required by foreign countries.

#### Imperial Post-Office Service.

The following table presents a comparison of the workings of the Imperial Post Office from 1907 to 1910:

	1907	1908	1909	1910
Offices open.....	2,803	11,400	4,258	5,357
Articles handled.....	168,000,000	252,000,000	306,000,000	335,000,000
Parcels handled.....	1,920,000	2,455,000	3,280,000	3,768,000
Native clubbed letters.....	6,363,000	8,042,000	8,411,000	7,409,000
Registered articles.....	15,533,000	19,802,000	25,598,000	29,013,000
Express letters.....	221,000	317,000	908,000	1,893,000
Collected from letter boxes, etc.....	8,113,000	11,099,000	16,044,000	20,088,000
Value of money orders issued.....	\$1,443,650	\$1,675,700	\$2,042,720	\$2,323,300

A feature of the year's work, as pointed out by the Postal Secretary, has been the extension of postal enterprise in Manchuria, Sinkiang, Mongolia, and Tibet. The long-contemplated increase in the tariff for domestic letters occurred in the autumn of 1910. The inland rate was fixed at 3 cents Mexican per letter; the unit of weight being raised at the same time for all letters, foreign and domestic, from 15 to 20 grams, which not only smoothed the way for the higher rate but brought the Chinese post office nearer to Union practice.

The figures concerning newspapers and printed matter carried between ports and the interior are interesting. Their number has risen from 10,000,000 in 1905 to 84,000,000 in 1910, and, coupled with the annual increase in letters, indicates China's widespread educational advancement.

#### Ore Sales—Railways, Telegraphs, and Telephones and Posts.

The output of the Tayeh iron mines, worked in conjunction with the Hanyang plant, was 303,000 tons, of which 106,000 tons went to Japan. The ore sold by the Tayeh company to Japan formed 75 per

cent of all the ore exports from China. Lead ore increased by 1,253 tons, zinc ore by 2,432 tons, and antimony ore by 5,494 tons.

The total length of Chinese railways open to traffic on December 31, 1910, including Manchurian lines, was 5,217 miles. This compares with 4,500 miles in 1909 and 3,900 in 1908.

No change in rates of the Imperial Chinese Telegraphs was made during 1910. Several additional lines, those of Kwangtung, Kwangsi, Yunnan, Kweichow, Shansi, Mongolia, and northern Chihli, were brought under Government administration, and long-distance telephones were provided between Yinkou, Haicheng, Liaoyang, Mukden, and Hsinmintum. It is proposed also to open telephonic communication between Yinkou, Chinchow, and Shanhaikwan. No addition was made to the wireless stations; the one installed at Shanghai in 1909 has not given great satisfaction.

The Imperial Post Office made further progress in 1910. Routes were increased by 17,300 miles, those served by couriers aggregating 95,600 miles, by native boat 8,000 miles, by steamers 8,700 miles, and by railways 5,000 miles, a total for the year of 117,300 miles. Offices and agencies advanced from 4,258 in 1909 to 5,357 in 1910.

#### Valuable Coal Mines.

While China has not yet recast its mining rules in such a way as shall offer no impediment to the attraction of foreign capital, such mines as are now working under foreign control, and some that are not, continue to make progress. There are no Government statistics pertaining to minerals save those concerning exports through the Imperial Maritime Customs. The following figures relating to coal have been gleaned from returns of the principal collieries now employing foreign methods and are fairly accurate:

Mines.	1909	1910	Mines.	1909	1910
	<i>Tons.</i>	<i>Tons.</i>		<i>Tons.</i>	<i>Tons.</i>
Kaiping.....	1,361,730	1,200,000	Hungshan.....	100,000	232,040
Pushun.....	730,000	1,200,000	Pao Hsin.....	100,000	120,000
Pen Hsi Hu.....		120,000	Ching Hsing.....		365,000
Pingsiang.....	520,000	640,000	Lanchow.....		1300,000
Fangtai.....	272,000	229,340			
Weihshen.....	244,370	357,200	Total.....	3,588,100	4,901,540
Lincheng.....	200,000	219,000			

<sup>1</sup> Estimated.

There are other deposits of coal operated by natives in primitive fashion in many parts of China, but there is no way of even estimating their output. A rich vein is reported to have been found in the Lushan, or Mountain of Lu, in Kiangsi, which the local gentry propose to work as soon as sufficient native capital can be raised. Coal is known to exist abundantly in Shansi and Szechwan and elsewhere throughout the country and only awaits scientific working to place China high up in the list of coal-producing nations.

#### Iron, Tin, and Other Mines.

The Tayeh mines are the only iron deposits being worked systematically. Their production of ore in 1910 was a little less than in 1909, when the output was 307,500 tons.

The tin mines at Kochiu, in Yunnan Province, with modern German ore dressing and smelting machinery and under German technical supervision, are the only deposits of this nature being developed

by up-to-date methods. Work was commenced during the year under review in the tin mines at No-doa, in the island of Hainan, and some degree of success is reported to have been met with, although crude processes of mining are employed. The ore is said to run about 60 per cent and finds its way principally to Hongkong. The total export of tin from China in 1910 was 7,175 tons, valued at \$4,133,310, as compared with 4,978 tons, valued at \$2,599,048, in the preceding year. America is a good buyer of this product, as also is Europe.

Apparently there was no development of gold, silver, or copper deposits during the year under review. Szechwan, Shensi, Kansu, and Chihli, as well as Mongolia, Manchuria, and Tibet, are said to have gold and silver within their borders, and Yunnan has copper.

The mineral oil which was discovered a few years ago in Shensi is reported to find ready sale in Sianfu, the provincial capital. This oil is claimed to be very clear and to emit no odor when burning. Few wells have been sunk so far, and the output is inadequate to meet local demands; but Shensi capitalists who promoted the industry and whose resources are limited decline to admit outside funds, and so what is thought to be a rich deposit is restricted in output. There are also, it is claimed, valuable petroleum fields at Boulai in Szechwan.

#### **New Enterprises.**

Reports from various parts of China indicate that new enterprises of various kinds are springing up. At Shanghai a new flour mill, equipped with American machinery, with a capacity of 400 barrels per day, was added to the list. One candle factory, with a capacity of 50,000 per day, equipped with British machinery, was completed during 1910, and another was under construction with German machinery. Chefoo, too, records a candle plant with a small American equipment, and also celebrated the opening of a new winery, the Chang Yu, which served its products for the first time at the dinner given in that city to the American commercial commissioners, mention of which was made in Daily Consular and Trade Reports on December 16, 1911.

Electric-light plants were completed at Chapei, adjoining Shanghai (German machinery), Nanking (German), Chungking (British), and Mukden (American), while a plant at Changsha with German equipment was nearly completed and one was under construction at Changchun in which American machinery was being installed. Waterworks were finished at Chapei, and at Swatow a contract was awarded to a British firm for the construction of a plant. A paper mill was under construction at Hankow with British and American machinery, and the Hupeh cement works commenced operations at the same place. The raw materials for the latter, which are obtained locally, are reported excellent, and the output has met with a strong demand.

Foochow has a new canned-goods factory, which puts up fruits, fish, and other local products. Mukden boasts a new mint equipped with American electrical machinery, and Antung has a Japanese bean mill and a British-owned sawmill. Two cotton mills in Shanghai increased their loom installation, British machinery being employed.

This list must of necessity be far from exhaustive, for there are many small factories of various kinds constantly starting all over China, but it is difficult to get more than a general statement or rumor in most cases that such things are so.

## CONSTRUCTION WORK ABROAD.

## ARGENTINA.

[From Consul General R. M. Bartleman, Buenos Aires, supplementing item in Daily Consular and Trade Reports, for Mar. 30, 1912.]

**New Thoroughfare for the Capital.**

The bill authorizing the opening of a wide avenue to extend diagonally across the city of Buenos Aires from San Martin and Rivadavia Streets to the Plaza Lavalle, a distance of about 40 squares, has become a law. The plan is stupendous in its scope, as it involves the acquisition by the city of a vast amount of property in the business section, at a cost which now appears to be about \$200,000,000 United States currency.

## CANADA.

[From Consul General David F. Wilber, Vancouver.]

**Rapid Industrial and Municipal Development.**

It would be appreciated if firms interested in these items would advise the consulate general of the fact, sending their catalogue if they desire, and also whether they are successful in obtaining business as a result of their inquiries. There have been cases where such action by manufacturers has enabled the office to later put them in touch with other opportunities, as their names are on file here and we knew them to be interested in obtaining business in British Columbia. Manufacturers having agents in this Province should advise this office of the agents' names and addresses.

**Hydroelectric plants.**—British Columbia has available great water power. Small plants are being erected by mining and other firms for their own use, and several hydroelectric plants have been reported from time to time by this office. If a canvass were made for the Province, it is probable that a number of towns or companies could be shown that it is to their advantage to make installations, particularly in view of the freight on coal and the cost of coal for generating power. The city of Kamloops has decided to install a hydroelectric plant at Barrier River, 40 miles north of Kamloops, and L. R. Lea, of Montreal, is named as the supervising engineer. It might be to the advantage of the manufacturers of hydroelectric equipment to send catalogues to the American consulate at Vancouver to be placed on file for the information of inquirers.

It is rumored that engineers have been surveying the Lillooet River for the British Columbia Railway of Vancouver, British Columbia, for a hydroelectric plant far greater than any now in the Province. No statement of its plans in this connection has been made by the company.

Among other hydroelectric enterprises are those for Prince Rupert and Penticton, on which construction work is being rapidly pushed.

**Sawmills and brick works.**—E. H. Heaps & Co. (office in Vancouver), whose sawmill at Ruskin was burned in 1910, are having it rebuilt for 200,000 feet daily capacity, with electric power. They are also to build a brick plant with 50,000 daily capacity, the kilns being heated by oil. The new Gilchrist brick plant at Ruskin will soon begin operation. With large numbers of buildings being erected in this developing Province, manufacturers of brickmaking machines should find a good market. Several plants were built last year. Any catalogue sent to this consulate of such machinery will be placed on file for the information of inquirers. It is reported that J. D. Winlaw will build and operate a sawmill at Howser Lake, north of Nelson, British Columbia.

**A box factory** is proposed at Creston, British Columbia.

**Car factory.**—It is stated that the eastern representative of the St. Louis Car Co., recently here on a visit, has recommended and will urge the building of a branch factory at Vancouver.

**Lock and hardware factory.**—The Canadian Lock & Novelty Co., said to be capitalized at \$100,000, is thought to have definitely decided to build a lock and hardware factory at New Westminster. It can be addressed in care of the secretary of the Board of Trade at New Westminster, British Columbia.

**Waterworks.**—The District Council, meeting at Lynn Valley, British Columbia, resolved: "That the district engineer be empowered to start work at once putting in

pipes on the streets necessary to supply water to those who have applied for same on the higher levels; also, that he proceed with the work of putting in the necessary intake, settling tanks, and reservoir for the water supply to the highest levels in Lynn Valley."

*Car shops, etc.*—Vancouver papers state that an electric railway will be built this year connecting all towns between Pincher City, Alberta, and Crows Nest; the car shops may be built at Blairmore, Alberta. The Keystone Portland Cement Co. has bought the smelter at Frank, Alberta. The company expects by next August to be turning out 1,500 barrels of cement every day.

*Cement plant.*—The McAlpine-Robertson Construction Co. (841 West Hastings Street, Vancouver, British Columbia) is the contractor and is reported ready for tenders for supplies and equipment for the Saanich Arm cement plant.

*Fire equipment.*—Fire Chief Carlisle, of Vancouver, British Columbia, has been instructed to call for tenders, to be all in by May 1, for the new fire apparatus provided for in the estimates for the current year. These include the following: One auto, \$3,500; two auto pumping engines, \$28,000; two auto city service trucks; one auto chemical engine, \$7,000; three auto hose wagons, \$18,000; new hose and nozzles, \$8,000; auto aerial ladder truck, \$15,000; machine shop, \$1,000; and blacksmith shop, \$500. Previous reports have been sent regarding auto fire apparatus for Nanaimo and North Vancouver.

*Automobiles.*—Two automobiles, one an ambulance, are contemplated in the estimate for the Vancouver police department, to cost \$6,200.

*Road machinery.*—It is stated that Mayor Lee and other officials of New Westminster, British Columbia, consider that their city is losing much money through old machinery for road making and repairing and will obtain appropriations for modern machinery to replace it.

*Logging railway.*—Robert McNair (1070 Melville Street, Vancouver, British Columbia), is reported to be constructing a 6-mile logging railway from Port Moody to Coquitlam Lake, to transport timber from the latter to tidewater.

*Manual training.*—The school trustees of South Vancouver, British Columbia, propose to introduce manual training, appropriating \$1,690 for the first equipment. Mr. Kirkland is secretary of the board. H. Donnell (Victoria, British Columbia), is the provincial inspector of manual training.

*Coal-mine equipment.*—It is stated that improvements which will cost \$1,000,000 are being considered by the Pacific Coast Collieries (Ltd.), in order to increase production and to provide better shipping facilities.

*Fishing steamers.*—Tenders for six wooden-hull oil-burning fishing steamers, to cost approximately \$100,000, are to be called for at once by the Canadian Fish & Cold Storage Co., of this city.

*Ornamental street lights.*—To install 898 additional ornamental street light standards recommended for the city of Vancouver will cost \$235,000, and it is expected that City Electrician Woodroffe will be directed to proceed with the work, so that installation may be begun this summer and completed before the end of the year.

*Jails.*—(1) It is thought that North Vancouver, British Columbia, will soon erect a city jail. (2) Three cells are to be added to the jail at Vernon, British Columbia. (3) It is reported that a new jail will be provided by the board of works of British Columbia at New Denver, as well as a record office and a bridge.

*Drill halls.*—It is considered assured that the Dominion Government will build a \$400,000 drill hall at Vancouver, British Columbia. Drill halls for Prince Rupert and Fernie were mentioned in Daily Consular and Trade Reports for March 16.

*Hospitals.*—(1) A hospital is to be erected at Masset, British Columbia. (2) An isolation hospital is being urged for North Vancouver.

*Bridge.*—The Province of British Columbia is considering a \$75,000 bridge across the Kootenay River at Nelson, pressed for by local people.

*Water tank.*—The municipality of South Vancouver has decided to construct a 100,000-gallon water tank on the municipal grounds.

## CHINA.

[Nanking correspondence of Lim Boon-Keng in North China Herald.]

### Rebuilding of Hankow.

Mr. Percy Tilley, a Shanghai architect, has gone to Hankow to assist in the drafting of plans for the rebuilding of the burned district into a modern model city. Since the political upheaval at Wuchang, and the subsequent burning of the native city of Hankow, that part of China, once the commercial center of the interior, has been reduced to ruins and deserted. As Hankow is not likely to be exposed by renewal

of hostilities, the board of industry of the Wuchang provisional government, President Sun Yat Sen, and the Chinese merchants of Hankow, notably Messrs. Chang Chan, Wu Pay Ling, and Sun Wei Chung, have formulated elaborate plans to transform the deserted city of Hankow into a commercial seat.

A new bund, with lofty buildings, wharves, broad roads, and other commercial facilities, will be the principal feature of the reconstruction. Thirty-four roads will be laid out. The landowners will contribute 10 per cent of their acreage for these highways and for sites for public buildings and parks. The landowners have been instructed to establish their claims to their respective holdings in the burned area, and new title deeds will be issued.

The Commercial Building Corporation will float a loan of 15,000,000 taels (\$9,200,000), guaranteed by the Republican Government, it is said, and this will provide for the erection of 30,000 houses.

## INDIA.

[From the London Times.]

### The Irrigation Program.

In the financial statement of Sir Fleetwood Wilson for the ensuing fiscal year, information was given as to the irrigation schemes sanctioned or awaiting approval. It was stated that, in addition to canals in operation, there are altogether 55 projects under construction, awaiting sanction, or being examined by the professional advisers of the Government of India. They include 26 works classed as "productive" and 23 classed as "protective," and are designed to irrigate 8.80 million and 1.18 million acres, respectively, at a total capital cost of \$150,000,000 for the productive and \$31,600,000 for the protective works. The former are estimated to yield a net return of 7.28 per cent on the capital. Satisfactory progress is being made with the greatest undertaking now in progress—the triple canal project in the Punjab; and Sir Fleetwood Wilson announced that the Upper Chenab Canal will be opened in May or at latest October, while the Upper Jhelum and Lower Bari Doab Canals will be ready in 1914. [Details of this construction appeared in Daily Consular and Trade Reports for Jan. 12 and Oct. 7, 1907, and Apr. 3, 1912.]

It was announced that the Ghaggar, Twante, Mahanadi, and Wainganga Canals have been sanctioned. The scheme for the first of these projects was submitted by the United Provinces Government, and the cost is estimated at under \$1,215,000. The Twante project is for a navigation canal along an important trade route in Lower Burma, to cost \$2,362,000. The Mahanadi and Wainganga canals will take off from those rivers in the Central Provinces, where at present State irrigation works are almost nonexistent. Their estimated cost is \$4,455,000.

The Government of India now have before them the detailed scheme for the introduction of perennial irrigation in Sind, of which the Sukkur Barrage will be the pivot, though the main outlay will be for the Rohri Left Bank Canal. Between them these works will cost not far short of \$21,900,000. The Cauvery Reservoir project [described in Daily Consular and Trade Reports for Jan. 25 and Dec. 28, 1911], estimated to cost \$12,500,000, is for the construction of an immense dam attaining a maximum height of 201 feet and an average height of 113 feet. It will impound sufficient water to irrigate 4,750,000 acres, and will bring into existence a vast artificial lake having an area of 58 square miles. Another most important scheme on the list for the near future is the Sarda-Ganges-Jumna feeder project. It is estimated to irrigate over 1,500,000 acres, when account is taken of the additional supplies which existing works in northern India will derive from it.

## HAWAII.

[From the Honolulu Bulletin.]

### Marine Barracks—Commercial Building.

The contract for marine barracks and officers' quarters at Pearl Harbor has been awarded to the Spalding Construction Co., of Portland, Oreg., at \$114,000, including fittings.

A large commercial building in Manila is planned jointly by the Merchants' Association, the Chamber of Commerce, Commercial Club, and the Stock Exchange.

### New Buildings—Sewer Contract.

Building operations, although not up to the pace set during the last couple of months, continue fairly active, especially in the residential districts. Many foundations have been laid in the Kaimuki section, and a number of buildings are in course of construc-

tion. In the heart of the city the one-story shacks at the corner of Union and Hotel Streets have been demolished to clear the way for the new Brewer Building, and it is understood that a new building is contemplated to take the place of the old Art Theater that is being torn down. The old buildings on upper Fort Street are being cleared to make way for the new building to be put up by C. M. Cooke (Ltd.).

The Government has agreed to sign with Lord & Young for constructing the Wai-pilopilo sewer; contract price, \$54,157. About 3 miles of sewer will be put in.

#### **New Sugar Mill for Philippines.**

The San Carlos Milling Co. (Ltd.) is now being organized in Manila, capital \$400,000, to build and operate the sugar central at San Carlos, on the Philippine island of Negros, according to the proposition inaugurated a year ago by Alfred D. Cooper. The report of the expert who studied the question has been favorable. It is expected to have a 12,000-ton mill operating in 1913 on San Carlos Harbor, shipments being made by vessel. A 10-mile railroad will also be constructed.

---

### **TURKISH HANDMADE LACE AND EMBROIDERIES.**

[From Consul General George Horton, Smyrna.]

The hand manufacture of lace, embroideries, and lingerie underwear is carried on, on a fairly large scale, in Smyrna and the neighboring villages. The fact that it has not been customary for female labor to be employed away from home has caused a large proportion of the women workers to give their time to manufacturing lace and embroideries. Their work is either taken around the town and disposed of by women dealers or sold to the trade, chiefly as piecework made under orders from dressmaking and underwear establishments. Girls working at home earn small wages as compared with those employed in the stores, the latter receiving 40 to 70 cents per day of nine hours.

It is also of interest that the Oriental Carpet Manufacturing Co. has a plan which may improve the condition of lace and embroidery workers of this district. This firm works in connection with owners of small looms in country regions, furnishing them with dyed yarns and other materials, supplying them with designs of carpets most in demand, and finding a market for the goods in England, America, and elsewhere; when necessary, even money is advanced. A similar exploitation of the lace and embroidery makers is contemplated, and it is hoped that there will in time be as large an output from this region as from Beirut, where these workers were first established through the aid rendered them by the American mission.

---

### **AMERICAN WHEAT SHIPMENTS TO JAPAN.**

[From Consul General Thomas Sammons, Yokohama, Feb. 9.]

The Japanese press comments freely on the unusual large quantities of wheat now being shipped from the United States to Japan. During the past 60 days upward of 30,000 tons of American wheat have been consigned to this jurisdiction.

The prevailing duty on wheat imported into Japan is approximately 29 cents per 100 pounds and on flour 70 cents per 100 pounds.

---

An International Aviation Exhibition will be held at Vienna, Austria, May 18 to June 23.

**MINERAL PRODUCTION OF BRITISH COLUMBIA.**

[From Consul Frank C. Denison, Fernie, Canada.]

The preliminary report of the department of mines at Victoria shows a shrinkage of \$4,500,000 in the output of the British Columbia mines during 1911.

In the East Kootenay district there was a falling off of 605,000 tons of coal and 140,000 tons of coke compared with the production in 1910; but as the total coal shortage for the whole Province was but 365,000 tons, the output in other sections of British Columbia evidently advanced. A considerable falling off in the production of copper at the Granby and British Columbia smelters is also reported as the result of the coal strike, which shut off the supply of coke. Notwithstanding this loss in the boundary district, there was an increase of \$18,588 in the copper production of the entire Province. This increase comes from the coast district, where the gain for the year is given as 8,000,000 pounds.

Placer gold to the value of \$3,000 was taken from the Fort Steele district, practically all from the old placer grounds on Wild Horse Creek. The decrease in the gold production of the Province in 1911 amounted to \$925,915, the year's total output being \$5,120,465. Much of this loss is also attributed to the shutting down of the Granby and other smelters for lack of coke, considerable gold being secured from the copper ores reduced at those smelters; and the Rossland mines, also suffering from the strike, report shortages in their output.

**Oil Fuel for Smelters.**

Both silver and lead declined, due to the exhausting of the available ore body in the St. Eugene mine at Moyie. This shortage amounts to \$272,070 for silver and \$272,945 for lead, the total production being reported at 1,921,300 ounces of silver and 27,975,000 pounds of lead.

Developments at the Corbin coal mines, near the eastern boundary of British Columbia, about 40 miles from Fernie by rail, has resulted in stripping a large body of coal which the management is preparing to mine by a surface process similar to quarrying.

An interesting paragraph of the report from which this information is taken relates to the experiments being made at the Van Anda smelter on Vancouver Island. These experiments have been under the supervision of Thomas Kiddie, who states: "We used 157 gallons of oil in 2.33 hours, and 60 gallons for heating up, or 217 gallons in all. This gave an average of 14.6 gallons of oil per ton of material smelted, equal to 43.8 cents per ton of ore smelted. The rate of smelting was 110 tons per 24 hours." Mr. Kiddie thinks that with some changes the cost for smelting by this method should approximate 30 to 35 cents per ton of ore treated. [The United States Geological Survey states that California crude oil has been used for some time in reverberatory furnaces at McGill, Nev., and Cananea, Mexico.—B. of M.]

Deputy Consul General John C. Allen, of Monterey, reports that an Ohio tire and rubber company has arranged with the Government to establish at Mexico City a plant for manufacturing all kinds of rubber products, oilcloth, insulated wire, etc.

**FUSEL OIL FROM SUGAR WASTE.**

[From Consul General James L. Rodgers, Habana, Cuba.]

Inquiry is made regarding the production of fusel oil in Cuba. After careful inquiry it is evident that no attempt is made to save this valuable by-product by the distilleries of Cuba, which run on the large supply of molasses coming from the sugar mills. As far as I can ascertain this is more the result of lack of knowledge in the matter of the production of fusel oil rather than any intention to sacrifice value.

Among the distilling interests to which this matter has been submitted one company is very anxious to open correspondence with a view to securing the technical advice and assistance which would be necessary in developing this new feature of their industry.

The price of molasses in Cuba fluctuates from year to year, but it can be averaged safely at about  $3\frac{1}{2}$  cents per gallon. All the available supply finds a ready market in Cuba, as it is used in local distilleries and is also shipped abroad in large quantities. In 1910 (the latest statistics available) the exportation of molasses from Cuba was in value \$1,477,756, of which over 60 per cent went to the United States and very nearly all the remainder to England.

Roughly estimated, the present-day distillation of alcohol of all grades in Cuba would be about 1,000,000 gallons annually. There are no accurate statistics available.

[Compiled in the Bureau of Manufactures from official sources.]

Fusel oil is a by-product produced in the distillation of alcohol from various substances, including grain, beet and cane molasses, and wood. Its chief use in the United States is in connection with the manufacture of explosives. It is also used in making artificial fruit essences. The total output of this oil in the United States was 110,792 gallons during 1910, the last year for which figures have been compiled by the United States Internal-Revenue officials. This figure was exceeded only by the record year, 1907, when 124,709 gallons were produced. As the production of spirits distilled from other materials than fruit increased from 163,893,960 gallons in the fiscal year ended June 30, 1910, to 175,402,396 gallons in the fiscal year 1911, it is probable that the 1911 output of fusel oil also showed a gain. Illinois ranks first in the production of proof spirits and fusel oil, Ohio second, and Louisiana third. In the first two States, alcohol is produced chiefly from grain, while in Louisiana molasses is the sole source.

The imports of fusel oil into the United States amounted to 4,953,952 pounds, valued at \$598,199 during the fiscal year 1910, and 5,231,252 pounds, valued at \$842,916, in 1911. European Russia ranked first as a source of supply, with Germany second, these countries supplying, respectively, 1,342,282 and 1,573,902 pounds in 1911.

It is estimated that the maximum amount of fusel oil obtained in the distillation of proof spirits is about two-tenths of 1 per cent. During the fiscal year 1911, the production of spirits from molasses amounted to 21,634,257 gallons, produced from 41,014,190 gallons of molasses. There were 17 molasses distilleries in operation during that period, 6 in Massachusetts, 3 each in California and Louisiana, and 1 each in Hawaii, Kentucky, Michigan, New York, and South Carolina. Louisiana led in the production of spirits from molasses, followed by Michigan, New York, and South Carolina, in the order named.

**POSTAL AND SHIPPING FACILITIES IN PERSIAN GULF.**

[From Consul Homer Brett, Maskat, Oman, Arabia.]

The post office at Maskat is maintained by the Government of British India, which finds it expedient to operate post offices at a number of places outside of its own territory, among others at Aden, Arabia; Bagdad and Bassorah, Asiatic Turkey; Bahrein, Bahrein Islands; Bandarabas, Bushire, Jask, Lingah, and Mohammerah, in Persia; and at Guadur, on the Mekran coast of Baluchistan.

A complete and reliable service is provided, some features of which are not familiar to the general American public. One of these is the insurance system, by which any registered letter or parcel may be insured for its value up to 2,000 rupees (\$648.70), the charge being 2 cents for each 50 rupees (\$16.22) or fraction thereof.

Another important service is the Value Payable Post, by which a letter or parcel may be sent and held for delivery until the stated value has been paid to the post office by the addressee. The postal authorities are then responsible for the transmission of this money to the shipper, which is done by a money order.

This system is made to cover freight shipments in the following manner: The seller dispatches the goods to himself at the place of destination; he then indorses the bill of lading, writes an order for the delivery of the merchandise, and sends these documents, in care of the Value Payable Post, to the purchaser. Complete safety is provided for shippers, and persons unknown and without credit ratings are enabled to have orders filled without trouble or delay. The charge for this service is approximately 1 per cent, not including the money-order fee, which must be paid by the consignee.

The post office furnishes certificates of posting for unregistered articles at the rate of one-half cent for any three letters or six packages mailed at the same time by one person.

**Parcel-Post Facilities—Bills of Lading with Drafts Handled.**

A complete parcel post, both internal and foreign, is operated, packages up to 10 pounds in weight being carried between domestic offices at a rate of 4 cents and those between 10 and 20 pounds at 8 cents per pound. Parcels up to 11 pounds in weight and £16 (\$77.86) in value may be sent to the United States at the regular International Parcel Post rate of 12 cents per pound, but insurance is not available. A semiofficial service carried on in connection with the American Express Co. handles parcels of the same weight, but up to £20 (\$97.33) in value, and insurance is available. This service will also undertake the payment of customs duty in the United States when a proper deposit is made at the time of posting.

The United States has no provision for posting parcels to India. It is surprising that the facilities should be so one sided, because the opportunity to send goods to this part of the world at the 12 cent per pound rate would be of great value to American merchants, as many people here live at places remote from well-stocked stores. An enormous mail-order business is now done with England, and if a proper parcel post were in operation American catalogue houses could participate in this trade. They could probably make large sales of sporting goods, jewelry, and similar lines, and certainly very large sales of shoes. It is impossible to obtain reasonably good footwear in this part of the East, except at extremely high prices.

**AN AMERICAN EXPOSITION SHIP.****Important Trade Promotion Plan.**

The American Manufacturers Export Association, of New York, is active sponsor for a plan for an annual commercial tour by representatives of manufacturers and exporters on an exposition vessel, the first cruise to include all Latin-American countries. The United States Marine Exposition Co., a corporation authorized under the laws of the State of New York, has organized the enterprise under the patronage of the association, and Mr. Henry T. Wills, secretary of the association, 200 Fifth Avenue, New York City, will have general management, and Mr. J. J. Finnell, consulting engineer, of New York, exposition management. The active cooperation and interest of the President and the executive departments of State, Navy, and Commerce and Labor have already been secured. Assistant Secretary of State, Mr. Chandler Hale, has issued instructions to diplomatic and consular officers to aid the success of the tour in every way by arousing the interest of Latin-American countries. A representative of the Department of State will probably accompany the expedition.

A ship of 14,000 tons displacement, under American registry, will be secured, and a large amount will be expended in remodeling the boat to fit it for exhibition purposes. Exposition booths and show cases, suitable for the effective display of American manufactures; will be installed. These exhibits will include machinery, plantation equipment, motor boats and cars, factory supplies, hardware, household ware, dry goods, food products, drugs and chemicals, paints, oils, and practically every variety of the up-to-date products of our factories. They will be in charge of high-class representatives of the manufacturers, and every facility for an effective display will be provided—interpreters, advance notices, excursions from inland districts, and the cooperation of governmental agencies. The exposition will be under the personal direction of a distinguished American, well versed in the languages of the countries to be visited, and bearing with him the approval of our own Government.

The name *Exposition* has been chosen for the vessel. It is expected that the first tour will begin about October 1 next, and last about 180 days, the itinerary to begin with Habana and include some 60 ports on the Atlantic and Pacific coasts, ending at San Francisco. Officers of the United States Navy may be detailed to command and navigate the ship, and every effort will be made in the enterprise to emphasize the purpose of the journey to establish the active and effective trade relations with the countries of Latin America, for which Secretary Knox is now paving the way by his visits at Caribbean ports.

This should result not only in establishing better trade relations, but will have other far-reaching effects in relation to banking activities, transportation, and the extension of our foreign commerce. Further publicity will be given to the matter from time to time in the public press before the voyage of the *Exposition* begins.

At the conclusion of the mission to Latin America plans will be undertaken for a similar cruise among the trade centers of the Orient.

---

*British beer consumption decreased from 36,841,000 barrels in 1899 to 33,619,000 barrels in 1911.*

**AMERICAN NATIONAL CONVENTIONS.**

The following are among the prominent conventions to be held during 1912 of national associations pertaining to commerce and manufacturing:

- International Federation of Commercial Travelers' Organization, Colorado Springs, Colo., July 15-17. D. K. Clink, secretary, 143 N. Dearborn Street, Chicago, Ill.
- National Electrical Contractors' Association, Denver, Colo., July 17-20.
- National Hardwood Lumber Association, Chicago, Ill., May or June. Frank F. Fish, secretary, 1012 Rector Building.
- United Commercial Travelers' Association of America, Burlington, Iowa, June 6-8. H. W. Conant, secretary, Sheldon, Iowa.
- American Iron, Steel, and Heavy Hardware Association, Boston, Mass., May.
- E. R. Marnelle, secretary, Thirty-fourth Street and Broadway, New York, N. Y.
- American Institute of Electrical Engineers, Boston, Mass., June 25-28.
- National Association of Credit Men, Boston, Mass., June 18-21. J. H. Tregol, secretary, 41 Park Row, New York, N. Y.
- American Association of Nurserymen, Boston, Mass., June 12-14. John Hall, secretary, 204 Granite Building, Rochester, N. Y.
- American Electrochemical Society, Boston, Mass., April 18-20. Prof. Jos. W. Richard, secretary, Lehigh University, South Bethlehem, Pa.
- National Association of Stove Manufacturers, Detroit, Mich., May 8-11. Thos. J. Hogan, secretary, 1400 Auditorium Building, Chicago, Ill.
- National Retail Hardware Association, Detroit, Mich., June 18-21. M. L. Corey, secretary, Argos, Ind.
- National District Heating Association, Detroit, Mich., June 25-27. D. L. Gaskill, secretary, Greenville, Ohio.
- Railway Industrial Association, Kansas City, Mo., May 14. Guy L. Stewart, secretary, 1328 Pierce Building, St. Louis, Mo.
- United States Highway Association, St. Louis, Mo., April 8. Coleman Du Pont, secretary, Wilmington, Del.
- American Society of Plumbing Inspectors and Sanitary Engineers, St. Louis, Mo., May. M. J. Conroy, president, St. Paul, Minn.
- National Wholesale Grocers of the United States, St. Louis, Mo., May 15-17. G. B. Wason, president, Boston, Mass.
- National Piano Manufacturers' Association of America, Atlantic City, N. J., about May 20. Herbert W. Hill, assistant secretary, 254 West Twenty-third Street, New York, N. Y.
- American Medical Association, Atlantic City, N. J., June 4-7. Dr. Alexander R. Craig, secretary, 535 Dearborn Avenue, Chicago, Ill.
- National Association of Clothiers, Atlantic City, N. J., June 3-5. W. R. Corwine, secretary, 13 Astor Place, New York, N. Y.
- National Machine Tool Builders' Association, Atlantic City, May. Charles E. Hildreth, secretary, Worcester, Mass.
- National Association of Manufacturers, Waldorf-Astoria, New York, N. Y., May 20-22. George S. Boudinot, secretary, 50 Church Street.
- National Cigar Leaf Tobacco Association, New York, N. Y., May 13. Charles Emery Long, secretary, Lancaster, Pa.
- International Waterways Congress, Philadelphia, May 23-28.
- Wholesale Saddlery Association of the United States, Nashville, Tenn., April 23-24. Henry Othmer, secretary, 30 North La Salle Street, Chicago, Ill.
- National Commercial Teachers' Federation, Spokane, Wash., July 15-19. F. M. Van Antwerp, secretary, Louisville, Ky.
- Commercial Law League of America, Colorado Springs, Colo., July 23-25. E. L. Kreamer, secretary, 108 La Salle Street, Chicago, Ill.

**British Empire Trade Commission.**

The Union of South Africa has appointed as its representative on the British royal commission to investigate the natural resources of the Empire Sir David Graaf, Minister of Public Works. Canada will be represented by Mr. Foster, Minister of Trade and Commerce, and Australia by Dr. Donald Cameron. The commissioners for New Zealand and Newfoundland have not yet been chosen.

**FOREIGN TRADE OPPORTUNITIES.**

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8506. Harbor works.**—An American consul reports that a harbor for a certain city in his district now seems assured, as plans, specifications, and other information regarding the project have been prepared for prospective bidders. These call for a basin, a pile wharf, roadway to the shore, etc. It is stated that \$100,000 has so far been appropriated for this purpose, and bids will be received up to April 19. Copy of the specifications, instructions to bidders, etc., which was forwarded by the consul, will be loaned to interested firms by the Bureau of Manufactures.
- No. 8507. Ham, bacon, cheese, canned meats, and food products.**—A business man in a Mediterranean country informs an American consulate that he desires to represent American houses dealing in hams, bacon, cheese, canned fruit, canned meats, and other canned and preserved food products. The inquirer has been manager of a house handling these goods for about nine years and desires to engage in business for himself. Correspondence may be in English.
- No. 8508. Cotton goods for India.**—An American consul in India has forwarded a copy of a letter received from a business man in his district in which it is stated that great quantities of cotton goods are annually imported into that region. The writer of the communication is anxious to secure a part of this trade, and with this object in view is desirous of corresponding with several cotton goods manufacturers in the United States who are seeking export trade. He is anxious to get in touch with the manufacturers themselves, not through export commission agents.
- No. 8509. American articles for Sweden.**—A Swedish importer of American gas lamps and fixtures, who has had considerable success during the past years with these articles, and who has a large number of reliable agents scattered over the country, desires to import various other American products. He informs an American consular officer that he would like small general articles of practical utility.
- No. 8510. Plumbers' supplies and sanitary appliances.**—A Latin-American city has just completed a new water and sewage system, and the city council is now preparing specifications for the proposed contract of connecting the houses with the new system and at the same time embodying prices for the complete installation or furnishing of the necessary plumbing supplies, such as closets, bathtubs, sinks, washstands, pipes, drains, etc. As the city in question has about 40,000 inhabitants such a contract will amount to a considerable sum. As plans are not yet completed, definite information regarding this matter can not be furnished, but a copy of the complete report on this subject, forwarded by an American consular officer, and which contains particulars that would enable American firms to be in a position to take advantage of any opportunity that might arise, will be sent to interested firms on application to the Bureau of Manufactures.
- No. 8511. Shellac.**—A business firm in India has notified an American consular officer that it is manufacturing a superior quality of shellac and is willing to send a sample of the same to any firm in the United States that may be interested in this product.
- No. 8512. Home savings banks.**—One of the commercial agents of the Department of Commerce and Labor reports that a European Government is especially interested in the home savings banks which have proved so successful in England. He writes that this is an important opening, and American manufacturers of this class of goods would do well to get in touch with the European Government officials as soon as possible, submitting samples of their products. A good, low-priced bank for the home for small savings should find a ready sale in the country in question.
- No. 8513. Supplies for shipbuilders and navigation companies.**—A business man informs an American consular officer that he desires to represent in Italy American manufacturers of all kinds of supplies used by shipbuilders and navigation companies. Such supplies would consist largely of locks, port-hole fittings, toilet and bathroom fittings, plumbing supplies, etc. References can be furnished. Correspondence in English or Italian.

## PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

- No. 570. Mineral oil for Lighthouse Service.**—Sealed proposals will be received at the office of the Lighthouse Inspector, Tompkinsville, N. Y., until April 15, 1912, for furnishing mineral oil required by the Lighthouse Service for the fiscal year ending June 30, 1913, in accordance with specifications, copies of which, with blank proposal and other information, may be obtained upon application to Lighthouse Inspector, Tompkinsville, N. Y.
- No. 571. Navy Department supplies.**—The Bureau of Supplies and Accounts, Navy Department, Washington, D. C., will receive bids until April 16, 1912, for the following supplies. Firms interested therein should make application to the Bureau of Supplies and Accounts, giving the schedule numbers desired: Schedule 4402, typewriter carbon paper, typewriter ribbons. Proposals will be received until April 30, 1912, for the following articles: Schedule 4456, baskets for hydro-centrifugals, cast-iron pinions, rails; schedule 4452, magnesia blocks, plaster asbestos cement, plastic magnesia cement, pipe magnesia covering, asbestos felting, asbestos millboard, asbestos paper, asbestos plaster for pipe covering; schedule 4467, coffee copper boilers, scouse kettles, butchers' knives and cleavers, bake and bread roasting pans, sauce and mess pans, tinware, cooking utensils; schedule 4453, steel bolts, buff paving bricks, gravel, reinforcing steel; schedule 4455, felt-lined rubber boots, Kenwood felt, white rubber gloves and aprons, sodium nitrate; schedule 4464, fire brick; schedule 4468, cotton canvas, flax canvas, flax ravens, cotton ravens; schedule 4460, steel casing, lenses, information confidential lockers, Washington or west coast spruce; schedule 4451, black-print cloth, black-print paper, blue-print paper; schedule 4468, furnishing and installing furnaces; schedule 4448, furnishing and installing forging welding furnace; schedule 4446, laundry machinery; schedule 4459, ventilating and starting panels motors, ventilating sets; schedule 4443, lubricating oils; schedule 4447, mechanical signal hoist ammunition turret outfits; schedule 4458, gap power shear; schedule 4465, insulating cotton tape, rubber insulating tape; schedule 4457, white ash, Douglas common fir, white cabinet oak, Georgia, Virginia, and North Carolina pine, North Carolina pine and clapboards, white pine, spruce, black walnut; schedule 4454, Douglas common fir, fir piles, creosoted fir piles; schedule 4461, forged steel, steel plates; schedule 4462, steel boiler plates; schedule 4453, reinforcing steel. Bids are invited until May 7, 1912, for the following: Schedule 4463, window and door screens; schedule 4444, heavy cotton and wool underwear. Tenders will be received until July 2, 1912, for blue flannel, schedule 4445.
- No. 572. Garbage crematories.**—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until April 13, 1912, for garbage crematories at the navy yards, Puget Sound, Wash., and Norfolk, Va., and at the naval training station, San Francisco, Cal. Plans and specifications can be obtained on application to the bureau or to the commandants of the navy yards or station named.
- No. 573. Condemned navy material.**—There will be sold at the navy yard, Norfolk, Va., material belonging to the Navy, condemned as unfit for use therein, consisting of furniture, clothing, refrigerators, dishes, nautical instruments, blocks, anchors, hose, wire rope, packing, hardware, valves, whaleboats, cutters, dinghies, bathtubs, electrical supplies, incandescent lamps, generating sets, hawsers, machine tools, scrap metal, etc. Proposals for these materials will be received until April 22, 1912. Schedules containing form of proposals and terms of sale can be obtained upon application to the General Storekeeper, Navy Yard, Norfolk, Va.
- No. 574. Cable.**—Sealed proposals, in duplicate, will be received at the office of the Chief Signal Officer, War Department, Washington, D. C., until April 12, for cable of various kinds, to be furnished on reels. Further particulars and specifications can be obtained from the Chief Signal Officer. (Proposal No. 578.)
- No. 575. Condemned Navy material.**—There will be sold at the navy yard, Puget Sound, Wash., Navy material unfit for use therein consisting of pumps, boilers, engines, anchors, blocks, scrap rubber, furniture, dishes, packing, hand tools, machine tools, musical instruments, rope, clothing, searchlights, nautical instruments, generating sets, bathtubs, scrap metal, cutters, boats, etc. Further information can be obtained of the General Storekeeper, Navy Yard, Puget Sound, Wash.

**GLOVES IN CONSTANTINOPLE.**[From the *Revue Commerciale du Levant*.]

Gloves are extensively worn in Constantinople, and the annual consumption is estimated at 80,000 dozen pairs, including both gloves made of textile stuffs and leather gloves. Gloves for women are the most important, and the cheapest kinds are most in demand. Cotton gloves find a large sale at 70 cents to \$2.65 a dozen pairs, white or colored, preferably gray and brown. Next in importance are gloves of Scotch yarn at \$2.35 to \$5.25 a dozen. Silk gloves have a very small sale. The winter being short and not often severe, winter gloves have a smaller sale than summer gloves. Woolen gloves, however, are well liked and are sold at \$2.10 to \$4.75 a dozen, while fur-trimmed gloves realize from \$4.75 to \$7 a dozen.

Military gloves are an important article. These large woolen gloves are sold at \$1.68 to \$2.10 a dozen. Germany has almost a monopoly of cotton and Scotch yarn gloves and supplies them at very low prices, from 72 cents a dozen upward. Austria and Italy also sell a small quantity of these gloves, while France supplies certain good and more expensive articles. Leather gloves are sold to a smaller extent than cotton and woolen gloves, and are supplied by Austria-Hungary, France, and Italy. England furnishes some kinds of gloves of which it has the monopoly, while Germany sends the products of two or three manufactories. The sales of these last two countries are, however, quite small.

The ladies' cheap gloves which are sold have three or four buttons of metal, horn, or composition; men's gloves have one or two buttons or press-studs. Among the cheap qualities, gloves are often imported with a length of only three buttons, but having four buttons, and are sold as four-button gloves. The cheap gloves are mostly glacé kid with a few suede; they are sent from Austria-Hungary at \$3.05 to \$4.85 a dozen. Gloves of medium quality for ladies, with three buttons made of mother-of-pearl, metal, composition, or press-studs, or with four buttons, are sold at \$4.85 to \$7.40 a dozen. Long glacé gloves for ladies, with 8 to 20 buttons, are sold at \$8.40 to \$19.50 a dozen. Suede gloves with three or four buttons of metal or pearl or with press-studs are sold at \$4.50 to \$7.80 a dozen, and long suede gloves with 8 to 20 buttons at \$7.80 to \$17.50 a dozen. The following kinds of men's gloves are sold: Glacé kid gloves with one or two buttons or press-studs, \$5.05 to \$7.80 a dozen; suede gloves with one or two buttons or press-studs, \$4.50 to \$7.80 a dozen. Children's gloves with one to four buttons of various kinds or with press-studs are \$3.30 to \$4.50 a dozen. The gloves of average kind mentioned above are supplied almost wholly by Austria-Hungary and France.

Special gloves comprise kid gloves for men and women, the Derby kind of glove and buckskin gloves for sports and for uniforms. The following are details of these gloves: Kid gloves for ladies at \$6.70 to \$9.75 a dozen, and for men, at \$7.40 to \$9.75, come from France, Austria-Hungary, and Germany; French gloves are generally preferred. White sheepskin uniform gloves, glacé, suede, and buckskin are supplied almost exclusively by two or three German firms. Riding and driving gloves are supplied mostly by the United Kingdom. Austria-Hungary and Germany send the remainder. Fur gloves do not find an important sale, as they have to compete with knitted woolen gloves at very low prices.

**MODERN GARAGE IN JAPAN.**

[From Consul General Thomas Sammons, Yokohama.]

It may interest American manufacturers of automobiles that an extensively equipped automobile exchange and garage has been opened at No. 7 Bund, Yokohama, Japan. It is claimed that this is the largest establishment of the kind in the Far East, and an assortment of various supplies is kept on hand for the accommodation of the steadily increasing number of automobile owners in this jurisdiction.

The garage is in charge of Karel Jan Hora, of the firm of Letzel & Hora, architects and engineers, who are associated with the British-American importing and exporting firm of Sale & Frazar of Yokohama and Tokyo. E. W. Frazar, of the firm of Sale & Frazar, is largely interested in the importation of American automobiles.

## MARKET FLUCTUATIONS OF SICILIAN ESSENTIAL OILS.

[From Consul Arthur Garrels, Catania, Italy, Feb. 26, 1912.]

It appears that neither crops nor legitimate business conditions warrant the present high price of oil of lemon. This may be attributed to local speculation and market manipulation, made possible by the general prosperity of the industry.

An unusual feature enters into this year's trading. A number of outsiders—that is, persons not regularly engaged in the business—came into the market as speculators by buying and selling "futures." This action had a tendency to stimulate prices, which were later further advanced when the actual producers of oil "squeezed" those speculative "shorts" who could not settle their contracts by the payment of cash differences but were compelled to deliver oil under such of their contracts as had fallen into the hands of legitimate dealers. There is no question but that the general financial prosperity of the producers has tended to strengthen a "bull" movement by placing them in a position to withhold their products from the market.

It is held by some that certain natural conditions in the legitimate trade, while not of such a character as to warrant an excessive price, have nevertheless contributed to the advance over last year. Among instances cited are the generally higher prices of all commodities in the world's markets, the increased cost of local labor, and the covering of legitimate "short" interests among actual producers.

### Features Affecting the Market.

The circumstances responsible for the short supplies of producers are supposedly as follows: Many manufacturers buy their lemons under an old conventional method known as a *colpo* (by glance). By this system the product of a whole orchard is bought for a lump sum, the amount paid being based on the producer's judgment as to the possible yield, the "guess" often being made several months before the fruit is ripe. It is maintained that in many instances this season the yield did not, by a fairly large margin, approximate the basis upon which it was bought. This fact, if true, not only increased

the price of the producer's raw material but also found him lacking sufficient fruit to meet the demands of his existing contracts. It is also maintained that the fruit itself, when finally picked, was deficient in oil, this condition being due, it is said, to a protracted period of high winds which occasioned friction among the young fruit on the trees and caused a portion of the oil to evaporate.

Several pertinent features have entered into local lemon-oil production which did not obtain a few years ago. The advent of the Camera Agrumaria (the Government monopoly of citrate of lime) created an ever-ready source of revenue for the producer of citrate of lime (the output of which goes hand in hand with the production of oil) by enabling him to realize, in cash, on the market value of his output immediately upon delivery to the chamber's warehouses. This places the manufacturer in a position to enter the better into any desired market manipulation of oil of lemon.

#### **Effect of Messina Earthquake—Lack of Organization.**

The earthquake of Messina in December, 1908, dissolved a common recognized market center for the commodity into a number of scattered market centers. This tended to lessen the possibility of maintaining a more fixed standard of price. Another important, permanent factor which enters into the production of oil of lemon, irrespective of conditions depending directly upon the crop, and which affects the quality of oil produced, is the price and demand abroad for fresh lemons. When the export demand is good and is coupled with high prices, a larger amount of fruit is diverted into foreign channels than when export conditions are not so favorable.

In a consideration of any features incident to the production of Sicilian lemons and their by-products, it is well to bear in mind the complexity of the basic principles underlying these industries. While there are apparently five or six well-defined phases of the industry (growing the lemons, manufacturing by-products, jobbing and exporting such by-products, preparing and exporting fresh fruit and peels in brine), the business is not organized along definite lines. A grower, for instance, may be only a grower or he may be engaged in one or all of the other lines; a manufacturer of by-products may also be an exporter of fresh fruit, etc. This condition naturally creates a diversity of bases of costs and thus precludes the possibility of any general, definite ratio between cost and selling price. When there is added to this the facts that the underlying basic unit of value—the cost of producing a crop of lemons—is always an unknown quantity, that the business in none of its producing phases proceeds along generally recognized scientific economic lines, that contracts for future delivery must always be of a highly speculative nature, it will readily be understood how difficult it is sometimes to arrive at even an acceptable, plausible explanation of abnormal prices and trade conditions.

#### **Essence of Bergamot.**

The conditions governing the production of oil of bergamot are simpler than those pertaining to oil of lemon. The district in which the bergamot is cultivated is exceedingly limited; the persons engaged in the industry are comparatively few in number and have an almost exclusive monopoly of that essence. The world's demand for

this article is steadily increasing, while the normal available supply has decreased some 40 per cent during the last three years. When, in addition to these permanent causes for high prices, there are added crop curtailments coupled with the independent position of the producers, unprecedented high prices are easily accounted for.

The decline in the normal production is attributed to the facts that the earthquake of December, 1908, destroyed groves and that there is now less adulteration than formerly. Another important factor that tends to a steadily decreasing supply is that all of the bergamot trees are very old and that no young trees have been planted for many years. High winds, just at picking time this season, stripped the trees of fruit. The factories' capacity is inadequate to dispose immediately of any large quantity of fruit, and a great deal becomes unfit for manufacture through decay. The producers of oil of bergamot have received good prices during the last few years and are consequently in a position to withhold their oil and dispose of it at will. It is stated that a movement to cultivate the bergamot in Messina Province has begun by grafting bitter orange trees with scions of the bergamot. It will, however, be several years before any fruit of a commercial value can result.

[Additional information relative to the speculative movement referred to in the foregoing report may be obtained by interested firms from the Bureau of Manufactures. Among numerous previous articles appearing in Daily Consular and Trade Reports, the following are particularly pertinent: Citrate of lime industry, Nov. 2, 1908, and Feb. 19, 1910; essential oil, Jan. 23 and Mar. 20, 1909; lemon growing in Sicily, May 20, 1911.]

### JAPANESE EFFORTS IN MANCHURIA.

[Notes prepared by American consulate, Dalny, from China Tribune.]

The Japanese Government of the Kwantung leased territory is striving to develop various industries, for which \$125,000 is devoted. With the object of making Dalny not only the first-rate trading port in Manchuria, but also a port of transshipment for Korean ports, as well as Tientsin and other North China ports, an annual subsidy of \$35,000 has been granted to certain local shipping firms engaged in coasting trade. The four steamers receiving such subsidy will soon be increased to five or six.

An annual grant of \$5,000 is made to the Fishery Association and the Marine Products Co. (Ltd.). A special subsidy may also be granted for the export of marine products to South China.

To open a market for Kwantung salt in Korea a \$10,000 subsidy was granted. The Government is working hard to promote the sale of salt.

Willow planting is being encouraged. Wicker trunks are now popular, being used both by Chinese and foreigners, so there is good prospect for the manufacture of willow articles. The Government is also distributing free seeds and fruit trees to both native and Japanese farmers. Grape culture is promising, and a subsidy of \$5,000 for wine making has been allowed.

Glass factories have started at Dalny and Port Arthur. A subsidy is given the industry, which appears promising.

### Bound Volumes of Daily Consular and Trade Reports.

The Government Printing Office will supply regularly in quarterly volumes, with complete 32-page indexes, bound sets of Daily Consular and Trade Reports from January 1, 1912. The price is \$1.50 per volume or \$6 per year, in order to cover the cost of the index and binding. Those desiring the bound volumes should write to the Superintendent of Documents, Government Printing Office, Washington, D. C.

## COST OF LIVING ABROAD.

## GERMANY.

[From Consul Talbot J. Albert, Brunswick.]

## Higher Prices of Foodstuffs.

The increased cost of living due to the higher prices of foodstuffs is the cause of much complaint in Germany. The advances shown by the most important articles of food during the past year are shown by the following table of wholesale prices:

Articles.	February, 1911.	February, 1912.	Articles.	February, 1911.	February, 1912.
Wheat.....bushels <sup>1</sup> ..	\$1.26	\$1.38	Sugar.....pound..	\$0.0199	\$0.0332
Rye.....do.....	.97	1.28	Table beans.....do.....	.0024	.0432
Oats.....do.....	1.12	1.30	Lentils.....do.....	.0016	.0432
Corn.....do.....	.88	1.21	Potatoes.....100 pounds..	.54	1.100
Barley (cat/le feed).do.....	.92	1.20	Beef.....pound..	.1700	.1700
Peas.....pound..	.17	.21	Beef (belly piece)...do.....	.1300	.1404
Rye flour.....do.....	.0203	.0248	Pork.....do.....	.1404	.1404
Wheat flour.....do.....	.0250	.0273	Veal.....do.....	.1296	.1512
Wheat bran.....do.....	.0103	.0155	Mutton.....do.....	.1404	.1404
Rye bran.....do.....	.0103	.0155	Butter.....do.....	.2376	.2376
Straw.....100 pounds..	.486	.605	Eggs.....dozen..	.30	.36
Hay.....do.....	.5076	.8856	Lard.....pound..	.1129	.1021
Coffee.....pound..	.1183	.1415			

<sup>1</sup> 60 pounds.

The only article in the above table showing a decrease is lard, the lower price of which was due to the scarcity of fodder, which forced the farmers to slaughter a large number of hogs and throw the product on the market. The scarcity of feed also forced the sale of a large number of cattle, which accounted for the small increases in meat prices. How high these prices will go when this surplus is sold is hard to predict. Increased consumption was responsible for the higher price of rye, and short crops for the increased cost of grain, fodder, vegetables, and sugar, the last article being dependent on the sugar-beet crop. The dearness of grain and fodder caused rises in the prices of flour and butter.

It is difficult to give a general average of retail prices, owing to the differences in quality of goods, store rents, and other circumstances, but the tendency is unmistakably toward higher prices. While the price of bread has remained the same, the loaves have been made smaller. The people especially affected here are the laborers and small officials, who must practice economy in all directions. The following table gives a comparison of retail prices per pound of principal articles of consumption:

Articles.	February, 1911.	February, 1912.	Articles.	February, 1911.	February, 1912.
Butter.....	\$0.39	\$0.35	Rye flour.....	\$0.039	\$0.048
Potato flour.....	.032	.043	Sugar.....	.054	.071
Eggs (per dozen).....	.23	.29	Beans.....	.05	.054
Peas.....	.043	.064	Lentils.....	.065	.066

## AUSTRALIA.

[From report of the Bureau of Census and Statistics of the Australian Commonwealth, forwarded by Consul-General John F. Bray, Sydney.]

A special inquiry into the cost of living in Australia was undertaken by the Bureau of Census and Statistics of the Commonwealth of Australia, covering the period from July 1, 1910, to June 30, 1911. Small account books were distributed among house-

holders throughout the Commonwealth, with provision for entering, for each week of the period covered, particulars of income and expenditure under specified headings. While approximately 1,500 books were distributed, only 222 were returned at the end of the period, of which 212 were available as a basis for compilation. The distribution of the books was not in any way restricted, and they were kept by people of all classes. Of those returned, 58 were kept by families having over 4 members and incomes of over \$1,000 a year, 41 by families of 4 members or less and incomes of over \$1,000, 49 by families of over 4 members and incomes of \$1,000 or less, and 64 by families of 4 members or less and incomes of \$1,000 or less.

The average weekly expenditures of the four above-mentioned classes were as follows, in the order named: \$27.34, \$24.92, \$21.53, \$12.91. The following table gives an analysis of this average weekly expenditure by percentages under the most important divisions:

Income.	Number in family.	Housing.	Food.	Clothing.	Fuel and light.	All other items.
		<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>
Over \$1,000.....	Over 4.....	11.84	28.39	13.11	9.95	43.71
	4 and under....	13.83	22.00	12.16	3.58	46.43
\$1,000 and under.....	Over 4.....	14.46	40.12	13.22	4.26	27.92
	4 and under....	16.41	31.41	12.25	3.77	36.16

While direct comparison of the results of the Australian inquiry with those obtained in other countries is practically impossible, owing to differences in the methods followed and classes of people included, a general comparison of the percentages expended under the different heads in Australia, the United States, and Germany is shown in the table following. In preparing this table, family groups with incomes approximately the same as those included in the Australian inquiry have been selected from the returns of the investigation in the United States in 1902 and the German investigation of 1907.

Countries.	Housing.	Food.	Fuel and light.	Clothing.	Other expenditures.
	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>
Australia.....	13.70	29.30	3.46	12.72	40.82
United States.....	17.40	36.45	5.03	15.72	25.40
Germany.....	14.90	30.31	3.12	14.91	36.76

### CEMENT GUN WORK AT PANAMA.

[Announcement of Isthmian Canal Commission, supplementing article in Daily Consular and Trade Reports for Sept. 8, 1911, on "Use of Cement Gun by the Government."] ]

The coating of cement mortar applied by the pneumatic cement gun which was sent to the Isthmus a little less than a year ago for use in spraying the surface of certain rock faces in Culebra Cut, which disintegrated on exposure to air, was found not to prevent this disintegration. The concrete mixture sprayed on the smooth surfaces adhered uniformly, but was not sufficiently air-tight to retard appreciably the progress of disintegration. The gun was used recently on the relocated line of the Panama Railroad, in coating the surfaces of hand-laid revetment wall, made of hard Bas Obispo rock. In this case the concrete penetrated the interstices between the rocks as far as several feet and thus obtained a firm hold. Using a mixture of 1 part of cement to 3 of sand for the inner coating and 1 part of cement to 2 of sand for the final surfaces it was practicable to lay a smooth, strong coat from 2 to 3 inches thick over an area of about 25 feet square a day. The spraying was continuous. By the time the work had been carried from one end of the area under treatment to the other the first part was ready for another coat. In all, about 10,000 square feet of revetment was treated.

*The Irbit fair.*—A Reuter dispatch states, under date of March 14, that \$3,893,000 worth of furs have been sold at the Irbit (Russia) fair this year, an increase of nearly \$250,000 over 1911, squirrel skins forming \$1,640,700 and sables \$527,000 of this total.

## CUBAN AGRICULTURAL FAIRS.

The March number of the Cuba Magazine reviews the exposition and fairs held in that Republic during the first two months of the current year, notice of which appeared in Daily Consular and Trade Reports on January 5. These included the Third Annual Cubitas Valley Fair at La Gloria, January 24 to 26; the Second Cuban National Exposition, Habana, January 28 to February 24; the First Camaguey-Oriente Fair, Camaguey, February 3 to 12; and the Third Annual Isle of Pines Fair, held at Santa Fe under the auspices of the Commercial Club, February 13 to 16. The following items pertaining to these fairs have been taken from the publication mentioned:

At the Cubitas Valley Fair the displays of fruit were confined largely to those varieties which are proving commercially desirable. Mr. Carl A. Ward, of Boston, in his entry of nursery stock exhibited Ceylon honey jac-fruit, kola nut, Circassian bean tree, Australian silky oak, Indian fig cactus, cocoa plum, nutmeg, *Prunus sclerocarpa*, loquat, cluster fig (*Ficus glomerata*), Surinam cherry, mangosteen (*Garcinia mangostana*), cherimoyer (*Anona cherimolia*), yellow Chinese guava, Talipot palm, genip, seedless breadfruit, *Coccoloba scandens*, Liberian coffee, sour sop, *Laurus nobilis*, sausage fruit, rooster vine, grafted Trapp avocados, inarched mango, thornless cactus, candle nut or Otaheite walnut, and turpentine wood (*Syncarpia laurifolia*). Other displays included honey and wax, hand-made mahogany furniture, and a department of women's work.

## Second Cuban National Exposition.

The Second Cuban National Exposition was preeminently an agricultural and horticultural fair, the principal exhibitors being Americans and Canadians. The exhibit of Las Mercedes plantation included over 40 varieties of citrus fruit, from native seedlings and the shaddock, through all the commercial varieties, to unusual cross-breeds like the Buckeye navel (ribbed like a gooseberry) and the golden nugget orange, both from imported stock. There was also a cross between the ruby blood orange and the grapefruit, which is a blood grapefruit. Other exhibits included grapefruit, mandarins, limes, pineapples, lemons, citron, bananas, and native fruits, such as anonas, guanábanas, and guayabos; commercial vegetables, such as tomatoes, peppers, eggplant, squash, with the common garden vegetables, turnips, rutabagas, carrots, radishes, chard, chayotes, cabbage, cauliflower, beans, cowpeas, kohlrabi, lettuce, spinach, potatoes, granadilla, and the native malanga, ñame, yuca, etc.; also peanuts, rice, and Kaffir and broom corn. The exhibit of orange boxes, tangerine straps, and pineapple crates made from almagico wood showed that this wood makes a very light, strong, and attractive package of white color. There is an abundance of almagico in eastern Cuba.

The exposition grounds were visited by tourists in large numbers, and the Cuban National Horticultural Society held its sixth annual meeting there February 14-16. Mr. J. E. Roberts, of Bartle, was elected president of the society. Additional features were the athletic and sporting contests. It is said that an effort is being made to "try out" Cuban athletes and discover the champions in preparation for Olympic games to be held if an international exposition is arranged for Habana at the time the Panama Canal is opened.

[An account of the Cuban National Exposition of 1911, by Consul General James L. Rodgers, appeared in Daily Consular and Trade Reports on Mar. 7, 1911.]

## Camaguey-Oriente Fair—Railway Industrial Department.

The Camaguey-Oriente Fair was advertised as a provincial exposition on behalf of central and eastern Cuba, but welcomed exhibits from other sections of the island. A notable display was made by Mr. Thomas R. Towns, who won 21 prizes and was officially recognized as "a good friend of the country," being the first American to receive this honor. Included in his exhibit was the Towns grapefruit. Other displays were made of standard varieties of grapefruit, navels, tangerines, mandarins, satsumas, etc., and the exhibit of La Gloria Exposition Association was supplemented by entries of cigars, tobacco, silkworms and silk, native root crops, potatoes, fine vegetables, peanuts, bananas, coconuts, jellies, wines, vinegars, and women's handiwork.

The display of the Cuba Railroad's industrial department will probably be the last made by the company, as it is understood this department is to be discontinued. Methods of growing alfalfa were shown by the railway, and the product displayed in

various forms. There were several eucalyptus trees 18 months old from seed that were 10 feet tall and 3 inches in diameter. Native medicinal plants were shown, and in boxes diminutive fields of buckwheat, peanuts, and other crops. Useful by-products of the manufacture of starch and vegetables were exhibited. The department's demonstration farm sent in fine vegetables, and on several evenings small packages of seed were given away.

#### **New Horticultural Society—Ile of Pines Fair.**

During the fair at Camaguey a new horticultural society was organized which took the name of the Cuba Horticultural Society, though its organizers explain that its object is to solve the special problems of colonies in the central and eastern sections of the Republic. Mr. D. W. Hart, of La Gloria, is president of the new association.

Though this was not the season for pineapples, a noteworthy feature of the Ile of Pines fair was the display of Smooth Cayennes. So popular is this fruit that many hundreds of acres are already set out, and all the Smooth Cayenne slips in sight are contracted for in advance, a single company recently ordering 200,000. Another notable display at this fair was of heavy furniture made from native hardwoods. The schools of Columbia, Los Indios, and Santa Fe made instructive exhibits.

### **BIG TREES OF NEW SOUTH WALES.**

[From Consul General John P. Bray, Sydney, Australia.]

Much interest is being manifested here in the preservation of Australian forests. The big trees of this State are being steadily destroyed, and those immediately concerned are looking with apprehension on the prospect. A writer in a local newspaper says that there may be an occasional stringybark 300 feet in height, but that these giants will soon be a thing of the past.

No provision is being made for replanting these trees and the lumbermen fell those already growing before they reach half that height. Even one moderately tall tree, the 150-foot red cedar, is nearly extinct. Such trees frequently yielded 30,000 superficial feet of timber per tree. The timber trees of New Zealand are still numerous, but the best are being picked out. The *Eucalyptus calyr*, popularly known as the Cumberland blue gum or Clarence flooded gum, is one of the most useful trees in this State. It rarely attains a greater height than 80 feet, with a diameter of 7 feet, but it frequently yields 6,000 to 7,000 feet of timber. It is used for all kinds of building purposes, as well as for coach building. The next best tree for building purposes is the stringybark (*Eucalyptus capitellata*), which sometimes attains a height of 400 feet, and thus stands out as the tallest tree in the world. The tallest American redwood recorded was 340 feet.

[A list of the trees of New South Wales which attain a height of 100 feet and over, with their commercial uses, may be obtained from the Bureau of Manufactures.]

### **OXYGEN MAKING IN ENGLAND.**

[By Consul H. L. Washington, Liverpool.]

New works are being erected for the manufacture of oxygen at Bromborough Port, 3 miles above Liverpool, on the opposite shore of the Mersey River, and they are expected to be in operation by October of the present year.

The plant is designed to produce 200,000,000 cubic feet of oxygen and hydrogen a year. Two gas engines, each of 1,750 horsepower, direct-coupled to continuous-current generators, with Mond gas and recovery plant, will, states the engineering supplement of the Times, furnish the power.

It is expected that oxygen will be sold as low as \$1.21 per 1,000 cubic feet direct from holders and \$4.86 in cylinders, and that the purity will be increased to 99½ per cent.

[Another article on the manufacture of oxygen in Great Britain appeared in the Daily Consular and Trade Reports for Nov. 27, 1911.]

**NORWEGIAN HERRING FLOUR AND OIL INDUSTRY.**

[From Consul P. Emerson Taylor, Stavanger.]

There is increasing interest in manufacturing herring flour and herring oil, not only within this district, but in the northern part of the Kingdom.

The herring flour and oil factories in the district are all doing a prosperous business and increasing their output each year to meet a demand that has thus far been much beyond their capacity. While the manufacture of herring flour and herring oil is profitable in the district, it is believed by those best informed that it can be made a much more profitable industry in the extreme northern part of Norway.

**Extensive Uses for the Oil and Meal.**

Herring oil is being used more and more instead of linseed oil for paints, and the foreign demand for it is steadily increasing and is far beyond the supply. Herring flour and meal are used in Norway chiefly for cattle feed, while that exported to Germany is used as feed for both cattle and hogs. That which is exported to the United States, it is believed, is all used as fertilizer. Considerable quantities of the herring flour are also exported from this district to France, England, and Japan.

The herring flour is manufactured from the fish after the oil has been extracted and pressed out, so that the cost of the raw material is very low. Two new herring-flour factories are being completed at Haugesund, in this district, which is a large shipping port for kippered herring and all herring in oil or tomato.

The great advantage and economy in establishing herring flour and oil factories near the fishing waters are due to several conditions. Herring are caught during only a few months of the year, and during these months there is often a surplus quantity which the canning factories can not use. The export market for fresh herring at such times is also overstocked, and large quantities of the fish can not be sold after being transported to southern Norway and even to England and Germany. The establishment of herring flour and oil factories in the northern fjords where the fish are caught would effect a great economy in saving the transportation charges, as well as utilizing the surplus product.

**Ample Power—Norwegian Viewpoint.**

Then the presence of cheap and almost unlimited water power in the immediate vicinity of the herring fishing waters is another important consideration in the establishing of herring flour and oil factories in the northern fjords rather than in the cities where power transmitted long distances is much more expensive.

One of the men interested in the establishment of these herring flour and oil factories is quoted by the Christiania Intelligensen, of that city, as follows:

A number of requests have come to me to work for the establishment of herring flour and oil factories in Finmarken. There are a hundred small fjords in Finmarken and northern Norway with good post and steamship landings and facilities, good herring fishing waters, and business men interested in the fishing industry. Many of these places seem to have been made for the woolen industry and the fish-canning factory, but more especially still for herring-flour factories. There are waterfalls at almost every man's door, and the finest herring fishing waters in the fjords with much greater quantities of herring than can be used at present.

There are already quite a few small herring-flour factories established, but even if there were 30 or 40 times as many as at present there would be no overproduction of herring flour. Conditions here in southern Norway and in some parts of northern Norway are such that herring flour can hardly be obtained at any price. It has been practically all exported to other countries at steadily advancing prices.

A small herring-flour factory will use about 100 maal (150 liters each) of herring per day, and from this will manufacture about 30 sacks (220 pounds each) of flour, and 7 barrels (396 pounds each) of oil. Of course the herring flour can only be made during the herring season and while the herring lasts. The eastern, southern, and northern parts of Norway should combine and build herring-flour factories in northern Norway. In this way they could supply the strong demand for herring flour. My experience is that herring flour is the most nourishing stock food there is. The herring market could then be better regulated. It now often happens that Norwegian herring when parr are returned from Germany unsold. And the exports of fresh Norwegian herring to England are often so large and the market so overstocked that large quantities of the fish are simply thrown overboard into the sea. The establishment of more herring factories for the manufacture of flour and oil would prevent such conditions.

#### Output and Prices.

There are three herring flour and oil factories in Stavanger, and two in Haugesund. The largest factory in this city last year reports a production of a little more than 20,000 sacks (220 pounds each) of herring flour and about 5,000 barrels (396 pounds each) of herring oil. The three factories in this city have a combined output of about 40,000 sacks (220 pounds each) of herring flour, and about 10,000 barrels (396 pounds each) of herring oil, per year. The two Haugesund factories have an annual output of from 18,000 to 20,000 sacks of herring flour and from 4,000 to 5,000 barrels of herring oil per year.

The Vestlandske herring flour sells in this district for 15 crowns, (\$4.02) per sack of 220 pounds, and the Nordlandske herring flour, considered slightly better in quality, sells for 16 crowns (\$4.28) per sack of 220 pounds. Herring oil sells for 0.27 crown (\$0.073) per kilo (2.2 pounds).

### ROLLING STOCK FOR ITALIAN RAILWAYS.

[From Consul L. J. Keena, Florence.]

The Italian Government railroads are divided into 10 compartments or geographical divisions. The car equipment is not divided or allotted according to compartments, and cars are moved up and down throughout the Kingdom without having a fixed base. The car equipment of the Italian railroads is estimated at 170,000 cars operating on all lines and including both freight and passenger services. The purchasing headquarters for this district is the office of the Capo Ufficio, Trazione & Materiale Rotabile, Porta al Prato, Florence. Correspondence with that office must be in Italian.

Several years ago a law was enacted which in substance states that, as a local industry is concerned, two-thirds of the railroad cars used on the Italian railways must be of Italian manufacture and the remaining one-third might be imported. The countries at present supplying such materials are Germany (Krupp factories), Austria, England, and the United States. There is no prejudice against American-made cars, either freight or passenger, though I understand that the rolling stock principally bought in the United States is locomotives. Foreign purchasers of rolling stock are ordinarily made from the manufacturer offering the best prices in response to the request for bids. The building of several new railroads in Italy has been announced in recent issues of Daily Consular and Trade Reports.

**FORMOSAN BUSINESS NOTES.**

[From Consul Samuel C. Reat, Tamsui.]

**Rubber, Cotton, and Camphor Growing Enterprises.**

About 20 Japanese business men have organized the Taiwan Norin Kabushika Kaisha, capital \$250,000, to raise rubber on 3,600 acres given it by the Formosan Government. The company will also grow bananas, pineapples, and sugar cane for profit until the rubber trees are tapable. Many people appear anxious to raise rubber in Formosa, and seeds from the Malayan Islands have been distributed for experimental growth.

Although Government cotton-growing experiments in Formosa have not been encouraging, the Taiwan Menka Saibai Kumiai (Formosa Cotton Cultivation Association) has been organized to raise cotton experimentally in the central and southern parts of the island.

Camphor-tree afforestation is carefully nurtured by the Government, which in March distributed 3,855,552 young trees for this year's plantings.

**Sugar Mills to be Enlarged—Industrial School.**

The Taiwan Seito Kaisha, which has absorbed the Formosa Sugar & Development Co. and the Iki Seito Kaisha, will improve and enlarge the equipment of these new properties. The absorption of the Formosa Sugar & Development Co. removed the last foreign (British) company engaged in the manufacture of sugar. The Taiwan Seito Kaisha is one of the strongest and largest companies in Formosa. It owns six mills, all manufactured in the United States (Honolulu Iron Works).

With an appropriation of \$75,000 the construction of a technical and industrial school in Formosa has begun in the prefecture of Taihoku at Dainan-sho. The school is intended for the natives (Chinese), and the course will cover three years; graduates will be employed in the railway and public works' departments.

**Gas Lighting—New Steamship Line.**

The Taiwan (Formosa) Gas Co. has obtained a 28-year franchise in the city of Tainan, and intends to begin operations about the time the Government commences constructing waterworks in that city. The bill for the waterworks is now before the Imperial Diet. Tainan is the second city in the island and was the capital during the Chinese régime.

Yo Sam Pa, one of the wealthy Chinese residents of Daitotei, has about succeeded in organizing a small steamship company with \$500,000 capital. He now owns the *Chozan Maru* and will add three larger ships. The service will be bimonthly from Tamsui to Foochow, Hongkong, Singapore, and Batavia.

---

**Graphite Resources of Southern China.**

According to Consul Julian H. Arnold there is said to be much graphite in the vicinity of Amoy, and it is anticipated, when mining operations are commenced in that section of China, that the region will be able to supply a considerable quantity of graphite. Of just what quality or grade it will be the consul can not say at the present time.

**NOTES FROM INDIA.**

[From Consul General William H. Michael, Calcutta.]

**Victoria Memorial—Tobacco Experiments.**

Excellent progress is being made on the Victoria Memorial in Calcutta. Finished marble of excellent quality is arriving steadily. The financial position, owing to the accumulations of interest on invested funds, is most satisfactory; in fact, the funds are better by about \$33,000 than they were when the scheme was first started.

One of the most marked successes of the Agricultural Department has been its recent tobacco experiments, both in culture and in manufacture, which have given noteworthy results. The prices realized for the first year's crop, \$20 for Sumatra variety, have been quite eclipsed by last year's results, viz, \$40 per maund (82½ pounds) for the same variety. The crop was some 1,476 pounds per acre and the cost of production was low, leaving a substantial profit on cultivation and curing.

**Irrigating Canals.**

One result of the re-partition of Bengal will be to leave the new Presidency of Bengal with two large irrigation canals which do not pay. These are the Midnapore and the Hijili tidal canals. According to the canal revenue report for the triennial period ended March 31, 1911, the capital outlay on the Midnapore Canal was \$2,832,326, the average annual receipts for three years were \$64,783, and the average annual expenditure \$72,270; the Hijili Canal cost \$871,439, the annual maintenance charge was \$20,350, and the receipts \$18,350. The Sone and the Orissa Canals, which go to the new Province, are productive works in the true sense of the term, as they yielded an average annual profit of \$583,320 during the last three years.

[From Consul M. K. Moorhead, Rangoon.]

**What Burma Buys from the United States.**

The manifest of the steamship *Tennasserim* (Henderson Line) from Liverpool, dated February 16, 1912, shows that the following goods were shipped at New York for Rangoon: 17,632 kegs wire nails; 409 bundles corrugated iron sheets; 650 reels barbed wire; 2 crates wire fencing; 36 rolls concrete reinforcements; 17 boxes scales; 24 pieces band iron; 6 cases pumping machine y; 3 cases machinery; 58 cases tools and hardware; 12 cases steel wheelbarrows; 30 cases electric appliances; 10 cases typewriters; 34 cases canned provisions; 100 cases condensed milk; 10 cases toilet paper; 1 case clocks; 1 case saddlery; 1 case tennis-racquet gut; 1 case pills; 1 case dental cream.

**ASPHALT AND PETROLEUM IN SOUTH AFRICA.**

[From Consul Nathaniel B. Stewart, Durban, Natal.]

From the data gathered in response to an American inquiry concerning asphalt and petroleum deposits in the Mosbeshford district, it appears that there are no petroleum wells or asphalt mines being operated there or at any other point in this part of Africa. It is understood that there are signs of such deposits on a farm in the Orange River Colony. Some years ago an Austrian expert stated that from the indications there he felt certain that there was a dike in the vicinity, possibly at a depth of 2,000 or 3,000 feet.

**FOREIGN TARIFFS.****AUSTRALIA.**

[Documents transmitted by Consul General John P. Bray, Sydney.]

**Duty on Parts of Articles.**

In a customs ordinance published in the Commonwealth of Australia Gazette, of January 20, 1912, rules are laid down for the customs treatment of parts of goods dutiable ad valorem or free from duty. It is directed that, except where otherwise expressly provided by the tariff, any part of any goods which are dutiable ad valorem or are exempt from duty shall, though imported separately, be dealt with under the tariff item applicable to the complete goods. However, if any such part is usable on more than one article, the part shall be dutiable under the tariff item applicable to the higher or the highest rated article with which it is commercially usable.

---

**BRITISH INDIA.**

[From Consul Maxwell K. Moorhead, Rangoon.]

**Customs Requirements for Watermarked Paper.**

The customs requirements for the marking of watermarked paper imported into British India, in order adequately to observe the rules of the Indian merchandise marks act, have again been changed. The rule to apply on and after July 1, 1912, is that any imported paper bearing a watermark in the English language shall have a counter indication of the place of manufacture, in the English language, on each sheet, if the paper be of other than British manufacture. This reverts to the requirements formerly in effect. (See Foreign Tariff Notes, No. 1, p. 27.) In accordance with a circular of instructions issued by the Government in August, 1911, the requirement that each piece of paper bear the counter indication of origin was relaxed, and it was held sufficient that the country of origin should be indicated on each package containing such paper. (See Foreign Tariff Notes, No. 5, p. 149.)

American paper manufacturers should see that the watermarks contain the words "Made in U. S. A.," else the importation of such paper into British India will be prohibited.

---

**CANADA.****Marking of Imported Goods.**

A Canadian customs memorandum of February 12, 1912, calls attention to the requirements to be observed in the marking of goods to be imported into Canada. When goods are not of Canadian or British manufacture, it is required that the marking of such goods shall not be in a form tending to mislead a purchaser into believing that the goods are of Canadian or British manufacture.

Schedule C of the Canadian customs tariff specifies the articles of which the importation into Canada is prohibited, and all goods prohibited under that schedule of the tariff are subject to seizure and forfeiture when imported into Canada. Item 1209 in this schedule bears on the marking of goods imported from abroad and runs as follows:

Any goods manufactured in any foreign state or country which bear any name or trade-mark which is or purports to be the name or trade-mark of any manufacturer in

the United Kingdom, or in Canada, or in any other British country, unless such name or trade-mark is accompanied by a definite indication of the foreign state or country in which the goods were made or produced;

Provided that for the purposes of this item if there is on any goods a name which is identical with or a colorable imitation of the name of a place in the United Kingdom, or in Canada, or in any other British country, such name, unless it is accompanied by the name of the State or country in which it is situate, shall, unless the minister decides that the attaching of such name is not calculated to deceive (of which matter the minister shall be a sole judge), be treated as if it was the name of a place in the United Kingdom or in Canada or in any other British country.

The department of customs gives the following example of merchandise of which the importation would be prohibited under this clause: Shingles from the United States marked "XXX-B. C. Clears—Vancouver, B. C.," being calculated to deceive as to their origin or class, are prohibited.

### FRANCE.

[Reported by Consular Assistant Bartley F. Yost, Paris.]

#### Customs Regulations for Fresh Meat.

By a presidential decree of February 6, 1912, the regulations governing the admission into France of fresh meats are changed as follows:

Importation in separate pieces may take place, in the case of the kinds of meat of bovine cattle named below: Tenderloins and sirloins; rounds and rumps, which shall bear no signs of having been trimmed (they may be presented either separately or attached to each other); tongues which shall bear no signs of having been trimmed, and which shall be presented with the pharyngeal walls, the retropharyngeal and the sublingual ganglions adhering naturally, as well as the larynx, and about a third part of the trachea; kidneys and brains; and sweetbreads. Importation may be allowed, in the case of meat of sheep and hogs, for kidneys and brains.

This decree is a relaxation of the regulations formerly in effect, under the decree of May 26, 1888, which restricted importation in separate pieces to sirloins and tenderloins.

[From Consul General A. Gaulin, Marseille.]

#### Plant Regulations.

The United States consular agent at Toulon, France, reports that, in order to protect the silk industry in that part of France, the Government has forbidden the importation of all living ligneous plants. It was thought that the mulberry tree, which is so necessary to the silk industry, was in danger of a pest known as "diapsis pentagon," which is said to prevail in neighboring countries.

The consular agent observes that since the chief plant product exported to the United States from the vicinity of Toulon consists of flowering bulbs, it is not likely that any hitherto unreported plant malady could have been brought to America.

### PORTUGAL.

[From *Diário do Governo*, Feb. 7, 1912.]

#### Duty on Aeroplanes.

The Portuguese Government has ordered that aeroplanes be included in the customs tariff, subject to the import duty of 40 milreis (milreis = \$1) each, when imported complete.

**RUSSIA.**[From *Vyestnik Finansov*, Feb. 18, 1912.]**Changes in Tariff and Customs Act.**

The following provisions affecting the customs tariff and customs act of Russia are embodied in the law promulgated in the *Vyestnik Finansov* of February 18, 1912:

The free importation of the following articles is continued until the end of the year 1917: Fish, the produce of Russian fisheries, in tin boxes, imported through the Archangel customhouse, provided that the boxes in question shall have had customs stamps affixed to them; beech staves, imported through Baltic seaports and over the western land frontiers; caterpillar lime, for trees (a preparation composed of resin and lime); Stassfurt salts in the natural state, in powder or not; chloride of potassium; sulphate of potassium; Chile saltpeter (nitrate of soda); chemical preparations for combating the diseases of the vine and fruit trees, as specified in a list drawn up by the ministry of finance; and cans and can keys for packing fish imported through the Archangel customhouse.

The note to section 476 of the customs act is modified so as to allow the free reimportation, until the end of the year 1917, and with the authorization of the Ministers of Commerce and Industry and of Finance, (1) of packing material from foreign countries and Finland, used for the exportation of goods, except bags, which may be reimported free of duty only to the extent of 75 per cent of those exported (bags used for the exportation of bran are not allowed to be reimported free of duty); and (2) of receptacles intended for the transportation of special products of foreign or Finnish origin on which duty was paid upon their first importation into Russia. The Minister of Commerce and Industry, in conjunction with the Minister of Finance, is authorized to limit or entirely abolish the above concessions if they should lead to abuses.

The same law provides also for the continuance until the end of the year 1917 of the drawback allowance on the tin plate exported in the form of receptacles for Russian petroleum products, as well as on the strips and scraps of tin plate remaining over from the manufacture of such receptacles. The free importation of tin plate for the manufacture of receptacles for the exportation of Russian petroleum products, provided for by section 507 of the customs act, is extended, until the end of the year 1917, to tin plate imported by Baku kerosene works for the manufacture of receptacles for the exportation of kerosene to Persia.

**Imposition of duty on Bisulphide of Carbon.**

Bisulphide of carbon, now admitted free of duty, is to be dutiable after April 14, 1912, at 1.50 rubles per pood (\$2.14 per 100 pounds).

**TURKEY.**

[From American Ambassador W. W. Rockhill, Constantinople.]

**Articles not Considered Contraband.**

The Imperial Ministry for Foreign Affairs in Turkey has communicated to the embassy of the United States in Constantinople notice that the following articles are not regarded as contraband of war: Combustibles, food, and telegraphic apparatus.

## UNITED KINGDOM.

[Transmitted by Consul Albert Halsted, Birmingham.]

**Proposed Change in Merchandise-Marks Requirements.**

The London correspondent of the Birmingham Daily Post has telegraphed the following:

The bill to amend the law as to trade-marks and trade descriptions introduced by Mr. E. A. Goulding provides for the conspicuous marking of goods manufactured outside the United Kingdom as "British Empire made" or "Not British," as the case may be, the idea being to obviate the necessity for giving an advertisement to a foreign trade rival, as is done by the familiar inscription "Made in Germany." Goods not complying with the provisions of the act would be prohibited from importation, and there would be a consular declaration in the case of goods marked "British Empire made." The measure has received in advance the approval of the Birmingham Chamber of Commerce, and it is claimed by its promoters that if passed it would do more than many "all-British shopping weeks" for the employment of British labor, while if similar legislation were carried in all parts of the Empire it would do much to encourage mutual British trade within the wide scope of our dominions.

This measure is significant of the apprehension of manufacturers by reason of foreign competition, their belief in the growing favor of British-made goods in the United Kingdom, and their unwillingness to advertise the place of origin of foreign goods. If it becomes operative it will bring to public attention most distinctly what articles offered for sale are of foreign origin. It is really in line with the same policy that dictated the requirements for gun proving, hall-marking of precious metals, and the provisions of the new patents and designs act, which requires that articles enjoying the benefits of the British patent laws be manufactured adequately in the United Kingdom.

---

**AMBER INDUSTRY OF PRUSSIA.**

[From Consul General A. M. Thackara, Berlin.]

Most of the German amber is found in the waters of east and west Prussia, and the industry is a monopoly of the Prussian State. The raw material may be gathered only by authorized persons and in accordance with regulations prescribed by the Royal Amber Works at Königsberg in Prussia. Raw amber in pieces of 2 inches and more is very scarce in Germany and the most of it is reserved for the home market. Only occasionally are a few pieces of the raw amber sold to foreign concerns.

Pressed amber, which is also produced at the Royal Amber Works, is made by a secret process. Small but good pieces of amber are melted to about 150° Celsius and then molded under very high pressure into various forms and plates. The plates can be sawed and turned and manufactured into different objects. Forms in the shape of cigar tubes and mouthpieces for pipes, etc., are exported in large quantities to the United States. The artificial amber, often called ambroid, has the appearance of amber, and the untrained can scarcely differentiate between them.

The Royal Amber Works has contracts with several firms in the United States which have the exclusive sale of the products of the royal factory. Pressed amber is the product dealt in. The average price of pressed amber is about \$26 per kilo (2.2 pounds). [The names of the American dealers having the sale of the products of the Royal Amber Works may be obtained from the Bureau of Manufactures.]

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8514. Shoes and rubbers.**—An American consular officer reports that a business firm in his district desires to represent in a Mediterranean country American manufacturers of shoes and rubbers. The firm desires exclusive rights and is in a position to handle a good line successfully. References can be furnished. Correspondence may be in English, French, or Italian.
- No. 8515. Coal.**—According to the report of an American consul, there may be an opportunity for the sale of American coal in a foreign country. One company which consumes about 340,000 tons of coal annually recently ordered 40,000 tons of American coal. This order was in the nature of an experiment, and it is reported that the price and quality of this first order are in the main satisfactory, causing the company to look favorably upon the United States as a source of future supplies. Copy of the complete report, giving further particulars, will be sent to interested firms by the Bureau of Manufactures.
- No. 8516. Scrap iron and steel.**—An American consular officer in Italy reports that a local business firm desires to represent in that country American exporters of scrap iron and steel, for which material there is a large and increasing demand in that market. References can be furnished. Correspondence in English, French, or Italian.
- No. 8517. Compressed-air drills.**—A business man in a European country informs an American consular officer that he desires to be placed in communication with American manufacturers of compressed-air drills for use in certain salt mines. The inquirer states that he has already furnished considerable machinery for these mines, and is in a position to place a number of drills. Designs, prices, terms, etc., are requested. The inquirer also states that he will furnish references, and can correspond in English or French.
- No. 8518. Lard and bacon.**—An American consular officer in Italy reports that a local business man desires to represent in that country American exporters of lard and bacon. References will be furnished. Correspondence must be in French or Italian.
- No. 8519. Oak railway ties.**—A business man in a European country desires to be placed in communication with American producers of oak railway ties with a view to representing them in the country in which he is located. He is in touch with the officials of certain railways, and therefore in a position to dispose of large quantities of ties if the price and quality are satisfactory. Oak ties are preferred, but beech ties, if chemically treated, are also acceptable. Normal sizes are 240 by 14 by 24 centimeters (7.874 feet by 5.51 inches by 9.448 inches). The inquirer also desires prices on 250,000 oak or chemically treated beech ties for a railway line, the construction of which has just commenced, to be furnished within four years. The sizes required in this instance are 220 by 18 by 13 centimeters (7.217 feet by 7.186 inches by 5.118 inches). The offer for these ties must be received before July 1. Prices should be quoted c. i. f. certain ports, and correspondence may be in English, French, Italian, or German.
- No. 8520. Agricultural implements and tools.**—A resident of a Latin-American country has been commissioned by a Government official to visit certain regions of the country to give practical lessons on the working of modern agricultural implements, besides distributing literature on this subject. An American consul believes this is a good opportunity for manufacturers of agricultural implements and tools to increase their sales in this territory, and if properly followed up might result in augmented trade. Catalogues (in Spanish) of agricultural implements and tools and, if possible, samples of small implements and tools and working models of the larger and expensive type, with complete explanation of the working parts, etc., should be sent at once to two persons whose names are given in the report.
- No. 8521. Soap-making machinery and appliances.**—A manufacturer in a foreign country producing limited quantities of lard wishes to add a factory of limited capacity for making soap. He desires not merely catalogues of soap-making machinery and appliances, but definite suggestions, illustrated catalogues, and full particulars, so that he will know what the necessary outfit will be and its cost.

# DAILY CONSULAR AND TRADE REPORTS

## COMMERCIAL CONDITIONS IN LIVERPOOL.

(By Consul Horace Lee Washington.)

The port of Liverpool experienced great activity in its shipping business during last year. Good harvests generally and large outputs of ore and coal led to a demand from exporting countries for vessels.

This port, which handles nearly one-third of the trade entering and leaving (including transshipments) the United Kingdom, received its share of this expansion in commerce. The approximate inward and outward tonnage of the port for the year ended July 1, 1911, was 35,207,776 tons, or nearly 2,000,000 tons more than for the previous year. The rates and dues on merchandise received by the Mersey docks and harbor board during the period amounted to \$6,899,047, a gain of about \$300,000 over the previous year. This prosperity to the shipping interests came in a year that witnessed one of the most serious labor disturbances of recent years, and was particularly directed toward transportation.

### Future Demand for Shipping.

An authoritative Liverpool shipping circular, discussing the existing favorable conditions in shipping, stated in part:

The tonnage afloat is well distributed. The imports and exports, although much in excess of previous years, still grow, and the volume of trade is likely to continue to increase, not only in the United Kingdom but also abroad, particularly in Canada and the United States. The anticipated opening of the Panama Canal and the development of trade in China, which can not be much longer delayed, are all factors which are certain to create a demand for steam shipping which will absorb the large amount of tonnage now building, and which can not possibly be delivered for months after the contract dates, owing to the general shortage of skilled labor which builders are experiencing as well as the difficulty in obtaining material.

Many of the large cargo steamers nearly completed have been sold at handsome profits, and few new steamers remain unsold. The cost of building has increased fully 15 per cent during the last 12 months and will go still higher, as steel plates will be further advanced in price. New steamers of 7,500 tons dead weight approaching completion could be bought a year ago for \$180,000 to \$185,000, but similar vessels are now worth \$220,000 to \$225,000, and other sizes in proportion. Second-hand steamers have likewise improved in value in a much greater ratio, and the market is almost depleted of what may be called cheap tonnage. Many fairly modern steamers have been resold at about 20 per cent more than what they realized two years ago, but the high level of prices of 1900 and 1901 has not yet been reached.

The same publication states that many vessels now being built are fitted with the Diesel engines, and if they prove successful will cause a change in steam shipping not experienced in many years. Oil fuel for steamers is making rapid strides and supply depots have been opened in different parts of the world. Steamers adapted to burn oil fuel require fewer hands than those using coal; besides, oil is more easily handled and is free from dust, which are important factors with passenger steamers.

**Amalgamation of Shipping Lines—The Panama Canal.**

The announcement in the latter part of November that the Cunard Co. had acquired an interest in the Anchor Line marked the final stage in the completion of two great shipping combinations which were arranged during the year. The first of these combinations was the amalgamation of the Royal Mail, Elder Dempster, Lamport & Holt, Brocklebank, and the Union Castle steamship lines. The total tonnage controlled by this combination is approximately 1,319,333 and the capital \$39,702,902. The tonnage of the Cunard and Anchor Lines amounts to 422,813 and the capital \$14,794,160.

It is announced that Liverpool shipowners are preparing for the opening of the Panama Canal, which will revolutionize many of the existing trade routes, and one of the officials of the steamship combinations referred to above was reported to be leaving for Panama, the West Indies, and other Latin American countries to study new steamship routes.

**New Service with United States Pacific Ports—Emigration—Dock Works.**

Among the new services established during the year, the one of direct American interest was the inauguration of a new service of steamers by the Harrison Line from Liverpool to United States Pacific ports and British Columbia, via the Straits of Magellan.

The number of persons embarking at Liverpool for places outside of Europe during 1911 was 311,768, of whom 142,019 were destined for the United States, 140,724 for British North America, and 13,818 for Australasia.

Satisfactory progress is being made on the construction of the 1,020-foot dock, which is to be a part of a much larger undertaking. The present dock will cost \$2,432,250, and is unique, as a vessel can load and unload in it, and at the same time can be dry-docked. Owing to the shipping prosperity, the dock board is considering the advisability of proceeding with the full scheme, which contemplates the expenditure of \$15,573,384. [Further details of this undertaking were contained in this report and will be given to those interested in the project by the Bureau of Manufactures.]

**Imports of Wheat, Flour, and Corn.**

The Liverpool grain trade is not greatly affected by the results of the English wheat harvests, since this port is the center of the country's foreign grain trade. There was a decrease in the receipts of wheat into the port compared with 1910, the total imports amounting to 5,838,047 and 5,087,086 quarters of 480 pounds each for 1910 and 1911, respectively.

The imports of flour into Liverpool increased slightly as compared with 1910, but diminished in comparison with previous years. The total receipts in 1911 were 487,864 sacks of 280 pounds each, compared with 432,576 sacks in 1910.

The total imports of maize during 1911 amounted to 1,951,907 quarters of 480 pounds each, as compared with 1,552,575 quarters in 1910.

The following table shows the country of origin and quantity of wheat, flour, and corn imported into Liverpool for 1910 and 1911:

Countries.	Wheat.		Flour.		Corn.	
	1910	1911	1910	1911	1910	1911
America, North:	Quarters.	Quarters.	Sacks.	Sacks.	Quarters.	Quarters.

#### Prices of Wheat and Flour—Indian Flour.

The average price of American red winter wheat in Liverpool per 100 pounds during 1911 was \$1.76 against \$1.895 for the preceding year. The highest price was in February, being \$1.83, and the lowest in June and November, \$1.71. The average price of flours per sack of 280 pounds was as follows: American spring patents, \$6.92; American winter patents, \$6.56; and Liverpool-made patents, \$6.44. The highest point of American winter patent was in January, \$6.92, and the lowest in April, \$6.19; and the highest point of American spring patents was reached in October and November, \$7.41, and the lowest in April, \$6.44.

The import of flour from India was a new feature in the trade, but it was stated that it did not meet with approval and realized a price very little above that of American baker's grade, and about 73 to 97 cents below the best brands of American spring flour.

It was stated that the relatively high prices of wheat and flour in the United States last year militated against the flour imports into Liverpool. The prospect for the current season, however, is better, owing to the larger stocks of wheat in the United States.

#### Imports of Beans, Oats, etc.—Flour Milling.

There were 60,059 quarters of 480 pounds each of beans imported, 247,576 quarters of 400 pounds each of barley, 120,301 quarters of 504 pounds each of peas, 449,804 quarters of 304 pounds each of oats, and 75,251 loads of 240 pounds each of oatmeal.

There are within the Liverpool consular district 15 flour mills having a capacity of 835 sacks of 280 pounds per hour, and within a radius of 35 miles of Liverpool are 25 mills with an aggregate capacity of 1,160 sacks per hour. Owing to the considerably higher prices of imported wheat last year compared with the native product, the country millers, whose trade is largely confined to the home-grown wheat, enjoyed larger and more profitable trade than for some years, while those in the Liverpool district engaged in milling the imported wheat experienced unsatisfactory business.

#### Rules Governing Corn Shipments from United States.

The Liverpool Corn Trade Association states that numerous complaints were made during last year of the bad condition in which

maize was received from the United States. The following conditions have been agreed upon between that association and the Commercial Exchange of Philadelphia in reference to future shipments of No. 2 corn from that port to Liverpool:

(1) Natural No. 2 corn shall not contain at time of shipment, between March 1 and July 1 in any one year more than 16 per cent of moisture; (2) artificially dried No. 2 corn shall not at time of shipment during any period of the year contain more than 16 per cent of moisture; and (3) certificate of moisture at time of shipment, issued by chief inspector, shall accompany the documents.

#### Receipts and Shipments of Cotton.

The annual statement of the Liverpool Cotton Association for the year ended August 31, 1911, shows the total imports of raw cotton into the port of Liverpool from all sources as 4,348,608 bales of an average net weight of 503 pounds each, as compared with 3,340,039 bales of 490 pounds in the previous year. The following table shows the quantities imported for both years and the average net weight in pounds:

Description.	1909-10		1910-11	
	Bales.	Weight.	Bales.	Weight.
American.....	2,712,823	480	3,371,555	496
Brazilian.....	55,085	342	124,784	314
Egyptian.....	310,950	734	602,823	741
Peruvian.....	101,396	212	97,200	159
West Indian.....	11,789	310	4,330	414
African.....	21,377	367	12,212	350
East Indian, etc.....	126,610	400	135,704	400
Total.....	3,340,039		4,348,608	

The exports of raw cotton from the port of Liverpool during 1910-11 were 403,172 bales with an average net weight of 528 pounds. Of the total, 225,367 bales were American and 149,259 bales Egyptian.

#### Prices of Cottons—Future Demands.

The following were the average prices of cotton per pound in Liverpool during the season 1910-11: Middling American, 15.89 cents; fair Peruvians, 16.77 cents; fair good fair Egyptian, 21.79 cents; good Bhowmuggar, 13.62 cents; and No. 1 good Oomra, 13.75 cents. The highest point of American middling was 17.07 cents per pound on May 12, and the lowest 13.28 cents, July 31.

As to the present season, a cotton trade publication states that although the Egyptian and East Indian crop advices are not satisfactory, the increased American output will more than make up the deficiency. It is estimated by the best authorities that 1,000,000 bales of American cotton will be required to supply the deficiencies of the other world crops, such as Indian, Egyptian, etc.

As to the requirements in Great Britain, business is healthy and both spinners and manufacturers have large contracts for future delivery. Last season the average weekly consumption was 72,615 bales of 500 pounds each, but this season it will be about 79,000 bales.

#### The Apple Market—Imports of Oranges.

There was an increase of about 160,000 barrels in the quantity of apples arriving from the United States and Canada during last year compared with the previous one, but a decrease of about 120,000 in

the number of boxes arriving. The increase in barreled apples, it was stated by an authority in the fruit trade, was due to the larger crop in the Hudson River and Nova Scotia districts, and the smaller receipts of boxed apples to the smaller crop in what is known here as the box-growing district, which is west of the Rocky Mountains, and because supplies had been held back in anticipation of higher prices later in the season.

The total apple imports into Liverpool during the season 1910-11 were 649,055 barrels (which included 361,268 boxes, calculated at 3 boxes to the barrel). The prices for barreled apples were considerably lower at the beginning of the present year than for the same time last year on account of the larger supplies, due somewhat to a larger crop than usual in Great Britain, but the boxed apples averaged about 36 cents per box higher.

The imports of oranges up to December 27, 1911, were as follows: Valencia, 213,709 cases; Jaffa and Syria, 154,326 packages; Malaga and Seville, 24,823 packages; Naples, Palermo, and Messina, 12,215 packages; and Portugal, Florida, etc., 10,149 packages.

#### **The Tobacco Market.**

The tobacco market was steady throughout last year, what changes there were in prices tending upward. According to the review of a leading import firm, from the American reports received, it is anticipated that the conditions of last year will continue throughout 1912. The most satisfactory feature was the recovery of deliveries for home consumption, which during 1911 increased nearly 5,000,000 pounds over 1910. The prices of some of the grades of tobacco in Liverpool during 1911 were as follows, in cents per pound:

Strips, western: Filler, 12 to 12.5; rather short, 13 to 14.5; very middling to middling, 15 to 16; good to fine, 16.5 to 18. Virginia dark: Filler, 14; rather short, 14.5 to 16; very middling to middling, 16.5 to 17.5; good to fine, 18 to 22. Virginia and Carolina bright: Semidark, 14; semibright, 15 to 17; medium or mixed, 18 to 21; good to fine, 23 to 28. Leaf, western: Filler, 8 to 8.5; medium, 11 to 12.5; good to fine, 13 to 14. Virginia dark: Filler, 10.5; medium, 11.5 to 12.5; good to fine, 13 to 15. Virginia and Carolina bright: Semidark, 12; semibright, 13 to 15.5; mixed or medium, 16 to 21; good to fine, 21.5 to 27.

The stocks of the various grades of tobacco on hand at the end of 1911 were as follows, in casks: Virginia leaf 52,096, strips 19,193; western leaf 28,539, strips 7,211; all other, 587.

#### **Effect of Increased Shipping Rates on the Lumber Market.**

An authoritative source estimates the tonnage employed in the timber trade of Liverpool and other Mersey ports (including that which entered the Manchester Ship Canal from the River Mersey) during 1911 at 737,000 tons. While this is 43,000 tons in excess of the figures for 1909, it falls 32,000 tons below the estimated figures of 1910.

The advance in the freight rates which went into effect during the latter part of 1910 continued throughout last year, and another advance the coming season is not improbable.

Imports of pitch pine from the United States fell slightly below the totals of 1910, the market showing no interesting development until the autumn, when an advance in values was established due to an advance in the ocean freight rates. This has discouraged importers from entering into forward engagements at current quotations, and as a consequence consumption has exceeded imports both in timber and deals, and holders of stocks have benefited thereby. While stocks

of timber are moderate, deals and boards, although not excessive, are regarded as quite sufficient for present demands. The present demand in deals and boards is largely confined to the better grades.

The imports of American hewn pine amounted to 140,000 cubic feet and sawn pine 2,646,000 cubic feet, compared with 166,000 and 2,619,000 cubic feet for 1910, respectively. The stock of sawn pine on hand at the end of 1911 was estimated at 636,000 cubic feet. Logs were freely imported from Mobile and other Gulf ports last year, amounting to 117,000 cubic feet. The stock on hand at the end of 1911 was small, with good demand at moderate prices. The imports of oak planks were in excess of last year, and there was a fair demand throughout the year. There was on hand at the end of the year 170,000 cubic feet, compared with 337,000 the preceding year.

**Imports of Walnut Logs, Whitewood, Staves, Mahogany, etc.**

The imports of walnut logs from the United States were light, and stocks were reported small at the end of the year, with a demand for medium to large size logs of prime quality. The receipts of whitewood logs were smaller than during 1910, being 149,000 cubic feet against 269,000 cubic feet. The stock of hickory logs on hand at the end of 1911 was small, with a demand for strictly first-class wood. The receipts of ash logs were in excess of 1910, with a demand for good quality logs.

The total imports of staves from the United States were 3,622 mille, of 1,200 each, against 4,717 mille in 1910. A local authority stated that the reduced imports last year diminished the stocks considerably, the arrivals consisting principally of dressed stock for brewers and palm-oil coopers. Conditions in the wine-pipe trade were quiet, and exporters should be cautious in shipping 60-inch pipes.

The imports of all kinds of African mahogany logs, except Gaboon, during last year were 43,243 tons, against 46,623 tons the preceding year. There was an advance in the prices of both boards and logs. The market was slow until the last part of the year, when two large American firms became extensive buyers, and during the last three months buying became general. The outlook for 1912, according to one well informed in the trade, favors shippers, because one or two of the largest exporters from the West Coast of Africa will restrict supplies and do all in their power to keep prices up. The shipbuilding industry was responsible for a large part of the support given the trade last year.

**The Tin-Plate Trade—Imports of Copper.**

Although there was a decrease of over \$1,000,000 in the value of shipments of tin plates to the United States last year compared with the previous one, this decrease was more than made up in the expansion of trade with other countries. There were 60 more mills in operation in Wales at the end of 1911 than for the same period in 1910. The average price of 1G 20 by 14 coke tin plates, f. o. b. Wales, last year was \$3.38 per 112 pounds, an increase of 12 cents over the average for the preceding year. The highest was in February, \$3.65, and the lowest in November, \$3.22.

Statistics showing the imports of fine copper into each port are not tabulated, but the receipts at Liverpool, Swansea, London, and other outports during last year amounted to 167,878 tons, against 162,181

tons for 1910. Of the foregoing total last year the United States led with 47,631 tons, followed by Spain and Portugal with 33,916 tons; Australia, 26,363 tons; Chile, 20,688 tons; and Mexico, 12,070 tons. Last year opened with standard copper quoted at \$272.83 per ton cash, and closed at \$306.58.

#### **Decreased Receipts of Cattle from Canada.**

The number of live cattle imported into Liverpool during 1911, according to local trade statistics, was 75,936, as compared with 77,640 in 1910. The imports of live sheep increased last year to 40,338, compared with 304 for 1910. These imports were entirely from the United States and Canada.

Commenting upon the cattle trade for last year, an official of the Port of Liverpool Cattle Traders' Association stated that had the normal supplies of cattle come from the northwest of Canada the number imported would have shown an increase. Returns from Canada give the number of ranchers exported as only 10,000 head, a small proportion of which arrived at Liverpool. The reasons given for the falling off last year of 30,000 to 40,000 head in the shipments of ranch cattle were the increased Canadian demand and that the movement of northwestern cattle is to Vancouver and not to England; that a severe winter, followed by a summer drought, retarded the growth of animals; and that the abnormally severe winter of three years ago swept the ranches of many thousands of young stock that would have been available for export last year.

Cattle arriving from the United States up to the beginning of July were in better condition than for some years previous, but owing to the drought and the consequent failure of feed the arrivals in the latter part of the year were in poor condition.

#### **Imports of Chilled and Frozen Meats.**

The price of beef at the end of 1911 was 2 cents per pound higher than for the same period in 1910. This increase was mainly due to the abnormally dry summer in England, thus increasing the prices of foodstuffs, and the falling off in the Irish shipments. The influence of the large imports of Argentine chilled beef is felt on the best cuts of American meat. The South American article comes into competition with the rougher cuts of the home-killed, with the consequence that, to restore the average price of the sides, the better cuts have advanced in value.

Local trade statistics show the imports of chilled beef from the United States as 7,873 quarters, from River Plate 499,194 quarters, and from Australia and New Zealand 4,300 quarters. Frozen beef imports were as follows: From River Plate 841,349 quarters, and from Australia and New Zealand 267,433 quarters.

Frozen mutton and lamb carcasses continue to arrive at Liverpool in increasing quantities, the total in 1911 being 3,667,042 quarters, 2,136,107 quarters of which came from the River Plate, and 1,530,935 quarters from Australia and New Zealand.

#### **The Wool Market.**

One of the leading wool merchants of Liverpool comments on the course of the wool market in 1911 as follows: There was a decline in the price of clothing wool varying from 1.72 per cent on Lima wool to 12.12 per cent on New Zealand merino, the principal causes assigned

therefor being the strong movement in England and on the Continent to depress prices in view of ample supplies available in Australia and Argentina, and the absence of active American support during the major part of the year.

The demand for alpaca was slow owing to the absence of American orders for alpaca linings and to the fashion changing from black to colored linings, in the manufacture of which alpaca can not be used. The following were the prices at the end of 1911 of the various wools:

Clothing—New Zealand, unwashed, good, 29 cents; Peruvian, washed, average, 21.5 cents; Lima, unwashed, average, 12 cents; Abudia, unwashed, average, 10 cents. Combing—Lincoln, hog fleece, 20 cents; alpaca, Islay fleece, good average, 31.5 cents; alpaca, Callao fleece, average, 23 cents; mohair, Turkey fleece, fair average, 31.5 cents.

#### Imports and Prices of Rubber.

The total estimated imports of all varieties of rubber into Liverpool during 1911 were 23,474 long tons, against 27,224 tons in 1910. The importance of this market in the rubber trade may be gathered from the fact that the estimated imports of all descriptions into London during 1911 amounted to 13,368 tons, against 9,236 tons in 1910, and into Antwerp, Belgium, another important rubber market, 4,265 tons as compared with 3,995 tons during 1910.

The total imports of Para rubber into Liverpool for the year were 15,584 tons, against 18,009 tons in 1910. Of the total estimated shipments from Para to all parts it is calculated that Liverpool took well on to 50 per cent, as compared roughly with the same amount during the previous year. The demand for fine Para rubber was good, especially during the last six months of 1911, deliveries to the United States and Europe during that period showing an increase of 6,141 tons. The maximum price paid during 1911 for fine Para rubber was \$1.70 per pound against \$3.04 in 1910. The lowest price reached was 98 cents against \$1.35 during 1910. The prices for Negro-head India rubber were also much below those paid in 1910, the highest and lowest for that grade in 1911 being, respectively, \$1.24 and 79 cents; and in 1910, \$1.97 and \$1.01.

The total estimated exports from Liverpool of all descriptions amounted to 18,595 long tons, of which 6,075 tons went to the United States and 12,520 tons to other countries.

#### Decreased Butter Supplies—Decline in Prices of Bacon.

One of the leading importers of provisions and dairy products in Liverpool stated that the almost universal drought last year caused a shortage in the receipts of dairy products from all sources, and that prices advanced considerably. Irish creamery butter at the end of November sold at \$32.11 to \$32.84 per hundredweight of 112 pounds, against \$25.79 to \$26.76 for the same date the preceding year. New Zealand butter sold at \$32.11 to \$32.59 on December 31, against \$25.79 to \$26.03 on the same date in 1910, and Danish butter sold at about \$1 per hundredweight higher than the New Zealand product.

The prices of bacon, though high, were considerably lower than for 1910. There was a gradual decline up to the end of May, followed by a recovery up to the end of August, when they gradually declined again. The prices of bacon per hundredweight of 112 pounds at the end of 1911 were as follows: Long clear, \$11.92 to \$12.40; backs,

\$11.55 to \$12.38; bellies, \$11.92 to \$12.65; and Cumberland cut, \$11.06 to \$12.16.

**Decrease in Price of Hams.**

Hams, as usual, were little in demand during the first three or four months of the year, and prices receded during that period about \$2.43 per hundredweight, but the phenomenally dry summer induced a good demand, which started earlier than usual, and with supplies only moderate, quotations gradually advanced quite \$4.86 per hundredweight from the lowest figures, the end of August, as in the case of bacon, registering the highest figures.

From August up to Christmas there was a gradual decline in prices. American cut hams on December 31 sold at \$13.38 to \$13.98 per hundredweight compared with \$15.32 to \$16.20 for the same date in 1910, and long-cut hams sold at \$12.77 to \$13.62 against \$14.59 and \$16.29 for the previous year. One importer stated that the decrease in the price of hams at the end of the year was due to the increased killings of the home-fed hogs, larger receipts of hogs at American packing points, and increased killings in Denmark and other Continental countries, with consequent increase of shipments to Great Britain.

Another importer stated that the shortness in feeding stuffs caused farmers to kill an exceptionally large number of their hogs and the English market was flooded with Danish, Irish, and home-cured meats, which were sold cheaper than the American product.

Russia and the Balkan States, a comparatively new source of supply for the Liverpool market, are now sending quantities of hog products at reasonable prices, and find a ready market.

**Increased Interest on the Part of American Exporter.**

Commercial correspondence shows in a most encouraging manner that the American manufacturer and exporter and the consulate are getting closer together. The circular drag-net letter that obviously was sent to every consulate is of the past. The present-day letter calls for business information and in detail. It comes from an "export department" of the firm, and possibly is written by someone who has studied the question, and the consul has the feeling that a good business reply is going to be made use of actively, and trade secured through it if possible.

In former days a letter acknowledging a report made to an inquirer was so rare as to call for comment. Now further correspondence is the rule rather than the exception, and at times the American writer will go to the trouble of replying at length and saying why the prices or conditions or other circumstances reported to him do not allow of his particular firm doing business. This helps, for prices may change later, or suggestions may be made in the light of this further information from the inquirer that will show a way of meeting the apparently unfavorable conditions, and, in any event, it helps the consul in a broader knowledge of the matter under investigation, which may assist the inquirer also, and it aids much in promoting that closer touch which makes for business.

**Information at the Bureau of Manufactures.**

It appears here and there through the commercial correspondence that information as to price, statistics, advertising pamphlets, etc.,

which is sent to the Bureau of Manufactures at Washington, where it is near at hand for any and various uses, is not always availed of by those who are informed that this information is on file in the bureau. In some of these cases there seems to be a feeling that some advantage is to be obtained if the consul instead of the bureau is corresponded with. This is not so, and only loss of time results.

#### **Reduced Shipments to United States.**

There was a decrease of \$7,356,828 in the value of the merchandise invoiced through the American consulate at Liverpool to the United States during last year compared with the previous one, but an increase of nearly \$2,000,000 compared with 1909. About \$5,000,000 of the decrease last year was attributed to the reduced shipments of the following articles: Palm oil, tin, tin plates and terneplates, raw cotton, oils, mahogany, wool, hair and noils, and ferromanganese.

There was an unusually large shipment of palm oil to the United States in 1910 due to the shortage of greases and cottonseed oil in that country, and the prices averaged in that year \$157.46 per ton against \$138.47 for last year; hence the decrease in the exports last year.

#### **Cause of Decline in Shipments of Cotton and Wool.**

The large increase in the value of cotton exported to the United States during 1910 was due to the low price of East Indian, which made it possible for that article to compete in the American markets with the home-grown staple. Throughout 1911 the East Indian was higher in price, and, taken in conjunction with the low price of the American-grown staple, brought about the marked decrease in shipments.

The wool trade between Liverpool and the United States fell off during last year due to the good demand of the home market and the consequent stiffening of prices, which caused decreased orders from the United States.

#### **Greatly Reduced Shipments of Tin Plates and Mahogany.**

The decrease of more than \$1,000,000 in the declared exports of tin, tin plates, and terneplates to the United States may be charged wholly to tin plates. Shipments of this commodity have fallen off by reason of the firm bid made for the home market by American producers, dating from the latter part of 1910, and which was continued throughout last year.

The decrease in the declared exports of mahogany was caused by some buyers in the United States purchasing on the African coast and shipping direct to the United States. The mahogany which was put on the market during the year was of a lower quality than that for 1910, and therefore brought lower prices.

#### **Gains in Exports of Rubber and Fertilizers.**

The increase of \$476,961 in the value of rubber shipments to the United States is much more significant than would appear, as the price of this product was much lower last year than for 1910. The increase was necessary to replenish the stocks which had been depleted during the latter year, when prices were too high to warrant unnecessary orders.

Better prices and larger tonnage account for the increase of over \$1,000,000 in the declared value of manures. The Southern States

took almost the whole of this, the demand in that part for fertilizers having grown steadily in the last few years. Contracts for the year are made between early winter and March of the next year. The shipments to the Northern States are growing, and according to contracts in hand a much larger percentage of the shipments will go to the Northern States than formerly.

#### Declared Exports to United States.

The following table shows the articles and their value invoiced through the American consulate at Liverpool to the United States during 1910 and 1911:

Articles.	1910	1911	Articles.	1910	1911
Ale, beer, and mineral waters.....	\$302,435	\$187,374	Manures.....	\$1,022,376	\$2,650,546

#### Exports to Insular Possessions—Shipments from St. Helens.

The shipments to the Philippine Islands amounted to \$1,020,668, a decrease of \$157,553 compared with 1910, due principally to reduced exports of cotton manufactures. The principal items and their value for 1911 were as follows: Cotton manufactures, \$517,339; railway material, \$146,184; machinery, \$65,106; soap, \$55,053; ale and beer, \$49,499; steel and manufactures, \$28,894; and paints and varnish, \$20,131.

The exports to Hawaii were valued at \$161,168, a gain of \$91,524, compared with 1910, due to increased shipments of fertilizers. The main items in the exports for 1911 were: Manures, \$106,162; woolen

manufactures, \$11,512; cotton manufactures, \$11,229; and iron and steel and manufactures, \$9,471.

The shipments to Porto Rico were valued at \$17,910, against \$36,163 for 1910, and consisted principally of steel and manufactures, \$10,987; sal ammoniac, \$3,430; iron and manufactures, \$1,633; and cotton manufactures, \$1,001.

The total value of the exports invoiced through the St. Helens agency to the United States during 1911 was \$863,245, a decrease of \$80,089, compared with the previous year. The principal items and their value were: Bleaching powder, \$417,782; window glass, \$146,942; hide cuttings and glue stock, \$60,541; tanning materials, \$68,338; steel and manufactures, \$29,606; caustic soda, \$23,709; glass tubes, \$21,423; venetian red, \$15,363; and antimony, \$15,895. There were no articles invoiced through the agency at Holyhead to the United States.

#### **Municipal Notes, etc.**

The extension to the Adelphi Hotel, costing about \$388,000, is nearing completion. This hotel is owned by the Midland Railroad.

A large number of country estates were bought on the market during last year, and tenants were enabled to acquire their farms upon fair and often generous terms.

The new head office building of the Liverpool Friendly Society was completed during the year at a cost of \$3,136,580. The rental capacity is figured at \$160,594.

The famous golf links at Hoylake, the area of which is 164 acres, have been purchased by the Royal Liverpool Club for \$145,995.

There are now 59 parks, gardens, and recreation grounds under the control of the city council, exclusive of the Bowring estate, with a total area of about 1,000 acres and involving an annual maintenance cost of upward of \$145,995.

### **FORESTRY IN SOUTH AFRICA.**

[From Consul Edwin N. Gunsaulus, Johannesburg.]

Outside of the operations of the Forest Department there are practically no forestry operations in South Africa. The Government holds nearly all the lands of forest value, and the Forest Department purchases seeds from abroad and both sells seeds and raises large quantities of trees for transplanting which it sells at low rates to the public. The officer in charge of the Forest Department of the Union of South Africa is Mr. J. Storr Lister, Chief Conservator of Forests, Pretoria, Transvaal.

Elementary forestry, enabling students to enter the subordinate grade of the Government forest department, is taught at the Government forest school at Tokai, near Cape Town, Cape Colony, and a course in forestry suitable for farmers is given at the Government agricultural school of Cedara, in Natal Province. Vacancies in the higher grades of the forest service are filled from the South African Rhodes scholars who successfully pass through the Oxford School of Forestry, with its attendant courses on the Continent of Europe.

[A list of names and addresses of Johannesburg nurserymen and seedsmen dealing in tree seeds may be obtained from the Bureau of Manufactures.]

**DEPLETED STOCKS OF GRAIN IN GERMANY.**

[From Consul General A. M. Thackara, Berlin.]

The Imperial Gazette has recently published estimates made by the German Agricultural Council of the amount of the principal cereals still in the hands of the producers on March 1 and the percentage of the farmers' stocks of the total grain crops of the previous harvest year. The figures, which also include the estimates for the years 1911 and 1910, are as follows:

Cereals.	1910		1911		1912	
	Tons.	Per ct.	Tons.	Per ct.	Tons.	Per ct.
Wheat.....	3,755,747	22.6	3,861,479	22.8	4,096,335	20.2
Rye.....	11,348,415	27.8	10,511,160	26.9	10,808,116	22
Oats.....	9,125,816	36.9	7,900,376	35.7	7,704,101	31.1
Barley.....	2,495,616	26.2	2,902,938	23.2	3,159,915	16.5

The above statistics do not include the quantity in the hands of second parties, but, as stated, only the percentage of the stocks actually held by the farmers themselves.

The reasons assigned for the comparatively small amounts of the farmers' grain stocks on March 1, 1912, are that, on account of the early ripening of the grain last year, the crops were marketed sooner than usual and that, owing to the great drought which prevailed last summer throughout Germany, the fodder stocks were very low, so that the farmers were obliged to purchase outside supplies, and the proceeds from the sales of beets being smaller than usual the farmers were therefore in need of ready money and had to realize on their grain. As to rye, owing to the drought, larger quantities than usual had to be used as fodder.

The quality of the last year's crop of native bread cereals was excellent and, as the foreign supplies were below the normal, the amount of native wheat and rye used for bread-making purposes was very large.

The farmers' stocks of barley, it is thought, will be mostly taken for seeding and their oats will be used for feeding cattle, so that the quantity of these two cereals which will be placed in the market will be small.

**Spanish Congress on Viticulture.**

The Department of State is in receipt of a note from the Minister of Spain at this capital relative to the National Congress on Viticulture that will be held at Pamplona, Spain, in July of the present year. The minister desires that this matter be brought to the attention of American organizations which might be interested.

**Higher Ocean Freight Rates.**

Supplementing his report on the proposed increase in freight tariffs between Peruvian and Chilean ports and Europe, published in Daily Consular and Trade Reports February 27, 1912, Consul General W. Henry Robertson, of Callao, has forwarded copies of the new rates. These schedules are on file in the Bureau of Manufactures.

**ONTARIO MOTOR LEAGUE SHOW.**

[From Consul R. S. Chilton, Jr., Toronto, Canada.]

The recent annual automobile show under the auspices of the Ontario Motor League was much the largest ever held in Toronto and was most successful. It is said that of the \$1,000,000 worth of exhibits at least half were from the United States, most of the leading makes of cars and accessories being well represented, the others being Canadian, with a few British and foreign cars. It is said that the sales amounted to over \$500,000. One of the local papers sums up the main features as follows:

In general, it may be said that the cars on exhibition differ very little in their main essentials from those shown last season, the improvements in the new models being mainly in the line of refinement, especially in the body building. The limousine type is more prominent than ever, the interior appointments attaining remarkable luxury in many cases. In these cars electric lighting and hot-water heating are nearly universal, and many new ideas are shown in the way of attachments of convenience to the passenger. In the open cars the fore doors are now a practice without exception, even in the small runabouts, and the favorite style of body seems to be a compromise between the old tonneau and the straight-line torpedo effect of last year.

In the matter of engines, no car is shown with fewer than four cylinders, and the number of makes of "sixes" has increased greatly. Self-starters, as part of the equipment, are much in evidence. There is a noticeable tendency toward similarity in construction, it being difficult in many cases to distinguish between the classes of different makes of the same size.

At the same time this exhibition was open another automobile show was in progress at the Market Building, and this also included a large number of well-known American cars.

A copy of the catalogue of the first-mentioned show is forwarded [and will be loaned by the Bureau of Manufactures to interested firms].

---

**"MADE IN CANADA" EXHIBITION TRAIN.**

[From Consul R. S. Chilton, Jr., Toronto.]

The Canadian press announces that a "made-in-Canada" exhibition train will leave Toronto in May on a tour from the Atlantic to the Pacific. This moving exhibition, arranged by the Canadian Home Market Association, is intended to show the quality and variety of goods manufactured in Canada with the idea of extending the home market for them. The train will consist of 12 cars, 10 containing exhibits of the different Canadian factories and 2 the accompanying staff. The route is from Toronto to Montreal and Ottawa, thence to about a hundred towns and cities in western Canada. The exhibition will include textiles of all kinds, stoves, pianos, automobiles, beds, springs, mattresses, engines, packing-house products, confectionery, rubber goods, salt, kodaks, farm implements, paints and oils, drugs, cement, furniture, jewelry, watches, silver plate, sheet-metal products, etc.

There will be a model-house car, fully furnished, and showing the products of numerous Canadian factories; also composite exhibits showing the process of manufacture of raw steel into its many finer products. In addition illustrated lectures will be given on board by T. H. Race, of Mitchell, Ontario, who has been Canada's representative at the world's fairs in Australia, New Zealand, Great Britain, and Belgium.

By charging a rental for space the exhibit is made self-sustaining. Each car represents in rents about \$3,000. No actual exhibits will be sold en route, but representatives of each exhibiting firm will take orders and advertise the goods throughout the trip.

**NEW WAGE SCALE IN BOHEMIA.**

[From Consul J. I. Brittain, Prague, Austria.]

Referring to a serious lockout in the metal-working industry in Bohemia, the following is an outline of the basis of settlement.

The normal working time is fixed at 54 hours a week, the division of said working time being regulated by each factory according to existing conditions. On Christmas Eve day, work is to be done only in the forenoon, the workmen to receive pay for 4½ hours' work for the afternoon according to their usual wages. On Easter and Whitsuntide work is to be done only in the forenoon, with no compensation for the half holiday. There will be no work and no compensation for May 1. In case the contemplated reduction of holidays is introduced in Bohemia, every workman who has worked for a factory four years shall have a vacation of three days, with his wages paid in full.

The nominal wage of a skilled workman is fixed at \$0.064 per hour, but from July 1, 1913, \$0.064 to \$0.076 per hour. In Prague assistant foundrymen will receive \$0.076 per hour, in the country only \$0.073 per hour. All other workmen, except foundrymen, will receive \$0.064 to \$0.076. Workmen now receiving \$0.091 per hour will receive an increase of \$0.006 per hour; those receiving more than \$0.091 per hour will have an increase of \$0.004 per hour. A further increase of \$0.002 per hour is to be given from July 1. All overtime work will be compensated; on Sunday and holidays it will be figured according to the present increased wages. A skilled workman doing night work will receive additional pay of \$0.203 and an assistant \$0.162. The agreement is binding up to December 31, 1915, annually renewed thereafter.

**INDIRECT TRADE IN AMERICAN FLOUR.**

[From Consul S. M. Taylor, Nottingham, England.]

There are no firms which are direct importers of flour into the Nottingham district, nor do any of the large consumers buy their flour direct from foreign sources. A large amount of the flour consumed locally, however, is of foreign origin, but is purchased from wholesale agents and importers situated chiefly in Liverpool, Bristol, London, and Hull. A fair amount was originally purchased abroad by Nottingham firms and imported direct, but this method has been abandoned for some years on grounds of economy.

The proportion of American flour used here has appreciably declined during recent years; a local baker, who is one of the largest purchasers in this district, giving as an example of the present tendencies an order he has just placed for 500 bags, 100 of which are American and 400 Canadian. A remark of his was interesting: "We should be sorry to do without the stronger American grades, especially Minnesota and Dakota wheats; we consider them superior to anything that comes from Canada." Flour here is purchased by the bag, containing 140 pounds, instead of by the barrel. It would certainly be well for American millers to conform to the recognized unit and ship in 140-pound bags.

[The names of three prominent flour-importing firms of the United Kingdom, transmitted by Consul Taylor, may be obtained from the Bureau of Manufactures.]

## FOREIGN TRADE OPPORTUNITIES.

(Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.)

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 5522. Metal ceilings.**—An American consular officer in France reports that metal ceilings are unknown in his district, but that a prominent French architect desires to receive samples, free of charge, together with catalogues and particulars as to methods of application, all in the French language. If the ceiling proves suitable the applicant would be disposed to bring the matter before the society of architects in that district.
- No. 5523. Hardwoods.**—A firm in Italy informs an American consular officer that it desires to be placed in communication with American exporters of hardwoods, especially oak and satin walnut, with a view to purchase or represent them on that market. References can be furnished.
- No. 5524. Cement and tile-molding machines.**—An American consular agent in Mexico reports that on account of the installation of a new water and sewerage system in the city in which he is located more attention will be given to roof drainage. Therefore cement blocks, etc., should appeal to builders. The consular agent transmitted the name of a person who desires catalogues (in Spanish) of machines for making cement blocks for drainage; also for ordinary kiln-burned drain pipe.
- No. 5525. Axle washers.**—An American consul in Canada transmitted to the Bureau of Manufactures the name of a firm in his district which desires to purchase vulcanized fiber axle washers.
- No. 5526. Scrap steel and pig iron.**—A firm in Italy informs an American consular officer that it wishes to be placed in communication with American producers of pig iron and scrap-steel rail cuttings, known in England as "crop ends," with a view to representing them on that market. The minimum length of the cuttings must not be less than 20 inches. Correspondence in French or Italian.
- No. 5527. Sickle-manufacturing machinery.**—An American consular officer in Russia forwarded the name of an American citizen who wishes to be placed in immediate communication with American firms capable of equipping a factory with machinery for the manufacture of a million sickles monthly.
- No. 5528. Household goods.**—A firm with offices in England and China, but incorporated in Sweden, expressed a desire, through an American consular officer in England, to be placed in touch with suppliers of sanitary seats, blind rollers, curtain poles and rings, broom handles, and washboards in the United States.
- No. 5529. Coal.**—An American consular officer in Italy reports that there is a large demand in that country for coking coal and splint, or cannel, coal for use in the steel works. The name of a firm was transmitted which desires to represent in that market American exporters of this product.
- No. 5530. Paper-perforating machines.**—A firm of importers and exporters in New York transmits to the Bureau of Manufactures a request from a firm in Brazil which desires to communicate with American manufacturers of machines for perforating paper rolls for piano players. The New York firm would finance the orders.
- No. 5531. Electric plants.**—American Minister Nicolay A. Grevstad, of Uruguay, reports that, anticipating prompt action by the legislature of that country regarding the establishment of a State electric monopoly, the Minister of Finance has requested the board of directors of the Electric Works of Montevideo to prepare without delay complete plans for electric plants in all the cities and important villages in the Republic. When these plans are completed bids for the construction of the plants will be solicited.

**Armor-plate trust.**—The British Admiralty is investigating the claim that a "ring" exists among certain armor-plate manufacturers of the United Kingdom, it being alleged that existing price arrangements in the industry amount virtually to a "trust."

## CANTON SILK TRADE.

[From Deputy Consul General Hamilton Butler, Canton, China.]

The pessimistic predictions which have been heard in recent years in regard to the export trade in Canton silks received further support in 1911. Last year was unsatisfactory to exporters and disastrous for the filature men. The latter, who were required to pay high prices for their cocoons, were hindered in their operations by the unsettled conditions throughout the greater part of the year. It is said that at least half of the two hundred and odd filatures in the Canton silk district were closed by the end of the year, and that many of them have gone into bankruptcy and will not reopen.

This condition has been brought about to some extent by a state of lawlessness, affecting the security of cocoons in transit and the safety of the workers in the filatures, but it was also furthered by the lack of organization among the filature men as opposed to the well-organized cocoon men. The latter held out for high prices at the cocoon auctions, while the former engaged in competitive bidding which ended in their having to pay absurd prices for raw material.

### A Fluctuating Market.

A season of poor crops added the last straw to bring disaster to the filature owners. The seven crops harvested in 1911 netted only 36,500 bales against 45,000 bales in 1910 and 37,500 bales in 1909; while the shutting down of many filatures and the restricted operations of others diminished the output of waste silk.

As predicted at the close of 1910, the market opened strong, with the dealers demanding, in some instances, \$50 per bale more than at the opening of 1910. The new season's crops, both in this district and in Japan, were still conjectural. Despite the high prices asked, a number of orders were executed for European buyers, and in February American buyers came forward with a considerable demand for

coarser sizes. By this time it had become apparent that weather conditions were favorable to the growing of mulberry leaves, and large orders came in from the Continent, also for coarse sizes.

At the end of March all old stock except a few thousand bales had been sold. As the quality of the first crop was promising and the early crops were expected to be large, the dealers, with a view to influencing the price of cocoons in the interior, closed contracts at low prices; but a period of heavy rains in May reduced the second crop to about one-half the estimated amount, and sent prices up again. The result was that buyers on the Continent rushed into the market to cover their requirements in finer sizes, and the dealers, supported by these orders and by the high cost of spinning the inferior cocoons, maintained their position.

#### **Exports and Prices.**

The quality of the third and fourth crop of cocoons was fairly satisfactory, demand continued steady, and prices gradually rose during the summer. Some speculative orders were received for 22/26 short reel, which were fully covered during the summer but which led certain filatures to an overproduction in this size and left the market at the close of the year with heavy stocks on hand.

The demand from Lyon continued very satisfactory during the summer, until conditions in Europe made Continental buyers cautious, and local dealers were at last forced to lower their quotations to interest buyers. The total exports of raw silk from Canton, for the calendar year 1911, amounted to 43,100 bales, in contrast with 54,121 bales in 1910. American purchases aggregated \$4,203,026 against \$5,454,593 in 1910.

There was a reversion from the 22/26 vogue of 1910, in the American market, to the now recognized American staple, 14/16 short reel or "4-corner." The prices for No. 1, 14/16 short reel ranged higher as a rule during 1911 than in the preceding year, opening at approximately \$395 and closing at about \$334 a bale. The highest price reached was on February 2, 1911, when \$409 was quoted.

#### **Waste Silk and Piece Goods.**

The waste silk market was interfered with by a reduction of output due to the closing of filatures, and prices ruled slightly higher than in 1910. Superior selected opened steam filature waste, the grade most in demand in the United States, averaged about \$57 per picul (133½ pounds). The United States took during the year waste to the value of \$424,816, as against \$351,632 in 1910.

When the figures for the total exportation of silk piece goods are published they will undoubtedly show a considerable falling off as compared with 1910. The value of piece goods exported from Canton to the United States alone declined from \$24,547 in 1910 to \$19,634 in 1911. The production of this commodity was interfered with during the year by unsettled conditions in the manufacturing centers and by the high prices of raw materials.

The feature of the year was the threatened abandonment on a large scale of the native silk gowns for foreign style clothing, and the energetic campaign carried on by the piece-goods dealers to induce the Chinese to retain their native dress and patronize home industry.

## AMERICAN PRODUCTION AND IMPORTATION OF SILK GOODS.

[From data supplied by the Bureau of the Census and the Bureau of Statistics.]

There was a rapid, healthy growth of the silk industry of the United States during the decennial period covered by the census of 1909, the gain in the value of the output exceeding the rise in the cost of materials used. This fact is shown by the following table, which presents statistics for the manufacture of silk and silk goods and includes data for establishments that make a specialty of throwing and winding silk:

	1899	1909		1899	1909

(1) Not reported separately.

(2) In addition, silk and silk goods to the value of \$1,218,101 were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

The increase in the cost of materials and in the value of products for the period 1899–1909 was 72.7 and 83.6 per cent, respectively. The total production of broad weaves in 1909 was 198,787,027 run-

ning yards, single width, valued at \$115,136,724, compared with 97,940,935 yards, valued at \$58,122,622, in 1899, the increase in quantity being 103 per cent and that in value 98.1 per cent. Broad silks formed over nine-tenths of all broad weaves in 1909, the increase in the output between 1899 and 1909 being 111.9 per cent. The increase in the output of all other broad weaves combined—velvets, plushes, tapestries, and upholsteries—was only 26.9 per cent.

In 1899 all-silk goods constituted 78.1 per cent of the broad-silk product, and silk-mixed goods 21.9 per cent, whereas in 1909 the proportion for the latter had risen to 38.1 per cent and that for the former had fallen to 61.9 per cent. The change was due to an increase during the decade of 268.9 per cent in the output of silk-mixed broad silks, while that for all-silk was only 67.9 per cent.

#### Foreign Trade in Silk and Silk Products.

The foreign trade of the United States in silk and silk products for the calendar year 1909 (the last covered by the Census figures) consisted of: Exports of silk manufactures, \$967,231; imports, raw silk in skeins, \$74,060,605; waste, \$1,451,796; manufactures, \$32,707,982. Later statistics, given in detail for the fiscal years ended June 30, 1910 and 1911, show the origin of American imports of silk and silk products:

<sup>1</sup> Included in "Dress and piece goods" prior to 1911.

Exports of silk goods of domestic manufacture from the United States were valued in the fiscal year 1910 at \$1,097,593, and in 1911 at \$1,538,543, in which latter year the shipments were apportioned: Europe (chiefly England), \$241,632; North America (mainly Canada, Cuba, Mexico, and Panama, in the order named), \$1,182,873; South America, \$25,207; Asia, \$11,294; Oceania, \$74,308; and Africa, \$3,229. Silk waste was also shipped by the United States, to the value of \$64,528 in the fiscal year 1910 and \$30,863 in 1911, mainly to Germany and France in the latter year.

### DUTCH SHIPPING COMBINATION.

[Amsterdam correspondence in Frankfurter Zeitung.]

The Nederlandsche Scheepvaart Unie proposes to make an extensive increase in its share capital from 16,500,000 florins to 50,250,000 florins (\$6,633,000 to \$20,200,500). The Union Co. was originally formed to protect Dutch shipping companies from the competition of the large German shipping companies. The Union forms the connecting link between the three companies interested in the Indian trade, namely, the Nederland, the Rotterdam Lloyd, and the Koninklijke Paketvaart, and it possesses a portion of the share capital in each and is jointly managed by them. The projected large increase in the share capital probably points to plans for the complete absorption of the three companies by the Union, although no definite statement on the matter is so far available.

## TUSCAN STRAW BRAID AND HAT INDUSTRY.

[From Consul L. J. Keena, Florence.]

The manufacture of straw hats and hat braids has been a flourishing industry in the Province of Florence for more than a century.

At present over 90,000 workers are employed in making, gathering, sorting, and shipping the several million dollars' worth of these goods annually exported from this district. To the United States alone the declared exports during the past three years have been valued as follows: 1909, \$1,452,920; 1910, \$1,203,205; 1911, \$1,150,911.

In the Province of Florence are upward of 100 factories devoted to braid work and more than 30 making trimmed and untrimmed hats. Only some 4,000 persons are regularly employed in these 130 factories. The outside workers are listed under two headings, which refer only to their manner of living: 65,000 are "pigionali," i. e., live in rented houses, usually near some factory, and 19,000 are "coloni," i. e.; tenants of small farms worked on shares. More than 56,000 women and 26,000 girls under age are engaged in straw work. They work for the most part at home, and the making of hat braid is, in the case of coloni, done in addition to the usual work of the day.

**Agents—Leghorn Hats.**

This work is directed and ordered by agents of local factories or by exporters of straw braids. There are about 1,000 of these agents, known by the general name of "fattorini." Braid work is paid for by the piece of 9 to 10 meters (meter=1.0936 yards). Orders for work, and samples if necessary, are taken from the factories or exporters by the fattorini and delivered to the outside workers. The fattorini also see to the completing of these orders according to the instruction or sample given.

The most important branch of the local straw industry is the working of "paglia Fiorentina" or "nostrale," from which the famous "Leghorn" hats are made. The braid used in Leghorn hats is composed of 13 threads. The following are some of the ordinary sizes and prices of hats made with this braid:

Diameter.	Giri.	Price.
		Lira.
45 centimeters (centimeter=0.3937 inch).....	30	2.20
50 centimeters.....	33	2.40
55 centimeters.....	36	2.70
60 centimeters.....	40	3.00

By "giri" is meant the number of widths of braid wound in forming the hat. Each additional giro laid on the hat increases the price 0.10 to 0.25 Italian lira (lira=19.3 cents) per width, according to the size of the hat.

**Paglia Nostrale.**

The manufacture of hats from paglia nostrale is essentially a Florentine industry and one in which there is no competition abroad. It is customary to order these hats by the number of giri or widths of braid to be used. The person making the braid then winds and sews the widths until the requisite number of giri has been reached. Thirteen-thread nostrale braid is therefore not usually sold by the piece but by the hat or length necessary to complete a hat having a stated number of giri. The local prices of these hats range from 2.20 to 5 Italian lire.

Ordinarily Leghorn hats are sold in the natural color, which is a light yellow. Some also are bleached by a process of washing, followed by six or seven weeks' exposure to the sun. The bleaching process for Leghorn hats costs about 0.15 to 0.20 Italian lira per hat. Manila hats are frequently sent into this district to be bleached and reshipped. The cost of bleaching hats of this kind is 0.55 to 0.60 lira each.

Paglia nostrale is also made to some extent in braids of 5 and 7 threads. These lighter braids are used in the manufacture of broad-brimmed hats for women. The 7-thread type of nostrale is sold by the piece of 42 to 45 meters. It is called "pedale" or "Milan braid," and costs from 1 to 2.50 lire per piece, according to the quality and fineness of the straw thread. The 5-thread braid is sold in pieces of 36 to 40 meters and is priced at 0.60 to 1 lira. These prices are for pieces in the natural color; the cost of bleaching would be 0.15 to 0.20 lira.

#### **Punta and Truciolo.**

In the Emilian Mountains a straw different in type and finish from the Florentine is very largely worked. The hats of this straw in and around Bologna and the neighboring villages of Monghidoro, Monzani, Lojano, Monteruggero, Filigare, etc., are called "punta," to distinguish them in the trade from the Florentine "nostrale" hats. This straw is plentiful in the Emilian Mountains and is much rougher and coarser than the Florentine straw. Hand labor in this region is particularly cheap and the price of these "punta" is consequently very low, a fair average being 1.10 to 1.20 lire for finished hats of 45, 50, 55, or 60 centimeters diameter. In general, only 20 giri are used in making either the 45 or the 60 centimeter hat; in the latter a coarser braid is employed.

Formerly punta hats were exported in their rough form, but of recent years they have been forwarded to the Florence district to be properly finished for the market. The finishing process renders them more salable, though it increases the cost of each hat 0.20 to 0.25 lira. There is a steady demand for these hats in England and America.

Another important straw worked in this district is called "truciolo." It is a woody product, not native to this district, but grown in Russia and made into threads of various sizes in Bohemia. Locally the truciolo is plaited into different types of braid. As there is no standard style, it is impossible to make any statement of cost per piece. The braid is sold by the meter in lengths ranging from 9 to 80 meters. A quintal (220.46 pounds) of truciolo will make 3,600 meters of plain braid of a width of 10 millimeters (millimeter = 0.03937 inch). Only women's hats are made from this class of braid, which is largely sold colored.

#### **Japon Braid.**

Another foreign straw worked here is "japon." It is made up in pieces 9 to 10 meters in length, costing 0.70 to 2 Italian lire. Work in this straw is ordinarily limited to braids, but some few exporters make up a considerable number of fancy hats for women in accordance with the fashion of the moment, in order to take advantage of the cheap hand labor in this district.

[An article on the straw-braid industry in the vicinity of Bologna was published in Daily Consular and Trade Reports on July 14, 1908.]

**MOTOR BOATS FOR CHINESE WATERWAYS.**

[From Consul C. L. L. Williams, Swatow.]

Two motor boats arrived in Swatow at the end of January for measurement and certification under inland water regulations by the Chinese customs authorities, being certified to carry 90 passengers each. These boats will ply as passenger launches between the cities of Chaoyang and Kueisu. A part of the 30-mile journey is through the Bay of Haimun, just south of this port, but the most of it is up a small river on the banks of which stands Kueisu. Chaoyang is already connected with this port by a steam-launch service.

These launches are along the lines indicated in my previous reports, published by the Bureau of Manufactures, their dimensions being, length 63 feet, beam 14 feet, draft 18 inches, depth of hull about 4 feet. The hull is completely covered by a superstructure about 4 feet high, with the exception of a short deck forward, where there is a hand winch for handling the anchor. Being designed solely for passenger traffic, there are no cargo hatches. The long cabin formed by the superstructure and the hull is divided by transverse bulkheads into four main compartments, one for the engines and the other three for passengers, who enter the saloons by side doors, communication from one compartment to another being by a grating gangway carried alongside the vessel.

**The Propelling Equipment.**

The engine compartment amidships has no outside entrance, being entered from the after saloon through the chief engineer's cabin, which occupies some 10 by 3 feet on the port side of the engine room. On the starboard side is a similar cabin, but opening outside and not into the engine room. Thus the engines are effectively protected from rough weather.

The hull is of teak wood throughout. It is cut square at the stern and is cut away down the middle aft of the engine room to form a tunnel, in which the propeller works. A pair of rudders are fitted one on each side of the propeller tunnel. This form of hull is, I believe, in common use in the United States where launches are run in very shallow water.

The engines are Bolinder's (Stockholm, Sweden) patent 2-cylinder 50-horsepower direct reversible type, burning crude oil. They are capable of giving these craft a speed of something over 9 knots per hour. The exhaust is through a funnel, which also helps ventilate the engineroom. A compressed air whistle is provided.

These craft were built and the engines installed by Ulderup & Schluter, in Hongkong, at a cost of about \$6,000 gold each, including \$3,150 for engine.

The engines are said to consume 15 to 17 cents (gold) worth of oil per hour when running at full speed, or, say, \$1.58 per working day. For crew the monthly wages bill is about \$56 each, the crew consisting of one chief engineer, at \$13.50; one second engineer, at \$11.25; and a crew of seven or eight deckhands, ticket collectors, etc., at \$3.60 to \$4.50 each.

**Fittings and Decks.**

The bridge is at the forward end of the superstructure, the entrance to it being through the forward saloon. To avoid undue height above

the water line, it is not decked over. The forward deck, about 5 feet in length, is carried to a square end, to facilitate landing on the banks at way stations.

These boats, drawing only 18 inches, are adapted for very shallow waters. Their maximum height of about 5½ feet above the water line enables them to clear easily the numerous bridges on the smaller rivers and canals in China.

Chinese being unaccustomed to the luxuries of travel demanded in the Occident, fittings are conspicuous by their absence. Each saloon has benches built along the sides and ends, and a table in the middle. Two toilets are located right aft.

#### **Great Advantages of this Type.**

As compared with steam launches, it would be possible to purchase for the price paid for these boats only a very small launch, with no greater passenger capacity, drawing at least 3 feet, and considerably more expensive to operate. The steam launches running to Chaoyang cost approximately the same as these motor boats and carry about the same number of passengers, but burn at least 1 ton of coal a day—fuel, \$5.40—and carry a much larger and proportionately expensive crew.

Despite the fact that these boats were built for use in shallow waters, they came up from Hongkong under their own power, 185 miles of open sea, in very rough weather.

These are the first motor launches to be used commercially in this vicinity, and if successful, as there seems good reason to believe they should be, should prove the forerunners of many more. It is expected that motor launches for use on the Han River above Chaochowfu, as previously reported by me, will arrive from Hongkong shortly.

As pointed out in previous reports, it is the launch builders in Hongkong that the American manufacturers of marine motor engines must approach if they wish to compete in this market. There are no launch builders in this port, and the Chinese who purchase motor boats are absolutely unacquainted with the technical points involved in the consideration of motor engines. To this is attributable the fact that catalogues are of but little use.

A rough sketch of these launches is forwarded to show more plainly their arrangement. [The sketch will be loaned by the Bureau of Manufactures.]

---

#### **PANAMA-CALIFORNIA SERVICE.**

(From Consul General Alban G. Snyder, Panama City.)

From March 6 at this end and from March 15 from San Francisco the steamers of the Pacific Mail call at Los Angeles on both north and south bound voyages, and the trip is to be made in from 13 to 14 days. The steamers *Peru* and *City of Para* in this service will carry first-class passengers only, while the *Aztec* will carry no passengers.

---

*Lead production* in the United States last year reached 1 billion pounds, an increase of 40 million pounds over 1910. Imports last year were 180 million pounds, a decrease of 37 million pounds.

**SUGAR MACHINERY AND AMERICAN GOODS IN PERU.**

[From Vice Consul General Charles Lyon Chandler, Callao.]

During the calendar years 1910 and 1911 between \$100,000 and \$150,000 was spent on new sugar machinery in the Peruvian Department of Lambayeque, this being the most conservative estimate that the writer can make after many personal inquiries. Fully 85 per cent of this went to Fawcett, Preston & Co., of Liverpool, McOnie, Harvey & Co., of Glasgow, and other firms in the United Kingdom.

In November, 1911, a representative of the Honolulu Iron Works began a personal, aggressive campaign, visiting sugar estates and exhaustively studying the situation. The writer was informed by at least three different people that this was the first time a United States firm engaged in making sugar machinery had sent a special representative to Peru. The campaign proved successful, and this would seem to be the only logical way to get this business.

**American Plows and other Implements.**

A study of the different articles in use on the estate of Señor Don Antaro Aspillaga showed several American articles among them. The three American disk plows were sold by Señor Don Manuel Alvarez Calderon, a graduate of the Maryland Agricultural College. As was pointed out by Mr. Charles M. Pepper, in his report on trade conditions, especially agricultural machinery, in Peru [see Daily Consular and Trade Reports for Feb. 1, 1908], the 11 young Peruvians who have studied at agricultural colleges in the United States have done much to spread the knowledge and sale of American goods. Complaint was heard of the lightness of these disk plows for hard use on very difficult soil.

All sugar-grinding machinery was from Fawcett, Preston & Co., of Liverpool. Some of it was installed in 1878 and is still useful. The traction engines were from John Fowler, England. The Edwards centripetal drying machine came from the United States, and gives satisfaction. The boilers were Babcock & Wilcox. Two pumps of the Worthington Pump Co. (Ltd.), London, were installed in 1911. Zorritos oil is used exclusively in the sugar mill. The small tank cars for sugar while in a liquid state came from the United States. A steam engine from the Delamater Iron Works, Pennsylvania, has been in use for many years. The boiler compound of S. E. Heymann & Co., New York City, was exclusively used. At least \$500 worth of ax handles from Turner, Day & Woolworth, of Louisville, Ky., was noticed. Nicholson files, from Providence, R. I., were seen in the repair shop. Oregon white pine was strongly in evidence, and all nails and screws came from the United States. Charles Booth & Co., of Liverpool, supplied a steam hammer and lathes; Sharp, Stewart & Co., of Manchester, a screwing machine. The turning lathe of W. Collier, Salford, England, had been continuously used since 1870.

**A Prosperous Season—Trade Literature Wanted.**

The past season would seem to have been a very good one for the sugar industry, and its extension is expected with the opening of the Panama Canal. The promoters of the railway from Chiclayo to Pimentel state that they expect to have it completed when the Panama Canal is finished.

During 1911 several American traveling salesmen visited Chiclayo, the most important city and distributing center in the Department of

Lambayeque, and secured good orders there. The Chamber of Commerce of Chiclayo (address, Camara de Comercio, Chiclayo, Peru) would be glad to receive American trade literature, catalogues, and advertising matter in Spanish. It will be useless to send it in English. Information relative to agricultural machinery for rice, sugar, and cotton plantations, milling machinery, motor boats, jewelry, clocks and watches, and perfumery and toilet articles is especially desired by this chamber.

## TWO TYPES OF FRENCH GAS PRODUCERS.

[From Consul General Frank H. Mason, Paris.]

What is known in Europe as the "S. F. H." gas producer has the form of a small furnace, with walls that converge downward and terminate in a crucible, or retort, which is made of bauxite and has an opening through which the slag is drawn off at intervals, as in a blast furnace. The blast is introduced through tuyères, which enter the furnace near the top of the crucible that forms its base. Intense heat is generated in front of the tuyères and the bauxite retort has to be repaired once in about three months.

Coking coals or other materials that do not expand much under the action of heat are the only fuels used. Good coking coal containing as little dust as possible is regarded as the best material for this process. The fuel used must sink freely in the oven, as the lower portion is consumed and the ash fuses into slag. When the natural ash does not smelt readily the coal is mixed with such fluxing materials as limestone, sand, or granulated scoria. A producer of standard size will gasify  $1\frac{1}{2}$  to 2 tons of coal per hour. The six producers in use at Gironcourt are somewhat smaller and use 1,320 pounds of lignite per hour.

The makers of the "S. F. H." producer also manufacture a quite different type of gas producer especially adapted to the use of "fat" or "semifat" coals. It is known as the "double combustion gas producer" and is used with coals that are not workable with the type of producer above described. It has at the bottom a rotary grate, and the interior walls are perpendicular.

[A circular describing the "double combustion producer" may be had from the Bureau of Manufactures.]

## Consular Trade Conferences.

Consul Percival Gassett, of Jerez de la Frontera, Spain, advises that he expects to arrive at New York, N. Y., on April 10, 1912, on leave of absence for 60 days. He plans to remain in that city at the Albemarle Hotel four days, then proceeding to Washington, D. C., for a stay of one month, where his address will be the Metropolitan Club. The consul will later be in Boston, Mass., for two weeks, at which place he may be addressed in care of Mr. P. Atherton, St. Botolph Club. Mr. Gassett will be glad to meet any business men who are interested in trade with his district.

*Public works in Ontario.*—Consul Felix S. S. Johnson sends from Kingston a newspaper list of places in the Province of Ontario for which the Canadian Government has made appropriations for 55 public buildings and additions and 64 harbor and river improvements.

**PUBLIC-SCHOOL WORKSHOPS IN SCOTLAND.**

(From Consul Rufus Fleming, Edinburgh.)

Owing to the pressure for employment in skilled occupations in Scotland, the apprenticeship system has been gradually disappearing. In periods of normal industrial activity few trades can give employment to all journeymen at the standard wage; and in periods of depression unemployment among journeymen is of course much greater.

As a result of this experience trade unions have sought to regulate the number of apprentices entering the various industries in order to prevent an increase in the ranks of journeymen. They have so far succeeded that the majority of boys find it extremely difficult to enter any trade. Moreover, the indenture system no longer existing, the conditions of apprenticeship depend upon oral agreement only, and as a consequence the limited number of raw apprentices seldom serve their appointed time, going from one factory to another, and perhaps from one occupation to another, not a few of them finally drifting into the casual-labor class.

**Night Classes—New Supplementary Schools.**

The breaking up of the apprenticeship system has forced upon the public authorities the problem of how to give boys a chance in life by affording them practical instruction in trades. For several years the Edinburgh School Board has provided, in connection with 27 separate public schools with 10,538 pupils, night instruction to classes in stenography, typewriting, and in certain handicrafts—cabinet-making, upholstering, and plumbing. In some of the night classes 98 per cent of the day pupils are in attendance.

A noteworthy development of this educational policy is the recent opening by the board of supplementary schools and large workshops for the trade instruction, where boys will receive thorough training in evening classes at the public expense. The new buildings comprise 10 workshops, equipped with the requisite tools and appliances for the following trade classes: Cabinetmaking, carpentry and joinery, plumbing, tinsmiths' work, engineering, brass finishing, molders' work, pattern making, tailoring, upholstering, French polishing, and plasterwork; and there are also rooms fitted for cookery and laundry work. The site of 3½ acres cost \$37,435, the buildings \$29,200, and the equipment \$9,830.

It is the intention of the board ultimately to give day instruction also during ordinary school hours, allowing boys at the age of 14 to 16 to enter the school workshop and receive instruction for two afternoons a week. At the end of the term there will be available the reports of the teachers and the inspector as to whether or not a boy has any aptitude for the particular craft or trade in which he has been engaged. If the report be favorable, the time devoted to technical instruction will be extended.

**Advantages of the Plans.**

If convinced of the great advantage of such training, parents, it is believed, will be willing to allow their boys to remain at the school for another year, while they are looking for situations. A member of the school board says:

The advantages are obvious. It is not improbable that a factory master, finding a lad possessed of a certificate which shows his proficiency in the rudiments of his trade,

will recognize that that boy will be of more value to him than the raw boy fresh from school or he who has been running loose for some months. It is not unlikely that the technical-school apprentice may start his career in the shop with a higher wage than is given to the first year's apprentice to-day and with an equally important concession—a reduction in the time to be served. In that way the parents, the boy, and the master will be benefited, and a great step will be taken toward the solution of a problem which is giving anxiety to educationists everywhere—how to bridge over the gap between the time of leaving school and the day when a suitable situation presents itself.

### MAIL-ORDER POSSIBILITIES IN ECUADOR.

[From Commercial Agent Frank R. Rutter.]

It is the opinion of Consular Agent George D. Hedican, Esmeraldas, Ecuador, that a profitable American mail-order business could be worked up in his locality if the postal service were improved. All that is needed is an arrangement whereby mail pouches for Esmeraldas, and also for Bahia de Caraquez and Manta, should be made up separately from those destined to Guayaquil. At present all mail for Ecuador is shipped to Guayaquil, and from there distributed to the various post offices; mail for the coast towns instead of being landed in the voyage south from Panama must lose four days in the journey to Guayaquil, wait there perhaps a week, and then journey back to Esmeraldas. Practically twice the necessary time in transit is thus consumed.

Each of the three towns of Esmeraldas, Bahia, and Manta purveys to a considerable population, both in the towns themselves and in the surrounding country; they are remote from the markets and have communication with Guayaquil and Panama only by steamer; and if the postal service between them and the United States were improved they would deserve more attention from the mail-order houses of the United States.

### EXPENSES OF CITY SCHOOLS.

Compare the cost of a city's police force with the cost of its school system and you have one indication of that municipality's interest in education, according to Dr. Harlan Updegraff. Dr. Updegraff is specialist in school administration of the United States Bureau of Education, which has just published for free distribution a monograph (A Study of Expenses of City Schools) containing the results of his investigations. Of 13 cities with 300,000 population or more 26 per cent of total revenues are spent on public schools; 20 cities with 100,000 to 300,000 population spent about 33½ per cent of the income on its schools, 42 cities with 50,000 to 100,000 population spent 36.5 per cent, while 28 cities with 30,000 to 50,000 people spent 38 per cent of all receipts on education.

### Foreign Trade of Italy.

Consul General James A. Smith, of Genoa, reports that for the first two months of 1912 Italy's exports totaled \$67,875,577, an increase of \$5,421,772 over January and February, 1911. Imports amounted to \$101,296,081, a decrease of \$7,078,143.

Ontario Province was granted \$2,000,000 by the Canadian Parliament as subsidy for the Temiskaming & Northern Ontario Railway.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8532. **Sugar-bag sewing machine.**—An American consul in South Africa forwarded the name of a firm in his district which desires to procure a first-class machine for sewing sugar bags. If the right kind of a machine can be found the firm will be glad to represent the manufacturer in British and Portuguese South Africa.
- No. 8533. **Typewriters, adding machines, etc.**—A business man in Manchuria informs an American consul that he desires catalogues and price lists of American typewriters, adding machines, addressers, and duplicators. The applicant states that in purchasing from European houses he pays 10 per cent with the order and the balance against documents at a Manchurian bank.
- No. 8534. **Walnut and beech wood.**—An American consul in Greece reports to the Bureau of Manufactures that a firm in his district desires to be placed in touch with exporters of American walnut and beech woods for use in furniture making, with a view to establishing business relations.
- No. 8535. **Barber chairs.**—An American consul in the Far East requests that catalogues and prices, with discounts and shipping weights, of American barber chairs be sent to that consulate. The consul states that only the cheapest grades can be sold, as their introduction would be in the nature of an experiment.
- No. 8536. **Portland cement.**—A firm in Russia requested an American consular officer to place it in touch with manufacturers of Portland cement in the United States who desire to get into that market. Prices, c. i. f. a certain port, and how soon deliveries could be made should be stated.
- No. 8537. **Silk piece goods.**—An American consul in Greece forwards the name of a firm in his district which desires to be placed in touch with American exporters of silk piece goods with a view to establish business relations. Samples, with prices and terms c. i. f. a certain port, are desired.
- No. 8538. **Dry goods specialties.**—A firm in England requested an American consular officer to place it in communication with American manufacturers of dry goods specialties suitable for British and colonial trade, with a view to securing agencies. This firm has a New York house which, it states, would settle for all purchases.
- No. 8539. **Office furniture.**—An American consul in the Far East forwarded to the Bureau of Manufactures the name of a company which wishes catalogues, with prices and discounts, gross and net shipping weights, of wood and steel office furniture, particularly filing devices. Correspondence may be in English.
- No. 8540. **American goods for China.**—A business man applied at an American consulate in England for the addresses of American manufacturers and exporters of machinery of all kinds, railway materials, firearms, lumber, piece goods, and provisions, with a view to securing representation for them in China. He states that he was 15 years in the East, and was until lately manager of a firm in Shanghai, with branches in Vienna, Hamburg, Milan, Lyon, and Manchester. References will be furnished.
- No. 8541. **Electrical manicure machines.**—An American consular officer in Austria forwards the name of a dealer favorably recommended who wishes to obtain catalogues from manufacturers of electrical manicure machines in the United States with a view to securing the agency for them.
- No. 8542. **Construction of pipe line.**—American Minister to Roumania, John B. Jackson, telegraphed from Bucharest that a law has been passed authorizing the construction of a pipe line for carrying petroleum from Prahova, in the center of Roumania, to Constantza, on the Black Sea. The line is to be constructed by the Government railway authorities, and \$3,600,000 has been appropriated for the purpose. The plan proposed is to construct two parallel conduits, one for the "residus" and the other for the "lampant." The length of the line will be 150 to 200 miles. Inquiries regarding bids for furnishing materials should be addressed to the Department of Public Works, Bucharest, Roumania.

- No. 8543. Clothing.**—An American consul in Asia Minor reports that a local importer desires to hear from American manufacturers of cheap ready-made clothing and from dealers of secondhand clothing, as there is a good market for the sale of such goods in that district. Correspondence in English or French.
- No. 8544. Staves.**—A cooper in Wales requested an American consul to put him in touch with American firms which could supply white-oak barrel staves, ready jointed, 32 inches long, 4 inches wide, and  $\frac{7}{8}$  inch thick, in quantities of 10 to 20 standards at a time. Shipments could be made direct.
- No. 8545. Building equipments.**—An American consul in Turkey reports that a large new building is being constructed in his district for hotel and business purposes and that tenders for equipment should be forwarded to the person whose name is on file in the Bureau of Manufactures.
- No. 8546. Corn oil.**—An American consular officer in Sweden forwarded to the Bureau of Manufactures the name of a well-known firm in his district which desires to represent American exporters of corn oil.
- No. 8547. Furniture.**—A prominent importer in Asia Minor requested an American consul to put him in touch with American manufacturers of furniture. Catalogues and price lists, in English or French, are desired.
- No. 8548. Gasoline and naphtha motors.**—An American consul in Austria reports that the sales of gasoline and naphtha motors are rapidly increasing in that country and that several hundred American makes were sold last year. The consul forwarded the name of a person who wishes to be placed in communication with manufacturers of motors in the United States.
- No. 8549. White Portland cement.**—A firm in Germany which manufactures gypsum requested an American consul to place it in communication with manufacturers of white Portland cement in the United States with a view to importing same.
- No. 8550. Cotton yarn.**—An American consul in South America reports that a new cotton-goods factory will begin operations this month and that the firm is anxious to receive samples and prices of American cotton yarn (warp and wool) for spinning or weaving cotton drills, etc. The consul forwarded the name of another firm which desires to get in touch with American manufacturers of yarn. These factories will be large importers if samples and prices are satisfactory.

### PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

- No. 576. Steel forgings.**—Sealed proposals, in duplicate, will be received at the office of the Chief of Ordnance, United States Army, Washington, D. C., until April 17, 1912, for furnishing and delivering, f. o. b. contractor's works, 12 sets (except trunnion hoops), more or less, of steel forgings for 12-inch mortar, model of 1912, to be tempered and annealed and of American manufacture, in accordance with specifications prescribed by the Ordnance Department.
- No. 577. Erection of filtration plant.**—Sealed proposals, in triplicate, will be received by the commanding officer, Rock Island Arsenal, Ill., until April 26, 1912, for the erection of a filtration plant at the said arsenal. Specifications, with plans, etc., may be had upon application to the commanding officer.
- No. 578. Stern-wheel gasoline boat.**—Sealed proposals for constructing and delivering stern-wheel gasoline boat *Grantsville* will be received at the United States Engineer Office, Wheeling, W. Va., until April 30, 1912. Information on application to F. W. Altstaetter, Major, Engineers.

### Fruit Tree Values in Bavaria.

The Bavarian Government has given much attention to fruit growing, a decree having been issued as early as 1769 requiring all land owners to plant fruit trees along the public highways bordering their estates. The systematic planting of such trees was begun about the middle of the last century. The value of fruit trees in Bavaria is now estimated at \$170,000,000.

**DETAILS OF OSAKA'S DISASTROUS FIRE.**

[From Consul Geo. N. West, Kobe, Japan.]

Hindered by strong wind, insufficient water supply, narrow streets, and crowds, the fire department of Osaka was not able to get control of a fire that started in the southern part of that city on January 16 until 4,779 houses had been destroyed or damaged, entailing a property loss of \$3,457,632. The fact that this was a section of Osaka where one-story houses predominated accounts for the relatively small valuation of the property destroyed, for the area burned over approximated three-fourths of a mile in length and one-fifth of a mile in width.

To fight the conflagration 26 fire engines and 167 fire extinguishers of various makes were used. Although 26,000 feet of hose were used, no lengths burst during the fire. One hundred and thirty hydrants were available for use, these being principally 4-inch double hydrants connected to 12-inch mains at Nipponbashi Street and 20-inch mains at Namba Street, supplied from a standpipe which normally gives 200 to 300 gallons per minute per hydrant.

Osaka is constructing a large waterworks, and it is believed that with its completion and an ample supply of water fires may more readily be controlled. High towers are located in the different sections of Osaka and Kobe where watchmen are stationed to give warning of fires, and at these towers hand-hose reels are usually kept for immediate use.

---

**GRAPEVINES DAMAGED BY FROST IN GERMANY.**

[From Consul Milo A. Jewett, Kehl.]

Reports from various parts of Alsace-Lorraine indicate that serious damage has been done to the grapevines by frost. Alsace-Lorraine contains about 25 per cent of all German vineyards.

The winter was abnormally warm and the vines began to bud and grow in January. In the latter part of January and on the night of February 3 there were severe frosts. At Strassburg the temperature fell to 5° F. A report from the Erstein district states that 50 per cent of the vines are so seriously damaged that they will not bear this year. The damage is said to be most important in the lower lying vineyards; on the uplands the vines seem to have escaped serious injury.

Vineyards in the Baden portion of this consular district have also suffered from the cold and frost, but in Baden the production of wine is not very important.

---

**Program for the Ghent Exposition.**

The American minister at Brussels, Belgium, forwards copy (in English) of the program and prospectus for the proposed International Exposition in Ghent, plans for which were given in Daily Consular and Trade Reports for February 24 and April 1, 1912. The pamphlets will be loaned on application to the Bureau of Manufactures.

---

*A new French Riviera* is being developed on the Picardy seacoast near Boulogne. Considerable expenditures are being made.

# DAILY CONSULAR AND TRADE REPORTS

ISSUED BY THE BUREAU OF MANUFACTURES, DEPARTMENT OF COMMERCE AND LABOR

15th Year

Washington, Friday, April 12, 1912

No. 87

## THE NATIONAL COMMERCIAL CONFERENCE.

[By A. H. Baldwin, Chief, Bureau of Manufactures.]

It is already evident that the commercial conference which will be held in Washington beginning April 22 next will bring delegates from every part of the United States. Alaska, Porto Rico, Hawaii, and the Philippines will be represented, and also most of the national associations established for the promotion of a single commercial interest. This will insure the most truly representative commercial gathering, probably, that has ever been brought together in the United States.

The spirit and clearness of vision with which the delegates to this conference approach their task of organization will largely determine the value and permanence of the national association which, it is hoped, will be established as a result of this April meeting. It is believed that the Bureau of Manufactures is justified in offering the suggestion that the primary purpose of the meeting to establish a broadly representative national organization be kept persistently in view by delegates. It is deemed that loss of time and effort could be the only result if the meeting enters on the discussion of other matters, however important, if these matters are not essentially and closely related to the main subject; that is, the plan of organization of the national chamber of commerce. Further, it is believed that it will be difficult, if not entirely impracticable, to state at this conference in specific terms many of the details of the subsequent service which will be rendered by the national organization. The wisdom of indicating this service in the broadest terms in planning the organization seems apparent, and it is believed that the development of the actual details of this service can safely be left to the skill of the chosen directors of the organization as advised by the constituent associations. The conference can so fix the essential form of the association that its broadly representative and national character shall be firmly established, and it can also, it is hoped, find directors who will be willing to devote their time and interest unselfishly to the development of the association.

The attention of delegates is also specially invited to the fact that at first, or until Congress should take some action with respect to

authorizing Government officials to take active part in the development of the new national organization, the relations of representatives of the Department of Commerce and Labor and other Federal departments can be advisory only, and essentially those of helpful cooperation. This cooperation, it is certain, can always be secured by the national organization if properly conducted, but it will be impracticable to grant Government officials any vote or power in the conduct or control of the association until such time as, through the development of its commercial importance and truly representative national character, definite official relation may be established through action by Congress.

Obviously, commercial organizations have it entirely within their power to establish this national association and start it at once upon its useful work without aid from the Government at first other than that indicated above, and the exact form of the relations which it will finally sustain with Government departments must, it is believed, evolve gradually out of the experience of the organization. It seems certain that there will come, naturally, a close and cordial relation between it and the Federal service, and this relation can readily be given official form by sanction of Congress, if desired, at a later date; but it also appears certain that this relation can not be defined in advance by the conference of April, and that no action can be taken toward immediately establishing this bond of union further, perhaps, than to provide for some form of unofficial advisory council which would afford a dignified method of placing at the service of the national body any information or suggestions which might be desired by it from the commercial promotive branches of the Government.

It is evident that any discussion of moot questions in this meeting would be futile. The growth of the service and value of the national organization will depend much on the character of its opening efforts. If its power is diverted to special or narrow interests, or if it fails to keep in the broad unobstructed path of such purely promotive and constructive work as all its constituent commercial organizations can be in substantial agreement with, its life will be short. It would be manifestly unfair to expect too much at once from the organization. Its directors can not hope to guide its activities intelligently until a fairly complete record of the essential facts in regard to its constituent members is established, and a wide knowledge also of the work of the Federal Government in all its promotive branches is secured by the officers of the national organization. Probably some study of the methods of commercial organizations abroad would also be required in order to adapt to the conditions in the United States those activities which would be appropriate to the needs of the new association.

### WHOLESALE PRICES IN UNITED STATES.

[Announcement of Bureau of Labor, Department of Commerce and Labor.]

Wholesale prices during 1911 showed a slight decline from those of 1910, according to the annual report on wholesale prices shortly to appear as Bulletin No. 99. The fluctuation from month to month was small, with a slight upward tendency during the latter half of the year. The most important features in the movement of prices during the year were the advance in the prices of food products and the noticeable decline in those of metals and implements. Measured by the 257 commodities included in the Bureau of Labor's recent investigation, wholesale prices in 1911 declined 1.7 per cent from prices in 1910, and with this decline were only 0.2 per cent below the high average of 1907, the year of highest prices within the period 1890 to 1911.

**CONSTRUCTION WORK ABROAD.****CANADA.**

[From Consul General John G. Foster, Ottawa.]

**General Appropriations for Government Works.**

In the supplementary estimates (sessional paper No. 4) for the fiscal year ending March 31, 1913, presented to the Canadian House of Commons, numerous appropriations are made for public buildings and works throughout the Dominion.

Provisions which are of interest to Ottawa are an item of \$500,000 for a new departmental building (\$280,000 being a revote), an addition to the library, \$30,000, and a new drill hall, \$50,000. It is expected that the completed drill hall will cost about \$200,000.

Provision of \$1,000,000 is made in the estimates for acquiring site and construction of a Dominion Government building in London, England, and \$1,500,000 for the construction, acquisition, leasing, or expropriation of terminal elevators. The Hudson Bay Railway and Terminal is given \$1,500,000 for construction work, terminals, and elevators.

The total supplementary estimates amount to \$19,610,040, of which \$13,072,527 is chargeable to consolidated fund and \$6,537,513 is chargeable to capital account. They include extensive construction of public buildings, public roads, ship canals, river and harbor work, etc., throughout the Dominion.

[From Consul General David F. Wilber, Vancouver, Canada.]

**British Columbia Construction Items.**

Firms interested in these items should advise the consulate general of the fact, sending their catalogues, if they desire, and also whether they are successful in obtaining business as a result of their inquiries. Some firms send merely carbon copies of their letters, without going to the unnecessary trouble of a transmitting letter. There have been cases where such action by manufacturers has enabled the office to later put them in touch with other opportunities, as the names are on file here and we knew them to be interested in obtaining business in British Columbia. Manufacturers having agents in this Province should advise this office of the agents' names and addresses.

With reference to the large number of developments each week in Vancouver, summarized as follows and previously announced in Daily Consular and Trade Reports, it will be apparent that there are many opportunities for the sale of American material, supplies, machinery, and equipment. In some lines, as building hardware, there is keen competition and small profit for the local merchant, but many American hardware specialties are not well known, apparently, and could be introduced with profit to the dealer and manufacturer. In these and all other lines local representation is essential to obtain the most satisfactory results, even when sales are made exclusively to jobbers or to some one firm. It has been pointed out repeatedly that the period elapsing between the call for tenders and the closing of tenders is usually too short to permit of a concern not on the spot competing successfully. The importance has been shown also of making sure that architects and designers are fully acquainted with machinery, equipment, specialties, materials, or other supplies that

might be utilized by them to advantage in works under their supervision.

*Flour mills.*—The Moose Jaw Milling Co., of Saskatchewan, whose plant was recently destroyed by fire, will build a mill at Port Mann.

*Sawmills.*—A sawmill proposed at Chicken Lake, British Columbia, capacity 15,000 feet daily; no particulars are given. Robert Marr, of Princeton, British Columbia, is erecting a sawmill to cut 35,000 feet daily.

*Powder plant.*—It is estimated that the increased demand for explosives for blasting is to result in extensions to each of the plants of the Canadian Explosives (Ltd.) in this Province, at Nanaimo, Victoria, and Bowen Island, particularly the last.

*Machine shops.*—The Schaafe Machine Works, of New Westminster, British Columbia, are to build a new and larger plant.

*Laundry.*—The New Model Laundry Co. is being incorporated by Crompton & Berton, brokers (Pemberton Block, Victoria, British Columbia), and will erect a \$10,000 laundry building, equipped with most modern machinery.

*Biscuit and confectionery factory.*—Ramsey Bros. & Co. (Ltd.), 201 Raymur Avenue, Vancouver, British Columbia, are to make a \$17,000 extension to their factory.

*Cold-storage plant.*—The Chilliwack (British Columbia) Creamery Association plans erection of a refrigerating plant, capacity of 24 tons daily. The equipment has probably been purchased through a Vancouver firm. The same concern contemplates manufacturing ice cream on an extensive scale.

*Cannery.*—The farmers about Arrow Lakes contemplate establishing a cannery at Nakusp, British Columbia.

*Dairy and creamery.*—George E. Knight, Edmonds, British Columbia, plans to build a large modern dairy and creamery.

*Steamer.*—A \$160,000 200-foot steamer, to be finest on interior waters, is to be built by Port Arthur Iron Works (said to be branch of Cleveland Iron Works), for use on Kootenai Lake between Nelson and Kootenai Landing, as a link in the Canadian Pacific Railway system.

*Dock.*—British and French financiers are reported to have decided to build a floating dry dock for Vancouver; capital subscribed and joint boards formed in London and Paris. The dock to have a lifting power of 15,000 tons, a total length of 600 feet, a depth of 65 feet, and a width of 80 feet. It will be built in two years. It will be possible to use parts of the dock separately for smaller vessels or to put them together and use them as a whole for larger vessels.

*Bridge.*—Chief Provisional Engineer Griffiths, of Victoria, British Columbia, will recommend a \$250,000 bridge to cross the Kootenai River at Nelson, British Columbia, instead of a \$75,000 bridge, as previously stated.

*Terminal.*—Guthrie, McDougall & Co. (A. O. McDougall is of Portland, Oreg.) have contract for reclamation and filling work for the \$3,000,000 yards and terminal of the Great Northern Railway here. Two steam shovels are to be put to work immediately. One million cubic yards of dirt, it is stated, will have to be moved. Alexander Stewart, assistant chief engineer of the Great Northern, of Seattle, is named as the official who is drawing the plans for this extensive work. In addition to Canadian Pacific plans for a large new terminal station here, that railway is making large extensions to its yards and freight handling facilities, spending \$2,000,000 this year in Vancouver.

*Railway stations.*—It has been stated that F. M. Battenbury, architect, Victoria, British Columbia, has been commissioned to design the stations for the Canadian Northern Pacific Railway of this Province.

*Telegraph.*—The Dominion Government is appropriating a sum to extend its telegraph line down through the Okanagan Lake district to Penticton and for running an additional wire to Vernon, Kelowna, Summerland, and Penticton.

*Telephones.*—The British Columbia Shipowners' Association and the local Shipmasters' Association are urging the Dominion Government to establish a telephone line along coast between Powell River and Vancouver, similar to telephone lines along the St. Lawrence River and other shores in the East, which could be used in emergencies.

*Light and power.*—Concerning the reported purchase of the Coteau Power Co. by MacKenzie & Mann (Canadian Northern Pacific Railway) and the burning of the power plant of the city of Vernon, it is now reported likely that the city will not rebuild, but will arrange with the Coteau Power Co. for supply of light and power.

*Hydroelectric power plants.*—Tenders have been called for erecting a concrete and steel power station, including furnishing of all materials except as specified, for municipality of Penticton, British Columbia, tenders to be received by F. H. Latimer, con-

sulting engineer, at that place, until April 18, accompanied by a certified check for 5 per cent of the contract price as a guaranty. Plans, specifications, etc., obtainable from consulting engineer.

The British Columbia Electric Railway (Vancouver, British Columbia) is reported to have appropriated \$2,750,000 for new electrical equipment alone, for enlarging generating stations, improving service from substations, and general extension of light and power lines during 1912. Approximately \$1,000,000 is to be spent in installing three 14,000 horsepower units in the hydroelectric station on north arm of Burrard Inlet; \$225,000 for steam-turbo plant in this city (work well advanced); \$1,500,000 on substation and light and service improvements, embracing the new \$125,000 Earls Road substation, equipment soon to be purchased, including two 1,000-kilowatt motor generator sets, two 3,000-kilowatt transformer banks, and eight arc regulators. The substations at Vancouver, Lulu Island, New Westminster, Point Grey, and Burnaby are to be doubled in capacity. Also \$25,000 is to be spent for alterations and extensions to emergency power plant in Victoria.

**Tramways.**—(1) City Council of Nanaimo, British Columbia, desires a charter to operate a tramway through the tributary region, but has been refused by the provincial government, which, it is stated, is willing to "grant a charter to a private company." It would be well for manufacturers of equipment to keep in touch with the situation. (2) G. W. Bell, a merchant of Revelstoke, British Columbia, is promoting a company to build a tramway to Columbia Park. (3) Among other interurban electric railways under contemplation is a line from Vancouver to Mission, another from Vancouver to Ladner, one from New Westminster to Blaine, and one (problematic) from Ladner to Seattle, Wash.

**Water-supply system.**—(1) City of Kamloops, British Columbia, through its consulting engineers, Dutcher & Maxwell, are calling for tenders on some 5,000 feet of steel pipe, water hydrants, valves, and fishings (about \$10,000 worth) for big concrete reservoir to be built at Kamloops. (2) Elk Creeks Waterworks (Ltd.), Chilliwack, British Columbia, which has franchise for local water supply, is to make a 15-mile extension this year, also numerous improvements.

(3) Cleveland & Cameron (Winch Building, Vancouver, British Columbia), consulting engineers for municipality of Burnaby, are completing plans for two 300,000-gallon concrete reservoirs, one of which will be built as an addition to the municipality's present reservoir.

**Public works.**—South Vancouver, British Columbia, passed by-laws on March 23, 1912, appropriating \$100,000 for sidewalks, \$900,000 for roads, \$325,000 for waterworks extensions, and \$505,000 for school buildings.

The engineer of the municipality of Burnaby (Edmonds, British Columbia) has recommended: That the municipality open up its own quarry and establish there a crushing and screening plant, cost about \$25,000; that the receiving station on the river should consist of bunkers of about 4,000 yards capacity, with a movable tower, with horizontal boom derrick having an unloading capacity of not less than 50 yards per hour, cost about \$40,000; and that the distribution bunkers at Highland Park have a capacity of about 2,500 yards and be arranged to unload and reload into cars by suitable conveying apparatus, cost about \$15,000. Interested American firms might assist the council in considering the subject.

**Schools.**—(1) Nanaimo, British Columbia, is to spend \$80,000 on its schools in 1912, \$50,000 on a new building, and the balance on repairs, salaries, etc. (2) Roseland, British Columbia, is planning for a new 14-room brick schoolhouse. (3) A \$50,000 school building is soon to be erected at Enderby, British Columbia. (4) Chilliwack is to build a \$40,000 high-school building at once. (5) Holy Rosary Cathedral Parish (Vancouver, British Columbia) is to erect a large school building for social, athletic, and scholastic purposes. (6) Tenders are to be received until April 8 for erecting a 3-story brick and millwork school building at New Westminster, British Columbia, one of the school buildings for which that city will spend about \$200,000. Separate tenders will be received for the different trade contracts: Gardiner & Mercer, of the same city, are supervising architects and will receive tenders.

**Fire equipment.**—City of New Westminster, British Columbia, is considering a by-law for purchasing a \$14,000 auto aerial fire truck. Immediate attention should be given this.

**Fire escapes.**—The Southside Central Improvement Association (F. M. Thompson, president), this city, has started a movement to obtain better fire escapes for some city schools.

**Garbage carts.**—Council of South Vancouver, British Columbia, is planning to provide for removing and disposing of garbage. Tenders will probably be called for seven water-tight, neatly painted, covered garbage carts (\$8,816 initial appropriation).

For first year garbage will be dumped into ravines and gulleys, but erection of a garbage incinerator will probably soon be considered and American manufacturers of equipment for such plants might find it profitable to investigate. As residents are required to provide suitable garbage receptacles, there will no doubt be a considerably increased sale of such articles.

**Hotels.**—(1) Mesher & Co., New Westminster, British Columbia, are contractors for a 200-room hotel for A. E. Waterhouse at Port Alberni, British Columbia. (2) Thomas Mathews, Vancouver, British Columbia, has obtained a building permit for a 6-story steel and concrete hotel building. (3) The Canadian Northern Pacific Railway plans a summer resort and hotel at Departure Bay, British Columbia, on a 122-acre site. (4) Horton & Phipps, Victoria, British Columbia, are architects for a \$25,000 hotel building for C. P. Allen, for which the Saanich (British Columbia) council has issued a permit. (5) A. J. Pappas, Vancouver, British Columbia, is to erect a \$15,000 3-story restaurant and hotel at Coquitlam, British Columbia, for which Charles Davies, of Coquitlam, is general contractor. (6) G. A. Hankey Co., Vernon, British Columbia, owner of Hotel Russell, New Westminster, is to spend \$75,000 in adding a 4-story brick block and improving its bar and billiard room. (7) The Pioneer Hotel, New Westminster, British Columbia, is also to make extensive additions and improvements.

**Churches.**—(1) An Episcopal Church is to be built at West Arrow Park, near Arrow Park, on Upper Arrow Lake, British Columbia. (2) A \$100,000 building is to be erected by First Presbyterian Church, Victoria, British Columbia. (3) It is expected that the First Congregational Church and the First Baptist Church, of Victoria, British Columbia, will have plans prepared shortly for new church buildings.

**Hospital.**—North Vancouver, British Columbia, plans erection of a hospital. Citizens of Fort George, British Columbia, are to build a hospital at once.

**Rooming houses.**—(1) The Vancouver Realty Co. has obtained a permit for a \$40,000 6-story brick and stone rooming house building in Vancouver. (2) An \$80,000 6-story brick and concrete store and rooming house is to be erected by Hooper & Snider, Vancouver, Frantz Construction Co. of 346 Pender Street, contractors. (3) W. P. White, Hutchinson Building, Vancouver, British Columbia, is architect for a 3-story \$33,000 brick rooming house, for E. P. Buchanan; for a \$55,000 4-story brick apartment house, general contracts for which will soon be let; and for an 8-story apartment building for A. D. Goldstein, for which contracts are soon to be let for ornamental ironwork, marble, and hardwood interior trimmings.

**Building activity at Nelson.**—In addition to the items in Daily Consular and Trade Reports for March 30 the following buildings are planned for Nelson, British Columbia: A \$40,000 brewery; a \$10,000 brick office building, for E. K. Strachan; a \$30,000 brick and concrete office and store building for E. B. McDermid (of Vancouver, British Columbia); and a \$25,000 brick and concrete office and store building, for A. L. McCullough. The power plant for the new paper mill will obtain 5,000 horsepower from a 900-foot head and will cost about \$150,000. This and the paper mill are stated to be definitely assured. The Yale Columbia Lumber Co.'s mill will be rebuilt.

**Post office.**—Work has been resumed on the post office and customhouse for Grand Forks, British Columbia, a 2-story \$45,000 brick and granite building for which Bernard Lequime, of that city, is contractor.

**Moving-picture theater.**—William Turnbull has received a license from the council of North Vancouver, for a moving-picture theater.

**Masonic hall.**—Kamloops (British Columbia) Masons are to erect a 3-story, ferro-concrete lodge and office building.

**Club building.**—The Vancouver Athletic Club is selling its present property and will erect a 5-story \$125,000 club building.

**Golf links.**—Sir John Eardley Wilmot has arranged for constructing a 9-hole \$50,000 golf course at Nelson, British Columbia, for the use of tourists. It will later be doubled to full 18-hole course.

A skating rink is to be built at Trail, British Columbia.

[From Montreal Gazette.]

### A Large Cement Flume.

The natural resources department of the Canadian Pacific Railway has made the announcement that the contract will be let for what is said to be one of the engineering feats on the American continent. It is for the construction of a cement flume 2½ miles long, 16 feet wide, and 10 feet deep. It will be erected on pillars some 16 feet in height. It is to be built in connection with the company's irrigation projects at Bassano, Alberta, and will be used to carry water across a valley 2½ miles in width. It will be the main waterway of the system.

**FRENCH WEST INDIES.**

[From Consul F. T. F. Dumont, Basse Terre, Guadeloupe.]

**New Factories in Guadeloupe.**

Le Nouvelliste, a daily newspaper published at Pointe à Pitre, announces that a factory for the manufacture of coconut oil is to be established at that place by M. Hennequin.

Le Cri de la Guadeloupe, published at the same place, announces that H. Maston has been authorized to establish a distillery for bay oil at 57 Rue Peynier, Pointe à Pitre.

---

**VENEZUELA.**

[From Consul Thomas W. Voetter, La Guaira.]

**New Brewery—Hydroelectrical Plant.**

The Cervecería Venezolana de Maiquetía, capital 1,000,000 bolívares (\$193,000), has been organized to establish a brewery at Maiquetía, a municipality adjoining La Guaira. The incorporators are residents of Caracas, and its legal domicile is in that city. It is stated that Mamo electric power will be largely used in operating the plant.

Considerable work is being done on the hydroelectrical plant at Mamo, west of La Guaira, whither roads have been built for transporting the machinery, which has been ordered. The plant is expected to be in operation by August.

There will be developed 2,600 horsepower, part of which will be transmitted to Caracas and part to La Guaira. There are rumors that an electric railway from Maiquetía via La Guaira to Macuto will be established, either by taking over the steam tram line now operating between those points or by constructing a new line. The interests constructing the new plant at Mamo have close relations with the owners of the electric light plant now operating at La Guaira, so that it is probable that this will also be taken over.

---

**ARGENTINA.**

[From Consul General R. M. Bartleman, Buenos Aires.]

**Contract Awarded for Municipal Waterworks.**

The Government has accepted the tender of the firm of Lavinás, Poli y Cia., Calle Bartolomeo Mitre 441, Buenos Aires, Argentina, for the construction at Caballito of the new waterworks for the city. The amount of the tender was \$551,376, United States gold.

---

**GERMANY.**

[From Consul Samuel H. Shank, Mannheim.]

**Loan for Public Improvements.**

The city of Mannheim has issued \$2,380,000 of bonds. The money is to be used for extensions of the waterworks, gas works, street car lines, electric light plant, new school buildings, a new hospital, and acquiring new territory.

The city buys up all land lying contiguous and holds it until individuals desire it for building purposes. In this way the city is kept compact, as it will not sell outlying lots, but only those adjoining already improved property. This is an economy, as it is not

necessary for the city to build sewers and streets nor to extend its gas, water, and electric mains along stretches of unimproved property. The city also owns land adjacent to one of the harbors, and this it sells for factory sites.

The contracts are to be let for the various buildings referred to some time during the ensuing year. Plans and details may be had by applying to "Oberbürgermeisteramt, Mannheim, Baden," but postage for sending forms should accompany the request.

---

#### RUSSIA.

[From Ambassador Curtis Guild, St. Petersburg.]

##### New Port Works.

Sebastopol, formerly a naval base only, is to be opened as a commercial port. Work has already been started on the construction of a new commercial port in Streletz Bay at that point. The port is expected to be ready for traffic not later than 1914.

---

#### ROUMANIA.

[From American Minister John B. Jackson, Bucharest.]

##### Municipal Loans for Public Improvements.

A bill is pending in the Roumanian Parliament, which will probably soon be passed, authorizing the city of Craiova to contract a 4 per cent loan of \$5,400,000 for conversion of existing loans (amounting in all to about \$3,000,000) and construction of public works and local improvements, such as sewers, tram lines, a municipal palace, crematories, etc. Another bill is pending to authorize the city of Braila to contract a smaller loan, a part of the proceeds of which are to be applied to improving the water service and constructing a reservoir, public urinals, and sewers. Similar improvements are contemplated sooner or later in several Roumanian cities of minor importance.

---

#### CHINA.

[From Consul Lester Maynard, Harbin, Manchuria.]

##### Improvements for the City.

A summary of the requirements which the Harbin town council reports to the municipal delegates follows: Paving streets, \$600,361; bridges, \$16,000; ditches, \$93,535; draining in Pristan, \$97,850; total, \$807,746.

---

##### Diminishing Whitefish Catch in Great Lakes.

A report from Consul Felix S. S. Johnson, of Kingston, Canada, shows a large decrease in the whitefish catch in the Great Lakes during recent years; official returns for 1910 placing the total at 3,345,468 pounds, in contrast to 3,797,834 pounds in 1909, notwithstanding the efforts of the Sarnia hatchery. The increase of trout in lake waters is said by the consul to have had much to do with the disappearance of the whitefish, the trout catch during 1910 amounting to 5,806,850 pounds, an advance of 1,560,000 pounds in 10 years. The new hatchery established at Wiarton is propagating salmon trout. Consul Johnson's complete report has been forwarded to the Bureau of Fisheries.

**DEMAND FOR FOREIGN COAL.**

[From Consul Alfred A. Winslow, Valparaiso, Chile.]

**Chilean Trade Increasing.**

The demand for foreign coal continues good, notwithstanding the increased output of the Chilean mines, which amounted to more than 1,000,000 tons for 1911. The imports of coal for 1911 amounted to 1,274,118 tons, against 1,293,140 tons for 1910. Of this England furnished 705,762 tons, and Australia 526,643 tons, against 861,887 and 426,867, respectively, for 1910. No American coal was imported during 1911 and only 7,260 tons during 1910. Only 51,861 tons of American coal have been sold in Chile during the past six years.

Of late there has been more inquiry for American coal than for many years, owing largely to the strike in England, and it seems that here is a chance to get a foothold if American interests act promptly. [A list of houses in position to handle American coal to advantage may be obtained from the Bureau of Manufactures.]

[From Consul Joseph I. Brittain, Prague, Austria.]

**Bohemia's Coal Supply.**

There is very little coal imported into the Prague consular district, as there are extensive deposits of bituminous coal in the vicinity of Kladno, where are also located steel works and furnaces.

In northern Bohemia, in the vicinity of Teplitz and Brux, are immense deposits of brown coal or lignite. There are also good coal deposits in Moravia. Germany exports coal to the factories in northeastern Bohemia, as the freight to this territory is less than from the Bohemian coal fields.

Coke is also imported from Germany, as it contains less sulphur than the Bohemian product. Coke is used in American base-burner stoves, which have a good sale here. Hard coal is also used in these stoves, but in limited quantities, as it costs \$15.83 a ton. There are possibly 400 to 450 tons of hard coal sold here annually. Large quantities of brown coal are exported from Bohemia to Germany. In 1909 the exports were 1,620,000 tons, and in 1910, 1,535,000 tons. In 1911 the exports by way of the Elbe were much less on account of the very low water during the summer months.

The freight in Bohemia is high. From Bodenbach, the frontier between Germany and Bohemia, to Prague, less than 80 miles, the freight on 10 tons of coal is \$13.16, while from the seacoast at Stettin, Germany, to Bodenbach, 226 miles, the freight is but \$22.25 for 10 tons. [A list of coal dealers and importers in Prague may be obtained from the Bureau of Manufactures.]

---

**BRAZILIAN TRADE NOTES.**

[From the Review, Rio de Janeiro.]

**Rubber enterprise.**—The Guapore Rubber Co., capital \$7,500,000, is authorized by decree No. 9385 to operate in this Republic. Its domicile is Portland, Me., U. S. A.

**Brewery.**—The Companhia Fabrica de Cerveja Mogy Mirim, capital \$200,000 gold, is authorized by decree No. 9399 to do business in the Republic. Its domicile is in the city of Mogy Mirim, State of Sao Paulo, and its object is brewing.

**Whaling station.**—The Urd Whaling Co., capital \$140,000, has been formed at Sandefjord, Norway, and will establish a station near Bahia, Brazil, with a floating factory, and two whale steamers. Operations are expected to commence in May, 1912.

## TEA TRADE OF ASIA.

[From Consul General George E. Anderson, Hongkong.]

While the production of tea in the districts from which Hongkong draws its supplies seems to have been greater in 1911 than in 1910, the total exports of tea by way of Hongkong during 1911 were only about 74 per cent of those in the year previous. The statistics of the Hongkong General Chamber of Commerce show the exports to have been as follows, in chests:

	1910	1911
To continental Europe.....	16,880	4,385
To Great Britain.....	37,948	48,387
To the United States and Canada.....	35,985	12,682
Total.....	90,813	65,454

The increased shipments to Europe were in line with the augmented demand in that part of the world. The decrease in the volume of the shipments to the United States and Canada was due partly to American restrictions against artificial coloring, but particularly affected Canada, for the value of shipments to the United States rose considerably. However, the decreasing nature of the movement to the United States is indicated by the fact that figures covering the exports of tea from Foochow show that shipments to Europe from that port increased from 11,143,811 pounds in 1910 to 14,329,339 pounds in 1911, while shipments to the United States and Canada declined from 4,589,033 pounds to 3,260,018 pounds, total shipments to all parts of the world from Foochow amounting to 20,688,915 pounds in 1911 compared with 19,159,580 pounds in the year 1910.

The decrease in shipments by way of Hongkong in view of the increased shipments from producing centers is significant. The larger shipments to Europe go direct from the ports concerned, though the increase has not been great enough to materially modify shipping arrangements. The value of tea shipped from Hongkong to the United States, including Hawaii, during the past year was \$123,423, as compared with \$117,589 in 1910.

[From Consul General Thomas Sammons, Yokohama, Japan.]

**Japanese Production of Tea by Prefectures.**

The cultivation of the tea plant, which is a shrub with an average life of 15 years, is general throughout Japan, the acreage devoted to it aggregating 123,062 in 1909. The Prefectures of Shidzuoka, Saitama, and Miye are the principal suppliers to the export trade, while Kyoto, Nara, and Gifu largely supply the home market. Kumamoto, Fukuoka, and Kochi Prefectures produce black teas.

At the time of picking, the leaves are fired once and then sent to the factories, which are usually located near the export markets. Here the tea is refired and cured and prepared for shipment and consumption. The export centers of Japan are not numerous, there being only six of importance—Yokohama, Kobe, Moji, Shimidzu (the port of Shidzuoka), Yokkaichi (for Miye exports), and Nagasaki.

Tea is grown in every Prefecture of the main archipelago except the most northern one, Aomori. The following table gives the list in the

order of greatest production, followed by the value as reported by the Central Tea Guild at Tokyo, for the year 1911:

Prefecture.	Pounds.	Value.	Prefecture.	Pounds.	Value.
Shizuoka.....	20,711,040	\$2,307,477	Shimane.....	828,572	\$41,821
Miye.....	4,813,275	473,623	Nagasaki.....	604,230	\$7,599
Kyoto-Fu.....	3,609,560	446,538	Tokushima.....	683,433	38,621
Kumamoto.....	2,985,325	218,630	Okayama.....	682,961	31,986
Nara.....	2,579,080	212,198	Saga.....	629,314	57,179
Gifu.....	2,305,515	155,366	Chiba.....	597,832	73,688
Kagoshima.....	2,292,745	229,723	Alchi.....	542,181	\$6,401
Fukuoka.....	1,975,700	131,242	Osaka-Fu.....	527,913	23,300
Ibaraki.....	1,911,756	242,089	Tokyo-Fu.....	491,020	60,206
Shiga.....	1,828,176	229,106	Toiyama.....	374,900	54,354
Yamaguchi.....	1,603,385	46,621	Tottori.....	370,500	5,843
Kochi.....	1,508,309	95,908	Tochigi.....	153,035	27,573
Saitama.....	1,432,115	207,962	Kanagawa.....	118,210	18,305
Hyogo.....	1,411,697	75,318	Fukushima.....	100,445	14,782
Miyazaki.....	1,371,110	119,954	Miyagi.....	79,935	10,038
Wakayama.....	1,127,223	40,772	Yamagata.....	59,445	5,466
Niigata.....	1,103,309	127,873	Gumma.....	55,985	7,967
Ishikawa.....	1,062,359	102,587	Yamanashi.....	49,420	5,457
Hiroshima.....	1,054,067	27,761	Nagano.....	41,975	\$9,223
Yehime.....	898,624	48,999	Kagawa.....	36,950	1,256
Oita.....	862,984	102,915	Iwate.....	6,450	2,629
Fukui.....	848,849	47,039	Akita.....	4,555	627

#### Shipments by Countries and Varieties.

The United States is, of course, the largest customer in this market. The port of Shimidzu (Shidzuoka) is the central shipping point for teas to the United States, followed by Yokohama and Kobe. Before the Japanese began the manufacture of finished teas, however, the business was almost wholly carried on in the foreign settlements of Yokohama and Kobe.

As to the different varieties of tea shipped and the various countries of destination, detailed customs returns for 1911 have not yet been published, but the following summaries in the advance sheets may be of interest:

Countries.	Pounds.	Value.	Kinds.	Pounds.	Value.
United States.....	39,218,720	\$6,628,608	Green:		
Canada.....	2,829,837	429,346	Pan fired.....	27,112,833	\$5,012,081
China.....	296,713	12,317	Basket fired.....	9,275,292	1,826,158
Hawaii.....	137,498	23,935	Stubs or nibs.....	200,179	23,014
Kwangtung Province.....	200,359	25,257	Coarse (Bancha).....	133,345	8,914
Russia, Asiatic.....	28,616	1,502	Black.....	645,607	70,186
Straits Settlements.....	107,641	14,516	Brick.....	24,301	686
Other countries.....	97,418	15,320	Dust.....	5,525,145	100,303
Total.....	42,916,792	7,166,871	Total.....	42,916,792	7,166,871

#### CHEAP ORANGES IN CHINA.

[From Consul General Roger S. Greene, Hankow.]

The oranges eaten by the Chinese here are practically all grown in China, and most of them in places near enough to market to make possible transporting them without special precautions. Prices of oranges vary greatly according to the kind, quality, and season of the year. At present (mid-February) Szechwan loose-skin oranges (mandarins) sell at the equivalent of about 44 cents gold per basket containing about 175 oranges, while the tight-skinned variety from Canton sells for the equivalent of 67 cents gold per basket of 100 oranges.

**MANCHURIAN TRADE NOTES.**

[From Consul Lester Maynard, Harbin, China, Mar. 2.]

*Australian wheat.*—The Harbin branch of Samuel & Co. has sold to the Russian Flour Milling Co. a cargo of 6,000 tons of Australian wheat for April delivery at Vladivostok.

*The new bean-oil mill* of Kiosensha & Co. (Japanese), at Old Harbin, has been completed, inspected, and passed by the technical and sanitary committee of the Chinese Eastern Railway, and will soon be in operation.

*Russian bank.*—The Russian authorities contemplate opening a branch of the Russian Treasury at Harbin. The manager of the Vladivostok branch of the Imperial Bank visited Harbin in order to study conditions, and concludes that a branch of the Imperial Bank at this place would be desirable. The Harbin Chamber of Commerce has petitioned that it be opened.

*New freight line.*—The direct freight service over the Chinese Eastern and South Manchuria Railways will go into effect April 14, and arrangements are being completed for the delivery of freight and documents between Changchun and Kwanchengtzu stations. Thomas Cook & Son, of London, will be authorized to issue tickets between Kwanchengtzu and Harbin, which will be honored by the Chinese Eastern Railway.

*Cattle-plague prevention.*—The Russian Ministry of Interior has decided to send an expedition through Mongolia and Manchuria for inoculating cattle, to prevent cattle plague. The five detachments of the expedition will have headquarters at Urga, Kerulan, Uldja, Hailar, and Tsitsihar. At each of the last two points will be stationed a veterinary surgeon, with three assistants and an interpreter, and at the other stations one veterinary surgeon, two assistants, and an interpreter. In this way the entire district covered by Russian cattle buyers in Manchuria and Mongolia will be included. The veterinary surgeons will travel to various parts of their districts at the request and expense of cattle dealers. Provided the stock of serum is sufficient, the work of the expedition will not be confined to cattle owned by Russians, but they will be allowed to inoculate Chinese and Mongolian cattle also. With these precautions it is hoped to prevent cattle plague during the coming season.

*The soya-bean market* of Harbin is inactive now and has been for three weeks. This may be partially accounted for by the Chinese new year, but the main cause was the heavy purchases prior to the holidays by Mitsui & Co. These purchases totaled about two-thirds of the available stocks, and forced the price so high that it was impossible to ship. The heavy purchases were apparently made in an effort to corner the market, and considerable uneasiness was felt after their purchases ceased, as it was not known whether they would persist or not in their effort to corner the market. The price has gradually dropped to 64 kopecks (33 cents) per pood (36.112 pounds), but no sales are being recorded. According to London market prices, however, beans can not be purchased in Vladivostok at 91 kopecks (47 cents) per pood, but at present Mitsui & Co. will not sell under 94 kopecks (48½ cents) per pood. It is reported that in addition to the beans shipped through Vladivostok for exportation, Mitsui & Co. have a stock of 1,000 carloads at Vladivostok.

(From Consul Albert W. Pentius, Dalny, Japanese leased territory.)

*Two bean-oil tank cars* constructed at the railway workshops, Dalny, were subjected to a trial run with satisfactory results. Each car has 27 tons capacity and is partitioned into four chambers for transporting oil in small consignments.

*Railway traffic.*—In January the South Manchuria Railway had record traffic returns totaling \$1,330,448 and averaging \$42,918 per day. This was an increase of \$232,039 over January, 1911, and an increase of \$7,485 in the daily average. The aggregate tonnage of goods transported from last October to January reached 1,746,273 tons. The arrivals of beans and bean cake at Dalny in January were 157,640 tons, while the arrivals at Newchwang were only 16,695 tons.

### CHILEAN TRADE AND INDUSTRIAL NOTES.

(From Consul Alfred A. Winslow, Valparaiso.)

*The new wireless station* at Puerto Montt is to be strong enough to communicate with Punta Arenas, 700 miles distant.

*Lumber movements.*—During 1911, 29,410 cars of lumber were transported by the Government railways of Chile, against 13,937 for 1907.

*Nine blooded horses* arrived in Chile from England, February 1, and it is said more are to follow. Much is being done to improve live stock in this country.

*Japan's consumption of nitrate* increased from 5,892 tons in 1907 to 28,800 tons in 1911, and it is expected that 40,000 tons will be required for 1912.

*Railway opening.*—June 12, 1912, has been set for opening the Longitudinal Railway to Puerto Montt, in the southern part of the inhabitable portion of Chile.

*Cooking schools.*—The Chilean Government has decided to expend \$12,775 United States gold, during 1912, for a cooking department in some of the professional schools.

*Railway progress.*—It is expected that the Longitudinal Railway will be completed by June, 1912, so that one may travel by rail from Santiago to Serena, about 300 miles north.

*Bolivian tin exports.*—According to reports given out by the Bolivian customs authorities, that country exported 23,499 tons of tin during 1911, a gain of 2,000 tons over 1910.

*Copper exports.*—During 1911 Chile exported 15,035 tons of fine copper, against 17,897 tons for 1910, but during January of 1912 the exports of copper exceeded those of the same month in 1911 by 1,000 tons.

*The Chilean tobacco crop* promises well for 1912, and will be amply sufficient to supply the demand, save for some special brands and grades. The imports of tobacco, cigars, and cigarettes for 1910 amounted to 1,685,840 pounds.

Consul Edwin S. Cunningham, of Bombay, India, reports that *cassava* is in great demand as a foodstuff in that country and that the present price is \$1.45 to \$1.78 per hundredweight (112 pounds). The only form in which cassava is sold in that country is in flakes.

**EFFECT IN INDIA OF ENGLISH COAL STRIKE.**

[From Consul General William H. Michael, Calcutta, Mar. 7.]

The effects of the coal crisis in the British Isles are being felt in India. Steamers at Calcutta are unwilling to take cargo for England, to keep clear of the trade disturbances there, and a congestion of export cargo at this port may result. Steamers leaving Calcutta are also taking 30 per cent more bunker coal than customarily. No loaded ships have been unable to depart from this port owing to lack of coal, but they are not able to fill their bunkers as quickly as formerly.

There has been a strong demand for coal from other ports of India and Ceylon, which the Bengal collieries have been unable to supply, as the local demand for coal has increased during the past four or five months, owing to the flourishing condition of manufacturing. In Bombay the cotton mills have recently been very busy, owing to the brisk tone of the Chinese yarn market. The only remedy for the coal shortage at the other ports is said to be the placing of more cars on the railways. There are large stocks on hand at the mines.

At Bombay there is a coal famine, and shipping rates are much inflated. Some inquiries were received there for Bengal coal for use in the British Isles, but the Indian supply is insufficient for the home demands. Shipping rates from Bombay and Calcutta to the British Isles have risen from \$3.60, the normal rate, to \$5.28, and along the Madras coast to \$7.92. There is a demand at all ports for steamers, after the depression of the previous four years, and the tonnage all over the world is well distributed. The number of vessels at Karachi is unprecedented for this time of the year.

---

**GOLD IN WYOMING COAL.**

An interesting feature about the coal mined at Cambria, Wyo., is that it is claimed to be gold-bearing. Some of the coal has contained as much as \$2 per ton in gold, and the coal was sold for only \$1.50 per ton. When coke made at Cambria was selling for \$3.50 per ton samples were taken from 31 cars during a period of three weeks and assayed. The samples showed an average of \$2.46 per ton in gold and \$0.28 in silver. The explanation offered for the presence of gold in this coal is that the sands which submerged the old peat bog and now form the roof of the coal bed were derived in part from gold-bearing alluvium. While the sand was being deposited the gold worked down into the underlying bog and is now found in the coal.

This is one of the interesting statements made in a report to be published in a few days by the Geological Survey. It is Bulletin 499, entitled "Coal near the Black Hills, Wyoming-South Dakota," by R. W. Stone, and may be had free on request to the United States Geological Survey, Washington, D. C.

---

**American Farmers in Alberta.**

An official of the line says that "in Alberta lands alone, the sales of the Canadian Pacific Railway in the last two years have amounted to more than \$10,000,000 each year, 85 per cent of the land sold having been taken by farmers who came from the United States."

**SUPPRESSION OF COMPANY STORES IN FRANCE.**

(From Consul Carl Bailey Hurst, Lyon.)

On March 24, 1912, the following law, affecting certain classes of employees and employers, whether native or foreign, individual owners, companies, or railways under State control, went into effect:

Every employer in France is prohibited: (1) From having in connection with his establishment a store, business, or arrangement enabling him to sell directly or indirectly, to his operatives and employees or to their families, provisions and merchandise of any kind whatever; (2) from obliging his operatives and employees to spend their wages in whole or in part in stores indicated by him.

This interdiction does not apply to a formal contract between operative and employer if the contract stipulates that the operative will be lodged and boarded and will receive, in addition, fixed wages in money, or if the employer in meeting the terms of the contract allows the operative materials for his work at cost price.

A system of purchase and sale existing between employees and railroads under control of the State will not be affected by the present law, subject, however, to a threefold condition: (1) The personnel shall not be compelled to buy of the railroad; (2) the sale of provisions and merchandise shall bring no profit to the employer; (3) the stores where such goods are disposed of shall be managed by a commission, at least one-third of whom are delegates elected by the workmen and employees of the line.

Furthermore, the Minister of Public Works shall, five years after the promulgation of the law, consult, in a manner to be determined by a ministerial decree, the personnel of each railroad as to the suppression or the maintenance of sale annexes.

The same rules will apply to manufacturing establishments conducted by companies in which the greater part of the capital is held by the workmen and employees thereof, whether pensioned or not, and the general assemblies of which are composed by statute of more than one-half of such members.

The official work inspectors are directed to supervise the execution of the present law.

Every infraction of the articles just cited will be punishable by a fine of 50 to 2,000 francs (\$9.65 to \$386), which will be increased to 5,000 francs (\$965) in case of a second offense. Certain provisions of the French penal code are likewise applicable in determining sentence.

**TOBACCO PRICES IN ENGLAND.**

(From the London Financial Times.)

The ruling prices for tobacco leaf practically constitute a record for dearthness, and, notwithstanding the temptation which they would seem to hold out to growers to increase their acreage, there is very little prospect of expansion of production. This is attributable to the increased cost of production, and particularly of labor. In the United States the increase in this respect has been very substantial. For several years past cotton has been offering superior inducements to the grower, with the result that considerable areas previously devoted to tobacco are now planted with cotton.

Last year's severe drought, which was practically world wide, had an inimical effect on the supply as well as the quality, while the consumption continues to increase in practically every quarter of the globe. Even in England there are signs of a recovery from the effects of the increase in the duty of 8d. (16 cents) per pound in 1909. In 1911 the consumption of unmanufactured tobacco was 101,110,000, as compared with 96,184,000 pounds in 1910 and 94,557,000 pounds in 1909. The current year has not made such a promising start, as the consumption of unmanufactured tobacco in January was 7,933,000 pound, a decrease of 480,000 pounds from the same period in 1911.

The annual report of the Imperial Tobacco Co., recently issued, would appear to afford conclusive evidence of a strong recovery in the consumption, but possibly the success of that great combine has been attained at least partly at the expense of its smaller competitors. At any rate, during the past two years no fewer than 43 tobacco manufacturers have disappeared from the trade, and in well-informed quarters it is believed that this process of elimination is not yet at an end.

*Lava blocks* from Vesuvius were used for paving the streets of Naples, and Vice Consul J. S. Armstrong, jr., says their present condition is fairly good.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8551. Gasoline or kerosene engines.**—Consul General Louis H. Ayme, of Lisbon, Portugal, reports that a number of bids were received from the United States for the pumping and electric installations in connection with the projected dock improvements at that port, and the contractors were much impressed with the bids. The contractors now ask for proposals on gasoline or kerosene engines each of 150 horsepower to be coupled direct to electric generators to develop 150 to 200 kilowatts of electricity at 120 volts direct current. Fullset particulars, blue prints, etc., should be furnished; net and gross and dimensions of each part boxed for delivery in metric system; prices f. o. b. New York or c. i. f. Lisbon direct steamer; length of time from order to delivery; and expense of help, if necessary, to install. Correspondence in English or Spanish.
- No. 8552. Rubber articles and spindle oil.**—A business man in Germany requested an American consul to place him in touch with manufacturers of technical rubber articles and spindle oil in the United States with a view to represent them in that market. Catalogues and price lists should be in the German language.
- No. 8553. Radiators.**—The proprietor of a plumbing concern in France informed an American consul that some sample American radiators left at his place of business a year ago, which were later installed, proved very serviceable, and desires to get the address of firms in the United States which manufacture pressed steel radiators for steam or hot water heating.
- No. 8554. Watches.**—An American consular officer in Sweden reports that a firm in his district desires to import a cheap grade of American watches. Correspondence may be in English.
- No. 8555. Desks and oil stoves.**—The name of a firm which desires catalogues and quotations c. i. f. a certain port on cheap roll-topped desks and oil stoves was forwarded to the Bureau of Manufactures by an American consul in Turkey.
- No. 8556. Coal.**—A firm in Sweden requested an American consular officer to place it in communication with coal exporters in the United States, as the firm believes that there is a good opportunity to place American coal on that market. Quotations c. i. f. Swedish ports are desired for large and small screened, as well as unscreened steam and gas coal. Also, if possible, an analysis and description of the coal and screening and its comparison with British coal.
- No. 8557. Hardware and sporting goods.**—An American consul in Canada has forwarded to the Bureau of Manufactures the name of a person who has had extensive experience in the hardware business and who desires to represent American exporters of hardware and foundry and sporting goods.
- No. 8558. Leather and rubber belting.**—An American consular officer in Canada reports that a firm in his district wishes to secure the agency of a good line of American rubber and leather belting for the Province.
- No. 8559. Outdoor amusement devices.**—American manufacturers of amusement devices such as merry-go-rounds, camera obscura, mystic mazes, and illusionary articles for side shows are requested to send their catalogues and price lists to an American consul in Africa whose name is on file in the Bureau of Manufactures.
- No. 8560. Kerosene oil.**—An American consul in India has forwarded the name of native who has had 12 years' experience in the oil business and who wishes the addresses of American firms in a position to supply kerosene oil in bulk and in tins.

Consul William C. Magelssen, of Melbourne, Australia, has forwarded a 2,935-page directory of the State of Victoria for 1912, including the city of Melbourne and its suburbs, which is on file at the Bureau of Manufactures.

## PROGRESS OF THURINGIAN INDUSTRIES.

[By Consul General Frank Dillingham, Coburg.]

The high expectations of the exporters of this German industrial district were, as a whole, realized during 1911, the total exports to the United States and possessions having shown an increase of \$443,273 over those of 1910 in spite of a decrease in the exports of balata belting, steel balls, and ball bearings. The competition offered by American makers of certain classes of toys, dolls, and masks also tended to cut down the increase in the export of such articles to the United States.

There was a large decrease in the exports of electrotechnical articles because of American home production, which, aided by reduced prices of raw materials, is rapidly assuming greater commercial importance. A slight increase was made in the exports of all products of the porcelain industry, except in hand paintings, which dwindled to almost nothing. There was a good and steadily growing demand for porcelain stoppers for bottles, and new orders now on hand indicate a satisfactory business during 1912.

### Growing Doll and Toy Trade.

The exports of dolls and toys from this consular district alone are almost 50 per cent of the total export of these articles from the entire German Empire and were valued at \$2,582,752 in 1909, \$2,709,884 in 1910, and at \$3,411,296 in 1911. The 1911 statistics for all Germany are not yet available, but they will probably show a large increase and should approach the record mark of \$7,516,516 set in 1907. The total German export of these goods in 1909 was \$5,936,196, and in 1910, \$6,741,826.

Stuffed toys proved to be special favorites last year, and the sale of "Teddy bears" even increased. At the beginning of the year a new apparatus for imitating the voices of animals, called "Rueckenstimme," was put on the market and met with great favor. This is placed in the backs of fur and plush animals and works when the animal is stroked. The makers of ships found a good market, and show-window figures, run by clockwork, intended for advertising pur-

poses, met with good sales. Business in Easter articles showed little change from 1910, and most orders were filled promptly. The sales of Easter toys increase every year, newer and richer novelties constantly make their appearance, and new materials are continually being used in their manufacture. The article most fancied in this line was a hare that could lay eggs. Satisfactory orders for Halloween articles, which are exported only to the United States, were received during 1911. Instead of making all the articles of papier-mâché, as heretofore, a number were made of cardboard stamped into the desired shapes, these being more durable and cheaper to produce.

The better class of Christmas and Easter articles, made of fine material and of first-class workmanship, are being more and more sought after, while the sale of the cheaper articles, which formerly predominated, is gradually decreasing. On the other hand, it has been noticed that in the doll industry the demand for wares of the better class is decreasing. Sales in this branch in 1911 remained about the same as in 1910, although there was a good demand for stuffed dolls. Serious competition is being met in the United States, where large quantities of dolls are now being manufactured and sold at very low prices. Dolls' clothes are also being made in increasing quantities in America. The "character doll" has not met with as large sales in America and England as was expected, and the German market is, therefore, the principal purchaser.

#### **Higher Cost of Living and of Raw Materials.**

Although the prices of the principal materials that are used in manufacturing toys fluctuated repeatedly, that fact did not have any special influence on the selling prices. The only marked increase was in the prices for papier-mâché goods, in consequence of which many articles made of this material were not obtainable. The increased cost of living during the year led to higher wages and prices in the factory and "house industry," and the combined manufacturers and employees engaged in the manufacture of glass eyes for dolls have been compelled, in consequence of the enormous increase in the prices of raw materials as well as of the necessities of life, to increase the prices of their productions for the time being. This increase varies from 25 to 100 per cent. During the last half of 1911 the price of ether, which is used in the doll industry, advanced 33½ per cent, while prices of cardboard, colors, and leather also increased. Rubber and silk were somewhat cheaper, while contracts for cotton goods were, in some cases, made at prices 10 per cent lower than in 1910.

#### **Porcelain Industry—Dolls' Heads—Table China.**

In discussing the reports made at a recent meeting of the Association of Ceramic Factories in Germany, the chairman called special attention to the fact that, in spite of overproduction in this branch, the extension of existing factories and the building of new factories were being carried on, and that capital could not be warned sufficiently against these undertakings, because it could be assumed as a certainty that these could not possibly make the expected profits.

The demand for dolls' heads was brisk throughout the year. Male employees in this branch were always obtainable, but female employees were difficult to find. It was partly due to the efforts of the Association of German Porcelain Factories that manufacturers were able to maintain the prices of their goods. No important changes

were noted in prices of raw materials, but the prices of the middle and poorer grades of Bohemian brown coal decreased \$1.19 per wagonload in order to meet the competition of German brown coal briquets, which are being used by the industry to a greater extent every year.

Business in the table-china branch was satisfactory, and the total exports from the German Empire should exceed those of 1910 by \$750,000. The exports in porcelain and stoneware from this consular district alone to the United States and possessions in 1911 carried a value of \$818,511, as compared with \$735,722 in 1910. Prices of materials used for packing purposes, such as wooden cases, straw, hay, and excelsior, have increased 10 per cent within the last few years.

#### Glass Instruments—Christmas-Tree Ornaments—Other Glass.

The Thuringian house industry does a large foreign business in glass instruments, especially with Austria, where it is able to successfully compete with the Austrian factories. This is partly due to the fact that Austrian manufacturers are compelled to import all their material for the production of glass instruments, and partly to the low rate of duty charged on this variety of goods from Germany. The exports to the United States from this district during 1911 remained about the same as in 1910.

The sale of glass Christmas-tree ornaments is increasing from year to year, but the prices remained stationary until recently. The greater part of the 1,600 or more men engaged in the manufacture of glass ornaments in the Thuringian Mountains have, however, joined the Central Association of Glass Workers of Germany, with headquarters in Berlin, and have raised their prices from 20 to 30 per cent. Several of the largest wholesale houses in this district have refused to pay this large increase, and business is, therefore, practically at a standstill.

There was a large demand in 1911 for glass tubes, because of the increased production of Christmas-tree ornaments, for which they are chiefly used. The use of tubes for pharmaceutical, chemical, and technical purposes is also increasing. In consequence of a threatened strike last summer among the workers in the glass factories, when there was a scarcity of tubes on hand, the factory owners increased their wages.

The syndicate of glass-marble manufacturers has increased its prices about 10 per cent since December 1, 1911. The exports of glass and wax beads and artificial pearls from this district increased from \$20,300 in 1910 to \$74,100 in 1911. This tremendous increase was probably due to the use of beads in late styles of robes, etc.

#### Glass Eyes—Belting Factory in America.

Although large quantities of glass eyes go to the United States, they are sold at such low prices that the value covered by an invoice rarely amounts to \$100, and the shipments do not appear in the consulate's export returns. The annual production of these glass eyes in the town of Lauscha, 25 miles from Coburg, is estimated at 150,000, having a value of \$17,000 to \$19,000. Business in this line was bad in 1911, due to unsettled conditions and to the increase in the cost of necessities of life. Manufacturers were compelled to reduce their production in part and give their attention to the manufacture of other glass articles. It is reported that a few of these manufacturers

have gone into job manufacturing, each manufacturer making a certain portion of each eye and then passing it on to others who finish other parts, the last one putting on the finishing touches. In this way the quantity of eyes produced is greatly increased, although the quality deteriorates. In order to make the eye thoroughly satisfactory from a surgical and anatomical standpoint, it should be made throughout by one and the same trained worker, because in this way only can eyes for human beings be produced to equal the natural eye in color and form.

Exports of balata belting from this district to the United States ceased altogether after the first quarter of 1911, because the only firm in this consular district that manufactures this article erected a branch factory in the United States last year, and all American orders are now filled there.

#### Beer Export Decreased—Basket Ware—Steel Balls.

A slight decrease in the exports of beer is noted for 1911, although the brewing of beer in Thuringia increased from 61,027,385 gallons in 1910 to 61,429,405 gallons in 1911. With a population of 1,580,356, this amounts to 38.9 gallons per person, compared with 38.6 gallons the previous year. In the Province of Saxony it amounts to 17.7 gallons per person, against 16 gallons in 1910; in the Kingdom of Prussia to 18.3 gallons, against 18.5 gallons in 1910; and in the Kingdom of Saxony to 21.9 gallons, against 21.6 gallons in 1910. According to these statistics Thuringia stands at the head.

Exports of basket ware increased somewhat in 1911, the greater part of the articles being hampers, wash baskets, market, fruit, and candy baskets. A number of expensive baby baskets were also sold.

The exports of steel balls and ball bearings showed a decrease of about 45 per cent in 1911, probably due to the fact that American importing firms still had a large stock on hand from the previous year, when record shipments were made from this district. The demand for these articles seems to be increasing again this year, and a better business is confidently expected.

#### Declared Exports to the United States.

The exports to the United States from this district during 1910 and 1911, as indicated by the invoices certified at this consulate, were as follows:

Articles.	1910	1911	Articles.	1910	1911
<b>COBURG.</b>			<b>COBURG—continued.</b>		
Balata belting.....	\$115,747	\$11,287	Woodenware.....	\$39,821	\$36,248
Baskets.....	292,443	305,810	All other articles.....	172,349	229,220
Beer and brandies.....	99,896	89,306			
Dolls and toys.....	408,136	378,219	<b>Total.....</b>	<b>2,676,062</b>	<b>2,318,922</b>
Glass beads (artificial pearls).....	19,357	68,560	<b>SONMERSBERG.</b>		
Glassware.....	148,560	143,183	Dolls and toys.....	2,301,638	2,033,421
Guns.....	28,677	26,556	Masks.....	13,968	10,073
Hope.....	243,754	189,515	Porcelain and stoneware.....	229,808	266,566
Porcelain and stoneware.....	602,542	531,639	All other articles.....	19,270	40,933
Rags.....	23,150	33,455			
Steel balls and ball bearings.....	572,627	347,004	<b>Total.....</b>	<b>2,564,674</b>	<b>2,350,993</b>

The exports from Coburg to the Philippines during 1911 consisted of \$365 worth of porcelain and stoneware, as against shipments of metal ware, porcelain and stoneware, and post cards of a total value

of \$3,787 in 1910. Paper ware to the value of \$235 was sent to Hawaii from Coburg in 1911. The only exports to Hawaii in 1910 were dolls and toys, valued at \$110.

#### **Rising Prices of Foodstuffs.**

Although the demand for foodstuffs was good, the wholesale and retail dealers had to contend with a sudden rise in price of nearly every article. Raw Santos coffee rose from 10½ cents per pound, f. o. b., Hamburg, duty extra, in January, 1911, to 14½ to 15 cents in February, 1912. This article is said to be in the hands of speculators, so that no reduction can be expected for the time being. These exceptionally high prices force the public to drink more substitutes, such as malt and barley coffee. Higher prices are also paid for rice and spices. The unusual heat of the summer of 1911 greatly affected the beet crop, so that beet-sugar prices have advanced 50 to 60 per cent since last June. The pea, bean, and potato crops were also nearly ruined, and prices are about 50 per cent higher than they were a year ago, while all potato manufactures, starch, sago, potato flour, etc., cost 50 to 60 per cent more than at the beginning of 1911.

#### **Railroad Projects.**

Coburg is to have a new railway passenger station, which, including new tracks, freight yards, etc., will cost almost \$1,000,000. Work has already commenced on the freight yards, and as soon as it is advanced enough the present passenger depot will be razed. It is thought that the undertaking will be completed by or before 1915. The branch railway line from Coburg to Lauscha, a distance of 25 miles, is being extended over the highest part of the Thuringian Mountains to Bock Wallendorf, where it will meet a short branch line running to Probstzella, situated on the main line from Munich to Berlin. Stations will be erected at Lichte, Ernstthal, and Neuhaus am Rennweg. A tunnel is now being bored through the mountain "Lauschenstein," behind Lauscha, and will come out a little below Ernstthal. This line will run through the heart of the mountain "house industry" district and will be a great stimulator of trade, as it will supply an outlet for articles made by the house industry in all the small villages in the sparsely populated mountain districts. These goods have heretofore been carried for miles and miles on the backs of men, women, and children, who have walked every Saturday afternoon to Lauscha or Neuhaus to deliver their week's work to the different purchasing firms in those towns. This house industry has grown from year to year in spite of the lack of railroad communication, and it is safe to predict that it will increase very much after the new railroad is completed. Most of the products of the house industry are exported to America, and consist mainly of dolls and toys.

#### **General Condition of the Working People.**

The average German wage earner endeavors to have a small plot of land, either in the front or rear of his cottage, on which he can raise potatoes. The country houses or cottages of the working people in this part of the Empire, especially in Thuringia, are usually built of red brick, each house containing two or three small rooms besides the kitchen, which, being the general living room, is made much the largest room in the house. In the basement, or in a room at the end

of each house, one sees a cow or horse, or both, and frequently a pig or two and fowls. These conditions also apply to every farmhouse.

The method of workmen's insurance, which went into effect some years ago, by which a workman can insure himself, or an employer his employee, deducting the premiums from his daily wages, has worked well and has given satisfaction.

#### **Industrial Education.**

There are a number of industrial schools in this consular district where young people can learn such drawing, modeling, painting, and wood carving as will be of use to them in the toy and china industries. In the toy industry there are no apprentices, young people, as soon as they leave school, being engaged in the different branches at fixed wages. The desire is sometimes expressed that employees be first compelled to serve an apprenticeship of several years, and one employer reports that it is extremely difficult to obtain apprentices, as political organizations agitate against such service. Even if experienced men from other industrial branches should enter the toy industry, their knowledge would be of little use to them, and they would have to commence in a toy factory and learn the trade from the bottom. In mask making there are no apprentices, nor is it considered that there is need of trained employees.

In the manufacture of dolls' heads experienced workmen are not needed, as the work to be done can be learned in a short time. The same applies to the manufacture of technical and electrotechnical articles. There is a need for experienced workers in the manufacture of tableware, vases, and figures. The young employee entering this branch is so trained that at the end of his four years' apprenticeship he can easily find a job as a trained workman. It is not possible for workmen experienced in other branches to obtain a position in such a factory without first learning the new trade in the factory itself.

Boys leaving school at the age of 14 are employed in the glassworks as carriers, executing only the simplest tasks, for which they receive about 24 cents a day. After about six months they are allowed to work as glass-tube pullers and marble-makers, and at the age of 15 or 16 often earn \$3.50 to \$4.75 a week. The same conditions hold in the glass-blowing department. Some regard this method of training as insufficient, as it aims essentially only at obtaining sufficient wages for the apprentice as soon as possible.

#### **Opportunities for American Goods.**

First-class goods and perfect packing are essential to the extension here of American trade. European competitors, with trained representatives speaking several languages and granting long credits, have a strong advantage over American firms, whose travelers often speak indifferent German or no German at all and who insist upon immediate payment. In spite of these handicaps a distinct increase in the imports of American goods into this district has been noted in the past two years, most of which are made through large importing firms in Berlin, Bremen, and Hamburg.

Large shipments of American apples are supplying the local market; at 16 to 18 cents a pound. These prices impress the average Coburg purchaser as extortionate, but the demand is good and will continue so until the next local crop is marketed; as without them the market

would now be practically bare of apples. Canned vegetables have been used largely the past winter, there being a very limited supply of fresh ones in consequence of the crop failure in 1911. Meats of all kinds have also been scarce; and if the obstacles now existing against those from the United States could be removed, beef and mutton especially would find a large market throughout the Empire. A number of chambers of commerce are now advocating the admission of American meats, the Coburg Chamber of Commerce having initiated the movement. As few direct importations into this district are made from the United States, it is impossible to give even an approximate idea of the value of American goods consumed here, but this is increasing, and there is every reason to believe that it can be increased by a careful and systematic canvass.

### GUANACOS OF THE ANDES.

[From Consul Alfred A. Winslow, Valparaiso, Chile; see also Daily Consular and Trade Reports for Sept. 14 and Nov. 22, 1911.]

Texas ranchmen seek additional information concerning guanacos, which are found in large numbers in the Andes from central Peru to Cape Horn. These animals are very shy and hunters capture them with difficulty. They may be tamed if taken when young, and I see no reason why they could not be successfully raised in certain sections of the United States. Guanacos are said "to feed upon the pungent herbage of the Patagonian deserts, as well as upon the bitter grasses of the Pampas, and furnish to the wandering natives their principal flesh food and the only skins useful for clothing or tent making, except those of the rheas. Over a large part of their habitat none but salt water is to be had, which they drink readily."

Guanacos are about a third taller than the average sheep and weigh about the same. There is no fixed price for the animal, as few have been domesticated. They must be picked up wherever they can be found, at whatever the owner may charge, anywhere from \$6 to \$20 gold each. For further information interested persons might address the American Consul at Punta Arenas and the American Consular Agent at Antofagasta, at which points I am told the domesticated animal is better known than any place else in Chile.

Guanaco rugs are prized very highly here and cost \$16 to \$25 gold, according to size, quality of the hair, etc. A rug 6 by 9 feet is worth \$20.

### CHINESE USE OF MELON SEED.

[From Consul General Amos P. Wilder, Shanghai.]

Watermelon seeds are used as a delicacy in China, being served with tea and also at meals much as in the United States salted almonds are served. Watermelons are abundantly grown and in this part of China are, in season, on sale at every fruit stand and peddled about the streets, cut in small portions for immediate consumption by the myriads who buy. There should be ample seeds to supply the demand. Indeed, it seems there are more, for in 1910 China exported 7,458,000 pounds of melon seeds to countries where large Chinese settlements exist, principally to Hongkong. Their value was \$296,215, or a trifle less than 4 cents per pound.

**CLOTHING MANUFACTURING INDUSTRY.****GERMANY.**

[From Consul Samuel H. Shook, Mannheim, Germany.]

**Lockout of German Tailors—Wages Paid.**

A lockout against all union workmen was declared by the General German Employers' Union for Tailors on March 9, 1912, as a result of the failure of workmen who had been on a strike in 30 cities to accept the wages offered at the meeting of the arbitration committee at Frankfurt on the Main. The workmen demanded a wage increase of 20 per cent and the employers offered a raise of about 5 per cent, the highest being 7 per cent, offered in Berlin. The employers' organization has branches in 158 cities, with 2,500 members. More than 24,000 workmen are affected by the lockout. While the nonunion men were not locked out, many of them have quit work.

Employers are divided into four classes and pay wages according to their classification, the wage tariff being different in each city. The prices paid in Mannheim for making an evening dress coat are: Class 1, \$5.95; class 2, \$5.47; class 3, \$5.12; class 4, \$4.76. Additional charges are made for trying on, changes, trimming, etc., bringing the total wage cost up to about \$7 for class 1 and \$6.50 for class 2. The wages for repair work for classes 1 and 2 are 13 cents an hour, the hours being from 7.30 to 7.30, with 1½ hours at noon and 15 minutes for coffee in the forenoon and afternoon.

**Strike Benefit Funds.**

Each workman pays a weekly fee of 12 to 24 cents to his union, receiving during a strike a weekly payment of \$2.85 if unmarried, \$3.80 if married with no children, and \$5 if married with three children. Each member of the employers' union pays 5 pfennigs (1.19 cents) weekly into the strike fund of the employers' union for each workman employed, and during a lockout receives 28 cents a day for each workman for whom he has paid. This is done to help some of the smaller tailors, who could not otherwise withstand a strike. This payment, however, does not start until the fifth day of a strike or lockout. As soon as the funds of one organization or the other are exhausted the parties are usually ready to arbitrate. The present strike has lasted (Mar. 19) 10 days, and the workmen have received one payment. It is estimated they have funds for three more payments, and no settlement will probably be reached until this fund is exhausted.

---

**ENGLAND.**

[From Consul Benjamin F. Chase, Leeds.]

**Leeds Supplies England's Home Market—Growth of Clothing Exports.**

Clothing for men, women, and children is made at Leeds, but only a small portion of the output enters the foreign trade, as this city supplies the bulk of the ready-made clothing sold in the United Kingdom. The cheaper grades of cloth made here are thus used for home consumption. Ready-made clothing for the export trade is produced chiefly in London and Bristol. The wages paid in Leeds are about 12½ per cent higher than in Bristol, and 15 per cent higher than those paid in London, according to a local paper. Glasgow pays a slightly higher wage than Leeds and caters to Scotland and northern England. Under the trade boards act the tailoring trade

board has fixed the minimum hourly wage for journeymen tailors at 6d. (12 cents) and for women at 3½d. (7 cents). About 85 per cent of the 20,000 workers in this trade in Leeds are women. Austria is the strongest competitor met in the foreign trade, and Germany supplies her own colonies and part of the South American trade.

A British trade journal recently published statistics for the clothing trade during the past 55 years, showing that the average annual exports of clothing from the United Kingdom, by five-year periods, were \$10,327,000 from 1857 to 1861, \$13,096,000 from 1862 to 1866, \$11,509,000 from 1867 to 1871, and then rose steadily to \$29,029,000 for 1907 to 1911. The net imports during the last five-year period amounted to \$13,753, leaving the average annual net imports \$15,276,000.

The average annual exports to all countries, except Japan and the British possessions of South Africa and Australia, during the years 1906 to 1910 showed increases over the average of the preceding five years. The average exports to Japan remained the same for both periods, \$63,000, while those to South Africa declined \$1,046,000 and to Australia \$1,168,000. The greatest increases in exports were to France, Holland, Argentina, and Egypt.

#### UNITED STATES.

[From report of the United States Census Bureau.]

#### Output of Men's Clothing and Shirts.

The preliminary figures of the Thirteenth Census of establishments engaged in the manufacture of men's clothing and shirts shows that the value of the output of this trade increased from \$406,768,000 in 1904 to \$568,077,000 in 1909. This total includes the manufactures of men's, boys', and children's clothing, overalls, market frocks butchers' aprons, uniforms, bathing suits, knee pants, gymnasium and sporting clothes, and shirts and shirt waists. The following comparative summary gives the figures for 1904 and 1909:

	1904	1909	Per cent of in- crease, 1904-1909.
Number of establishments.....	5,145	6,354	23
Capital.....	\$176,557,000	\$275,320,000	56
Cost of materials used.....	\$211,433,000	\$297,515,000	41
Salaries and wages.....	\$84,199,000	\$133,000,000	58
Salaries.....	\$15,740,000	\$26,723,000	70
Wages.....	\$68,459,000	\$106,277,000	55
Miscellaneous expenses.....	\$64,146,000	\$84,107,000	29
Value of products.....	\$406,768,000	\$568,077,000	40
Value added by manufacture (products less cost of materials).....	\$195,335,000	\$270,561,000	39
Employees:			
Number of salaried officials and clerks.....	15,671	22,220	43
Average number of wage earners employed during the year.....	173,099	239,096	38
Primary horsepower.....	29,829	42,725	43

#### New Directory for Panama.

A new directory for the cities of Panama and Colon is being prepared by certain Americans at Ancon, Canal Zone. When the book is available, Consul General Alban G. Snyder, of Panama City, states that he will procure copies for those desiring them. If there is to be a charge therefor, the amount will be announced later.

**DEVELOPMENT IN EAST INDIES.**

[Abstracts from reports by Commercial Agent for the State of Victoria, forwarded by Consul Wm. C. Magelssen, Melbourne, Australia.]

**Java and the Celebes.**

The three principal cities, Batavia, Sourabaya, and Samarang, each furnish evidence of the wealth following increased production in Java. The artificial harbor of Tanjong Priok, the port of Batavia, excavated and constructed some years ago at great cost, is proving inadequate and is to be doubled in extent. Many new buildings have been erected or are in course of erection in the commercial part of Batavia.

Sourabaya, the chief commercial city, is having a new dock and harbor and quite a building boom is taking place; large numbers of new warehouses, banks, and residences are in course of construction. In Samarang also the same change is taking place.

The Celebes, the trade of which is largely done through Java, are to be opened up by roads and railways. The trade development of Borneo and the large group of smaller islands of the Dutch Indies is evidenced by the fleet of small steamers running to them seen in the ports of Java.

**Island of Sumatra.**

Dutch people who have traveled over a great portion of Sumatra declare that it is quite as fertile as Java and has an immense area of country, undeveloped on account of lack of railways, roads, and labor. The Government of the Netherlands Indies has, however, decided to build a railway through the entire length of the island which will link on to several coastal lines now in existence. Survey parties are now engaged in determining the route of the proposed line.

Within 80 miles of Medan is the chain of mountains which intersects the island. In this there are table-lands, with a cool, temperate climate, 4,000 to 5,000 feet above sea level, a great asset to a large tropical island. The Government has recently constructed a motor-car road so that residents of Medan can proceed in half a day to this table-land, and it is proposed to have residences built there. In the southern portion of the island there are two rich quartz mines, which have large plants of modern machinery and are now large producers of gold. Other places at present inaccessible are reported to be rich in minerals. On the west coast, in the mountains, there is an extensive coal mine which furnishes large supplies of coal for the railways in Java. A railway from Padang, a town and port on the west coast, extends inland for a considerable distance, and a branch line furnishes the coal mine means of transportation. On the east coast, several large oil companies have been operating for a number of years, and great quantities of oil are exported by them.

The opening up of this island by railways will bring about the rapid internal development of its resources.

**The Federated Malay States.**

I have succeeded in having Victorian plows and cultivators introduced into the Malay States, but the chief demand has been for disk cultivators light enough to be drawn by two bullocks, which are only equal in strength to one horse. During the past year a very considerable number of these have been imported and they have done good work on rubber estates from which the timber and stumps have been cleared. They are chiefly used for keeping the land clear of grass and weeds. One of the largest rubber plantation companies near Malacca is at present plowing up and planting 5,000 acres of lalang grass country, which has been cleared of timber. The grass, from 2 to 3 feet in height, was first cut with mowing machines, and burned. They commenced operations with Victorian 2-furrow plows drawn by bullocks, and the land broken up was subsequently gone over at right angles with disk cultivators, and then the rubber planted. During the past year, however, heavy traction engines and an equipment of large reversible 7-furrow disk plows, scarifiers, and wire cables were imported from England. These have been at work now for several weeks, and when in Malacca I visited the estate and saw them working. The engines were stationed at either end of the land to be broken up, and a wire cable a quarter of a mile long pulled the 7-furrow disk plows. Although the field had an irregular surface, excellent work was being done at the rate of 10 acres per day. After a large block of land was plowed and soil exposed to the sun, it was cross plowed, and this after a time was harrowed by traction power also, and then the rubber planted. The work done was excellent, the soil well broken up, and the lalang destroyed. I was informed that the cost of tillage, \$5.70 (American currency) per acre, was \$2.80 less than that done by bullocks under the other system. The success of this method of breaking up lalang land will no doubt lead to its adoption in other places.

In keeping weeds and grass down in planted areas one large company near Malacca has 200 disk cultivators (8 and 10 plate) working, all drawn by pairs of bullocks. The cultivators used throughout the Malay States are of Canadian or Victorian manufacture. The agents for the former have been making every effort to secure trade. On a number of estates hand labor and the use of a large hoe are adopted for clearing plantations of weeds. The Victorian tree and stump extractors, for clearing the stumps of felled jungle which were left in the land at time of planting, are in universal use in the Malay States. These have had a large demand, and although American and other implements have been tried for this purpose those of Victorian manufacture have established their supremacy in effectiveness and utility.

## NEW GOVERNMENT PUBLICATIONS.

[Announcement of Bureau of Labor, Department of Commerce and Labor.]

### Settlement of Railway Labor Disputes.

Conciliation and arbitration in labor controversies form the subject of Bulletin No. 98, soon to be issued and for which applications will be listed. Recent experience in this and in a number of foreign countries under various plans is presented in a series of articles. Commissioner Charles P. Neill discusses "Mediation and arbitration of railway labor disputes in the United States, under the Erdman Act" in the first official report upon this subject; the operations of the Canadian industrial disputes investigation act and the British railway conciliation scheme of 1907 are summarized; the experience with conciliation and arbitration in Great Britain is given and the attitude of employing interests and of labor is discussed by A. Maurice Low and Arthur E. Holder; the work of the boards of conciliation, arbitration, and of sanitary control in the cloak industry in New York is reviewed by Charles H. Winslow; and the settlement of labor disputes by the industrial courts in France, Germany, and Switzerland is described by Helen L. Sumner.

### Industrial Courts of France, Germany, and Switzerland.

A study of the industrial courts of France, Germany, and Switzerland, by Helen L. Sumner, Ph. D., is a feature of Bulletin No. 98, soon to be issued and for which applications will be listed. Such courts, though unused in English-speaking countries, are common on the continent of Europe. They are designed to meet the needs of workmen who frequently feel that in their relations with their employers they are the victims of small injustices and impositions, none of them individually perhaps worth the trouble and expense of an ordinary suit at law, but in the aggregate causing much bitterness and unrest. To meet this situation industrial courts are made easy of approach, proceedings are swift and informal, fees and expenses are reduced to a minimum, a lawyer's services are unnecessary and in some cases even forbidden, and a persistent effort is made to bring the contestants to an agreement rather than to impose upon them a formal decision. Their jurisdiction is limited to cases between employers and workmen arising out of their labor contract.

These courts, although established in many parts of Europe, are more generally used in France, Germany, and Switzerland than elsewhere. In France, in 1906, there were 164, which handled 46,834 cases. In Germany, in 1906, there were 469 courts, which handled 112,281 cases. The number of courts constantly increases, but there is said to be a decrease where the system has been long in operation in the number of complaints. This is accounted for in part by the increasing standardization of labor conditions and in part by the growing knowledge and understanding of the laws brought about by the courts themselves.

### Improvements in Cloak, Suit, and Skirt Industry.

The working of the agreement which ended the strike in the cloak, suit, and skirt industry in New York City, with the agencies which it established—the preferential union shop, the machinery for settling disputes, and the board for improving sanitary conditions in the industry—is also a report in Bulletin No. 98. The establishment and successful working of these agencies depended on the fact that both parties to the strike and to the protocol were organized, the employers in the Manufacturers' Protective Association and the employees in various unions working together through a joint board. At the close of the strike, September 2, 1910, the Manufacturers' Association included 123 firms employing some 15,000 workers, while the unions had a membership of about 40,000.

Natural gas produced in the United States now amounts to over 500 billion feet annually.

## SHADE-TREE PLANTING IN PRUSSIAN CITY.

[From Consul General Frank D. Hill, Frankfort on the Main.]

One of the pleasantest and most striking features of Frankfort is its wealth of verdure. In addition to the famous Palmengarten, the Zoological Garden, and a host of parks and squares, the "Anlagen," or parks laid out on the site of the former outer wall torn down about the beginning of the nineteenth century, encircle the center of the town. The residence part of the city is beautified by its numerous gardens, nearly all residences having a garden, often a spacious lawn, between street and house. The principal streets and highways are planted with shade trees.

The planting of shade trees is carried on under the supervision of the "Stadt-Gaertnerei," an office having charge of public parks, etc., which office furnished the following information with respect to planting and care of shade trees on streets and highways, stating that similar conditions prevail in other German cities:

The following varieties are used in the center of town: *Platanus orientalis*, *Robinia pseudacacia Bessoniana*, *Robinia pseudacacia monophylla*, *Tilia alba*, *Acer pseudo-platanus*, *Aesculus hippocastanum flore plena*, *Sophora japonica*. In addition to the above the following varieties are used in the outer districts and on highways: *Acer plantanoides Schwedleri*, *Acer negundo*, *Acer dasycarpum*, *Tilia platyphyllos*, *Tilia vulgaris (intermedia)*, *Populus nigra fastigiata*, *Ulmus montana*, *Ulmus vegeta*, *Fraxinus excelsior*.

The trees are generally planted at intervals of 8 meters (26 feet). Trees with spreading crowns are set a little farther apart, while those which do not spread are planted nearer together. Trees are planted with great care. The ground is prepared by digging a hole about 6 feet square and 3 feet deep, which is filled with the earth in which the particular tree prospers. In case of drought trees are thoroughly watered once a week or once in two weeks. The branches are trimmed in winter.

[An article on the planting of fruit trees along German roads appeared in Daily Consular and Trade Reports for Mar. 12, 1912.]

## PROPOSED JAPANESE-KOREAN CABLE.

[From Consul General George H. Scidmore, Seoul, Chosen.]

It appears from the following announcement in the Seoul Press that the Japanese authorities are laying a new submarine cable between Chosen and Japan:

It is stated that the Communications Department in Tokyo has decided to lay a new submarine cable between Shimonoseki and Fusan and also to lay a through wire between Nagasaki and Tokyo. The estimates for these works were presented to the Diet as a supplementary budget and were approved of by the budget committee. It is expected that both works will be started about March 10, after approval by the House of Peers has been obtained. With regard to the new cable between Fusan and Shimonoseki the Communications Department being already possessed of the cable necessary for the projected work, it is expected that the laying of it will be finished in a fortnight. The laying of the through wire between Tokyo and Nagasaki is also expected to be completed by the end of the same month, as the necessary arrangements have already been made.

In this connection we learn that there are already two submarine cables between Fusan and Shimonoseki. Besides these, Chosen and Japan are connected by a line between Wonsan and Matsuye, in Izumo Province, and another between Seoul and Osaka.

Consul General S. Listoe sends a copy of the Regulations (conditions) of the Rotterdam Grain and Seed Exchange, which may be of interest to American grain dealers. It will be loaned on application to the Bureau of Manufactures.

## NOTES FROM INDIA.

[From Vice Consul General Charles B. Perry, Calcutta.] -

*New cooperative store.*—A Rangoon message states that a cooperative store, with a capital of \$6,665, has been started in that city for the benefit of railway employees.

*Shipments of jade.*—Owing to the troubles in China, which is the chief market for jade won in the mines of upper Burma, the revenue of the Burmese Government under the head of jade has fallen off in the past year by over one lac of rupees (\$32,433).

*New consulate general.*—A telegram from St. Petersburg states that the appointment of M. Nabokoff to the Russian consulate at Calcutta is connected with the project of raising the post to the status of a consulate general and its possible transfer to Delhi.

*Indian opium sales.*—At the opium sales on March 5, 1912, 810 chests Behar opium sold at an average of \$1,257, the highest price being \$1,770 and the lowest \$630. The 960 chests of Benares opium averaged \$880, the highest price being \$1,700 and the lowest \$630.

*Departments of Government.*—It is understood that the Viceroy has decided that all departments of the Government of India except Finance and Comptroller General, should remain in Simla until January next, the Finance and Comptroller General's Departments removing to Delhi next October. It is believed that by next January arrangements will be completed at Delhi for the accommodation of the other departments of the Government of India.

*Palmyra fiber.*—According to the office of the Director General of Commercial Intelligence, there are practically no exports of palmyra fiber, used in the manufacture of brooms and brushes, from Calcutta. The quantity of these commodities exported from British India during the fiscal year 1910-11 was 64,169 hundredweight, of which 106 hundredweight were shipped from Sind and 64,063 hundredweight from Madras. Palmyra-fiber extraction is for the most part a Madras industry.

*Rice crops in Far East.*—The first foreign customer this season to make purchases of Burma rice was Japan, the quantity exported to that country from the first of January to the first of March amounting to 16,000 tons against 5,400 tons in the corresponding period of last year. Java has already taken 55,000 tons of rice from Rangoon, the Straits Settlements and China have been indenting largely on Burma, and in view of last year's stocks being practically exhausted there is danger of injudicious exportation from Burma. The local production of rice in Shanghai has been severely interfered with by the troublous conditions in China, and in order to augment internal supplies a heavy demand is certain to be made on outside sources. In Siam the condition of affairs is deplorable, perhaps unprecedented in the history of that country. It is expected that only 40 per cent of a normal crop will be obtained. Bad crops are the indication all over in the Far East.

---

Consul Harry A. Conant, of Windsor, Ontario, Canada, reports that the growing of seed corn for the market is attracting much attention in the vicinity of Amherstburg, in that consular district.

**FOREIGN TRADE OPPORTUNITIES.**

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8561. Store fixtures and supplies.**—An American consul in Mexico forwarded to the Bureau of Manufactures the name of a firm which is about to open a large retail store in his district and desires to buy a complete assortment of men's, ladies', and children's shoes, rubber and celluloid novelties, fancy dress goods, etc.; also wants catalogues of modern store fixtures. The firm expects to pay cash for purchases.
- No. 8562. Cocoa.**—A company in Jamaica has requested an American consular agent to place it in communication with dealers in the United States who desire to purchase high-grade cocoa directly from the company. Arrangements are being made to install modern machinery.
- No. 8563. American goods for Germany.**—An American consular officer in Germany forwarded the name of a firm in his district which wants to represent American firms in margarin and similar products, liquors, meat, and meat products, or manufactured goods of any kind. References accompanied the request.
- No. 8564. Metal polish, graphite, oils, and greases.**—A Canadian firm requested an American consular officer to place it in touch with manufacturers of metal polish, graphite, and oils and greases in the United States with a view to representing them in one of the Provinces.
- No. 8565. Antimony.**—A Russian merchant located in China, who is interested in antimony mines, informed an American consular officer that he is desirous to establish connections with buyers or users of antimony in the United States.
- No. 8566. American flags and bunting.**—Catalogues and price lists of American flags of all sizes and bunting are requested without delay by a firm in Austria whose name was forwarded by an American consul. The consul states that a large number of Americans are expected to participate in the Sokol exercises held in June, and that American flags and bunting will be in demand.
- No. 8567. Leather and imitation.**—An American consular officer in Canada reports that a business man in his district desires to purchase American leather and imitation leather for upholstering, bookbinding, and other purposes. References are furnished.
- No. 8568. Hoisting machinery, locks, and lubricating oils.**—A business man in Austria requested an American consul to put him in communication with manufacturers of hoisting machinery, etc., for lifting bricks and other materials into buildings in course of construction; he also desires to communicate with American manufacturers of locks and lubricating oils.
- No. 8569. Wearing apparel, footwear, and groceries.**—A Canadian wholesale commission merchant, who handles American goods only, requested an American consular officer to place him in touch with manufacturers of dry goods, wearing apparel, shoes, leather goods, and groceries in the United States with a view to representing them in one of the Provinces. References are furnished.
- No. 8570. Olographic paper oil pictures.**—An American consul in Germany reports to the Bureau of Manufactures that prospective buyers in his district want the names of manufacturers of "olographic" paper oil pictures in the United States.
- No. 8571. Sporting goods.**—A business man in Canada, who has opened a sporting-goods store, requested an American consular agent to place him in touch with firms in the United States exporting guns, ammunition, fishing material, camp outfits, motor boats, and accessories, canoes, tents, etc.
- No. 8572. Dry paste.**—An American consular officer in Canada has forwarded to the Bureau of Manufactures the name of a firm which wishes to obtain the agency in one of the Provinces for a good line of dry paste for paper hanging. Reference is furnished.

**PROPOSALS FOR GOVERNMENT SUPPLIES.**

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

- No. 579. Department supplies.**—Sealed proposals for furnishing articles covered by the general schedule of supplies for the fiscal year 1913 (except furniture and fuel) for all executive departments and independent establishments will be received at the office of the General Supply Committee, Treasury Department, Washington, D. C., until 2 p. m., May 7, 1912. Specifications and instructions will be furnished upon application to the General Supply Committee, Union Building, Washington, D. C.
- No. 580. Electric passenger elevators.**—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until 11 a. m., May 11, 1912, for installing three electric passenger elevators, one in the Naval Hospital at Chelsea, Mass., one in the Naval Hospital at Newport, R. I., and one in the Naval Hospital at Portsmouth, N. H. Plans and specifications may be obtained upon application to H. R. Stanford, Chief, Bureau of Yards and Docks, Washington, D. C.
- No. 581. Gunboat.**—Proposals for constructing by contract one gunboat (river gunboat No. 1) will be received at the Navy Department, Washington, D. C., until noon, June 10, 1912. A circular of requirements for said vessel is now ready, and forms of proposal and contract may be had on application to the Navy Department, Washington, D. C., after May 1.

---

**MARSEILLE'S PRODUCTION AND EXPORTS.**

[From Consul General A. Gaciln, Marseille, France.]

The annual production of Portland cement in Marseille and immediate vicinity is estimated at 275,000 tons, including 70,000 to 80,000 tons of white Portland cement. The latter cement is used in the manufacture of artificial stone and for decorative purposes. The declared exports of white Portland cement from Marseille to the United States amounted in 1911 to \$24,332. Owing to the importance of the local industry there is no market here for the American product.

[See also Daily Consular and Trade Reports for January 3, 1912, which contains a series of articles on cement and ferroconcrete.]

---

**American Agricultural Expert for Brazil.**

The Department of Agriculture has transmitted to the Bureau of Manufacturers a clipping from the Agricultural Student (for March, 1912), which is issued by the Ohio State University, stating that Prof. J. H. McNeil, M. D. V., professor of surgery and obstetrics, also the veterinarian at the Ohio State University, has accepted a position as manager and inspector of cattle and meat on a 9,000,000 cattle ranch in southern Brazil.

---

**Consular Trade Conferences.**

Consul General John Edward Jones, at Winnipeg, Canada, has arrived in the United States on leave of absence, which will probably extend over several weeks. American business organizations, firms, and individuals interested in trade between the United States and western Canada desiring to communicate with Mr. Jones should address him in care of R. D. No. 4, Box 37, Washington, D. C.

**THE GERMAN TRADE IN PINEAPPLES.**

[From Consul General Robert P. Skinner, Hamburg.]

There is a large and growing demand in Germany for pineapples, the trade in which, as in the case of substantially all fresh fruit imported into this country, is centralized in Hamburg. Nearly all the pineapples shipped to this city are sold at auction, the supplies, as a rule, coming from the Azores. The annual importation from these islands amounts to 130,000 cases. The official statistics relating to the business are as follows:

	1910	1911
	<i>Tons.</i>	<i>Tons.</i>
Total German importations.....	1,321.0	2,355.1
From the Azores.....	1,052.0	1,929.9
Total reexportations.....	44.5	55.8
To Austria-Hungary.....	17.1	16.4
To Russia.....	6.5	12.6
Total value of importations.....	\$314,368	\$536,000

Some attempts have been made to import pineapples from Porto Rico and also from South America, but without much success, as the fruit arrived in bad condition, owing to the length of the journey. The high freight rates also discouraged importers who, nevertheless, are entirely willing to receive goods on consignment from San Juan and to dispose of them on the market under the most favorable conditions possible. It is suggested that beginners in the trade would do well to send a sample consignment of perhaps 20 cases. The fruit should be assorted so that each case contains pines of the same size. It is recommended that the interstices be not filled with hay, which keeps the fruit too warm. Leaves might be utilized as packing material to better advantage perhaps. The cases should be stored in the bow of the transporting steamer and as far removed from the boilers as possible. Markings on each case should indicate the quantity contained. Shipments from San Juan should be made via the Red "D" Line to New York, and from Florida by fast train to New York, and thence via fast steamers to Hamburg. Care should be taken that packages be made ready at the last moment possible prior to the departure of the carrying vessel.

Importers state that fruit from the Azores is grown under glass, which makes it rather expensive. They have the impression that fruit so grown is superior to that grown in the open air, a point in regard to which there may be differences of opinion. [The Florida pineapples are much improved since the slatted shed coverings were adopted.—Bureau of Manufactures.]

The prices obtained for pineapples run from 70 to 90 pfennigs (\$0.1666 to \$0.2142) per German pound (half kilo or 1.102 pounds), and Porto Rican fruit would not command as much, at least until a demonstration had been made of its qualities.

The cases received ordinarily contain up to 16 pines, although if the fruit is fine, weighing up to 6 pounds each, the cases contain only six.

[The addresses of Hamburg importers of pineapples, and of retailers supplying exclusive trade may be had from the Bureau of Manufactures.]

## COMMERCIAL GROWTH OF YUNNAN.

[From Vice Consul General Hamilton Butler, Canton, China.]

The following notes on the trade and industrial development of the Province of Yunnan during 1910 are based largely on the reports published by the Imperial Maritime Customs.

Although late in publication, they constitute an appropriate continuation of the review of the foreign trade of Yunnan in Daily Consular and Trade Reports for April 3, 1911, and show that, with the exception of Szemao, a port dealing with Tonkin and Burma and of no significance to American importers or exporters, there was a gratifying improvement in the foreign trade of the open ports of the Province and that a spirit of educational and industrial betterment characterized the year.

The completion of the French Yunnan Railway to Yunranfu and the opening of that mart to foreign residence and trade were significant features of the period under review.

### The Trade of Mengtsz.

The total value of the trade of Mengtsz coming under the cognizance of the Imperial Maritime Customs in 1910 was \$7,566,853, of which \$3,351,031 represented foreign imports and \$4,215,822 exports of local origin. The total value of the trade of the port in 1909 was \$6,894,246, and in 1908 \$6,561,824.

There was an apparent large falling off in the value of foreign imports in 1910 as compared with 1909, but in reality an increase of approximately \$990,000. The immense difference between the values of the railway supplies imported in 1910 and in 1909—the Yunnan Railway was completed April 1, 1910—accounts for the discrepancy.

Cotton yarn is the staple import at Mengtsz and in 1910 reached the record figure of 11,305,466 pounds, valued at \$1,914,000, of which India supplied 75 per cent and Tonkin the remainder. Among the other principal imports may be mentioned cotton and woolen piece goods, kerosene, matches, aniline dyes, lamps and lamp ware, medicines, needles, and paper.

**Tin the Chief Export—A Market for Sundries.**

The value of native exports increased in 1910 over 1909 by 50 per cent, due almost entirely to the increased output of the Kochiu tin mines. The total production amounted to 13,662,000 pounds, or 4,218,800 pounds in excess of that of the previous year, and was valued at \$3,954,720. Tin prices ruled high on the Hongkong market during the year and encouraged the mine owners to work their shafts. The excellent record achieved in 1910 may induce the owners to increase the size of the foreign plant imported from Germany some years ago. The only other minerals exported in 1910 were zinc, 28,000 pounds; antimony, 122,666 pounds; and orpiment, 12,400 pounds—a poor showing for one of the richest mineral beds of the Empire. Among the other principal exports are beans, cow and buffalo hides and horns, false gambier, hams, marble slabs, native medicines, and white and yellow wax, all of which showed improvement in 1910.

There is little in the list of exports from Mengtsz, with the exception of tin (which finds its way very largely to Hongkong), to interest American importers, but the city itself and the district which it serves offer a considerable market for many foreign sundries, such as cigarettes, cotton umbrellas, talking machines, cloth caps, etc., in addition to the articles mentioned above as principal imports. It should be remembered, however, that it is almost purely a native market—the foreign population probably not exceeding two score—and that only articles suited to native tastes and ideas can hope to succeed in it.

A German firm with offices in Hanoi, Haifong, Saigon, and Paris does a general import and export commission business at Mengtsz.

**A Satisfactory Year for Tengyueh.**

The trade of Tengyueh, situated in the extreme western part of the Province, proved eminently satisfactory during the year and showed an improvement of 28 per cent over 1909. There was an importation of foreign goods to the value of \$954,628 and an exportation of native produce of local origin valued at \$367,541. No special features are recorded. The trade of the port is entirely with Burma and the medium of exchange is the rupee; hence it was not unnatural that the upward movement of silver exchange in 1910 should effect a general improvement in business.

There were gratifying increases in the imports of gray shirtings, cotton italians, velvets and velveteens, and Indian cotton yarn, and only insignificant decreases in white shirtings and T cloths. Among woollens, long ells dropped 50 per cent, but Spanish stripes rose from 15,980 yards in 1909 to 26,600 yards in 1910. The action of the Burma Government in excepting petroleum and tobacco in all its forms from the privilege of claiming a refund of seven-eighths of the import duty when they are reexported through Bhamo to Tengyueh caused a falling off in the importation of cigarettes from \$9,954 in 1909 to \$1,280 in 1910. American kerosene increased, however, despite this obstacle, from 19,380 gallons to 24,860 gallons. Of the other principal articles imported, aniline dyes increased from \$2,785 in 1909 to \$4,574 in 1910, and umbrellas from 9,870 to 15,130 pieces; prepared tobacco remained stationary at 266 pounds; and Japanese matches dropped from 35,050 gross to 27,130 gross.

There was also a gratifying increase in the amount of native goods sent abroad in 1910 as compared with the previous year. Almost without exception, however, the articles of export from Tengyueh are not of interest to the United States. The exceptions are orpiment, musk, and yellow Szechwan silk. The orpiment lodes in Talifu are said to be rich, but as yet have been worked only by crude native methods. The exportation of this pigment has increased steadily, however, from 426,666 pounds in 1903 to 1,199,566 pounds in 1910. It was also exported through Mengtsz, as noted above, to the amount of 12,400 pounds.

#### **Musk and Silk—Railways—Education.**

There was an exportation of musk in 1910 amounting to 276 ounces, the highest figure on record. The trade in musk has not been developed by the Chinese to anything like the point to which it might easily be brought. The shipments abroad from Tengyueh are collected by the representative of a French perfumery manufacturer, who spends part of each year in the Likiangfu district. There was also an exportation of musk from Yatung, Tibet, across the Sikkim frontier, amounting to 1,824 ounces. The exportation of Szechwan silk reached 121,733 pounds in 1910, a record figure; and now that it enjoys the outward transit-pass privilege, shipments will doubtless continue to increase. It is practically all taken in India.

The prediction that the completion of the Yunnan Railway to Yunnanfu would deprive Tengyueh of a large part of its distributing trade, by rendering simpler the importation and exportation of goods to and from eastern and northern Yunnan via Tonkin, was not borne out by the figures for 1910. The railway was opened in its entirety on April 1, and, while it has unquestionably assisted Mengtsz, it has had no apparent influence upon Tengyueh. There is the probability, however, that this is the result of the tardiness with which the conservative natives change from established trade routes, and that in time the value of rail communication will have become so well recognized that the line will take its proper place in relation to the commerce it was designed to serve.

The project to give Tengyueh rail connection with Bhamo has apparently been definitely dropped. It has not been discussed during the year and it is probable that unless the working of the French Yunnan line shows a profit, the Bhamo-Tengyueh scheme will not be resuscitated. A number of schools, in which both sexes are taught and in which the curriculum includes history, geography, arithmetic, drawing, and physical drill, have been started in the Tengyueh district. The teaching is conducted on the so-called Western system, but suffers much from the lack of competent teachers. At Yungchangfu experiments are being made with various kinds of American, Indian, and Egyptian cotton seed, with a view to introducing cotton growing as a substitute, in part, for the lost industry of poppy culture; and at the same place an institution has been opened to teach straw-braid weaving, an industry well suited to the district.

#### **Szema Steadily Losing Ground.**

With the exception of the year 1908, there has been a steady fall in the trade of Szema since 1903, due to some extent, in the case of imports, to the reluctance of the merchants of the district to use the rough and expensive route through the Shan States when they can

draw their supplies more conveniently through Tengyueh on the west and Mengtsz on the east. The total value of the trade coming under the Imperial Maritime Customs in 1910 was \$131,849, of which \$105,978 represented foreign imports and \$25,871 exports of local origin. The principal imports are raw cotton from Burma, of which 888,133 pounds came in during 1910; Burmese cotton cloth, of which 3,561 pieces were imported; and foreign umbrellas, of which 1,258 were purchased. With the exception of Burmese cloth, there were only 117 pieces of foreign cotton goods imported during the year. The receipts of woolen goods amounted to 40 pounds of blankets and 25 yards of Spanish stripes. The other imports are birds' nests, tiger bones, inferior cardamoms, elephants' teeth, deer horns, liquid indigo, rattan ware, and skins and furs.

The list of principal exports is scarcely more extensive, including as it does small quantities of brass ware, felt and silk caps, felt carpets, coarse chinaware, native cloth, copperware, straw hats and hat covers, iron pans and ironware, pottery, native boots and shoes, skins, steel, brown sugar, tea, tobacco, preserved and salted turnips, vermicelli, walnuts, and yellow wax. Raw yellow silk and silk piece goods have disappeared from the list. There was an increase in felt carpets from 1,780 pieces in 1909 to 2,329 pieces in 1910 and in black Puerh tea from 43,200 pounds to 87,333 pounds. Insignificant increases occurred in native cloth, hat covers, manufactured iron, iron pans, ironware, pottery, boots and shoes, steel, and turnips.

#### **A New Open Port.**

The latest "port," or, better, inland mart, to be opened by the Chinese Government to foreign residence and trade is Yunnanfu, the capital of Yunnan. It is not a "treaty port," but was voluntarily opened by the Government following the completion of the French Yunnan Railway, which connects Yunnanfu, via the important mining district of Mengtsz, with the Tonkin border at Hokow-Laokai. The city stands in the center of an elevated plain over 6,000 feet above the sea and of unusual fertility and salubrity for southern China, and has a population of 85,000. It already possesses a mint, an arsenal, an electric-light plant operated by hydraulic power, a flour mill, a tannery handling 1,000 hides a month and turning out shoes, saddlery, accoutrements, etc., for the new army, a provincial assembly hall built in foreign style, new law courts, new prison buildings, etc., and has other innovations under way. Several foreign firms have located in the city and many of the native merchants have erected new and more pretentious shops—all looking for the business which is confidently expected to follow at an early date.

No figures have been published to show what has been done so far, nor is it possible at the present time to predict exactly what effect the opening of the place to foreign residence will have upon it and its foreign trade. Before the advent of the railway Yunnanfu drew its foreign goods largely through Suifu, on the Yangtze River, and Mengtsz. Suifu is neither an open port nor an important mart, but Mengtsz has been both since 1889 and has created for itself a large distributing trade in eastern Yunnan. In doing so it has overlapped the zone naturally belonging to Yunnanfu, and to this extent it may be expected eventually to lose territory; but trade districts once established, particularly in China, are slow to change, and more

especially is this so where as in this instance they are served by pack animals and porters.

Until the Yunnan-Suifu extension of the Yunnan Railway is effected, and it has not gone beyond the survey stage as yet, it is probable that a constantly increasing radius about Yunnanfu itself and practically all the country between Yunnanfu and the Yangtze, as well as much of that lying between the provincial capital and Talifu, will draw its foreign goods from the new mart, for the reason that it is much easier, cheaper, and safer to land them at Haifong and send them by rail to Yunnanfu than to land them at Shanghai and send them up the Yangtze. In this condition is to be found the reason for opening the city to foreign trade.

#### **Foreign Firms—Sericulture.**

Among the foreign firms established at Yunnanfu, one whose New York address may be obtained from the Bureau of Manufactures, is perhaps the most responsible. It has confined itself in the past largely to Government and other large contracts and in this has done exceedingly well. The great mass of arms, ammunition, and machinery recently imported into Yunnan has been supplied by it.

In their attempt to find substitute industries to replace the recently abandoned culture of the poppy, once the principal industry of the Province, the Yunnanese are giving primary attention to the development and improvement of sericulture. A school of agriculture has been started, which is apparently doing excellent work in educating the farmers about Mengtze in the habits and needs of silkworms, sericulture in general, and the preparation of the cocoon product for the market. It is also importing, with success, seed from Shoching and Hangchow, in Chekiang, which produce first-class white cocoons, yielding a grade of raw silk which, it is claimed, compares well with the best found on the Shanghai market. The old "long reel" has been replaced by the "short reel" used abroad and in the foreign filatures in China, and the raw silk now being turned out by the school of agriculture is spun directly on the short reel, instead of being spun on the long reel and subsequently rereeled.

This silk, which has already found its way in small quantities into the Mengtze market, is theoretically an 8-cocoon thread, and in quality, color, and size is said to compare favorably with the Shanghai rereeled Tsatlees. The silk industry in Yunnan is still in the initial stage, but once the importation of Szechwan yellow seed is stopped, only the best white seed used, and the work now being done by the school of agriculture is extended through the Province, Yunnan should produce 400,000 to 500,000 pounds of first-quality silk a year.

[In addition to the report referred to in the text of the foregoing article, a review of the Hongkong-Yunnan trade published on Aug. 9, 1911, is relevant.]

---

#### **Bound Volumes of Daily Consular and Trade Reports.**

The Government Printing Office will supply regularly in quarterly volumes, with complete 32-page indexes, bound sets of Daily Consular and Trade Reports from January 1, 1912. The price is \$1.50 per volume or \$6 per year, in order to cover the cost of the index and binding. Those desiring the bound volumes should write to the Superintendent of Documents, Government Printing Office, Washington, D. C.

**INDUSTRIAL-MACHINERY BUSINESS IN CHINA.**

[From Vice Consul General W. Roderick Dorsey, Shanghai.]

China, according to the returns of the Imperial Maritime Customs, purchases each year from foreign countries no less than 256 varieties of cargo. The United States participates to a greater or less extent in but 123 of these, and ranks third or higher only 27 times. If American exporters can not find among the remaining 133 articles any that would interest them, they should at least seek to increase their participation in the ones already tried and found suitable.

The majority of these, I realize, are lines too small to make direct individual effort attractive, but the cooperative and reciprocal methods of competing nations seem to afford a channel for successful effort in this direction. Some of these lines may prove impracticable and unprofitable for the American producer, but it is the opinion of many that such articles as phonographs, photographic and optical materials, lamps and lamp ware, bicycles, clocks and watches, hats, caps, gloves, hosiery, haberdashery and underwear, machinery, railway and electrical appliances, hardware and building material, medicines and perfumery, condensed milk, wine, beer, and spirits enjoy an increasing demand and will continue to do so for many years.

**Cooperation for Small Lines.**

I do not for an instant hold out the prospect of an easy market in these lines or invite dealers to plunge into them without first reasonably assuring themselves that the experiment is worth making. There is much they can do at the home end to get a knowledge and an intelligent grasp of chances here. The cost at which producers of other nations lay down the same goods in China is of first importance in determining if articles are competitive.

Where a line is not important enough to warrant establishing one's own offices, then the cooperative scheme should be attempted; but if this is not feasible, negotiations should be entered into with some locally established concern, preferably American or of a noncompeting nationality, for representation on an agency basis. If the latter arrangement is effected, the principal should be guided by his agents in all things local, leaving such matters as advertising and catalogue distribution in their hands and cooperating in every way to meet the competition and methods of other countries. Several firms in more important lines have found it profitable, in addition to entering into agency arrangements, to send their own technical experts to assist in introducing and handling their products, which is a distinct advantage where the line will stand it.

Machinery, railway and electrical appliances, and bridge-building materials should be kept constantly in mind as the trade is sure of expansion, and it must not be forgotten that to succeed in these there must be such representation on the spot as will enable dealers to give intelligent information, specifications, and quotations without delay. The tendency to-day, owing to the increasing competition between American and European manufacturers, is toward industrial and financial combines which, through their agents or branches in Shanghai, Peking, and other centers, stand ready to finance Chinese industrial undertakings and furnish all the machinery and technical supervision required.

**Opinions of Shanghai Firms.**

China is at the dawn of an era of industrial development, and the demand for implements for this expansion should continue to increase for many years to come. Following are ideas and views gleaned from local representatives of machinery and electrical appliances from time to time: The British and German firms are obtaining more business than their competitors because they study the requirements of the market more carefully than manufacturers of other countries and have far superior organizations in China. They also grant special terms of payment which Americans are not often willing to give. This is particularly true of the Germans, in whose country the banks amalgamate with manufacturers' syndicates, with the result that any scheme presenting a reasonable prospect of success is financed through this combination and German capital purchases the German materials with which the plant is fitted. There is usually a first partial payment and a lien taken on the plant so erected as security for the balance. In equipment of a municipal or public nature, the guaranties of local officials are often added to the security.

The American technical representative of a well-known company writes with reference to electrical machinery that at present there is excessive competition indulged in by foreign firms and any American exporter desirous of obtaining a foothold in the market must be content with small returns as long as present conditions last. Great emphasis in many instances is placed on price, which puts not only electrical but other American machinery at a disadvantage, except in the case of apparatus of the largest manufacturers. This is true for the reason that technical knowledge is lacking in China on the part of all but an extremely limited number of purchasers. Consequently few customers are in a position to judge the relative merits of machines offered and price becomes to a large extent the standard by which suitability is determined. This is directly responsible for the keen, low-priced, small-profit condition of the present day. Education will do much in time to alter this. Foreign competitors seek in this low-priced campaign to secure a footing against the time when development is more general, demand more generous, and education such as to render small margins unnecessary.

**Local Representation an Essential.**

One thing is certain: The industrial-machinery business in China can not be carried on without local representation of some sort. Catalogues alone are useless. Some of the important American houses are already in the field with technical experts operating independently or in conjunction with locally established firms, and these, I am told, have made headway.

Personally I have faith in American organization, alertness, and general ability to get business if gone after properly. For this reason I believe firmly in the cooperative scheme for houses having lines not sufficiently important as yet to warrant individual direct effort, but certainly entitled to the fair trial that only such representation can give. This is peculiarly applicable to houses producing industrial and other machinery, and such an organization supported by bank affiliations should be in position to secure a larger proportion of this expanding trade than the United States is getting at present. It is the plan of the competitors and is at least worth the most thorough investigation if not a trial.

## INCREASED AMERICAN PURCHASES FROM RUSSIA.

[By Consul General John H. Snodgrass, Moscow.]

There was a large increase in the shipments of merchandise from Russia to the United States last year compared with the previous one. According to invoices certified at the several American consulates and agencies throughout European and Asiatic Russia, the value of the exports to the United States in 1911 was \$18,818,442, against \$14,939,092 for the previous year.

This increase was due largely to the greater shipments of hides and skins, which item represents over half the exports, and which increased from \$7,726,935 in 1910 to \$10,703,419 in 1911. Wool, another important item in the shipments to the United States, increased from \$2,193,404 to \$2,927,066, and licorice root from \$486,302 to \$557,294. There was a decrease in the exports of some of the articles which figure largely in the trade, such as rubber waste, flax and hemp, animal hair, and wood pulp.

**Exports by Articles.**

The following table gives the principal exports to the United States during 1911:

Articles.	Value.	Articles.	Value.	Articles.	Value.
<b>Alcoholic products:</b>		<b>Furs—Continued.</b>		Potash, carbonate of....	\$43,754

		Peas.....	126,741		

**Shipments by Consular Districts.**

The consulate at Riga and the agency at Libau lead in the certified shipments to the United States, over 60 per cent of the total exports from Russia last year being invoiced through that district. Of these shipments, amounting to \$11,580,360, only \$5,455,962 worth, however, originated in the Riga consular district, the greater part of the remainder, or \$4,949,372 worth, originating in the Moscow district, and consisting principally of hides and skins, wool, animal hair, hemp and tow, furs, seeds, and rubber waste. There were also \$646,798 and \$389,621 worth of merchandise, consisting principally of hides,

which originated in the St. Petersburg and Warsaw districts, respectively, invoiced through the Riga district; also \$139,812 worth, made up chiefly of mushrooms, hides, furs, and animal hair, the products of Odessa, which were invoiced through Riga.

Of the total shipments invoiced through the St. Petersburg consulate to the United States last year, goods amounting to \$172,718 were the products of outside districts, principally from Moscow, and consisting of hides and skins. Of the wool valued at \$868,027 certified for shipment from Batum, \$462,858 worth originated in the Moscow district.

The following totals represent the certified shipments through the several American consulates and agencies to the United States during 1910 and 1911:

Districts.	1910	1911	Districts.	1910	1911
Batum.....	\$1,507,652	\$1,926,762	Vladivostok.....	\$31,837	\$84,086
Moscow.....	2,511,889	2,190,680	Warsaw.....	802,946	\$14,502
Odessa.....	590,456	664,845			
Rostoff-on-Don.....	235,263	610,964	Total.....	14,939,092	18,818,442
Riga.....	6,374,464	9,766,596			
Libau.....	1,490,031	1,813,764			
St. Petersburg.....	702,673	1,080,730			
Helsingfors.....	266,518	204,911			
Reval.....	35,311	51,493			

### FACTORS IN FOREIGN TRADE.

The Bureau of Manufactures has issued a bulletin that will no doubt find a permanent place on the desk of every manufacturer interested in foreign trade. In its 56 pages will be found answers to questions asked by every manufacturer sending out trade literature or opening correspondence with foreign firms: What language is it best to use? In what currency and what weights and measures should prices be quoted? What postage should be placed on the catalogue or the letter? Can I prepay a reply from the prospective customer? Is there a parcel post?

The bulletin answers these and other questions for each country in a concise manner. The reader can put his fingers on the information sought without hunting through a mass of detail that he does not want. Supplementing these statements are tables for converting the money of foreign countries into that of the United States; also a comparison of prices for countries in which both the monetary unit and the units of weight and measure differ from those used in the United States. For example, the latter tables show the reader at a glance what is the comparative price per meter in Mexican currency of a cloth quoted at 50 cents United States currency per yard or the price per pound in United States money of an article quoted at 30 francs per kilo. Currency-conversion tables and price comparisons are given for over 30 countries. Foreign postage rates and the parcel-post regulations are summarized and a list is given of the countries in which international reply coupons are valid.

Copies of the bulletin, which is entitled "Factors in Foreign Trade," are now available for distribution, and those desiring it should make application to the Bureau of Manufactures, Department of Commerce and Labor.

**JAPANESE INTERESTS IN MANCHURIA.**

[Compiled by Consul Albert W. Pontius, Dainy, from Manchurian Daily News.]

**Agricultural Resources.**

South Manchuria offers little encouragement for Japanese emigration. The soil of Kwantung Leased Territory is sterile, and the Territory has room for only a small number of farmers, even if all the available area were converted into rice fields. Then, the South Manchuria Railway area is merely a narrow strip of land, ill suited to agricultural settlements. The three coal mines, including Fushun Colliery, one of the richest coal seams in the world, afford no opening for Japanese labor, as Chinese labor is obtainable at very low rates.

The South Manchuria Railway Co. is conducting laboratory experiments, looking to the better utilization of beans. The larger the percentage of fat extracted, the greater is the fertilizing value of the residue bean cake. The common methods of bean milling in south Manchuria are wasteful. It may take some time for the oriental farmers to get reconciled to a powdery residuo, but its higher value as a fertilizer will soon be realized and more economy accomplished, at the same time securing more oil.

**Iron Drums as Receptacles for Bean Oil.**

Iron drums as receptacles for bean oil for over-sea export (referred to in Daily Consular and Trade Reports for July 5, 1911) are found to be too unwieldy and also encounter a customs duty in Japan, in case of not being reexported within a fortnight of their importation. They are dutiable at 1.95 yen (yen=\$0.498) per 100 kin (kin=1.323 pounds). A Yokohama firm dealing in fish oils used old drums experimentally, but although satisfied of their being proof against leakage, could not use them, owing to the sudden advance of steamer freight, from England to Japan, from \$1.20 per 40 cubic feet last year to \$2.40 this year, and to the other disadvantages named. This Yokohama firm, which exports large quantities of fish and other oils, is trying to solve the problem of receptacles by planning a cask which meets all requirements. With kerosene-oil cans, which are most commonly used for bean oil, there is a leakage of 3 or 4 per cent.

The iron drum suggested as a substitute by Japanese Commercial Commissioner Tawara, at London, is U-shaped and manufactured by the Steel Barrel Co., London, being quoted in the catalogue at about \$11 each. It is 41½ inches high, 36½ inches in diameter, and weighs 230 pounds; 4 drums hold 3 tons. The iron plate of which it is made is about ½ inch thick.

**Dairen Harbor Works.**

The east quay of Dairen wharves, 1,450 feet long, and the east breakwater projecting therefrom have been completed, and the quay has 30 feet of water. A signal station is being constructed close to the lighthouse. The reconstruction of the main (west) quay into a vertical facing in concrete will be accomplished by the spring of 1913. Then the east side of west quay will be reconstructed.

The berthing capacity of the quay line is 5 steamers of 10,000 tons each, 4 more of 6,000 to 8,000 tons each, 3 of 4,000 tons each, and 10 others of 100 tons up to 3,000 tons each, making the total of 22 vessels at a time. So far the cargo-working record for a single day consisted in loading 9,584 tons general cargo and 2,400 tons of coal and discharging 3,293 tons of general cargo.

With the extension of the quay line, including new berths for steamers of larger type and the improvement of cargo-working equipments, the daily average of 10,000 tons for cargo work lies within easy reach, if only the goods to be loaded into steamers are conveniently placed and the maneuvering of vessels is conducted properly.

**Railway, Horticultural, and Agricultural Program.**

The following horticultural and agricultural work is planned for 1912, along the South Manchuria Railway area:

Saplings will be distributed to the principal stations, chiefly for hedge plants, shade trees, and improvement of appearance. Should the company's nursery at Hsiungyocheng lack a sufficient supply, the shortage will be supplied from other sources.

Growing the mulberry tree is to be taken up in earnest. Both the climate and soil of south Manchuria encourage sericulture. Should the initial undertaking at Dainy prosper, tree plantings will be extended northward.

Young fruit trees will be distributed to railway employees along the lines for planting about their residences, to encourage a taste for horticulture and to experiment in orcharding.

Experiments in rice farming have been made at Mukden, Hsiungyocheng, Chien-chinchai, and other places with fair results at each place. Haichong, Liaoyang,

Tiehling, and the country along the Mukden-Antung line are also pronounced to be well suited to rice farming. Several new places will be tapped this year and the railway company is prepared to offer sundry facilities in the lease of lands, irrigation, etc., where necessary. For instance, wells may be bored at the company's expense if it considers such help fully justified.

A notification has been issued to the effect that all applications for information on any of the foregoing subjects should be sent to the company's district agents at the various centers.

#### **Manchurian and Japanese Coal-Mining Comparisons.**

Fushun Colliery, of Manchuria (partially described in Daily Consular and Trade Reports for Feb. 26, 1912), is a peer to the Mûke Colliery (annual output 1,500,000 tons), the most extensive coal mines in Japan. The Japanese mines of the Kyushu district pay an average daily wage of 60 cents, while Fushun Colliery can obtain any amount of Chinese labor at 22 cents. Moreover, the mining capacity of the Kyushu collieries, which is put at 8,000,000 tons per annum, has attained its zenith, and hardly admits further expansion. It is possible that the present output will be maintained for 50 years or so, but not much longer. Apart from the Kyushu collieries, Japan can count for coal supply upon Hokkaido, with 1,400,000 tons, and Iwaki Province, with 800,000 to 900,000 tons, which, combined with the other sources, make a total of 7,000,000 tons per annum. Of this grand total of 15,000,000 tons, Japan can spare only 3,000,000 tons for export.

### **HAWAIIAN INDUSTRIAL NOTES.**

[From the Honolulu Bulletin.]

#### **Pineapple Trade Expansion—Maui Improvements.**

A Chicago firm, which employs 400 persons in its Hawaiian pineapple cannery during the season, has been turning out 110,000 cases, but proposes to put up 330,000 cases in 1912. The manager of the concern says the pineapple pack of Hawaii will be 1,500,000 cases by 1914.

The island of Maui is on improvement bent, and it is learned that it is intended to spend nearly \$1,000,000 in general island betterments. Among some of the work in hand and in view may be mentioned the extension of the Kahului Railroad and the construction of irrigation ditches. There are thousands of acres of pineapple lands to be opened up also. Business conditions on Maui are reported to be very favorable.

#### **Beef Hotel a Possibility.**

A number of business men in the city are taking up the project of building a hotel on the coral reef near Diamond Head, and at the same time filling in about 2 acres with rock with a connecting pier to the shore. It is further planned to build a submarine tower down to the bottom just outside the reef. At the lower end of the tower it is intended to have big glass plates so that those who go down will be able to see all that is going on at the bottom of the sea and the fish swimming about. The promoters figure that it will be the greatest attraction the city has ever had.

#### **More Building—Paving Blocks.**

There is much activity promised in the building line on this island in the near future. Work on the new Charles Brewer Estate Building has been commenced. The erection of a 4-story structure will be commenced soon by the Chas. M. Cooke (Ltd.). There are a number of other structures underway throughout the city.

One of the largest shipments of hardwood paving blocks received at Honolulu in months arrived on March 22, there being 63,000 blocks.

#### **Increase in Lumber Rates.**

Coast advices tell of a material increase in lumber rates along the Pacific coast. Freight rates for carrying lumber on the coast have been increasing gradually during the last year. Steam schooner tonnage for handling the product is being held at \$4.75 for transporting 1,000 feet, as against \$4 a thousand in February, 1911. There is the same proportionate increase for transporting lumber to San Pedro and other points below San Francisco, the present rate for that haul being \$5.25 per 1,000 feet. Local steam-schooner agents attribute the increase largely to the fact that practically all the schooners which formerly remained in the coastwise trade have been going offshore the last few months, greatly cutting down the supply of available tonnage.

Steam schooners are being turned out in nearly all of the big shipyards of the coast, and before a great while it is predicted there will be enough of the vessels to take care of the coastwise trade without any attempt being made to increase the rates.

**TOURISTS AS AGENTS FOR AMERICAN PRODUCTS.**

[From Consul G. C. Cole, Dawson, Yukon Territory, Canada.]

American tourists and others traveling in foreign countries could accomplish a great deal toward creating a market for American products if they would use a little tact and national pride by visiting stores and shops and calling for some American-made article.

No merchant will carry a class of goods for which he has no demand; neither will there be a demand for a product of which the public knows nothing. If the tourist and others would call for American products when purchasing articles abroad and not accept the substitute offered them until they have visited a number of stores, the merchants would soon begin to inquire as to where and how they could procure these goods to carry them in stock. The public would also learn that this new product was in demand and on the market and would begin to make purchases.

This mode of introducing American wares affords the tourist an opportunity to visit the shops, which are a source of pleasure to most people—in fact, form one of the chief pleasures of the sight-seer.

I make it a rule to visit as many stores as possible when in foreign countries (invariably calling for some American product, but seldom finding it), for two reasons; one is to see the class of goods carried, the price charged, the mode of display made, and the manner of selling them; the other is to see if any American goods are handled, and if so, what class and to what extent, and the price obtained.

**How a Woman Established a Trade in Shoes.**

When stationed at Buenos Aires, Argentina, I was called upon by a lady, who had been living there but a short time, for the address of a certain shoe factory in the United States which made the kind of shoe she had been wearing. The address was furnished and a pair of shoes ordered through a merchant of that city. In due course of time the lady received the shoes and exhibited them to some of her friends, who in turn, being well pleased with the neatness and other qualities, gave orders for this shoe in the same way. Through the efforts of these ladies so many others made demands that the merchant was obliged to order by the case.

This trade was established by one lady in a special effort to procure the shoe of her choice, yet wholly unconscious of what she was accomplishing for American trade in that country.

I give the illustration to show how simple it is sometimes to create a demand and establish a trade for an article of merit. If tourists and others were advised in some way of what they could do for American commerce by a slight effort along the lines here suggested, I am confident they would avail themselves of the opportunity.

---

**German Agency Contract.**

Consul Herman L. Spahr, of Breslau, Germany, forwards a form of agency contract, in German, drawn up by a German lawyer for use in that country, with the warning that American manufacturers in signing a contract for an agency with a foreign house should be careful not to make themselves liable to pay commissions on all sales which might be effected in any way in that territory for many years to come. [The blank will be loaned upon application to the Bureau of Manufactures.]

**BOOKBINDING FOR THE TROPICS.**

[From Consul General George E. Anderson, Hongkong.]

American publishers and bookbinders generally, issuing publications which may be used in the Tropics, need to give attention to the matter of employing in their work such materials as will not only resist the usual effects of a hot, damp climate, but which also will withstand the onslaughts of various insects and worms.

This is of particular importance to publishers of trade catalogues. Hundreds of catalogues of American business houses, prepared at great expense and bound in permanent board or cloth, attractive in design, and calculated to merit a place in a trade library, are ruined by two or three days' exposure in an office. Many of them in whose binding ordinary glue is employed come apart as a result of the dampness of the climate. More of them are damaged by the ravages of insects, largely by cockroaches eating the sizing or glue stock in the filler of the cloth or board binding. There are also other pests to be guarded against in this line.

**Philippine Government Experiments.**

For some time the bureau of printing of the government of the Philippines has been carrying on, with satisfactory results, experiments in the use of special glue stock and sizing and of various materials for book coverings. In each book issued is inserted a printed slip which asks the recipient to report to the bureau the experience had with that particular sort of binding. Results are watched and a record kept of the advantages of each particular variety of binding materials. At present the publications of the bureau are being issued in bindings made from approved materials, and the result is that these are practically the only publications received in this part of the world that are not immediately injured by local pests.

Experience in other tropical countries is practically the same as that in South China, and the efforts of the government bureau at Manila ought to be of more than passing value to publishers generally. American exporters will increase the probable value of their trade catalogues to be used in tropical countries if they will give the matter of resisting dampness and insect pests special attention.

---

**VISIT OF CHINESE BUSINESS MEN.**

The Associated Chambers of Commerce of the Pacific Coast (central office, San Francisco, Cal.) has extended to the Consolidated Chambers of Commerce of China an invitation to send a delegation to tour the United States. This will carry out a plan made a year ago, but which was delayed owing to the disturbed conditions in China. The present invitation was conveyed in person by Robert Dollar, who has just returned from China. Mr. Dollar says that before leaving San Francisco arrangements had been made for a special train of sleeping and dining cars to carry the party about 12,000 miles by rail and to visit 63 mainland cities. It is estimated that 90 days will be required to complete the tour.

The main object, as outlined by Mr. Dollar, was that the excursion would serve to stimulate trade relations as well as increase friendly feeling between the two countries.

### FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

**No. 8573. Representation in Spain and Portugal.**—The Bureau of Manufactures is in receipt of a communication from a correspondent stating that he is about to make a commercial tour of Spain and Portugal. He states that he will undertake to represent and establish connections for American manufacturers; that he has already represented American firms in various foreign countries and has secured orders for such articles as office appliances and furniture, school desks, books, typewriters, labor-saving devices, engineering supplies, etc.

**No. 8574. Fire department apparatus.**—Consul General David F. Wilber, of Vancouver, British Columbia, Canada, has forwarded copy of a notice calling for tenders for fire department apparatus that has been authorized for that city. Bids will be received by the City Clerk, Vancouver, until May 2 for one auto gasoline pumping engine, two auto hose wagons, and one combination chemical engine and hose wagon, auto; also miscellaneous equipment for each car. Specifications and further particulars regarding the above may be obtained by addressing the City Clerk.

**No. 8575. Waterworks and sewerage franchise.**—An American legation in a foreign country reports that the local Government will undoubtedly in a short time take measures to install systems for supplying water to two cities in the country. The Government intends that this enterprise shall be given to a private company under a franchise for 99 years. Bids for this franchise will be invited and the award will be made to the bidders offering the lowest metered rates to consumers. Coupled with this proposition is one for the construction of a modern sewer system for the two cities, an annual charge being permitted for all entries thereto, and the award being similarly based upon the prices fixed for such entry. These franchises are valuable ones, and the projects should command the attention of American capitalists and contractors. Copy of the complete report, giving further particulars, will be sent to interested firms by the Bureau of Manufactures.

**No. 8576. Briquet-making machinery.**—A resident of Germany informs an American consular officer that he desires the names of the manufacturers or inventors of a briquet-making machine according to the Armstrong-Mordan process. This correspondent states that the machine produces a briquet composed of coal dust, crude petroleum, and straw, said to be cheap and of high caloric power.

**No. 8577. Construction of buildings for normal schools.**—The American consulate general at San Salvador, Salvador, reports that the Ministry of Public Instruction of Salvador has advertised for bids for the construction of two buildings of reinforced cement and concrete, to be occupied by the normal schools. The buildings are expected to cost about \$60,000 each. Bids must be received by the ministry on or before July 4, 1912. Two copies of the specifications, in Spanish, accompanied the report and will be loaned by the Bureau of Manufactures. Plans will be forwarded by the consulate general as soon as they are issued, and these also will be loaned by the bureau when received.

**No. 8578. Leather.**—An American consul in a European country reports that there are excellent opportunities for the American exporter in his district. A firm engaged in the agency business for many years has expressed a desire to represent American manufacturers of leather, especially fine upper leather.

**No. 8579. Glassware of various kinds.**—A business man in a European country has advised an American consulate that he would like to secure an agency from some American firm exporting cut glass, pressed glass, glass vases, and compot dishes of colored glass.

**No. 8580. Furniture.**—A firm of manufacturers' agents in a Latin American country informs an American consular officer that it desires to obtain the local representation of the following lines of American goods: Roll-top desks, basket furniture, cheap chairs, better class office furniture, bookcases, cradles, combination chairs, and other lines of furniture.

**No. 8581. Exploitation of mines.**—Tenders are invited by the Prefecture, Algiers, Algeria, for the exploitation of copper, silver, and lead mines, of about 18 square kilometers. No further particulars are supplied.

- No. 3582. Telephones.**—The Deputy Postmaster General, Perth, Western Australia, will receive bids until May 8, 1912, for the supply and delivery of common battery telephones (schedule No. 190). Copies of the specifications and forms of tender on application to the High Commissioner for the Commonwealth of Australia, 72 Victoria Street, S. W., London, England. Local representation is necessary.
- No. 3583. Railway construction and rolling stock.**—The Minister of Ways and Communications in the Russian budget for 1912 has allocated \$58,254,504 for railway construction; \$26,900,704 for extension and improvements; and \$9,599,894 for rolling stock. The Japanese budget for the same year also authorizes the expenditure by the Railways Department of \$26,814,415 for new works and improvements. No further particulars are furnished in either case.
- No. 3584. Harbor extension.**—An important scheme of harbor extension is projected for Dundee, Scotland, at an estimated outlay of \$875,970. It is proposed to build a wall along the river front for 1,000 feet. An estimate drawn up is framed as follows: Cost of monolith wall and fendering, filling at back of wall (ferroconcrete), shed, roads, drains, cranes, lighting, and extension of the common sewer, \$754,823; cost of dredging a berth 200 feet wide to a depth of 28 feet below harbor datum and dredging the bank in front of berth to 20 feet below harbor datum, \$155,728. It is also suggested to have a new 120-ton crane on sheer legs, the estimate being \$72,997 for the crane and \$24,332 for the necessary foundations. A subsidiary contract may also have to be tendered for the removal of a large quantity of rock at the approach to the Camperdown Wharf. This work is estimated to cost \$48,665, and the removal of a bank in the line of approach to the western wharf is estimated to cost about \$19,466.
- No. 3585. Railway.**—The Public Works Department, La Paz, Bolivia, invites tenders for the construction of a railway from Potosi to Sucre, and from Quiaca to Tarija. Particulars as to date for receipt of tenders are not furnished.
- No. 3586. Tramway extension.**—The London County Council, Spring Gardens, S. W., London, England, contemplates the extension of its East India Dock Road (London) tramway section, and is prepared to receive tenders for the execution of the work. The value of the contract is placed at \$91,000.
- No. 3587. Dry-dock tenders.**—It is reported that the Canadian Federal Government will call for tenders for the erection, under the dry-dock act, of a huge graving dock in the port of Quebec, the dimensions to be 1,150 feet long, 110 feet wide, and at least 37 feet deep. The act provides that every company tendering shall submit with its tender a report of its engineers establishing the advantages and disadvantages of the two respective projected sites, one at Levis and the other at the mouth of the St. Charles River. Tenders must be sent in on or before May 20, 1912.
- No. 3588. Cranes.**—"L'Administration de la Marine," Dunkirk, France, is prepared to receive tenders for supplying cranes, the estimated value of the contract being placed at \$198,553. No further particulars are given.
- No. 3589. Telephone installations.**—In the Norwegian budget for 1913, provision is made for the expenditure of \$405,539 by the Post and Telegraph Department for telephone installations. Details are not supplied.
- No. 3590. Harbor works.**—The harbor board, Valencia, Spain, will expend about \$25,000 on harbor works. Particulars, form of tender, and conditions governing this contract may be obtained from "Junta de Obras del Puerto," Valencia, Spain.
- No. 3591. Bridge.**—Tenders are invited by the Public Works Department, Montevideo, Uruguay, for the construction of a bridge over the Arapey Grande. Tenders will be received through local agents only.

### DIESEL-ENGINE COMBINE.

[From the London Financial Times.]

It is reported that an amalgamation is contemplated between the Diesel Engine Co.; Carels Bros., a Belgian undertaking that manufactures Diesel engines; and Davey Paxton & Co., of Colchester. The capital of the combined undertaking is placed at £750,000 (\$3,650,000), of which between £400,000 (\$1,847,000) and £500,000 (\$2,433,000) may be publicly issued, and the balance held in reserve. Considerable developments are reported in connection with the Diesel engine, and this amalgamation is probably for the purpose of assisting these. The system of giving other firms a license to manufacture Diesel engines, however, has proved successful and is not to be discontinued.

**SALE OF CIGARETTES IN FRANCE.**

[From Consul General Frank H. Mason, Paris.]

As the sale of tobacco and its products is a Government monopoly in France, permission must be obtained from the director general of State manufactures for the introduction of foreign cigarettes for public sale in that country. Two models of cigarettes and two packages of each model must be presented by each maker desiring admission. The applicant must agree to furnish to the regie (the Government monopoly) specified quantities of cigarettes annually, state the price and give a description of each model of cigarette, the style of packing, number of cigarettes in a package, etc., and submit samples. The retail selling price is calculated on the basis of the weight and wholesale price of the cigarettes by a formula established by the Government regulations. All cigarettes containing substances detrimental to the public health and all those whose packing does not conform to certain rules are refused admission.

After being admitted, each manufacturer is required to deposit a guarantee fund of 20,000 francs (\$3,860) in currency or Government bonds, which sum is returned at the end of three years or whenever the profits of the brand exceed triple the annual minimum exacted by the State, unless the brand is suppressed within that time, when the guaranty is retained by the State. Upon receiving an order from the regie, the manufacturer is required to ship the goods promptly, freight prepaid, to the Manufacture des Tabacs de Paris-Reuilly, where they are stored at the manufacturer's risk until verified and accepted by the regie. In case the sale of the various types of a certain brand fail to return an annual profit of 40,000 francs (\$7,720) to the regie during the first three years of sale, the brand is suppressed.

In October, 1911, the administration of the State manufactory was authorized to negotiate contracts for the trial introduction of self-lighting cigarettes, subject to indorsement by the public-health officers. Up to March 15, 1912, no foreign manufacturers of such cigarettes had availed themselves of the new regulation.

[Translations of the complete regulations of June 28, 1910, governing the admission into France of foreign cigarettes for public sale, and the decree of Oct. 6, 1911, regarding the sale of self-lighting cigarettes, may be obtained from the Bureau of Manufactures.]

---

**THE BRITISH TRADE COMMISSION.**

The British Imperial Trade Commission has now been completed. The representatives of the United Kingdom are Lord Inchcape, chairman; Sir Rider Haggard, Sir Edgar Vincent, Sir Charles Owens, late of the London Northwest Railway; T. Garnett, cotton manufacturer, of Manchester; and William Lorrimer, Glasgow.

The Dominions' representatives on the commission are: George Foster, Canada; Donald Campbell, Australia; Bowering, Newfoundland; Sir David Graaf, South Africa; Sir J. Ward, New Zealand, with W. A. Robinson, of the Colonial Office, as secretary of the commission.

A Government official announced in the British Parliament that he hoped the labors of the trade commissioners would be concluded before the next imperial conference was held.

## TARIFF SYSTEMS OF LATIN AMERICAN COUNTRIES.

The present report on Panama is one of a series of reports by Dr. Rutter, tariff expert of the Department of Commerce and Labor, who has been sent, as commercial agent of the Bureau of Manufactures, to make a study of the tariff systems and customs regulations of Panama and the South American countries.<sup>1</sup> The reports are not limited to the tariffs of the various countries, but deal also with such subjects as port regulations, patent and trade-mark laws, and other Government regulations and facts of interest to those having business transactions with these countries.

### PANAMA.

[By Commercial Agent Frank R. Rutter.]

#### Customs Tariff.

With few exceptions, the import duty imposed by Panama is 15 per cent ad valorem, calculated upon the invoice value. This same rate was prescribed by the first customs tariff enacted after the establishment of the Republic, but remained in force only a few months. In December, 1904, it was reduced to 10 per cent ad valorem, in order to comply with an arrangement entered into with the United States War Department, whereby it was agreed, in return, that imports in the ordinary course of trade should not be entered at the terminal ports of the Canal Zone, but should instead be shipped in transit to the appropriate port of Panama and thus be subject to the regular schedule of duties established by the Republic. From this régime are excepted goods in transit across the Isthmus, coal and oil for seagoing vessels, and supplies for the Isthmian Canal Commission or the Panama Railroad, any of which may be entered at the Canal Zone ports without the intervention of the customs authorities of Panama.

In January, 1911, the assent of the United States was given to an increase in the ad valorem rate of duty from 10 to 15 per cent. By law of January 11, 1911, the President of Panama was authorized to

<sup>1</sup> Preliminary announcement of this tour was made in Daily Consular and Trade Reports, Jan. 26, 1912.

increase the rates up to the new limit. The Executive decree of January 23 carried the rate generally only up to 12½ per cent on and after May 1, 1911, although a few articles (silks, jewelry, furniture, silver and plated tableware, and perfumery) were subjected to the full duty of 15 per cent ad valorem, while flour, lard, rice, and corn remained dutiable at 10 per cent ad valorem. A subsequent decree, effective September 1, 1911, raised the rate on articles dutiable ad valorem to 15 per cent, except on wheat, flour, corn, rice, lard, and alfalfa,<sup>1</sup> the rate on these articles being 10 per cent ad valorem. The duty of 12½ per cent ad valorem on sirups, extracts, grape juice, mineral and aerated waters, elixirs, and medicinal wines was not affected by the decree.

**Specific Rates—Articles Exempted from Duties.**

Specific rates of duty are applied to imports of cattle and beef, coffee, salt, tobacco and manufactures of tobacco, opium, matches and materials for their manufacture, beverages, essences, and sweetening substances for use in distillation. By the arrangement entered into with the United States, the Government of Panama has agreed not to increase the rates of duty on any of these articles, with the exception of wines, liquors, alcohol, and opium. A number of articles are exempted from duty, the most important of which are breeding stock, ice, guano, living plants and cuttings, seeds, coal, newspapers and printed books introduced by mail, raw materials for candle and soap making, news paper, printing ink, and machinery and supplies for printing and binding, irrigation machinery, school supplies imported by municipal authorities, and supplies for members of the diplomatic corps, for the Isthmian Canal Commission, and for the Panama Railroad.

Absolute free trade prevails between Panama and the Canal Zone. No customs frontier is maintained. This situation is practicable because all articles intended for consumption within the Canal Zone, unless imported directly by the Isthmian Canal Commission or the Panama Railroad, must have satisfied, on their first importation, the customs requirements of the Republic. Imports into the United States from the Canal Zone, as well as from the Republic of Panama, are subject to the ordinary rates of duty prescribed by the United States tariff.

**Dutiable Value.**

Since the great majority of articles are subject to ad valorem rates of import duty, it is natural that efforts should be made to guarantee the correctness of the values shown in the accompanying invoices. It is required that invoices be made out on forms sold by the consulates of Panama,<sup>2</sup> that they be certified to by a Panaman consul, and that the insurance papers be submitted to the consul at the same time as the invoices. This last requirement is made by few, if any, other countries and frequently causes delay in the shipment of merchandise. If no insurance is to be taken out on a shipment, a declaration to that effect, under oath, is necessary. The Government also reserves the right to purchase at the invoice price any goods believed to be undervalued. (See ordinance No. 30, 1904, art. 10, and Law No. 8, 1907, art. 11.)

<sup>1</sup> On alfalfa the rate of duty from May 1 to Sept. 30, 1911, was 12½ per cent ad valorem.

<sup>2</sup> At the price of 15 cents per set.

**How Imports are Entered.**

The geographical situation of Panama, with its two chief cities completely surrounded by the Canal Zone, is unique. Imports landed at Cristobal or Balboa, if consigned to business houses and not intended for reexportation, must be delivered to the Panama Railroad, conveyed either to Colon or Panama, and held there until proof is given that the import duties have been paid. The railroad company assumes the obligation of transporting the goods under seal and its storehouses serve as a kind of bonded warehouse. No customs warehouses are maintained by the Republic, either at Panama or Colon. Storage is charged as follows, after goods have been 48 hours in the railroad warehouses: Barrels, half barrels, or packages (unless of extra size), 25 cents per week; hides, 10 cents each per week. Similarly, cars detained longer than 72 hours are subject to a charge of \$5 a day. In actual practice, however, prompt delivery is customary, the principal importers having adequate storage rooms of their own.

**Special Exemptions from Duty.**

Samples imported by commercial travelers are admitted on the deposit of sufficient funds to cover the duties stipulated in the tariff, and the deposit is returned on proof of the reexportation of the samples, without limitation as to the length of time that the samples remain in the country. No license fee is required from commercial travelers.

Articles imported by the Government are not subject to duty. Special remission of duties is sometimes granted on petition of the importers, setting forth the reasons justifying the free admission of their goods, when these are intended as materials for public works, or when, as in the case of machinery, they are to remain in the country only for a limited time.

Books and periodicals are exempted from duty when imported by mail. Printed matter intended for advertising purposes is now liable to a duty of 15 per cent, the rate prior to the arrangement with the United States having been 40 per cent *ad valorem*. This provision refers primarily, if not exclusively, to advertisements of Panama business houses printed abroad and imported in bulk. Catalogues and advertisements of foreign firms, especially when sent by mail in single copies, are, it is understood, not liable to duty, and it is doubtful whether duty would be levied even if the catalogues were sent in larger quantities for distribution, provided that they were intended to advertise articles of importation and not some local business house.

**Tariff Classification—Port Facilities.**

No special provision is made for giving advance information concerning the application of the tariff of Panama to individual articles. Owing to the simplicity of the schedule, comparatively few questions arise in respect to classification. It is stated, however, that the *Secretaría de Hacienda* will indicate in advance of importation the rate of duty applicable to any article not clearly described in the tariff; requests for such information should contain a full description of the article in question, accompanied whenever practicable by samples, and may with advantage be transmitted through the consul general of the United States at Panama.

The docks at Cristobal and Balboa and, with the exception of one pier at Colon are controlled by the Panama Railroad. The docks at Balboa, owing to the heavy tides of the Pacific, with a mean variation there of about 20 feet, have had to be equipped with cranes. The charges are based on the amount of cargo loaded or discharged, the rate being for most articles 80 cents per ton for dockage and 10 cents per ton for handling. At the Caribbean ports (Cristobal and Colon) the charges for steam vessels are fixed amounts, irrespective of the size of the vessel or the cargo shipped or landed. The work of handling the cargo at Cristobal or Panama must be performed by the shipowners and not, as at Balboa, by the Panama Railroad.

#### **Packing of Goods.**

The problem of packing for shipment to Panama is comparatively simple. The import duty on most articles is not affected by the packing used, whether heavy or light, and the shipment is made exclusively by steamers landing at well-equipped docks; sometimes, however, owing to the limited dock space on the Pacific side, merchandise is lightered to shore and then hauled a short distance by rail. No peculiar form of packing is therefore necessary; it is sufficient if the cases used are strong, and the goods are packed so as to withstand dampness. Notwithstanding the comparative simplicity of the problem in respect to articles for consumption in Panama, many complaints of defective packing are heard. It is believed, however, that there has been material improvement within the last few years, especially in the case of purchases made by the commissary department of the Panama Railroad, which handles the larger part of the imported articles used by the employees of the company and of the Isthmian Canal Commission. The improvement is perhaps attributable largely to the careful stipulations as to packing made in the invitations for bids and the insistence upon the strict observance of such requirements. In the case of shipments to private consignees similar packing should invariably be employed, unless the purchaser gives more precise instructions.

#### **Goods Arriving from United States.**

The packing of foodstuffs imported from the United States is said to be generally satisfactory, although formerly insufficient attention was given to the need of protection against mold, due to the humidity and heat, and, even yet, grain is frequently shipped in old bags, too frail to withstand the handling, and, in spite of extra care taken by the dock and railroad authorities, much grain is lost.

For dry goods and similar articles the packing used by American exporters is said to compare in general unfavorably with that used by their European competitors. In order to avoid theft en route, the name of the article should not appear on the package. The minimum thickness of board advised for cases is seven-eighths inch, and the cases should be strengthened with three iron bands or else wired and sealed. An example was cited of two pairs of shoes being taken from a case which was fastened with bands at the two ends, but not around the middle; the boards were forced near the middle and afterwards the case was closed again. Linoleum is said to withstand the handling better if rolled, covered with burlap, and marked "Use no hooks," than if inclosed in a crate. For a long journey it is frequently desirable to cover a case with burlap, so that its appearance

when delivered to the consignee will be attractive. Every effort should be made to preserve the advantage enjoyed by manufacturers of the United States because of lower freight rates and the natural preference on the part of the large American population in Panama and the Canal Zone for articles to which they are accustomed.

**Absence of Additional Taxes—Trade-Marks and Patents.**

No internal-revenue, provincial, or municipal taxes may, under the arrangement between the United States and Panama, be imposed on imported merchandise. On beer brewed in the Republic a tax of 2 cents per liter is imposed, and on distilled spirits a tax of 10 cents per liter; a tax of 10 cents per liter is, by Executive order of May 13, 1911, also applicable to spirits distilled in the Canal Zone.

The protection of the patent, trade-mark, and copyright laws of the United States was extended to the Canal Zone by Executive order of March 12, 1907, effective April 15, 1907. So far as concerns the Canal Zone, therefore, no formality is required in the case of trade-marks registered or patents and copyrights granted in the United States. The Republic of Panama, however, has distinct laws governing patents and trade-marks. Copies of the laws of November 14, 1908, and January 29, 1911, dealing with patents and trade-marks, are on file in the Bureau of Manufactures, both in the original and in translation. The essential feature is the requirement of registry, granted in the case of trade-marks for a period of 10 years, renewable indefinitely for corresponding periods, and in the case of patents for 5 to 20 years. Application must be made on stamped paper and be accompanied, respectively, by four copies and a cut of the words, phrase, symbol, or combination thereof desired for use as trade-mark, or two copies of the description and drawing and, when practicable, a model of the object to be patented. After two announcements in the *Gaceta Oficial*, 90 days must elapse before the registry is granted, which is regarded merely as *prima facie* evidence of the right of the applicant, no examination being made as to any conflict with prior rights. The fee for trade-marks<sup>1</sup> is \$25 and for renewal of trade-marks \$20, while for patents the fee is \$5 a year. Foreign trade-marks or patents must be previously registered in the country of manufacture, and in the case of patents the period is limited to that still to run in the country in which first patented, but may in no case exceed 15 years. Patents lapse if not worked within the first third of the period for which they are granted. When originally granted for less than the maximum period, the time may, at the discretion of the Government, be extended up to the limit fixed by law.

**Labeling Requirements.**

Penalties, equal to those for the infringement of registered trade-marks (fine of \$25 to \$250 or imprisonment for one to three months), are provided for the false labeling of goods, with intent to defraud, in respect to their nature, quality, quantity, number, weight, measure, or country of origin or manufacture. Aside from these restrictions, contained in the trade-mark law, the customs regulations require that all shipments of champagne shall be accompanied by a certificate of origin, issued by the local authorities and viséed by the consul for

<sup>1</sup> In the case of trade-marks for Panaman products, only half the ordinary fees are charged.

a fee of \$1; the importation of other sparkling wines labeled "champagne" or under that name is prohibited. Methylic alcohol must be denatured on entering the country so as to prevent its use in the manufacture of alcoholic liquors.

#### **Stability of the Tariff.**

The tariff arrangement between Panama and the United States guarantees a general low level of duties, and, more important still, safeguards importers against any material change in the rates of duty and against the imposition of additional taxes. With freight rates favoring shippers from the United States to the extent of 15 to 20 per cent, and with the preference for American goods on the part of a large portion of the residents in Panama and the Canal Zone, the future for American trade is bright. The importance of the market is far greater than the population of the Republic would indicate; even now the Isthmus is on the highway of travel from the west coast of South America to Europe, the West Indies, and the United States, and when the two oceans are united the commercial significance of Panama can not fail to be enhanced. Every effort to conserve and promote trade with Panama, by observing the requirements as to packing, by according the usual credit facilities, and by catering to the natural preferences of the buyers, will be amply repaid by trade with the whole Pacific coast of Central and South America.

---

### **LACK OF FORESTS IN CHINA.**

[From Consul General Samuel S. Knabenshue, Tientsin.]

Forestry is a subject in which the Chinese evince no interest, as there are no forests in this country. The Great Plain, on which Tientsin is located, never had forests, being entirely of delta formation, and the mountainous regions to the north and west were denuded of their forests centuries ago. The surface soil of these mountains has been washed away, and to reforest them would be a matter of great difficulty. The only nurseryman in this consular district is Mr. F. Bade, of the Tientsin Nursery Gardens, who is much interested in tree culture. He raises various shade and ornamental trees from seed, but the soil of the Great Plain is alkaline and comparatively few varieties of trees will flourish in it. He has had the most success with the acacia [which is also being used by the Germans in the Tsingtau district].

A British corporation engaged in mining and shipping has a concession for coal mining in the Kaiping district, about 80 miles northwest of Tientsin. [The name of the manager may be obtained from the Bureau of Manufactures.] The surface of the region is broken by hills 50 to 200 feet high, which are absolutely bare of trees, and the company has begun the work of afforestation. It already has 1,000,000 young trees growing, chiefly acacia, and is preparing to establish a nursery for them on an extensive scale.

There are no Government forestry officials, schools of forestry or horticulture, magazines devoted to these subjects, or associations of foresters, nurserymen, seedsmen, etc., in China. [At Tsingtau, German China, afforestation has been successfully carried on by the German Government. See Daily Consular and Trade Reports for Jan. 4, 1910, and June 5, 1911.]

## AMERICAN TRADE WITH GUATEMALA.

[By Consul General George A. Bucklin, Jr., Guatemala City.]

Notwithstanding the disadvantages in freight rates and exchange which American goods suffer, the imports from the United States into Guatemala are increasing. This is due largely to the growing interest which American manufacturers and exporters are taking in the Central American market. Much more could be done, however, if more favorable freight rates and better banking facilities were established.

The imports from San Francisco apparently have decreased, with a corresponding increase from New York and New Orleans. This is due partly to the apparently higher market of the American Pacific ports, but perhaps even more to the freight arrangements made between the Guatemala Railroad, the Central Railroad, and the United Fruit Co. steamships, by which the carrying is done, to their mutual profit and to the exclusion of the Pacific lines.

**Exports to United States.**

Statistics covering the imports for even 1910 are not yet available. The following table shows the exports to the United States from the several districts for that year:

Articles.	Total, 1909.	1910					Total.
		Guatemala City.	Champerico.	Livingston.	Ocos.	San Jose.	
Bananas.....	\$170,450			\$331,442			\$331,442
Chicle.....	2,454			412			412
Cedar logs.....		\$708					708
Coffee.....	2,220,085	19,676	\$425,517	119,172	\$279,490	\$716,783	1,590,634
Hides.....	17,487		2,395	15,084	2,256		19,735
Horns.....	20		237	100			337
Mahogany.....	52,632			65,304		16,770	82,074
Orchids.....		565					565
Rubber.....	47,478		66	44,565	260	11,885	56,776

Skins.....	12,759		337	11,879	270	4,542	17,029
Sugar.....	42,537		7,320			39,551	46,671
All other articles.....	4,374	95	196	842		20	960
<b>Total.....</b>	<b>2,570,618</b>	<b>21,044</b>	<b>436,068</b>	<b>569,120</b>	<b>282,276</b>	<b>789,357</b>	<b>2,117,066</b>

**Industrial Conditions and American Investments.**

There have been no important additions to the industries of the country. Prospective investors state that they are awaiting more stable conditions. Mining is practically at a standstill, miners complaining that the obstacles to importation of explosives make development of mines impracticable. Plantations are not developing, owing to the increasing scarcity of labor, thousands of Indians apparently having gone into Salvador, attracted by higher wages, and the difficulty of arranging with the jefe politicos for an assured number of laborers when most needed. The jefe politicos or governors of the Departments receive a salary equivalent to only a few dollars per month and customarily receive 3 pesos per day from the planter for each laborer supplied, of which the laborer is given  $1\frac{1}{2}$  pesos, equivalent to about 8 cents gold, per day.

The steady increase in the number of inquiries from Americans interested in the opportunities for investment and industry indicates

an awakening interest in the possibilities of Guatemala. Excellent opportunities are offered to the judicious investor. Money brings 10 to 12 per cent interest, but the investor should first study local conditions before placing his money. In general, large undertakings made money during the past year, and this statement applies also to even smaller mercantile houses whose experience has enabled them to forecast the market and to provide against currency fluctuations.

[From British consular reports.]

### Imports into Guatemala.

The only available official source of information regarding the trade of Guatemala is contained in the annual report of the Ministry of Finance, but up to date the statistics even for 1910 have not yet appeared. The following data, which may be regarded as substantially correct, were collected from various sources:

The imports into the Republic for 1910 were valued at \$5,189,271 against \$4,074,302 for 1909. This increase was probably due to the necessity of replenishing stocks which had been allowed to run down in the expectation of a considerable fall in the rate of exchange (an expectation which was not realized) arising from the discussion for an adjustment of the currency, but which is still in abeyance.

### Imports and Principal Countries of Origin.

The following table shows the total value of the principal imports into Guatemala during 1910 and the countries supplying the greatest amounts in the order given:

[Abbreviations: United States, U. S.; United Kingdom, U. K.; Germany, Ger.; France, Fr.]

Articles.	Total.	Principal countries of origin.	Articles.	Total.	Principal countries of origin.
Automobiles and parts..	\$42,329	U. S.	Iron and steel, and manufactures of:		
Cotton goods:			Builders' hardware..	\$60,213	U. S.
Piece goods—			Cutlery.....	26,445	U. S., Ger.,
Bleached.....	94,046	U. K., U. S.,	Galvanized-iron sheets.....	82,750	U. S.,
Drills.....	155,393	U. S., U. K.,	Nails and bolts.....	20,361	U. S., Ger.,
Dyed.....	56,012	Ger., Do.	Piping and tubing.....	24,727	U. S.,
Gray.....	104,369	U. S., U. K.	Railway material.....	708,040	Ger., Do.
Printed.....	207,425	U. K., U. S.,	Tools.....	68,049	Ger., U. K.,
Other piece goods.....	130,846	U. K., Ger.	Wire and manufactures.....	43,239	U. S., Ger.
Made-up goods.....	203,844	U. K.	Jute bags.....	113,380	U. K.
Threads, sewing.....	59,965	U. K., Ger.	Leather and manufactures.....	117,088	U. S.
Yarns.....	190,675	U. K.	Machinery.....	121,853	Do.

Electrical apparatus and supplies.....	48,913	Fr., Ger.	Steerin.....	64,671	Ger.
Flour, wheat.....	315,481	U. S.	Wood and manufactures.....	74,249	U. S.
Hats.....	32,133	Do.	Woolen manufactures.....	166,600	Ger., U. K.
Glass.....	27,097	Belgium.			

### Increased Demand for American Goods.

About \$730,000 of the increase was due to the greater receipts of textiles (principally cotton prints and cotton made-up goods), corn, cocoa, beer, and railway material. The principal countries exporting to Guatemala are the United States, United Kingdom, and Germany. Over 70 per cent of the British imports into Guatemala is in cotton goods, but the receipts of British drills and plain and fancy cotton goods have been declining, while those from the United States and Germany have been increasing.

The United States leads in the exports of iron and steel goods to the Republic, and it is only a matter of a short time before that country will control the market in such goods as galvanized sheets, barbed wire, wire for telegraphs and telephones, wire netting, iron tubing, steel pillars, tinplates, iron bridges, and railway material. There was an increase in the imports of flour, all of which came from the United States,

the receipts amounting to \$273,000 in 1909 and \$312,000 in 1910. The imports of beer also increased, due to the introduction of the Mexican product, which comes into competition with the American and German beers. The Mexican brewers have succeeded somewhat in imitating the taste of the brands with which they compete in this market.

There is a large number of German merchants throughout the Republic, many of whom are engaged in the dry goods and hardware trades, and the greater part of the coffee plantations in the country is in German hands, and therefore their wants are supplied from Germany if possible.

#### Coffee, Panela, and Banana Cultivation.

The coffee crop of the season 1910-11 amounted approximately to 720,000 quintals (quintal=220.46 pounds) of clean coffee, and the present season is expected to yield about the same amount. Owing to the failure of the beet crops in many countries last season, and the consequent high prices obtained for the Guatemalan panela (brown sugar), it is expected that the output will be much larger this season. The maximum price per hundredweight of 112 pounds paid for panela last season was \$3.28. The cultivation of bananas by the United Fruit Co. in the Lower Motagua Valley, near Puerto Barrios, is rapidly extending.

---

### PANAMA REGISTRY LAWS.

[From Consul General Alban G. Snyder, Panama.]

In order to secure Panaman registry a ship must belong wholly or in part to one or more Panaman citizens resident in the country, or else to a Government official if he resides abroad, but the law does not state how much interest or what part of the vessel such citizens must own.

A ship can not be permanently registered and fly the Panaman flag without coming to some qualified port of the Republic to obtain sailing papers and comply with the formalities exacted by law, but in some instances, upon request, the Government has granted authority to a Panaman consular official to issue temporary sailing papers, the applicant agreeing to change them when the ship comes to Panama. The time for which this temporary certificate is valid is indicated in the authorization issued to the consular officer. Once issued it is not necessary to renew a definite register unless lost, and it can be used for all times for navigating in foreign waters. The owners of a ship registered in Panama may sell or transfer their rights to any parties, but it is understood that the ship's register can not be ceded or transferred with the ship or transferred for the use of another ship.

The cost of registry is collected but once, at the rate of 50 cents for each registered ton or fraction thereof, and there are no other charges upon vessels save those paid to consular officers abroad for services rendered the vessel in accordance with the fiscal regulations. A Panaman consular officer at a port where a vessel flying the Panaman flag enters should immediately visit the ship and is authorized to collect \$2.50 for each visit of inspection so made.

The Colombian dispositions found in the Fiscal and Maritime Codes and other laws additional and reformatory thereof are in force in Panama. Among these law 79 of 1880 requires as a condition for the nationalization of a vessel that the captain or purser and at least half of the crew be Panaman citizens, but this can not be enforced owing to a lack of seamen in the Republic.

---

*Railway rolling stock*, worth \$250,000 has been ordered from British firms by the Siamese Southern Railway.

**COMMERCE OF THE PORT OF HULL.**

● [By Consul Walter C. Hamm.]

The trade of the English port of Hull, which ranks third in the United Kingdom in the volume of its commerce, was unsatisfactory throughout last year, attributed largely to unsettled labor conditions.

There was a large decrease in the exports to the United States, the principal items contributing to the decline being cottonseed, creosote, soya-bean, and other oils, and castor seed, glue stock, linseed, and wool. There was an increase in the shipments of fertilizer, glycerin, potatoes, and linseed and rapeseed oils.

**Receipts of Oilseeds and Shipments of Oils.**

Conditions in the seed-crushing industry, which is the principal business of Hull, were discouraging, due largely to the small crop of cotton seed in the United States and Egypt. The Indian crop, however, was good. The total receipts of cotton seed into the United Kingdom last year were 596,956 long tons, against 690,171 tons for 1910, of which the receipts at Hull were about 270,000 and 353,000 tons, respectively. There was also a heavy decline in the imports of soya beans, the total receipts into the United Kingdom in 1911 being only 222,657 long tons, against 421,531 tons for 1910, of which 145,362 and 245,829 tons for the two years, respectively, were imported into Hull.

The exports of linseed oil from Hull last year amounted to 4,331 long tons, compared with 3,646 tons in 1910. More than half the shipments were for Australia, being 2,334 tons, followed by India with 532 tons, United States 461 tons, Norway 319 tons, Egypt 175 tons, and Turkey 129 tons. The total exports of cottonseed oil were 7,058 tons, against 12,073 tons for 1910. The principal countries to which shipments were made last year were: Netherlands 1,917 tons, Germany 1,623 tons, Belgium 902 tons, United States 660 tons, Sweden 640 tons, Turkey 426 tons, Italy 262 tons, and Austria 200 tons. The soya-bean oil shipments amounted to 12,248 hundredweights of 112 pounds each, of which the principal exports were made as follows, in hundredweights: Netherlands 3,221, Germany 3,177, Belgium 1,281, Italy 1,165, France 825, Sweden 760, Denmark 269, Austria 259, and United States 114.

**Imports of Apples, Oranges, and Tomatoes.**

The fruit trade was smaller and less profitable than for some years, due principally to the fact that at the time when the fruits were coming in most abundantly a labor strike occurred, and much of the fruit spoiled in the holds of the ships. There were 36,481 packages of apples imported, against 14,386 packages in 1910, and 335,318 packages of oranges, against 346,610 packages. Most of the oranges come from Spain and Jaffa, but do not compare with the American product.

The imports of tomatoes have increased from 24,381 packages in 1909 to 155,475 packages last year. Hull has special facilities for the distribution of fruit and vegetables to the central counties of England and the Continent, and American shippers could largely increase their exports into this port.

**Decreased Receipts of American Wheat and Flour—Other Imports.**

There has been a steady decline in the imports of American wheat into this port during the past three years. The receipts from the east

coast in 1909 were 1,631,778 quarters, of 480 pounds each; in 1910, 1,286,838 quarters; and last year 1,221,684 quarters. From the west coast the decline has been still greater, the receipts being 136,851 quarters in 1909, 45,535 quarters in 1910, and 23,884 quarters last year. American flour also shows a decrease in the imports. The total receipts last year were 56,627 sacks, against 65,799 sacks in 1910 and 70,576 sacks in 1909.

The imports of merchandise arriving at this port from New York last year amounted to 122,842 long tons, against 98,883 tons for the previous year. The principal items last year were as follows, in tons: Wheat 67,856, oil 10,916, corn 8,219, bacon 6,888, lumber 4,875, glucose 4,539, sirup 4,313, lard 4,502, castings 964, apples 761, sugar 790, rosin 754, starch 486, cement 438, zinc oxide 416, cheese 370, oil cake 202, flour 141, canned meats 118, and dried fruit 101. The cargoes arriving from Boston amounted to 15,963 long tons, against 15,773 tons for 1910, of which 15,003 tons represented wheat, 520 tons Quaker Oats, 158 tons oats, 108 tons lumber, 57 tons hay, and 58 tons wood pulp.

#### Shipments to United States—Shipping.

The following table shows the articles and their value invoiced through the American consulate at Hull to the United States during 1910 and 1911:

Articles.	1910	1911	Articles.	1910	1911
Alum.....	\$6,502	\$12,819	Linsced.....	\$227,310	.....
Aluminium.....	6,255	.....	Oils:	.....	.....
Ammonia.....	21,429	18,231	Cottonseed.....	149,258	.....
Castor seed.....	47,457	17,823	Creosote.....	422,540	\$123,197
Chalk.....	.....	2,433	Linseed.....	5,862	33,741
Cliffstones.....	6,276	5,532	Rapeseed.....	31,353	168,392
Creosote.....	13,975	21,579	Soya-bean.....	139,571	47,747
Fertilizers.....	111,889	158,721	Onions.....	29,037	11,133
Fishing tackle.....	2,780	7,981	Paints and colors.....	4,954	5,243
Fish, salt.....	.....	8,609	Potatoes.....	.....	40,315
Glue.....	23,862	1,984	Sealskins.....	10,137	.....
Glue stock.....	56,054	15,420	Sheep casings.....	15,996	4,235
Glycerin.....	2,179	41,889	Soft soap.....	2,253	1,376
Grease.....	17,533	.....	Ultramarine.....	18,685	19,956
Herring.....	16,008	5,403	Washing blue.....	4,840	1,549
Herring, pickled.....	.....	9,629	Whiting.....	6,031	3,580
Hides and skins.....	12,021	18,679	Wool.....	04,738	5,167
Hide cuttings.....	.....	2,539	All other articles.....	279,369	52,263
Iron oxides.....	21,193	21,087			
Leather.....	10,278	6,323	Total.....	1,788,220	890,035

There were \$18,813 worth of dried fish invoiced through the consulate for Porto Rico during last year and \$350 worth of disinfectant fluid for the Philippine Islands.

Of the 5,120 vessels arriving at this port last year, only 63 were from the United States and of those departing 57 were bound for American ports; 97 vessels arrived from South American ports, 90 of which were from Argentina, and 75 vessels departed for South American ports.

#### Proposed Rubber Exposition in Java.

Consul B. S. Rairden, of Batavia, Java, has been notified by the Director of Agriculture of the colony that an International Rubber Exhibition will be held in Batavia during the first half of the year 1914, under the patronage of his excellency the governor general. The exact date has not yet been decided.

## NATIONAL COMMERCIAL ORGANIZATION SUGGESTIONS.

### Tentative Outline Plans Offered for Consideration.

The following "Memorandum of suggestions for a national business organization," prepared by Mr. Frank S. Gardner, secretary of the New York Board of Trade and Transportation, has been submitted to the Secretary of Commerce and Labor by Messrs. William M. Carroll, Ludwig Nissen, and C. A. Green, delegates from the New York Board of Trade and Transportation to the conference to be held at Washington beginning April 22. After a preliminary statement with respect to other suggestions which have already been submitted for the plan of organization of a national association, the following suggestions are submitted:

Examples of notably successful national organizations are not lacking. There are those which are exponents of the interests of single branches of business; others are based upon sentimental or altruistic principles; others are educational along special lines, and some unite general classes. The National Geographic Society, with over 100,000 members, the American Forestry Association, and the National Association of Manufacturers are fine illustrations of successful organizations consisting wholly of individual members. The National Association of Credit Men is probably the only truly national and successful business association in which the local association and delegate feature is conspicuous. Even that association has adopted a combination plan and its national association has several thousand individual members who reside in places where no local credit association exists. The plan of the National Credit Men's Association is almost identical with that herein-after suggested.

The study of the form and methods of such successful national associations should enable the new national business association to adopt a plan which has been successful and which might embrace some such general features as the following:

#### 1. The Membership.

The associations mentioned and others furnish warrant for the belief that the new national business organization, if based upon individual memberships, would secure the support of a sufficiently large number of the business men of the country with annual membership dues as low as \$5 or \$10 to produce a revenue that would carry the organization and enable it to perform all its functions. There should be no difficulty in enrolling in such an association at \$10 per year from 20,000 to 100,000 members in the first 12 months. At the lower number a revenue of \$200,000 would be provided.

#### 2. Payment of Dues.

In order to give an assurance of permanency, annual members when joining should be required to pay at least three years in advance, the expenditures each year being limited absolutely to the revenues credited to each such year, and the amount of the two years' advance payments set aside in two funds for use in the years for which they were paid in—for instance, the 1913 fund and the 1914 fund—and these funds invested in approved convertible securities.

#### 3. Other Classes of Membership.

In addition to annual memberships provision could be made for "patrons" at \$500 or \$1,000 each, and for "life" members at \$200 each, and the receipts therefrom put into a special fund and invested and the interest alone used.

#### 4. Branches of National Organization.

The individual membership plan contemplates the election and general enrollment of members residing in every State and in the island possessions. In every city or place where members reside or do business these could be organized into a local branch of the national association. Each such branch having enough members would have its own president and other officers and committees, would hold stated meetings; consider and act upon questions which it originated or upon questions originating with and acted upon by any other branch and sent to all local branches through the central office established in Washington or such other place as might be selected.

#### 5. Annual Meetings.

All the members could have the right to attend the annual meetings, but in order to insure attendance each local branch should be represented in the annual meetings by its president and as many others, in proportion to the membership of the local branch as might be deemed proper.

#### 6. Officers and Executive Committee.

The usual officers, including a president, vice presidents, treasurer, and secretary, should be provided for the national association; also a small executive committee not to exceed 10 members, including the president, to keep in close touch with and have immediate control of the main office and its activities under the general policies of the national association.

#### 7. Administration Advisory Board.

An administration advisory board, consisting of one or not more than two members from each State, should also be provided, whose members at any time might be summoned individually or collectively by the President of the United States or by the Secretary of any national department for conference with reference to national business questions.

It is manifest that such administration advisory board should be composed of men whose knowledge of business interests would make them of the highest value to the President of the United States, the departments, and the committees of Congress. Appointment to such a board would be regarded as an honor and would be much sought. The members of this board from each State might be selected by ballot by members of the national association in such State and nominated to the President of the United States or the Secretary of Commerce and Labor for his approval, or an election in each State might be made final. The method of selecting members of the administration advisory board is a matter of detail.

#### 8. Councils for Trades and Industries.

Specializing along the lines of making provision for the consideration and promotion of the interests of separate trades and industries by experts in each such line, an industrial council could be formed for each industry of men elected by the members of the national association in the industry. Each such council would study the needs of the industry it represented and report to the administration advisory board or to the national association for approval of its conclusions. No such industrial council could bind the association or the administration advisory board to any policy until such policy had been approved by the association or the advisory board. But, without binding the association or advisory board, each industrial council could act for itself upon the matters pertaining to its own industry. The method of selecting the members of each industrial council and the number composing each is a matter of detail.

#### 9. Miscellaneous.

The general plan should comprise definite regulations as to the control of disbursements, the employment of the paid officers, of the managers of the departments and their subordinates; the publication of a weekly or monthly bulletin or magazine; the distribution of special information to those to whom it would be useful, and regulation of such other matters as experience should develop.

The national association should impose upon itself restrictions as to the consideration of any question which, although relating to public national policy, would lead in such a general body to hopeless controversy, or division of purpose, and impair the influence or threaten the permanency of the organization.

The association should not attempt too much. The gathering and distribution of certain kinds of information should be left to the Government bureaus. Much of such information now distributed to associations should be given direct and only to individuals, firms, and corporations interested, and never to associations having a mixed American and foreign membership. Distribution through local associations will often defeat the purpose of the Government. The relations of some of the local associations to foreign manufacturers are as close as they are with American manufacturers.

#### 10. Legislation.

The national organization should be authorized and incorporated under an act to be passed by Congress. It should define its powers and duties, establish its relations to the Government, create the administration advisory board, as an official or semi-official auxiliary to the administration and the departments, provide that the members of such board shall serve for a specified term of not more than four years and without pay, but when members of such board are summoned collectively or individually to advise with the President of the United States or the Secretary of any department between annual meetings of the association, such members of the board should be paid a mileage compensation.

#### 11. Affiliated Associations.

Provision could be made for national associations having single objects becoming affiliated with the national association. But this should be done as a means of

coordinating the effort and influence of these special national associations with the general national body and not as the main dependence of or dominating element in the general body.

The suggestions under this head are made so that no elements which are of any value whatever shall be excluded from participating in benefits to be derived, or from contributing to such extent as they may to the success of the new organization. The plan suggested combines all the valuable features of the local-organization-delegate plan, while not depending upon it for the perpetuity of the association, and would create the organization upon the individual membership plan, which has been shown by experience to furnish a more enduring and stable body with substantial financial support.

### CHANGES IN GOTHENBURG SYSTEM REGULATIONS.

[From Consul Stuart J. Fuller, Gothenburg, Sweden.]

The managing board of the Gothenburg System Corporation, at a meeting held in February, decided to place further restrictions, taking effect October, 1912, on the sale of spirits (that is, alcoholic beverages of 25 per cent alcoholic content or over) for consumption otherwise than on the premises where they are purchased. As this step goes much further than any of the others taken by the institution in question, it may be of interest to the American inquirers who have recently been looking into the operation of the laws and regulations in Gothenburg to govern the sale of alcoholic beverages, as described in Special Consular Reports No. 49, issued by the Bureau of Manufactures.

The many restrictions placed on the sale of brännvin for consumption on the premises at the bar rooms operated by the Gothenburg System Corporation have been found to lead to the purchase, in many instances, of excessive quantities of the liquor to be consumed on the streets or in the home of the purchaser. At these places, any sober person, over 18 years of age, may purchase as much as he likes, provided he takes at least 1 liter (1.05668 quarts).

#### **Must Have Permit to Buy Brännvin.**

The new regulation is designed to prevent this, and consists in the requirement that purchasers be provided with a permit, good only at one of the company's stores, revocable at the company's will, and without which no spirits may be purchased at any of the company's establishments for consumption otherwise than on the premises of purchase.

It was at first proposed, in order to minimize the abuse in question, to establish a sort of "black list" to whom spirits should not be sold, but it was decided that this would be enforceable only in very small places.

The regulation adopted does not apply to the independent retail liquor dealers, who are sublicensees of the monopoly. These are not allowed to sell brännvin, the particular liquor most subject to abuse, and used to the greatest extent by the lower classes. Thus the new regulation absolutely controls the sale of brännvin for off-consumption. Control of other spirituous beverages is obtained through the already existing provision by virtue of which the monopoly can set the minimum price at which its sublicensees may sell these.

[Accompanying the foregoing report were translations of (1) a discussion by the director of the Gothenburg System of the proposals to reform the system, and (2) of the new regulations adopted; these will be loaned to interested persons. Copies of the special report on the Gothenburg System referred to by Consul Fuller may be procured upon application to the Bureau of Manufactures.]

**AMERICAN HOUSE FOR SINGAPORE.**

[From Vice Consul General D. Milton Figart, Singapore, Straits Settlements.]

Frequent proposals have been made for the establishment abroad of branches by American manufacturers for handling export trade, but without result, so far as this district is concerned. The following proposition has been under consideration here for many months and has received unqualified approval from all business men to whom it has been submitted:

A limited number of American manufacturers of such articles as pumps, stationary motors, disk plows and other agricultural implements, hardware, etc., might unite to open a permanent branch in Singapore under the management of a trained American, with the assistance of a man secured locally who is familiar with the market.

Each firm should bear a proportionate expense to the amount of business done. This would involve only a small amount of money and would undoubtedly lead to a large volume of business in the Far East. The representative could travel throughout the Peninsula, Siam, and the Dutch East Indies, making his headquarters in Singapore, and could handle a large business on the same basis as it is now handled by local firms. The cost of inaugurating such a scheme would be so small in comparison with the amount expended by many firms for advertising that it is certainly worth the trial, and experienced business men acquainted with this market say without hesitation that such an enterprise would not only be a success but is absolutely necessary if American manufacturers desire to secure a permanent foothold here. Personal representation is indispensable.

This consulate general would like to receive correspondence from any firm which might be interested in this project, and would endeavor to give all the detailed information necessary to enable such firm to come to a decision regarding the matter.

**BRITISH EMPIRE COMMERCIAL CONGRESS.**

[From the London Times.]

We have received the following from the British Imperial Council of Commerce, inaugurated last year:

"The preliminary program of resolutions to be submitted at the eighth triennial Congress of Chambers of Commerce of the British Empire has now been issued. The congress will meet at Guildhall, which has been placed at the disposal of the organizers by the city corporation, and will be inaugurated by the Prime Minister, the Right Hon. H. H. Asquith, honorary president of the congress, on June 11 next. Lord Desborough, president of the London Chamber of Commerce, is the acting president. The list of honorary vice presidents contains the names of many members of the Cabinet and the opposition and distinguished British colonial administrators, etc., including his Royal Highness the Duke of Connaught (Governor General of Canada), the Earl of Aberdeen, Lord Avebury (president of the second congress, 1892), Mr. Arthur James Balfour, Earl Brassey (president of the fifth congress), Mr. Sydney Buxton (president of the Board of Trade), Earl Cromer, Lord Curzon of Kedleston, Viscount Gladstone (Governor General of South Africa), Sir Edward Grey, Sir William Hall-Jones (High Commissioner for New Zealand), Mr. Lewis Harcourt (Secretary of State for the Colonies), the Marquis of Lansdowne, Mr. A. Bonar Law, Mr. Lloyd George, the Lord Mayor of London, Viscount Milner, Sir George H. Reid (High Commissioner for Australia), Sir Albert K. Rollit (president of the third congress, 1896), Mr. Albert G. Sandeman (president of the fourth congress, 1900), the Earl of Selborne, Sir Richard Solomon (High Commissioner for the Union of South Africa), Sir Albert Spicer, Bt. (president of the seventh congress, 1909), and Mr. J. Herbert Tritton (president of the first congress, 1886). The majority of the 400 British chambers of commerce scattered throughout the Empire are expected to send delegates."

### PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

**No. 582. Panama Canal supplies.**—Sealed proposals, in triplicate, will be received at the office of the General Purchasing Officer of the Isthmian Canal Commission, Washington, D. C., until April 27, 1912, for furnishing the following supplies: Material for steel cylinders, rivets, steel reinforcement bars, babbitt metal, bolster truck springs, pipe wrenches, cable hangers, fire hose, heating boilers, hot-water service heaters, sanitary fixtures, cast-iron pipe and fittings, steel pipe and fittings, brass pipe and fittings, lead bends and "P" traps, valves, cocks, lumber, untreated pipes, and artificial vermillion. (Circular No. 698.)

**No. 583. Electric passenger elevators.**—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until May 17, 1912, for an electric passenger elevator in the United States post office and courthouse, Great Falls, Mont. Tenders will also be received until May 18, 1912, for an electric passenger elevator in the United States post office, Oklahoma City, Okla., in accordance with drawings and specifications, copies of which may be obtained at the office of the Supervising Architect, Treasury Department, Washington, D. C.

**No. 584. Stone.**—Sealed proposals for furnishing and delivering stone at South and Southwest Passes, Mississippi River, will be received at the United States Engineer's Office, Room 325 Customhouse, New Orleans, La., until April 30, 1912. Further information may be obtained by applying to Lieut. Col. Lansing H. Beach at the New Orleans office.

**No. 585. Electric passenger elevators, hydraulic lifts, and pumping plant.**—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until May 13, 1912, for two electric passenger elevators, two hydraulic lifts, and pumping plant in the reconstruction of the United States post office, courthouse, and customhouse at Richmond, Va., in accordance with drawings and specifications, copies of which may be obtained at the Supervising Architect's office at Washington.

**No. 586. Dredging.**—Sealed proposals for dredging in Newtown Creek, N. Y., will be received at the United States Engineer's Office, New York, N. Y., until May 8, 1912. Further information on application to S. W. Roessler, Colonel, Engineers.

### CENTRAL AMERICA WEST COAST SERVICE.

[From Consul General Harold D. Clum, San Salvador.]

The Salvador Railway Co.'s new steamship, the *Jiquilisco*, arrived at Acajutla on March 6 and has entered the company's service. This steel vessel was constructed on the Tyne, has triple-expansion engines with furnaces fitted for burning oil, and is also provided with electric light; capacity 1,000 tons, and speed 10½ knots per hour.

The Salvador Railway Co. (Ltd.) now has three ships with which it maintains its steamship service between Central American ports and Salina Cruz, Mexico. The *Acajutla*, with accommodations for 24 first-class passengers, makes the direct run between Acajutla and Salina Cruz, leaving Acajutla on the 10th, 20th, and 30th of each month and Salina Cruz on the 4th, 14th, and 24th. The trip each way is made in 36 hours, strictly according to schedule. The *Salvador*, the sister ship of the *Acajutla*, plies between the Guatemalan ports of San Jose, Champerico, and Ocos and Salina Cruz, Mexico. The *Jiquilisco* will serve the ports south of Acajutla as far as Corinto, Nicaragua (principally Corinto, La Union, and El Triunfo), connecting them with Salina Cruz.

## CONSTRUCTION WORK ABROAD.

### CANADA.

[From Consul General John G. Foster, Ottawa.]

#### Welland Ship Canal Construction.

The supplementary estimates for the year ending March 31, 1913, contain a first appropriation of \$200,000 for Welland Ship Canal construction. It is understood that the Welland Canal will be deepened from 14 to 25 feet in its course and to 30 feet in the locks, and that the number of locks will be reduced from 22 to 7. The waterway will be widened from 150 feet to 200 feet, and it is claimed that as a result of these changes there will be a reduction of eight hours in time required for vessels between Port Colborne and Port Dalhousie. It is estimated that the total cost of the completed canal will amount to \$45,000,000.

[From Consul Harry A. Conant, Windsor, Ontario.]

#### Waterworks—Railroad Construction—Branch Factories.

The chlorine system of treating city water for bacteria was definitely decided on by the Windsor water board on April 2 as a precaution rather than as a necessity. The cost will be about \$1,000. To provide for increased consumption of water the board will install another 8,000,000-gallon pump (cost, \$18,500) at the waterworks station.

The Canadian Pacific Railway will spend about \$90,000 at Windsor constructing a freight shed, 500 by 30 feet, with five tracks, etc. The company proposes to spend about \$600,000 on improvements in the western Ontario division. New freight sheds at Chatham, costing \$50,000, are also planned.

The Windsor Record notes the continual establishment here of American branch factories. "Nearly every large concern in Detroit has a branch on this side. As a result Windsor is deriving over \$3,000 yearly in school taxes on new industries, which are otherwise exempted."

**NEWFOUNDLAND.**

[Press dispatch from St. Johns.]

**Extension of Railroads.**

The Newfoundland Government has submitted to the legislature of the colony a proposal to sanction the borrowing of \$2,000,000 in the London market to carry out the Government's policy of branch lines, making, with the \$4,000,000 already borrowed, \$6,000,000 for this purpose. The Minister of Finance explained that the reason the Government had to come to the House for this new loan was that the original estimate of 250 miles was exceeded because it was found necessary to touch at the different settlements. They now estimate the mileage at about 350, and the sum now required would be sufficient to complete the lines.

The Government also proposes to raise \$250,000 to provide telephones and light-houses throughout the colony.

**PERU.**

[From Consul General W. Henry Robertson, Callao, supplementing report in Daily Consular and Trade Reports for Apr. 5.]

**Concession for Building the Ucayali Railway.**

The concession for building the Amazon-Pacific, or so-called Ucayali Railway, as modified by the Peruvian Congress, was signed by President Leguia on March 8. The modifications of the original contract of April 11, 1907, provide:

(1) The width of the road is reduced, at the option of the concessionaires, from the standard gauge of 1 meter and 44 centimeters (4 feet 6 inches) to 1 meter (3 feet 3 inches), but the tunnels and cuts are to be made as for a normal gauge. The concessionaires may prefer to construct a broad-gauge road.

(2) A gradient up to 5 per cent is authorized for the section of the road between Goyllarisquisca and the exit of the pass of Tusi.

(3) It is permitted to substitute the construction of the road from Port Wertheman and a point of the line by that of another highway in the judgment of the Government, to which has been suggested the advantage of choosing the one which unites Tambo Colorado, or La Oroya, with the city of Tarma.

Any transcontinental Peruvian railway would permit an interchange of the eastern and western products of Peru within three or four days, instead of their having, as now, to undergo a journey of some 20,000 miles via Europe, covering a period of six months or more. The Ucayali Railway should be completed at least by the time the Panama Canal is to be officially open for the ships of the world, and will enable direct shipment of United States products to be made to the Amazon regions via the Panama Canal, the Pacific Ocean, and the port of Callao, thus materially increasing the commercial importance of this port, which will then be the Pacific terminus of this transcontinental route.

**TASMANIA.**

[From Consul Henry D. Baker, Hobart.]

**Tramways or Light Railways—Fishing Enterprise.**

The Premier of Tasmania, Sir Elliott Lewis, in a policy speech at Hobart, states:

The Government proposes to obtain a design for tramways or light railways which will carry produce and passengers at a slow rate of speed and with only a limited regular time table for carrying the bulk of the produce in special trains which will run to meet the requirements of producers when there are goods to carry. This will to some extent take the place of roads and lessen the road construction in some districts. In this way it is hoped that the Tyenna district and the Florentine Valley, in both of which there are large areas of Crown land now withdrawn from selection, will be systematically opened up. If the experiment is successful, the same course will be followed in regard to other areas which now await development.

Digitized by Google

The agent general of Tasmania in London, in his half-yearly report just issued, mentions:

An effort is being made to form a company, with \$60,000 initial capital, to carry on fishing in all its branches, including supply of edible fish, curing fish, extraction of fish oil, and manufacture of fish fodder and fish guano. It is proposed to erect the first factory on the Derwent River, as near Hobart as practicable.

#### **Mining and Timber Development.**

The agent general of Tasmania also mentions:

The manufacture of iron for the Commonwealth is talked about a great deal at present, and mention is made to establish this industry in both New South Wales and South Australia, but those who know all about the past difficulties in the way of establishing this industry in Australia are satisfied that the solution of all difficulties will be found in the creation of the big power scheme of the Hydroelectric Co. of Tasmania. The successful establishment of these works means that the manufacture of iron is more likely to be a success in Tasmania than in any other part of Australia. Mr. Gillies, the chairman of the Hydroelectric Co., is still in London, and is collecting the necessary information to enable him to put a sound scheme for the manufacture of iron in all its branches before his colleagues on his return to Australia early in this year. [This concern has just engaged as construction engineer J. W. Fraser, who has been with the Southern Power Co., of Charlotte, N. C.—B. of M.]

The Mount Balfour Mining & Power Co. is well spoken of, and I believe the amendment recently made in its act by the Tasmanian Parliament will enable it to obtain the necessary capital to carry out its works.

In connection with the timber industry, which has for some reason not developed on satisfactory lines, and where large sums of money appear to have been lost by investors on this side, a brighter future appears to be in view. The Millars Kauri & Jarrah Co., of West Australia, a company that has done much for the development of timber in that State, has secured some of the principal sawmills in the southern part of Tasmania, and has every confidence of being able to make a success of the timber industry in our State, under certain conditions. The first is the provision of an ample cash working capital which it is prepared to invest to enable it to hold timber until it is seasoned and made fit to be placed on the market.

#### **New Furniture and Knitting Factories—New Oil Building.**

Emerson Bros. Proprietary (Ltd.), South Melbourne, Victoria, have obtained from the marine board of Launceston a lease of land for erecting a furniture factory.

The Hobart Daily Post contains an interview with H. G. Lloyd, of the Sydney Knitting Co., in which it is intimated that as Hobart offers unrivaled advantages for the manufacture of knitted goods he is ascertaining the possibility of removing the whole of his business to Hobart.

James E. Gunn, of Launceston, is building an oil store at Inveresk, Launceston, for the Vacuum Oil Co. (controlled by the Standard Oil Co.). The building will be of reinforced concrete, 80 feet square, and store 2,000 tons of oil, besides having office accommodation and repair shop. The successful tenderers for the contract are Messrs. James E. Gunn, of Launceston. The Hobart agents for the Vacuum Oil Co. (Burgess Bros.), have accepted the tender of Stabb & Son for the \$15,000 oil store to be built for the company in Salamanca Place. Capacity, 45,000 to 50,000 cases of oil.

#### **ASIATIC RUSSIA.**

[From Consul John F. Jewell, Vladivostok.]

*A new theater* is to be built in Vladivostok by the Clerks' Club.

*A strong steam tugboat*, of the icebreaker salvage type, fitted with fire pumps, is provided for the Vladivostok commercial port by an appropriation of \$30,000 from the St. Petersburg Government.

*Telegraph lines* are to be constructed in the north of Asiatic Russia. The budget provides \$154,500 for a line along the seacoast from

Okhotsk to Petropavlosk, Kamchatka, and \$103,000 for a line from Petropavlosk to Ust-Kamchatka. This will also enable the Imperial Bank and the Russian Treasury to make telegraphic remittances to Petropavlosk. Wireless stations will be established at Okhotsk, Tiguil, and Ore.

### SCOTLAND.

[From Consul Rufus Fleming, Edinburgh.]

#### Many New Public Buildings Planned.

The Royal Scottish Museum, Edinburgh, a massive stone structure, is to be greatly extended, at a cost of approximately \$500,000. The work will be undertaken soon by His Majesty's Office of Works, Parliament Square, Edinburgh.

The Edinburgh council has decided to erect a \$40,000 town hall in Portobello (a city ward) under supervision of city superintendent of works, City Chambers.

The Edinburgh school board has prepared plans for five new schools and the extension of several existing ones. The total expenditure for these improvements will probably exceed \$850,000. The construction will be under the direction of the city superintendent of works.

For some time His Majesty's Office of Works has been considering the erection of a large building in Edinburgh for the inland revenue officers, the national insurance act commissioners, the Scottish board of agriculture, the Scottish land court, the Scottish local government board, and the Scottish fishery board. The site and block will cost a large sum. No definite step toward the acquisition of a suitable site has yet been taken. It is not expected that building operations will begin before 1915.

The Edinburgh council will erect new headquarters for the city police and for the weights and measures departments at a cost of \$210,000. This work will not, it is understood, begin before the coming fall. It will be under the supervision of the city superintendent of works.

The county council of Dumfriesshire, Scotland, will construct new county buildings in Dumfries. Mr. J. M. Dick Peddie, 8 Albyn Place, Edinburgh, is the architect.

### NEW ARMY TRANSPORT VESSEL.

The construction of the United States Army transport *Merritt* has just been finished by the Shanghai (China) Dock & Engineering Co. (Ltd.), the contract price for which was \$325,000. The *Far Eastern Review*, of Manila and Shanghai, publishes an illustrated description of the new vessel, the hull of which is steel. It has three boilers of cylindrical return-tube type, constructed for a working pressure of 180 pounds per square inch, and an hydraulic test pressure of 360 pounds. Twin screws are driven by triple-expansion 3-cylinder surface-condensing engines of ample power for a speed of 12½ knots per hour. The engines are "open-front type," with cylinders carried at front by turned steel columns and at back by the condenser and one separate column. Refrigerating chambers with 18,000 cubic feet capacity, three ice machines, electric plants, and wireless telegraphy are part of the equipment. There is accommodation for 50 passengers and 350 soldiers.

**COMPOSITION FLOORINGS OF MAGNESIUM CHLORIDE.**

[From Consul General Robert P. Skinner, Hamburg, Germany.]

The report from the Hamburg consulate general entitled "Floorings of sawdust and magnesium chloride," which appeared in Daily Consular and Trade Reports for August 7, 1911, has given rise to innumerable inquiries from correspondents from various parts of the United States, all of whom express a desire for further details. It was stated in the original report that extensive use was being made in Germany of a flooring composition consisting of a solution of chloride of magnesium to which pulverized magnesia is added, together with considerable proportions of sawdust, and which, being skillfully compounded, provided a relatively inexpensive and fairly fireproof flooring material, especially useful in large office buildings and public halls. One inquirer stated that the art of laying these floorings in Germany is far ahead of the practice in America, and asked particularly for the method of coloring the material and of governing its expansion and contraction.

According to my information, there should be neither expansion nor contraction of the material from any cause whatever after a flooring of magnesium chloride is once laid. The very ingredients are such that there is no buckling or cracking due to heat or cold. In Hamburg the composition is mixed and spread where the building operations are being carried on, the prepared dry meal being delivered in bags from the factory and the lye water made on the spot. It is impossible to state the precise rule for the composition of the meal or for the lye solution, these being the manufacturer's secrets and each manufacturer claiming particular merits for his own formula. These formulas are not patented, and there is no doubt that they are all substantially alike. Several manufacturers have expressed a willingness to sell their process, either for the whole of the United States or for restricted territory. One Hamburg firm sold its formula for a small place in southern Germany for \$1,428.

**Method of Mixing and Laying.**

The mixture of meal and lye water is made in a mortar box, and when a thickness of not more than 2 inches is proposed it is spread and smoothed with a hand trowel; when a thickness of 4 inches is desired, the material is tamped and then smoothed. The amount of lye water used in mixing the meal depends upon whether the flooring is to be simply spread or tamped; if spread the ordinary practice seems to be to use from 4 to 6 buckets of the lye water to 1 sack of meal, the sack apparently containing from 50 to 60 pounds.

These floorings were first utilized in large office buildings in Hamburg, and probably elsewhere, as a basic flooring for linoleum and also for the addition of artificial wood-marble flooring. These wood-marble floorings are substitutes for wood, and the panels are polished like hardwood floors; that is to say, smoothed with steel shavings and given a coating of wax. When linoleum is applied, it is glued to the magnesium-chloride foundation with a linoleum cement, which is said to be composed of copal resin and putty.

In Germany linoleum is never tacked to wood or artificial-stone flooring, as is usual in the United States, but is invariably glued in place, an ordinary flour paste being used when it is applied to wooden floors. Linoleum thus laid is washed afterwards with soap water

and when dry is given a coating of wax, exactly like a hardwood floor. This treatment is the ordinary practice in the large office buildings in Germany, even in hallways where thousands of people pass in the course of a week.

The magnesium-chloride flooring was first considered a particularly excellent foundation for linoleum, and it is only in comparatively recent times that it has been found possible to color it and to lay it so attractively that no linoleum covering is necessary. It is laid tight against the side walls, making the entire floor waterproof. In bathrooms and around toilets it is brought to the edge of the porcelain and the joints are rounded upward, so that no crevices present themselves in which dust or dirt can collect, nor should there be any joint through which water might percolate.

#### Use of Colors.

The favor in which linoleum is held in this country is such that manufacturers of these new composition floorings have some difficulty in inducing buyers to put down this material, in solid or varied colors, in preference to a similar natural color foundation with linoleum covering, although the cost and wearing qualities of the former method are said to be much in its favor. Linoleum costs in Hamburg about 86 cents per square meter (square meter=1.2 square yards) and the cheapest class of magnesium chloride foundation pavement costs 48 cents, making a total of \$1.34 per square meter against a cost of \$1.19 per square meter for a colored wood-marble floor attractively finished. The new floorings may now be obtained in almost any color, or in mottled colors. When mottled colors are desired, the different colored mixtures are prepared separately and tamped in together as the floor is laid. Special dyes are required for these operations, and there are a number of manufacturers who produce them. [The addresses of several may be obtained from the Bureau of Manufactures.] In a general way, from 7 to 10 kilos (15.4 to 22 pounds) of color are necessary for 220 pounds of mortar. The proportions vary with the strength of coloring desired. The colors themselves are of different prices. One manufacturer quotes red, blue, black, and brown at \$4.76 per 220 pounds; oxide green, \$53.55; and blue, \$19.04 to \$21.42 per 220 pounds. Another manufacturer quotes red dye, very much in demand, at an average price of \$3.81 per 220 pounds. The prices again vary with the quantity ordered. The more delicate tints, such as green and blue, are more sensitive to light, particularly if exposed for a long time, than the quiet colors, such as black, red, and brown. Red is especially favored, and the many different shades are said to be absolutely unchangeable. Most of the manufacturers of these dyes also supply dyes for cement tiles, stucco, imitation marble, sand-lime bricks, and cement blocks.

#### Advantages Claimed.

One Hamburg manufacturer claims for his own composition that it is crack-free under all circumstances, warm under foot, elastic, and sound proof, preferable to linoleum, as linoleum curls at the edges after a time, breaks or wears away, and absorbs water, permitting it to leak through. This same manufacturer submits a certificate of examination from the royal board of examiners of material

in the Technical High School in Berlin, dated November 19, 1906, reporting as follows on the examination of samples of his material:

1. After the sample plates were soaked in water and had been exposed to frost 25 times at 15° C. below zero the samples remained unharmed.

2. After the plates had been lying in water for eight days a very small proportion of water (9 per cent) had been absorbed.

3. After the plates had been attached to a vessel containing water—after 24 hours, none; after 48 hours, 2 cubic centimeters, or 5 per cent; after 72 hours, 4 cubic centimeters, or 10 per cent, of moisture had been absorbed.

This manufacturer also claims that in this country his composition is cheaper than pine flooring, tiling, or stone; that it may be used to cover old worn-out wood and stone-plate floorings, staircases, and the like without the necessity of removing the old floors. Wherever a foundation is firm and dry it may be laid without any complicated preparations. Finally, it may be cleaned with cold water and only very seldom should lukewarm soap water be applied. After complete cleansing and thorough drying the flooring should be rubbed with raw linseed oil or should be waxed.

#### **Cost of Raw Materials.**

Magnesium chloride, the chief ingredient of these compositions, is worth, in 50-ton lots, in casks of 880 pounds f. o. b. Hamburg, \$11.50 per ton fused. If in lesser lots, \$12 per ton. Greek calcined and powdered magnesite, in barrels of 396 to 440 pounds, is worth \$33.32 to \$35.70 per 2,200 pounds f. o. b. Rotterdam. Raw magnesite, in casks, is worth \$30.94 per 220 pounds f. o. b. Hamburg.

---

### **NORTHERN ARGENTINA CROP REPORT.**

[From Consul Robert T. Crane, Rosario, Mar. 7, supplementing report from Buenos Aires in issue for Mar. 21.]

The harvests of wheat and linseed were completed and thrashing well advanced throughout the northern half of Argentina during February. The almost entire cessation of freight movement from January 7 till nearly the end of the second month on account of railway strikes prevented any large quantity of grain from arriving at the commercial centers. Reports from the thrashing, however, confirm the preexisting general opinion that wheat will yield an average crop, which is about 2,250,000 tons, or 54 per cent of the country's output, and that linseed will fall below the average, which amounts to about 500,000 tons, or 81 per cent of the total output. It is said that the average weight of the wheat received in Rosario to the end of February is quite low—65 to 66 kilos per hectoliter (about 50 pounds per bushel). The linseed is said to contain so much weed seed that delivery at the established allowance of 4 per cent will not be possible. The rains flattened the crop, permitting the weeds to outgrow it, so that much had to be cut with mowing machines.

The prospects for a record corn crop are well assured. Weather conditions have been favorable throughout the period of its growth, and no damage has been done by locusts. Harvesting commenced at the end of the month and extraordinary yields are reported therefrom. The average corn crop for five years preceding 1911 was 2,000,000 tons for the district, or 52 per cent of the country's production.

## ENGINE GAS FROM PEAT.

[From Consul General A. M. Thackara, Berlin.]

The production of gas from peat having a low water content (up to about 20 per cent) for use in suction gas (sauggas) engines has already met with considerable success in Germany, but for a number of years efforts have been made to utilize peat with a water content as high as 50 to 60 per cent and thus eliminate the costly process of drying the raw material.

Difficulties have been encountered in preventing a loss of calories through radiation and other causes, and in getting rid of the dust and tar vapors carried over by the gases to the engine; but great strides have been made recently in overcoming these obstacles. Peat with a water content up to 60 per cent has been found to be a suitable fuel. Owing to its great porosity and low specific gravity it prevents a large combustion surface in the generator, so that the oxygen in the air used as a draft can easily unite with the carbon of the peat.

One of the great difficulties is to eliminate the tar vapors that clog up many of the working parts of the engine. The passing of the gas through the wet coke washers and dry sawdust cleansers does not appear to have thoroughly remedied the evil. Efforts were therefore made to remove the tar-forming particles of the gas in the generator itself or to render them harmless. That of the Aktien-Gesellschaft Görlitzer Maschinenbau Anstalt und Eisengiesserei, of Gorlitz, was displayed at the exposition at Posen in 1911. The gas from the generating plant was employed in a gas-suction engine of 300 horsepower used to drive a dynamo for developing the electric energy for the exposition. The fuel used was peat with a water content of about 40 per cent. The efficiency and economy results obtained were very promising.

### Design of the Generator—Advantages.

The generator consists of a vertical sheet-iron or steel cylindrical furnace with double walls; it is about 12 feet high and the diameter is a trifle more than 6½ feet. The interior wall is lined with fire brick. The sides of the furnace are pierced with six slanting apertures about 6 inches in diameter that may easily be opened or closed and serve for inspecting the interior combustion chamber and cleaning the fire. The fuel is fed into the furnace through a lid on the top of the cylinder; draft air enters through hollow cast-iron feet. In an opening in the center of the cast-iron bedplate there is fitted a cast-iron tube that extends below to the water in the foundation and above to the center of the combustion zone about where the peat is converted to ashes. At the bottom the tube is connected to a pipe leading to the scrubber through which the gas passes on its way to the engine.

The advantages claimed for the Gorlitz engine are that the sulphurous gases and those containing great quantities of tar products are drawn down by the suction of the engine through burning masses of peat and thus rid of their deleterious constituents. The air for combustion purposes is well heated before entering the combustion chamber, thereby producing economical results. It is claimed also that the gas produced by its system is so free from impurities that the cleaning and drying apparatus may be of the simplest kind.

**The Gorlitz Engine—Cost of Power.**

The engine exhibited at Posen by the Gorlitz company was a double-working, four-cycle, one-cylinder suction gas motor, with a cylinder diameter of 25.59 inches, length of piston stroke of 29.53 inches, and diameter of piston rod of 6.7 inches. The piston is water cooled and provided with ribs that serve to direct the circulating water into the proper channels. All parts of the engine are easily accessible and all stuffing boxes are provided with metal packing. Probably the most notable feature of the Gorlitz engine is the governor, which automatically admits the correct charge into the cylinder and maintains a proper mixture at all speeds and loads, even when the engine is running light. The governor is also connected with the igniting apparatus so that there is always a proper ignition.

The cost of the peat used (water content, 40 per cent) was \$0.57 per metric ton (2,204.6 pounds). In two trials the consumption per kilowatt-hour obtained was 3.43 pounds for the first trial and 5.31 pounds for the second.

[Four reviews in German on the manufacture of gas from peat, and also two sectional drawings of the Gorlitz generator, may be had from the Bureau of Manufactures.]

---

**NEW URUGUAYAN FISHING INSTITUTE.**

[From American Minister Nicolay A. Grevstad, Montevideo, Uruguay; see also Daily Consular and Trade Reports for May 23 and Nov. 11, 1911, and Feb. 10, 1912.]

The Institute of Fisheries (Instituto de Pesca) was established March 1 at Punta del Este, Department of Maldonado, by the Minister of Industries, Dr. Eduardo Acevedo.

Mr. John Wisner, who recently arrived from the United States, under a 3-year contract with the Government of Uruguay, is director of the institute. He thinks that a great deal can be done to increase the output of the fisheries in this country.

The institute is installed temporarily in the customhouse at Punta del Este. Mr. Wisner will prepare complete plans for the work of the institute, including an outline of the requirements as to buildings, ships, boats, etc. He is now making a preliminary survey of the coasts of Uruguay in the gunboat *18 de Julio*. Mr. Wisner may also be charged with the supervision and management of the seal rookeries of Uruguay.

[From Consul Frederic W. Goding, Montevideo.]

Mr. Wisner, the American fisheries expert, and Messrs. Wilbur Mansfield Ball and Ernest Fiske Cole, dry-farming authorities, who were recently engaged by the Uruguayan Government, have assumed charge of their work. The latter two, who are now stationed at the Toledo Experiment Station, will soon be transferred to the Agricultural College at Sayago.

Arrangements have been made for employing another fisheries expert and two geologists, all Americans.

---

*The Franco-Japanese Bank* is being organized at Tokyo, the Industrial Bank of Japan, the Banque de Paris, Crédit Lyonnais, Comptoir d'Escompte, and Société Générale participating.

## STEAMSHIP LINES TO TAHITI.

[From Consul North Winship, Papeete.]

The *Mariposa* of the Oceanic Steamship Co., San Francisco, which, since July, 1902, has been making regular trips from San Francisco to this port and return, made its last trip to Tahiti in January, 1912.

On August 29, 1910, the contract with the French Colonial Government was renewed for three years, much to the satisfaction of every one in Tahiti. However, in December, 1911, the Oceanic Steamship Co. asked the governor of French Oceania to relieve them from the contract. This was refused by the governor after consulting with the chamber of commerce; whereupon the Oceanic Steamship Co. took the *Mariposa* off the run and sold the vessel. Although no conclusion has been reached, it is thought that the Oceanic Steamship Co. will pay about \$10,000 to the colonial government as settlement.

This left Tahiti entirely dependent upon the Union Steamship Co.'s line, making a 28-day schedule between Tahiti and Wellington, and Tahiti and San Francisco; and another line of the same company making 28-day trips between Auckland and Tahiti.

The vessels running to America remain in this port only 24 hours, and there is a lapse of three weeks between the arrival of the mail and freight from the United States before there is a northbound vessel by which to answer letters or place new orders. Since the United States enjoys half of the foreign trade with this colony, and as all the mail from and to France is sent via the United States, the present schedule is most unsatisfactory both for the French Government and the merchants. On the other hand, it is convenient for promoting the interests of New Zealand and Australia, there being only 10 days between the arrival of the vessels from Sydney and Wellington and the return vessel; besides, the *Matai* comes here every 28 days from Auckland, bringing and returning with mail and freight, this vessel also calling at Raiatea and other smaller islands of this colony.

Under these circumstances it is evident that New Zealand will secure a large quantity of the orders and products that should go to America. In view of this fact, G. A. Moore & Co., of San Francisco, who for years have been sending the *S. N. Castle*, a sailing vessel of 514 tons to Tahiti, intend placing another sailing vessel on the run, but since the trip one way usually takes about 40 days, the service will not begin to take the place of the *Mariposa*.

For the present year at least the Union Steamship Co. states that no improvement can be made in the schedule as published. It is therefore quite possible that if any American companies wish to bid for the future mail contract of this colony, Monsieur A. Bonheure, governor of the French possessions in Oceania, Papeete, Tahiti, Society Islands, will be interested in hearing from them in the near future.

The subsidy paid the Oceanic Steamship Co. was \$30,291 a year, the contract calling for a vessel of at least 3,000 tons, with a minimum speed of 13 knots, and which would make 10 round trips each year. The *Mariposa*, therefore, made the voyage one way in 12 days, remaining 8 days in San Francisco and 4 days in Papeete.

[The complete schedule of the Union Steamship Co. may be secured from the Bureau of Manufactures.]

**GERMAN RAW SPIRIT MARKET.**

(From Consul General Robert P. Skinner, Hamburg.)

There are now some indications that the German demand for raw spirits from the United States will be permanent, as a result of a change of policy in Russia, which country at present supplies practically all of Germany's spirit imports. The Society of Russian Manufacturers of Spirit, in reply to an inquiry regarding the intention of the Russian Ministry of Commerce and Industry to establish a storage warehouse in Hamburg to handle the German trade, made the following statement, dated March 8, 1912:

The news concerning the foundation of a Russian storage warehouse is an invention, as there is no need for such an establishment for the Russian trade, and for the further reason that this year Russia is unable to export, the Russian State Alcohol Monopoly being in need of large quantities to cover its demands, higher prices being paid here than by exporters. The plan referred to, furthermore, is not contemplated for future execution; on the contrary, it is to be expected that from January 1, 1913, and thereafter no Russian spirit will be exported to foreign countries, as the Russian Minister of Finance intends to make propositions to legislative bodies looking to the cancellation of the export premiums from January, 1914, and thereafter.

This indicates that the German market is affected not merely by poor crop conditions but by the probable cessation of an average annual import of 15,000 tons of Russian spirit. Hence importers in Hamburg, where nine-tenths of this business is concentrated, are looking to the United States for future supplies and hesitate to advance further the already high prices. The most recent German statistics of alcohol exports and imports are as follows:

Countries.	1910	1911	Countries.	1910	1911
<b>IMPORTS.</b>			<b>EXPORTS—continued.</b>		
	<i>Met. tons.</i>	<i>Met. tons.</i>		<i>Met. tons.</i>	<i>Met. tons.</i>
Great Britain .....	2,210.8	1,181.4	Norway .....	551.6	194.5
Russia .....	13,138.0	16,603.8	Switzerland .....	1,813.6	1,142.7
All other countries .....	1,004.8	570.4	French West Africa .....	1,517.1	1,475.7
<b>Total .....</b>	<b>16,353.6</b>	<b>18,355.6</b>	Morocco .....	207.8	640.0
<b>EXPORTS.</b>			Portuguese West Africa .....	507.7	568.5
			All other countries .....	2,016.9	2,133.8
Great Britain .....	1,623.7	1,143.5	<b>Total .....</b>	<b>7,638.4</b>	<b>7,299.7</b>

**Freight Rates from England to Canada.**

Consul Gebhard Willrich, of Quebec, Canada, reports that the freight rates from English ports to Quebec are invariably higher than to Montreal, although the former port is touched first by the trans-Atlantic liners. All freight is shipped to Montreal, and then returned by rail or water to Quebec. On steel rails, for example, the freight quoted by one steamship company from Liverpool or Glasgow to Montreal is 7s. 6d. (\$1.825) per ton, while the rate to Quebec is 10s. (\$2.433) per ton. On pig iron the rate per gross ton is 12s. 6d. (\$3.042) to Montreal and 15s. (\$3.65) to Quebec. [A list of the freight rates from London, Liverpool, and Glasgow to Montreal, Quebec, Niagara Falls, Windsor, and Fort William, on cast and wrought iron pipes, billets, blooms, pig iron, and rails, may be obtained from the Bureau of Manufactures.]

**GEOLOGICAL NOTES FROM MOROCCO.**

[From Consul General Maxwell Blake, Tangier.]

The following notes concerning the geology of Morocco are of interest in view of the fact that present conditions in Morocco are likely soon to permit the inauguration of long-proposed railway projects, which will result in the development of the country. These are not offered as of authoritative nature, but are generalizations gathered from persons of more or less experience whose observations have carried them into various parts of Morocco.

The general geological formations are of Paleozoic age, with outcrops appearing in the high ridges of the Atlas hinterland, and again in the vicinity of Casablanca and along the Mediterranean Sea from Ceuta to Alheucemas. The wide areas between these outcrops are composed mostly of Tertiary sediments, between which are irregular layers identified as Mesozoic. Granites are abundant in the vicinity of Marrakesh, but northeast of that place they disappear or develop into melaphyres. Of igneous rocks of the Tertiary period, basalts and andesites have been reported. Copper, lead, antimony, manganese, and iron ores have been repeatedly discovered, while gold is said to exist in the regions of Sus.

In the Tertiary sediments, large deposits of salt are obtainable and the possibility of extracting potash salts is said to be favorable. In the outcroppings near Melilla, rock salt exists in association with large deposits of iron ore, reported to be of high quality. Deposits of gypsum are abundant in various places.

**Mineral Claims Being Secured.**

The opportunity for developing the mineral resources of the country is being eagerly awaited by persons who have secured denunciations. These denunciations signify that the mineral wealth within a radius of 4 miles of a certain point has been filed upon as the maximum which any individual may claim upon preemption. The only requirement for such a claim is an authorized survey by some qualified mining engineer acceptable to the legations of the nations concerned, and the filing of maps and reports of the discovery with the legation of the claimant.

Pending the promulgation of an international mining law, which has been under advisement and discussion by signatories to the act of Algeciras, including the United States, no mineral rights have yet been definitely acquired, but allocation of them is to be recognized upon priority by international adjudication. Already four or five mining syndicates have been organized, but only the preliminary field work has so far been attempted.

Owing to the experienced character of some of the persons who have interested themselves in the mineral exploitation of the country, present expectations do not appear to be speculative, especially as regards the existence of copper and iron.

In view of the accessible location of Morocco and its extensive coast line, both along the Atlantic and the Mediterranean, mineral wealth, in whatever part of the Empire it may be found, is not likely to encounter serious transport difficulties, especially should the building of initial railway enterprises be given materialization. In any event, present conditions appear to warrant serious inquiry on the part of responsible persons in the United States interested in mining developments.

**LOWER POSTAGE RATES IN OCEANIA.**

[From Consul North Winship, Tahiti, Society Islands.]

On December 29, 1911, a new postal convention between Great Britain and France was signed at Paris, modifying the tax on letters sent from French possessions in Oceania to New Zealand and on letters sent from New Zealand to French Oceania. The Cook Islands are included with New Zealand, but this convention does not extend to Australia.

All letters sent from French Oceania to New Zealand or from New Zealand to French Oceania shall pay 2 cents per ounce or fraction thereof, instead of 5 cents per ounce or fraction and 3 cents for each additional ounce or fraction thereof as formerly paid. This convention is effective from February 21, 1912, and will remain in force until six months after one of the contracting parties shall give notice to the other of its intention to discontinue same. This will prove a factor in encouraging and promoting trade with New Zealand.

A large percentage of the mail for Tahiti from the United States is still understamped through ignorance or indifference, causing double tax to be paid at this end and a delay in the receipt of mail.

**LEVANTINE BUSINESS NOTES.**

[From the Near East.]

*Egypt's purchases.*—Egypt is buying largely everything required for modern buildings of reinforced concrete, particularly girders and angle irons. It is importing, via Alexandria, large quantities of cement and distempers; also colors for manufacturing these washes, which are superseding oil paints and varnishes.

*The sporting-gun trade* in Greece is in the hands of the French. Of the 4,000 imported yearly, more than 3,000 are of French make, and include single and double M. L., as well as modern breechloaders, the latter of 12 and 16 gauge. French agents do the selling, and payments are made by bills at four or six months or for cash less 5 per cent.

*The National Bank of Egypt* opened a branch at Wad Medani in February. Wad Medani is the center of an important agricultural region, and the new branch bank augurs well for its trading future. El Obeid, which is bound to become the gum center for the Sudan, thus depriving Omdurman of one of its many commercial features, is a likely place for a second branch of the national bank.

*Cattle exports increasing.*—I referred previously to the phenomenal development of the cattle trade in the Sudan, most of which goes to Egypt. The returns show that the total value of cattle exported during 1911 amounted to \$1,300,000, as compared with \$550,000 in 1910 and \$200,000 in 1909. A further development can be safely anticipated. If the present rate of increase is maintained next year exports may amount to \$2,500,000.

*Agricultural cooperative societies.*—A specialist from the Ministry of Agriculture at Paris, Mr. Joseph Ribet, inspector general of agricultural credit and cooperation, has drawn up on behalf of the Khedivial Agricultural Society a general scheme for the organization in Egypt of agricultural cooperative societies. Mr. Ribet spent four months in Egypt, and it is hoped that his report will meet with careful consideration from the Government.

*Gold mines of Abyssinia.*—The Bank of Abyssinia, an offspring of the National Bank of Egypt, has offered \$15,000 for one of the gold mines of Zeroudachi. Abyssinia not only has great possibilities in agriculture, but also extensive deposits of gold, iron, copper, sulphur, coal, etc. The railroad now under construction from Dire-Dawa to Addis Ababa, the capital, will be completed in two years. With this will come the development of the country.

*A steel-casting plant* (Tropenas) has been established in Panama by the Isthmian Canal Commission, the output of which will be about 20 tons per month.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8592. Dry dock.**—Sealed proposals will be received at the Public Works Department, Ottawa, Canada, until July 2, 1912, for constructing a dry dock in the port of Quebec. The dimensions of the dock are to be not less than 1,150 feet usable length, 110 feet clear width at entrance, and at least 37 feet in depth over sill and keel blocks at ordinary spring tide, and to be in three compartments. For further information address R. C. Desrochers, Secretary Department of Public Works, Ottawa, Canada.
- No. 8593. Chemicals.**—An American consul in Germany has forwarded to the Bureau of Manufactures the names of two firms in his district which desire to represent American manufacturers in all kinds of chemicals. Correspondence in English.
- No. 8594. Jam factory, bottling plant, and cannery.**—An American consular officer in Canada has forwarded to the Bureau of Manufactures the names of the promoters of a jam factory, bottling plant, and a cannery to be established in his district.
- No. 8595. Silk hosiery.**—A firm in Australasia requested an American consul to place it in communication with manufacturers of silk hosiery in the United States, as the firm believes that the American article might be of better quality and the prices more reasonable compared with that handled at present. Samples of American hosiery are desired.
- No. 8596. Harbor improvements.**—American Consul Abraham E. Smith, of Victoria, British Columbia, reports that the Dominion Government has approved the recommendation to construct at once a breakwater from Ogden Point at a cost of \$1,250,000; an immediate survey of the ocean harbor to find the cost of building wharves, and that as soon as the survey is completed a pier be built at a cost of \$400,000; also the construction of four additional piers and a ferry slip for railway cars. The total cost of all the improvements will reach about \$7,000,000. The sum of \$500,000 has been appropriated for preliminary work. Tenders for these undertakings will be invited.
- No. 8597. Textile goods.**—An American consul in Germany reports that agency firms in his district cover a large area to visit the leading merchants in their respective lines. The consul has forwarded the names of firms interested in textile goods which desire the agency for American lines.
- No. 8598. Lead seals and sealers.**—A firm in Australasia informs an American consul that it is desirous to take up an agency for the whole of Australia in lead seals and sealers for mail bags, meters, milk cans, etc. Catalogues, prices, and discounts from American manufacturers in these lines are solicited. Bank references may be furnished.
- No. 8599. American agencies in Argentina.**—An American consular officer in Argentina has forwarded to the Bureau of Manufactures the name of a firm requesting the addresses of exporters in the United States desiring to establish agencies in that country. Correspondence in English.
- No. 8600. Coal.**—An American consul in one of the South American countries reports that the prospects are good for the introduction of American coal on that market. The consul states that some 50,000 tons of coal are consumed annually by public institutions in that country.
- No. 8601. Insulated cream carts and cans.**—A business man in Australia writes an American consul that there are some specially insulated cream carts and cans in use in the United States which have not been introduced into that country, but which if sold at reasonable prices would revolutionize dairying in outlying districts. The consul states that American manufacturers of insulated cream carts would do well to communicate with the person, whose name is on file in Bureau of Manufactures.
- No. 8602. Yarns, threads, and ribbons.**—An American consul in Germany has forwarded to the Bureau of Manufactures the name of a business man in his district who desires to secure an agency for American yarns, threads, and ribbons. The consul states that some of the agency firms cover a large territory, thus coming in contact with numerous merchants in their respective lines.

- No. 8003. Dried fruit.**—An American consul in one of the European countries reports that responsible shippers of dried fruit, especially evaporated apples, could find a ready sale for their fruit to members of the wholesale grocers' association of the district in which he is located. The consul states that at least 50,000 boxes of dried apples of 50 pounds each and about 5,000 boxes of dried plums are sold there annually, and he would be pleased to put American fruit shippers in touch with the wholesalers who would import direct.
- No. 8004. Railway material.**—American Consul General John P. Bray, of Sydney, Australia, reports that the Federal Cabinet has decided to call for tenders in Australia and London, to be submitted by May 29, for 135,000 tons of steel rails and fishplates for the West Australian Railway. The specifications (for which \$5.10 is charged for each plan) calls for rails made by the open-hearth process. The line will be 1,063 miles long and will be constructed by day labor. The Government is also inviting applications for two engineers to have charge at each end of the line (Port Augusta, South Australia, and Kalgoorlie, West Australia). Materials such as fishbolts, nuts, dog spikes, etc., are to be supplied by manufacturers in the Commonwealth.
- No. 8005. Pianos.**—A director of an American chamber of commerce in the Levant reports to the Bureau of Manufactures that there is a market in that district for about 100 good pianos selling for about \$200, and that American piano manufacturers should get in touch with him.
- No. 8006. Novelties and specialties.**—An American consular officer in South America forwarded the name of a business man in his district who is the agent of a trading company and who is desirous to secure the local agency for American novelties and specialties.
- No. 8007. Office furniture.**—A manager of a firm in Norway, after his attention was directed to the office equipment of an American consulate, especially the roll-top and typewriter desks, requested the consul to have forwarded the firm catalogues and price lists of office furniture manufactured in the United States.
- No. 8008. Fruit.**—An American consul in Germany has forwarded to the Bureau of Manufactures the name of a business man in his district who solicits the agency for American fresh, dried, and canned fruit. The consul states that there are excellent opportunities in that district for American goods.
- No. 8009. Cotton and gauze.**—The Bureau of Manufactures is in receipt of a communication from a director of an American chamber of commerce in the Levant stating that there is a demand for cotton and gauze for use in hospitals. They should be of the best quality and moderate prices. It is not necessary that they be sterilized.
- No. 8010. Agency for shellac and varnishes.**—An American consular officer in Canada has forwarded the name of a firm which desires to secure the agency for a Province in American lines of shellac and varnishes. References are furnished.

### The New Mexican Budget.

The Mexican Chamber of Deputies has passed the new budget for the fiscal year ending June 30, 1913, which provides for an increase of \$2,870,000 (American currency) over the current year. The total is \$55,500,000, divided chiefly as follows: Executive, \$129,000; legislative, \$634,000; judicial, \$348,000; foreign relations, \$1,020,000; gobernacion, \$7,316,000; justice, \$824,000; public instruction, \$4,042,000; fomento, \$2,042,000; hacienda, \$17,500,000; war and marine, \$14,900,000.

A description of the Russian ice breaker *Yermak*, used to keep navigation open in the Gulf of Riga, is forwarded by Consul William F. Doty, of Riga, Russia, and will be loaned upon application to the Bureau of Manufactures. A description of the new ice breaker *Peter the Great* appeared in Daily Consular and Trade Reports for March 29, 1912.

**EFFECTS OF BRITISH COAL STRIKE.**

[From Commercial Agent Archibald J. Wolfe, Mar. 27.]

In the fourth week of the British coal strike, the number of persons thrown out of work by the shutting down of factories and furnaces on account of coal shortage reached 1,070,730, not including the strikers, divided among the different sections of the United Kingdom as follows: North of England, 516,200; Midlands, 125,500; south of England, 54,410; south Wales, 136,500; north Wales, 45,000; Scotland, 187,720; Ireland, 4,800. In addition, 392,200 workers had been placed on part time up to March 27.

The loss of the railways due to reduced freight and passenger traffic in the first three weeks of the strike is figured at \$9,000,000, and the falling off is expected to reach \$12,500,000 before normal conditions prevail. The cotton industry of Lancashire was not very seriously affected, as far as actual stopping of work is concerned, on account of the early accumulation there of vast quantities of coal, but the doubling of the coal price cut severely into profits. A trade paper places the extra cost of operation for an 80,000-spindle spinning mill at \$400 a week.

On March 18 the railways ceased to accept iron ore, pig iron, and many other kinds of raw material for shipment, and many foundries and furnaces were forced to close. There is a prospect that the loss of some of the trade which has gone to other countries as a result of the strike may be permanent.

[From Consul C. Ludlow Livingston, Swansea, Wales, Mar. 21.]

**Tin-plate Mills Closed.**

Nearly all the tin-plate mills in this district have been forced to shut down, owing to the shortage of coal, and those still running will close by the end of this week. Practically all the black plates on hand at the various mills have been used, and it will require weeks after the end of the strike before the mills can be run in full force. American tin-plate manufacturers should avail themselves of the present opportunity to enter foreign markets where the Welsh makers will be unable to fulfill their contracts. There also seems to be an opportunity for the makers of black plates to secure orders from the Welsh mills for unfinished plates, as the mills will probably need stocks when they renew operations.

Considerable alarm is felt by the tin-plate makers here over the fact that several of the bituminous coal mines closed during the strike will not be reopened, owing to injuries through lack of repairs. It is certain that a considerable quantity of bituminous coal will be off the market here, and it is feared that scarcity of annealing and milling coals will add to the cost of production.

[The names of two commission agents dealing with the local tin-plate works may be obtained from the Bureau of Manufactures.]

*Dentists.*—Canadian openings are said to exist at Redditt in Ontario, Rivers in Manitoba, Bigger, Kelliher, Landis, Nokomis, Scott, and Semans in Saskatchewan, and Chauvin, Edson, Holden, Jarrow, and Viking in Alberta.

# DAILY CONSULAR AND TRADE REPORTS

ISSUED BY THE BUREAU OF MANUFACTURES, DEPARTMENT OF COMMERCE AND LABOR

## ASBESTOS IN FOREIGN COUNTRIES.

### GERMANY.

[From Consul General Robert P. Skinner, Hamburg; see also Weekly Consular and Trade Reports for June 11, 1910.]

The Hamburg market for raw asbestos is of some magnitude, as will be perceived from the following statement of importations from the countries given and average prices during 1910:

Countries.	Tons.	Average prices.	Countries.	Tons.	Average prices.
United States.....	5,810.7	\$64.26	Russian Black Sea ports....	25.5	\$96.64
Canada.....	5,219.5	57.12	Italy.....	3.0	228.48
British South Africa.....	1,018.8	149.94	France.....	.4	.....
Asiatic Russia.....	172.3	102.34	Other countries.....	44.4	52.36
Russian Baltic ports.....	2,151.2	147.56			
Great Britain.....	125.2	116.62	Total.....	14,598.6	.....
Belgium.....	20.6	81.90			

These average prices cover both fibrous and amphibolic material, and therefore do not reflect the market value of the latter variety, which commands from 50 to 90 marks (\$11.90 to \$21.42) per metric ton of 2,204.6 pounds c. i. f. Hamburg, including bags. The material should be shipped in pulverized condition, and correspondence should be accompanied by samples and quotations. [Names of dealers are on file in the Bureau of Manufactures.]

### Patented Methods of Asbestos Manipulation.

According to German patent No. 144,162, finely ground asbestos is worked into a plastic mass with sulphate of aluminum and a solution of agar agar. The resulting paste adheres well to the covering material, sets rapidly, and does not split. The addition of the aluminum salt makes the cement fireproof. By the addition of resin oil or glycerin, the paste is rendered more elastic.

German patent No. 148,936 contemplates the pressing of milled asbestos without the presence of cement. The asbestos is heated to a point below that of vitrification to obtain this result. Improvements on this process are provided in additional patents Nos. 156,794

and 160,981. According to the first improvement, the asbestos paste is saturated with a sulphuric acid of 25 per cent, dried, and then worked according to the prescriptions of the chief patent. The second additional patent contemplates the impregnation of the ready-prepared material with glass in solution (*wasserglaslösung*), the asbestos having been subjected to the heating previously prescribed, whereby an acid-proof silicic-acid impregnation is sought.

Manufacturers interested in the subject can always obtain full copies of German patents by paying the small fee fixed by the German Patent Office.

[From Consul George Nicholas Ifft, Nuremberg.]

#### **No Manufacturers of Asbestos Products in Bavaria.**

There are no establishments turning out asbestos products in Bavaria, but several firms [whose names are obtainable from the Bureau of Manufactures] use more or less asbestos in connection with their production of railway cars, fireproof doors, safes, etc.

In the year 1910 Germany imported asbestos valued at \$897,000. Of these imports \$481,950 worth came from Canada, \$171,836 from Russia, and \$122,000 from South Africa. The exports of asbestos products from Germany for the same period amounted to \$169,000.

---

#### **SWITZERLAND.**

[From Consul George Helmrod, Berne.]

Switzerland's imports of asbestos and mica (the customs statistics do not separately state the figures for these two minerals) in 1910 amounted to: Raw, \$125,000, largely from Russia and British India, with \$300 worth from the United States; in sheets and in combination with textiles, metals, etc., \$27,000; tissues, spun asbestos, and mica, \$54,000, mainly from Germany. In the last-named category \$250 worth appears as from the United States, but it is believed that a portion of the shipments credited to Germany were of American origin. In the same year the Swiss exports amounted to \$80,000 worth of prepared asbestos and mica and \$190,000 worth of manufactures. There is an asbestos mine at Poschiavo, Canton Graubunden (Grisons), and asbestos is spun and worked by a firm at Ennenda, Canton Glarus.

Import prices per 100 kilos (220.46 pounds) average: Raw, \$11 gross weight; spun, \$19.30. Asbestos is considered a precarious article to handle by reason of fluctuation in quotations and the inability to hold to a price agreement.

---

#### **ENGLAND.**

[From Consul Horace Lee Washington, Liverpool.]

There is but one manufacturer in Liverpool who weaves asbestos fiber into cloth; the others merely put together the cloth sent to them already manufactured. It is difficult to arrive at the actual prices of asbestos, owing to the varied qualities, but an approximate range of prices would be from \$24.50 to \$87.50 per ton, according to the length of the staple.

Italian fiber is said by the trade to be in good demand in England by reason of the length of the staple, which exceeds that of other

imports. According to the statistics, the relatively small amount of 2,987 hundredweights imported from Italy in 1910 had a value of \$21,378, whereas the 19,593 hundredweights imported from the United States were worth but \$35,813. The imports into Liverpool of asbestos fiber from the United States in 1909 were 3,342 hundredweights, valued at \$2,705, and in 1910 they amounted to 79 hundredweights, valued at \$574.

#### Imports by Countries.

The imports from different countries into the United Kingdom in 1908, 1909, and 1910 were as follows:

Countries.	Quantity.			Value.		
	1908	1909	1910	1908	1909	1910
<b>FOREIGN COUNTRIES.</b>						
Russia.....	<i>Cwt.</i> 20,751	<i>Cwt.</i> 10,704	<i>Cwt.</i> 17,153	\$123,142	\$71,060	\$119,264
Germany.....	5,518	6,263	6,316	40,240	48,690	62,008
Portuguese East Africa.....	4,508	5,793	4,648	39,676	56,523	36,015
Italy.....	3,022	3,837	2,987	26,960	38,378	21,378
United States.....	21,107	27,653	19,593	42,148	40,547	35,813
Other foreign countries.....	2,066	2,977	1,461	17,339	12,413	7,085
<b>BRITISH POSSESSIONS.</b>						
Cape of Good Hope.....	4,857	7,573	13,347	17,388	30,517	53,908
Natal.....	467	1,396	1,003	4,666	9,246	7,090
Canada.....	67,147	48,702	77,621	194,685	144,685	210,864
Other British possessions.....	1,583	760	253	12,510	5,596	1,764
<b>Total.....</b>	<b>131,716</b>	<b>116,658</b>	<b>144,382</b>	<b>518,754</b>	<b>457,635</b>	<b>554,279</b>

[The names of weavers of asbestos fiber, manufacturers of asbestos products, and importers in various towns of the United Kingdom are on file in the Bureau of Manufactures.]

#### RUSSIA.

[From Consul General John H. Snodgrass, Moscow; see also Daily Consular and Trade Reports for Oct. 14, 1911.]

At present asbestos mining in Russia is conducted without any real organization, the operators not owning the mines, but renting the asbestos-bearing grounds from the Imperial Government on leases of long duration, with a stipulation for developing a certain part each year. The output is limited from lack of capital. The methods employed are antiquated, and little interest is manifested in introducing modern appliances.

The Ural district is easily worked on account of a sufficiency of labor. There are two mining schools in that section, whose graduates can be hired at ordinary salaries. For technical construction and engineering, foreigners are absolutely necessary. The low cost of operation is conducive to large profits, the wage of the laborers being reasonable and their maintenance not expensive.

#### Asbestos Production in the Urals.

According to the latest available information there are 21 asbestos mines operating in the Urals. Their total production in 1910 amounted to 12,203 short tons, as compared with 14,670 tons in 1909, and 13,050 tons in 1908.

Following are the annual Russian exports and imports of asbestos from 1908 to 1910, the quantities being given in short tons:

Classification.	1908		1909		1910	
	Tons.	Value.	Tons.	Value.	Tons.	Value.
<b>EXPORTS.</b>						
Raw product.....	8,162	\$586,070	9,153	\$630,300	8,005	\$505,979
<b>IMPORTS.</b>						
Lumps.....	70	\$,240			( <sup>1</sup> )	269
Powder or fiber.....	126	13,390	198	29,140	88	10,230
Pasteboard.....	144	31,415	126	28,325	115	31,115
Yarns and manufactures.....	136	38,025	157	48,410	252	82,915

<sup>1</sup> Not stated.

### ITALY.

[From Consul Frank Deedmeyer, Leghorn.]

There are no manufacturers of asbestos products nor any users of asbestos fiber in manufacturing in the Leghorn consular district. There are, however, several firms selling asbestos at wholesale and retail, and their names are obtainable from the Bureau of Manufactures. The trade in this product is rather limited in the Leghorn district, and it is generally supplied from the asbestos mines in Savois and the Italian Alps.

### RHODESIA.

[From Consul Edwin N. Gunsaulus, Johannesburg, South Africa.]

The total declared output of asbestos in Southern Rhodesia from the beginning of operations in 1908 to January, 1912, amounted to 1,119.5 tons, valued at \$63,220, all of which was produced by the Rhodesian Asbestos Co. (Ltd.). The mine is situated in the Victoria district. It is stated by the Department of Mines and Works, at Salisbury, that with increased transport facilities a production of 150 tons per month may be maintained.

The valuation given to asbestos is assessed, the Department of Mines and Works not being in possession of the account of sales. The basis of valuation is as follows per ton: No. 1 grade, \$194.66; No. 2 grade, \$133.82; No. 3 grade, \$85.16; No. 4 grade, \$48.66.

Work was temporarily suspended on this mine on September 30 last, but will probably be resumed shortly.

### CANADA.

A bulletin on the production of asbestos in 1910, issued by the United States Geological Survey, thus reviews the Canadian situation:

One of the most notable features in the asbestos industry of Canada for 1910 was a greatly increased production during the first seven months. This stimulation of trade is regarded as a consequence of the combination of a number of mines at Thetford and Black Lake to form the Amalgamated Asbestos Corporation (capitalization \$25,000,000) and the Black Lake Consolidated Co. (capitalization \$5,000,000). The combinations promised greater economy and efficiency of administration with wider publicity and extended utility to increase demand. However, as the demand did not increase as rapidly as the output there was an overproduction and prices declined. Many of the mines have had to shut down altogether and all of the others have curtailed

their production; but judging from the history of the industry, it is believed that a steady development will soon follow.

Canada is by far the largest producer of asbestos in the world, yielding, if that held in storage is counted, about 78 per cent of the total output in 1910. Its production is of especial interest to the United States, as most of the asbestos mined in Canada is exported to the States and forms the basis of a large asbestos manufacturing industry. Furthermore, a number of the most important asbestos mines in Canada are owned or controlled by American capital.

The preliminary report of the Director of Mines gives the Canadian production for the calendar year 1910 as: Asbestos, 75,678 short tons, value \$2,458,929; asbestic, 24,707 short tons, value \$17,629.

#### **The Asbestos Merger.**

Relative to the merger referred to above, the Toronto Monetary Times states:

Bonds of the Amalgamated Asbestos Corporation deposited with the National Trust as representatives of the Canadian committee now amount to some \$1,200,000, or about \$200,000 more than at the beginning of the year. The National Trust is hearing daily from large and small bondholders who desire to cooperate with the protective committee, and the outlook continues favorable that the necessary 75 per cent of the total issue of \$8,000,000 will be turned over to the representatives of the committees here, in Great Britain, and in the United States.

The published plan of the committee appointed to submit a scheme of reorganization includes the formation of a new company with the following capitalization: \$5,000,000 in first-mortgage, 30-year, sinking-fund, 5 per cent bonds; \$4,000,000 in 6 per cent participating preferred stock; and \$2,875,000 in common stock. The bonds of the old company are exchangeable at a fixed ratio for the new issues, and it is to this exchange that the Toronto paper refers.

[For an article on asbestos mines and mining in the Province of Quebec, transmitted by Consul Gebhard Willrich, see Consular and Trade Reports dated Apr. 23, 1910.]

#### **ASBESTOS TRADE OF THE UNITED STATES.**

The United States purchases practically all of its asbestos from Canada, the Dominion supplying 56,950 tons in the fiscal year 1911, and Germany, Russia, and Italy together only 174 tons. These imports had a value of \$1,294,802 and \$23,737, respectively. This country bought from abroad asbestos manufactures amounting to \$293,651 in 1911, of which \$133,113 came from the United Kingdom, \$72,192 from Germany, \$64,290 from Austria-Hungary, and \$15,019 from Belgium. In the same fiscal year the United States exported raw asbestos (ore and unmanufactured) worth \$16,151, mostly to Europe, and manufactures of asbestos valued at \$388,833. Of the latter Canada took \$171,582 worth, Cuba \$45,116, United Kingdom, \$37,140, Mexico \$34,904, and Germany \$27,284.

A review of asbestos production and trade in the United States was published in Daily Consular and Trade Reports for December 20, 1910. Supplementary statistics supplied by the Geological Survey give the total production of asbestos in the United States for 1910 as 3,693 tons, valued at \$68,357.

Consul Thomas W. Voetter, of La Guaira, says that the maximum size of the widest tires used in Venezuela on carts, the usual conveyance, is 2½ by ¾ inches. The maximum dimensions of the thickest tires are 1½ by ½ inches. The tires are made by local blacksmiths.

**GERMAN STEAMSHIP COMPANIES PROSPEROUS.**

[From Consul General Robert P. Skinner, Hamburg; see also Daily Consular and Trade Reports for Mar. 22.]

In closing their business year in the latter part of March, 1912, the Hamburg-American Line declared a 9 per cent dividend, the Hamburg-South American Steamship Co. a 10 per cent dividend, and the Kosmos Steamship Co. one of 12 per cent. The two latter companies are engaged exclusively in trade with South and Central America and the west coast of North America. The report of the Hamburg-American Line is in part as follows:

The insecurity and unrest of the general economic situation in the United States is evidenced by the considerable decrease in immigration compared with the preceding year. The large cotton crop helped somewhat to bolster up economic conditions. Boston, Philadelphia, Baltimore, and the Gulf ports participated prominently in the activity of the freight traffic. New Orleans, with her poor harbor facilities, has not for years kept pace with the steadily increasing traffic. The business with Canada showed a satisfactory increase.

An increase in the price of coffee gave greater purchasing power to the coffee-producing countries of the West Indies, although the crop proved but an average one, and the outbound traffic to these countries increased, while the homeward-bound traffic failed to advance.

The connecting routes between the Atlantic and Pacific Oceans, via Colon, Puerto Barrios, and the Tehuantepec line, showed progressive development. The traffic by the last-named route showed the greatest increase.

The Atlas Line experienced an important change. With the expiration, at the close of 1911, of our contract with the United Fruit Co., under which we have for the past 10 years forwarded large quantities of bananas from the West Indies to New York in specially arranged steamers, no understanding was reached as to its renewal. Consequently we have entered into a contract with the new Atlantic Fruit Co. for the same kind of shipping. The new company intends to ship bananas to Hamburg and other European ports in connection with the Hamburg-Colombian Banana Co. (Ltd.). We have secured a certain influence in the affairs of the latter company through the acquisition of a number of bonds issued by the Atlantic Fruit Co.

The service of our Hamburg-South American lines was hampered by the insufficient harbor facilities in many of the South American ports. While the accommodations at Para and Santos are almost sufficient, in the majority of the other ports the means for loading and discharging cargo for seagoing vessels are far behind the requirements of the increasing traffic.

A slight improvement was noticed during the past year in the business of the New York-Brazil line, which was heretofore operated with unsatisfactory results. Economic conditions in the countries on the west coast of South America, especially Chile, improved during the year, and we are satisfied with the results of the transactions which we carried out jointly with the Kosmos Line.

**Report of Hamburg-South American Steamship Co.**

The Hamburg-South American Steamship Co., devoting itself exclusively to the South American trade, reports as follows:

Exports to the east coast of South America were important during 1911, with the exception of northern Brazil. Freight rates were satisfactorily maintained, owing to the increasing freight markets. These have reached a height unknown for many years, and the prospects for the coming year permit us to expect their continuation. Owing to poor harbor facilities, we have been forced to make many additions to the charges for handling freight to protect ourselves somewhat against the heavy expenses and loss of time connected therewith.

The business for return voyages was not very good. The last crop in Argentina was below the preceding one. The vessels in our Argentine and Brazilian service frequently had to return in ballast, seldom being able to procure full cargo. The exports of tobacco and coffee from Brazil to Hamburg showed a further decrease, and the importation into Hamburg of india rubber from the Amazon region has not increased in the past 10 years. The Patagonia Coast Line, in which six steamers are employed, showed a good traffic return.

The east coast of South America seems to have a great attraction for competitors, as new ones enter the field every year, disappearing as suddenly as they come. We are unable to clearly understand why shipping companies should at this time, when

the open market and the charter business promise such excellent returns, endeavor to force themselves into competition from which only loss can result and try to enter the business of the lines maintaining regular service. We can only explain these proceedings by crediting them to an insufficient knowledge of conditions prevailing in the Brazilian trade, which makes the freight rates quoted to that country appear more favorable than they actually are, on account of the high cost of maintenance, lack of return cargo, and poor harbor facilities, which cause a great loss of time.

In November, 1911, our new passenger steamer, the *Cap Finisterre*, the largest ship which has ever plied between Europe and South America, made her maiden trip. We have ordered another large passenger steamship, to be delivered in the fall of next year, and in April of this year the Diesel motor ship which we ordered last year will be put into commission. This is the first large German motor ship for trans-Atlantic trade. The two large twin-screw 12,000-ton freight and emigrant ships and a freight steamer of about 7,000 tons, which were ordered last year, will make their first trips at an early date. In addition we ordered two other twin-screw 12,000-ton freight and emigrant ships some time ago, which will be completed at the beginning of next year. Our fleet has thus been increased by about 67,000 gross registered tons, reaching a total of about 285,000 gross registered tons.

#### **Kosmos Line's Review.**

The Kosmos Steamship Co. is particularly interested in the west-coast trade to points as far north as Puget Sound, and reports as follows:

Our outward-bound business shows a considerable increase, through carrying material for railways and for the erection of nitrate works. Exports of general merchandise did not increase perceptibly. During the latter months exports to Chile showed an increase on account of the projected increase in the tariff.

The general economic condition of Chile was favorably influenced during the year by the better condition of the nitrate industry as well as by activity in construction work. The exports of nitrate from Chile during 1911 amounted to 2,400,000 tons, of which 1,800,000 were shipped to Europe. The importations into Hamburg amounted to 790,000 tons, of which 330,000 tons were carried by our line.

Iron ore from the Province of Coquimbo is a new product for export to Europe. As this ore contains a large percentage of iron, it is expected that with moderate freight rates the business will be satisfactorily developed.

Our outward-bound traffic to California and British Columbia showed a decrease, owing to the fact that some lines have already opened communication with this section in conjunction with service via the Panama Canal. We are unable at present to clearly foresee what changes will be necessary in our line as a result of the opening of the canal.

[From Consul William T. Fee, Bremen.]

#### **North German Lloyd Report.**

The annual report of the North German Lloyd Steamship Co. for the calendar year 1911 shows that during that year it carried 158,804 passengers to the United States, against 219,763 in 1910. The number of persons carried from the United States to European ports rose from 90,692 in 1910 to 93,338 in 1911. The loss in the west-bound passenger traffic is almost entirely accounted for by the decrease in emigration, said to be due to the weak labor market in the United States. The sharp quarantine measures necessitated by the spread of diseases in southern Europe no doubt also exerted a retarding influence.

The freight traffic of the company is reported as highly satisfactory, the increased demand having in many instances necessitated the chartering of extra steamers. The present fleet of the company consists of 119 ocean-going steamers, of a total of 665,350 register tons, and 325 smaller vessels, including river steamers, coasting vessels, 2 school-ships, and 6 steamers under construction. The total profits for the year shown by the report were about \$9,877,000, an increase of \$809,200 over the preceding year.

**COTTON GROWING IN THE DOMINICAN REPUBLIC.**

[From Consul Charles M. Hathaway, Jr., Puerto Plata.]

During 1911 many Americans visited this consular district to investigate the possibilities of cotton growing. Several of these have established themselves here and others are contemplating doing so. The result of these visits, some of them by cotton experts, has been a closer examination of the situation than had before been made and the accumulation of a greater quantity of reliable data than was available to earlier reporters.

The present opinion is that there are good soil and climate here for cotton growing and that the outlook is promising, especially for the skilled and intelligent grower of pure sea-island cotton. The actual possibilities of sea-island and long-fiber upland cotton here are yet to be ascertained, as little skill has hitherto been brought to bear on their cultivation. There is hope that positive results may be reached during the present year on plantations where more scientific treatment is being given to the crop. The total cotton export from the Dominican Republic has risen steadily from 15,462 pounds in 1908 to 343,262 pounds in 1911.

The cotton-growing district of this Republic is the northern half of the island, principally the Provinces of Monte Christi, Santiago, and Puerto Plata. There has been some planting in the interior Provinces of Espaillat and La Vega, but reports from these last seem less encouraging. The Province of Pacificador, although not much planted as yet, is thought to contain much good cotton land. In Monte Christi irrigation will be needed, as the average rainfall is scarcely sufficient to mature the plant. In Santiago and Puerto Plata rainfall is more abundant, there being some fear there that it is too abundant for cotton, but with good drainage it is not thought that the crop will be endangered.

**Cost of Plantations—Prices Received.**

The methods of culture in use have hitherto been very primitive, but profitable cotton growing will require capital. One observer here places the minimum size of a cotton farm at 100 acres and the minimum capital at \$2,500 to \$4,000. Another regards \$12,000 as the smallest amount for undertaking the cultivation of 100 acres. The cost of clearing, plowing, stumping, planting (including the cost of good seed), cultivating, insect warfare, ginning, baling, etc., is placed at \$45 per acre, varying with different tracts. To this should be added cost of land, buildings, tools, and all overhead expenses. Suitable land can be bought in Monte Christi, it is said, for \$3 to \$6 an acre, which will cost \$8 to \$15 an acre to clear.

Labor is now obtainable at 50 cents per day, but tends to rise. Only unremitting superintendence can obtain the prompt and continuous attention of the laborers to the details necessary for successful cotton raising. Some of the larger enterprises, like the sugar estates, resort to importation of labor from the British West Indies and from Haiti, but this practice is now subject to some Government restriction.

It is thought that the best of the present Dominican output, if properly handled, would grade up to Egyptian, but with the system of ginning it has been graded with upland cotton and priced accordingly. A shipment from Monte Christi to New York in the early fall of 1911 failed to realize 14 cents, although, if properly ginned, this

cotton should have brought 23 cents. The average invoice price of the cotton shipped from Monte Christi in 1911 was 17½ cents. Shipments from Puerto Plata have realized 18 cents and upward in the English market. Sea-island cotton grown in St. Vincent in 1911 averaged over 38 cents, in Antigua over 34 cents, and similar prices in other British islands. Competent observers see no reason why proper methods of cultivation should not yield 1,300 to 1,800 pounds of seed cotton per acre. The cotton future of the island seems to be in sea-island cotton. It is thought that with proper treatment and roller ginning such cotton would bring a market price of 30 cents or more.

#### **Market for American Goods.**

The various supplies required for the development of cotton plantations offer an opportunity for the sale of American goods. Gins and their attachments, baling machines, traction engines, plows, cultivators, other agricultural implements, pumps and irrigation appliances, and high-grade seed will all be needed, besides the various personal requirements of American settlers. Americans have the advantage, as this country has better communication with New York than with any other port, and because the United States, as the leading cotton producer of the world, is the natural source of supply.

[The complete 32-page report, of which the foregoing is a condensation, giving complete details of cotton growing in the Dominican Republic, will be loaned in rotation to those interested on application to the Bureau of Manufactures.]

---

### **VACUUM CLEANERS IN FRANCE.**

[From Consul James E. Dunning, Havre.]

There will eventually be a fairly good market for vacuum cleaners in France. The trade will have to be educated and the way carefully prepared by advertising, circularization, personal representation, and demonstration. France is a good country for window demonstration, and responds very well to personal canvass.

A good demand for some such machine is afforded by the fact that the household cleaning in France is done by an extra servant. On this basis an appeal could be made to the French sense of household economy. This could be made use of in advertising. Account would have to be taken of the first cost of the machine and of the very great difference in domestic procedure between France and the United States. The French are just beginning to take up the use of high-grade kitchen and other household appliances which are considered necessities by every family in America. The French will not take up an article because it is new and interesting, or because it is useful and a saving of physical effort; but because it can be shown to produce better results at a lower cost and under more healthful conditions.

---

### **National Fertilizer Convention.**

The nineteenth annual convention of the National Fertilizer Association will be held in Atlantic City, N. J., July 16 to 19, 1912. There will also be an extensive exhibit of appliances for the fertilizer trade at the same time. W. W. Hubbard, Chestertown, Md., is president, and W. G. Sadler, Nashville, Tenn., secretary, of the association.

**RUSSIAN CAVIAR INDUSTRY.**

[From Consul John H. Grout, Odessa.]

Black caviar is prepared at Astrakhan from the bieluga (white sturgeon) and the sevriuga (stellated sturgeon).

Fresh caviar is of a light color and is contained in a membrane. The caviar is cut out and placed on an iron sieve, through which it is rubbed carefully, without breaking the grain, to rid it of any refuse. It falls into a preparation of brine, and after remaining there for three or four hours is emptied into a sack, where the brine gradually drains off, leaving the caviar ready for consumption. For local consumption, or when it can be kept continually on ice for a few days, the slight salting is dispensed with.

**Preparation of Salted Caviar.**

Salted (payousnaya) caviar is prepared in the same way as fresh except that the brine is stronger and the caviar remains one day in the sack to drain, after which it is pressed to get rid of the brine. For the production of good caviar, the brine must be boiled and cooled. The brine is made lighter in cold weather and stronger in hot weather.

Red caviar (tarama) is produced from the fish "taran" (*Cyprinus vimba*), which in Astrakhan is called "vobla." The roe is cut out and thrown into a preparation of brine made of 9 pounds of salt and 12 drams of saltpeter to each 36 pounds of water. It is then carefully mixed and all the refuse cleaned off, when it is ready for packing in barrels. The barrels are loosely hooped for two or three days, to allow the brine to drain off. For about a month this caviar is soft, but it gradually becomes solid. For good results, cold weather is required and the roe must be taken out of the fish the day it is caught or it is liable to become putrid. This caviar is more perishable than the black.

Whole-roe red caviar is prepared from the fish "soudak" (sandre). It is strongly salted and carefully packed to keep it whole.

[From Vice Consul Emerio Matfievich, Batum.]

**Prices of Sturgeon Caviar.**

There is no regular market for caviar in the Batum consular district. As far as can be ascertained, no difference is made in the prices of caviar obtained from the bieluga, the sevriuga, or other varieties. The wholesale prices of payousnaya (malossol) caviar at Astrakhan are 100 to 140 rubles per pood (\$1.43 to \$2 per pound) for first quality, and 60 to 80 rubles per pood (\$0.86 to \$1.14 per pound) for the second grade, in barrels and sacks. The difference in price depends on the preparation given by different producers. Fresh caviar, unsalted, brings 90 to 100 rubles per pood (\$1.28 to \$1.43 per pound) at Astrakhan. No fluctuation in price has taken place during the present season.

[From Consul John F. Jewell, Vladivostok, Siberia.]

**Salmon Caviar, European and Asiatic Russia.**

According to local newspapers, the market in European Russia for salmon caviar is strong. The price at Nikolaiefsk is 10 to 11 rubles per pood (\$14.26 to \$15.69 per 100 pounds), and in European

Russia 24 rubles per pood (\$34.22 per 100 pounds), the freight rate being about \$6.40 for 100 pounds. The Nikolaiefsk fishermen have petitioned for the erection of proper cold-storage facilities in European Russia and the Far East in order to equalize the market.

[From Consul Talbot J. Albert, Brunswick, Germany.]

#### Preservatives in Russian Caviar.

The German police authorities have called the attention of dealers to the fact that caviar imported from Russia has occasionally been found to have been treated with formaldehyde or boracic acid. As these preservatives are injurious to health, caviar so treated is forbidden to be sold, under the penalties of the pure-food law, and dealers in caviar are warned to contract that all caviar to be delivered from the catch of the present season should be free from such preservatives.

These preservatives have been found in the inferior qualities of caviar. Although the quantities have been small and possibly not sufficient to injure health, the leading merchants are careful not to handle caviar preserved in this way. The roe of the sturgeon should be conserved only with pure salt. There is no caviar that is not salted, but the dearer kinds contain less salt than the cheaper. One of the best varieties is called "malossol," which means in Russian "little salt." As malossol does not keep well, it is put up in tin boxes and kept in cold storage. In the best caviar, half to three-quarters of a pound of salt is added to 34 pounds of caviar. Generally this quantity of caviar is treated with 1 to 3 pounds of salt. Bieluga is considered the best variety of caviar.

As the sturgeon roe is always gray, falsifying of caviar seldom happens. Lately Swedish and Siberian salmon roe has been introduced in commerce, but this is easily distinguished by its red color.

Caviar is used frequently by the sick for nourishment, and the purity of the article is carefully guarded in Germany.

#### SICILY'S TUNNY FISHERIES.

[From Consul Hernando de Soto, Palermo, Italy.]

The tunny fisheries of Sicily, some 40 in number, are located along the northern coast of the island from Trapani to Messina. The fish are caught in May and June, and the quantity canned annually varies from 15,000 to 40,000 boxes of 80 kilos (kilo=2.2046 pounds) each. The tins used hold from one-fourth kilo to 20 kilos.

From the refuse of the canneries about 10,000 kilos of tunny oil are extracted, the average price for the oil being 50 lire (\$9.65) per 100 kilos. This is shipped to Genoa, whence it is sold to firms in northern Italy or exported to foreign countries for use in the manufacture of chemical products. To extract the oil the refuse is boiled 24 to 48 hours and then passed through metal presses similar to those used in olive-oil establishments. The presses are of Italian make.

The pressed-fish residue is called "bagamo," and the entire output, which is estimated at 400 tons a year, is used in Sicily as a fertilizer, the average cost per 100 kilos being 6 lire (\$1.15).

## DEVELOPMENT OF AUSTRALIAN TRADE.

[Prepared at Bureau of Manufactures from Australian official publications and from declared export returns of American consuls.]

The marked growth which has characterized the Australian trade since the inauguration of the Commonwealth on January 1, 1901, continued during last year.

A preliminary statement issued by the trade commissioner gives the total value of the oversea commerce last year as \$712,185,650, against \$654,571,021 for 1910, \$557,129,938 for 1906, and \$448,351,536 for 1901. The imports were valued at \$325,375,665 (merchandise \$315,686,152 and specie and bullion \$9,689,513), against \$292,059,839 (merchandise \$285,577,856 and specie and bullion \$6,481,983) for 1910. The Australian exports last year amounted to \$386,809,985, of which \$328,115,952 represented merchandise, the remainder being gold. The exports in 1910 were valued at \$362,511,182, made up of \$339,953,606 worth of merchandise and \$22,557,576 in gold.

Imports into the Commonwealth.

The following table shows the value of the leading items of import into the Commonwealth during 1910 and 1911:

Articles.	1910	1911	Articles.	1910	1911
Ale and beer.....	\$2,111,249	\$2,311,309	Oil, kerosene.....	\$3,014,028	\$2,448,857
Apparel and dry goods...	68,634,058	73,032,802	Paints, colors, and var-		
Boots and shoes.....	1,755,171	1,861,417	nishes.....	2,342,685	2,361,543
Cordage and twines.....	3,119,807	3,538,725	Paper:		
Drugs and chemicals.....	4,449,319	4,542,538	Printing.....	3,558,396	3,533,342
Earthen and china ware...	1,697,820	2,160,654	Other.....	3,563,362	4,006,142
Fish.....	2,627,414	2,700,818	Railway materials (rails,		
Glass and glassware.....	2,028,124	2,512,277	etc.).....	3,993,825	5,303,142
Hats and caps.....	1,514,193	1,598,811	Rubber goods.....	3,320,885	4,404,183
Implements and machin-			Spirits:		
ery, agricultural, etc.	2,871,649	3,654,016	Brandy.....	746,580	1,172,637
Instruments, musical, pi-			Gin.....	675,636	774,582
anios.....	1,633,563	2,302,746	Whisky.....	2,916,557	3,210,460
Iron and steel:			Sugar (cane).....	1,979,249	1,966,596
Bar, blooms, girders,			Tea.....	6,995,849	6,073,767
etc.....	5,208,620	7,934,191	Timber.....	10,294,492	13,850,521
Galvanized, plate,			Tobacco:		
and sheet.....	8,380,682	8,668,656	Manufactured.....	781,132	817,120
Jewelry, and imitation....	1,383,468	1,662,494	Unmanufactured.....	2,163,819	2,473,209
Jute goods (bags, etc.)....	5,065,939	6,651,007	Cigars.....	592,004	850,971
Leather.....	1,893,770	1,856,244	Cigarettes.....	196,397	228,067
Machines and machinery			Tools.....	2,593,402	3,129,914
(except agricultural)....	14,569,810	17,805,540	Vehicles and parts (in-		
Manures.....	3,259,533	2,467,443	cluding cycles and mo-		
Metals, manufactures of...	18,013,706	21,240,842	tors).....	5,820,577	7,657,696

As will be seen from the foregoing table, practically all the items show an increase over 1910.

#### Increased Imports from United States.

The statistics showing the trade by countries will not be available for some months, and therefore there is no way of ascertaining to what extent the United States benefited by the increase in the Australian imports during last year. There has been a gradual gain, however, in the imports of American goods. In 1906 they amounted to \$27,279,711, but in 1910 had increased to \$37,273,254. These American imports cover all kinds of merchandise, the principal of which during 1910 were undressed timber, amounting to over \$4,000,000; followed by kerosene oil, valued at \$2,800,000; raw tobacco, \$2,050,000; rails, fishplates, etc., \$1,800,000; leather, \$1,180,000;

tools, \$1,046,000; manufactured tobacco, \$712,000; cotton and linen piece goods, \$652,000; preserved fish, \$805,000; iron and steel wire, \$875,000; printing paper, \$540,000; and arms and ammunition, \$456,000.

#### Exports of Principal Products.

The leading Australian exports and their value during 1910 and 1911 were as follows:

Articles.	1910	1911	Articles.	1910	1911
Animals—horses.....	\$1,240,330	\$1,070,367	Rabbits and hares:		
Butter.....	19,236,340	22,568,258	Preserved.....	\$3,046,395	\$3,785,169
Coal.....	4,428,822	4,415,147	Other.....	2,368,000	1,980,827
Copper, ingots and matte.	10,334,776	11,045,639	Silver, bar, etc.....	2,666,461	3,406,246
Fruits, fresh.....	1,570,790	1,503,471	Skins:		
Flour.....	6,054,729	6,775,390	Rabbit.....	2,763,910	2,430,112
Hides.....	2,219,743	2,975,223	Sheep.....	9,824,948	7,849,665
Lead.....	5,153,215	5,394,086	Other.....	4,415,731	2,445,713
Leather.....	2,584,784	2,351,576	Tallow.....	9,201,904	9,434,440
Meats, frozen:			Timber.....	4,918,075	5,217,331
Beef.....	5,738,315	5,363,225	Tin, ingots.....	3,288,950	3,723,744
Mutton and lamb.....	10,519,004	7,632,323	Wheat.....	48,341,075	46,831,021
Oil, coconut.....	935,074	681,037	Wine.....	627,452	738,502
Ores (exclusive of gold)...	4,117,774	5,180,759	Wool.....	140,044,648	126,959,870
Pearl shell.....	1,567,908	1,524,948			

Although wheat decreased in value of shipments compared with 1910, the quantity exported increased, being 28,657,137 and 32,992,173 centals (cental=100 pounds, avoirdupois) for 1910 and 1911, respectively. The wool shipments amounted to 650,985,361 pounds, a loss of 13,162,739 pounds; butter, 101,712,164 pounds, a gain of 13,784,013 pounds; flour, 3,544,099 centals, an increase of 745,181 centals.

#### Shipments to United States by Consular Districts.

According to invoices certified at the several American consulates and agencies throughout the Commonwealth there was a decrease in the total shipments to the United States compared with 1910. The articles invoiced last year were valued at \$10,272,330, a decline of \$631,558. The following table gives the total value of the shipments from each district for two years:

Consular districts.	1910	1911	Consular districts.	1910	1911
Hobart, Tasmania.....	\$79,231	\$170,438	Melbourne, Victoria.....	\$2,463,778	\$2,563,306
Newcastle, New South Wales.....	540,413	495,078	Adelaide, South Australia.....	77,457	47,162
Brisbane, Queensland.	1,009,040	797,010	Freemantle, Western Australia.....	425,729	325,423
Townsville, Queensland.....	216,291	425,208	Sydney, New South Wales	6,066,482	5,622,110

As seen from the foregoing table, the exports from Tasmania increased considerably, due to shipments of apples amounting to \$56,713, while there were none invoiced in 1910. Another item contributing to the increase was timber, which shows a gain of \$53,192. The increase in the value of the shipments from Melbourne was due to the larger exports of wool, which totaled \$2,290,934 against \$2,068,587 in 1910. Frozen meats are practically the only items invoiced from Townsville to the United States, and these increased from \$128,555 in 1910 to \$198,989 in 1911.

**Principal Australian Exports to United States.**

The following were some of the principal items in the Australian shipments to the United States, as invoiced through the American consulates during the past two years:

Articles.	1910	1911	Articles.	1910	1911
Apples.....		\$50, 713	Osmiridium.....	\$10, 762	\$19, 644
Beef and by-products.....	\$681, 671	644, 922	Pelts, pickled.....	145, 181	105, 028
Coal.....	533, 138	465, 928	Skins:		
Copper:			Calf.....	100, 110	156, 934
Blister.....	425, 487	324, 762	Marsupial.....	874, 397	619, 450
Other.....	3, 411, 085	3, 372, 849	Rabbit.....	320, 882	383, 567
Dairy products.....	81, 434	81, 387	Timber.....	59, 327	145, 922
Fusel oil.....		14, 681	Tin.....	410, 760	185, 489
Hides.....	126, 704	262, 664	Wool.....	3, 173, 365	2, 989, 271
Hogs and by-products.....	81, 672	102, 165			

**CHEWING GUM IN CHINA.**

[From Consul General Samuel S. Knabenshue, Tientsin.]

Very little chewing gum is at present sold in China; at least, that is true of the north. None of the business houses in Tientsin carry it in stock. This is because there are comparatively few Americans in China, and foreigners of other nationalities are not particularly addicted to the chewing-gum habit. There are perhaps 3,000 foreigners, excluding soldiers, in the various concessions at Tientsin. About 120 of these are Americans. The Japanese come first in numbers and the British next; neither of these nationalities use chewing gum. Whether the Chinese would take kindly to it if it were introduced is a question that can be solved only by experiment.

The use of cigarettes in China is increasing rapidly among the natives, and it is possible that if the same methods were used to introduce chewing gum it would have a similar success. The British-American Tobacco Co. entered this field several years ago. With headquarters in Shanghai, it has established large houses in each of the treaty ports, from which traveling men are sent through the cities and towns of the interior, placarding the walls with huge illustrated posters printed in Chinese. These salesmen distribute sample packages of cigarettes on the streets, giving away many thousands as an advertisement, and then arrange with some native merchant to carry a stock of their goods. By these effective and energetic methods they have built up an enormous traffic which is steadily growing.

It is entirely possible that a similar campaign on behalf of chewing gum would have similar results. I doubt, however, if any business of importance can be built up by endeavoring to sell through the foreign import firms of Tientsin and other treaty ports, first, because there are very few American firms in China, and, second, because it would be practically impossible to induce merchants of other nationalities to take up the matter and push it in the energetic manner detailed above.

**Naval Shipyards in Italy.**

Consul General James A. Smith, of Genoa, states that Italy has 21 naval shipbuilding yards, with a total capital of about \$20,000,000 and nearly 16,000 workmen. A list of the yards may be had from the Bureau of Manufactures, Washington, D. C.

## RUSSIAN BUSINESS NOTES.

(From Consul General John H. Snodgrass, Moscow.)

**Siberian Railway Travel and Traffic.**

The International Sleeping Car Co. seeks governmental permission for operating the Far Eastern Express (new train de luxe) to accommodate the many passengers over the Siberian route who formerly traveled via the Suez. Arrangements have been made to run the same train via Changchun and Mukden to Seoul, Shimonoseki and Tokyo, and to Tientsin, Peking, and Hankow; also on to Canton when railroad construction is finished thereto.

The Siberian Railway is handling increased traffic of food articles, which has overburdened the line, which with its single track can not handle over 40 trains daily.

**Russia's Proposed Northern Waterway.**

The Tomsk Chamber of Commerce, having ended the discussions of the propositions of the shipowners for connecting Siberian rivers with the Volga, decided that the solution of the difficulties in the absence of roads and means of communication in Siberia can be reached only by opening navigation over the northern sea route, which actual experience has proved possible for vessels. The committee asks the Government to establish docks and other landing points at the mouths of the Rivers Ob and Yenisey; to provide means of transportation; to construct wireless telegraphic stations; to organize a permanent anchoring station at the port on Nova Zembla, and to construct lighthouses. The Omsk Chamber of Commerce adopted a similar resolution.

**New Moscow Loan for Improvements.**

Although Moscow's municipal debt totals \$60,850,342, a new \$19,055,000 loan for city improvements will soon be floated in London at 4½ per cent, the bonds probably going on the market at 95. Interest and partial payment on the debt amounted to \$3,043,950 in 1910, representing 16.7 per cent of the city revenues. Notwithstanding the rapid increase of indebtedness, Moscow's credit is sound, the assets exceeding the liabilities by \$34,282,045. On January 1, 1911, municipal property, with unspent part of loans, aggregated \$94,772,582. The greater part of the loans are productive, being made principally for undertakings and property purchases. With the new loan profitable investments will reach \$77,616,976, or 97.2 per cent, while nonincome buildings represent only 2.8 per cent. Moscow compares favorably with other large European cities, as is shown by the following table of city loans:

Cities.	Date.	Productive expenditure.	Unproductive expenditure.	Total.
		<i>Per cent.</i>	<i>Per cent.</i>	
Moscow.....	Dec. 30, 1911	96.45	1.55	\$60,850,342
Petersburg.....	Jan. 1, 1910	75.8	24.2	48,101,000
Warsaw.....	Jan. 1, 1910	80.3	19.7	16,000,340
Odessa.....	Jan. 1, 1910	72.28	28	8,240,000
Riga.....	Jan. 1, 1910	85	15	7,188,134
London.....	Apr. 1, 1909	43.5	56.7	553,882,500
Paris.....	Apr. 1, 1909	81.7	18.3	96,670,930
Vienna.....	Jan. 1, 1910	77.4	22.6	

**PROPOSALS FOR GOVERNMENT SUPPLIES.**

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

**No. 587. Navy Department supplies.**—The Bureau of Supplies and Accounts, Navy Department, Washington, D. C., will receive bids for the following supplies, and firms interested should apply to the Bureau of Supplies and Accounts, giving the schedule number desired: (1) Until April 30, 1912, schedule 4472, white ash; schedule 4490, wood screws. (2) Until May 7, schedule 4490, strap coils, poplar excelsior, packing hay, garden hose, laundry soap, red brick, barrels, copper, flour; schedule 4481, squilgee rubber blades, rectangular mirrors, steel plow wire rope, steel and phosphor-bronze springs, cast-steel crucible wire, direct differential blocks and hoists, twist drills, scaling hammers, wrought-iron hammock rings, wrought-iron screw shackles; schedule 4473, single-conductor lead-sheathed cable, building sand, broken stone or gravel; schedule 4480, compressed slab cork, wooden fenders for towboats, Spanish-cane ship fenders, fire rubber hose, white-ash oars, wrought-iron or steel pipe, sheet lead; schedule 4491, coffee crates, coffee tins; schedule 4486, high-speed steel furnaces; schedule 4487, steam gauges, loofah sponges, turkish toweling, chain blocks, air hoists, pig iron; schedule 4483, lubricating graphite and greases; schedule 4477, wash metal, aluminum, ferromanganese, ferrosilicon, round bar iron; schedule 4475, black building paper, fire and silicate Paxson's clays, crushed rock, Albany sand, Lumberton sand, red gravel sand, Paxson's blast sand, silica sand, sawn spruce; schedule 4485, metallic life rafts; schedule 4484, automatic electric motor starters; schedule 4474, electric-driven winch; schedule 4489, Millville and core gravels, Albany sand, Lumberton sand, Crescent sand; schedule 4482, white ash, Port Orford cedar, clear fir, lignum-vitæ, white oak, yellow pine, plank spruce; schedule 4478, white pine, pig iron; schedule 4479, yellow pine; schedule 4488, phosphor copper, cast scrap iron; schedule 4480, solder; schedule 4469, drill rod steel, tungsten tool steel, carbon tool steel; schedule 4471, zinc boiler plates, slab zinc, rolled sheet zinc.

**No. 588. Photographic printing paper and cloth.**—Sealed proposals, in duplicate, will be received at the office of the Chief of Ordnance, United States Army, Washington, D. C., until 12 noon April 19, 1912, for furnishing during the fiscal year beginning July 1, 1912, such quantities of the following supplies as may be required: Photographic printing cloth (about 1,500 yards used per year); brown photographic printing paper (about 300 rolls used per year); blue-print paper (about 2,500 yards used per year).

**No. 589. Stone schoolhouse.**—Sealed proposals will be received at the Indian Office, Washington, D. C., until 2 p. m. May 14, 1912, for furnishing materials and labor for the erection of a stone schoolhouse at the Western Navajo Indian School, Ariz., in strict accordance with the plans, specifications, and instructions to bidders, which may be examined at the Indian Office, Washington, D. C.; the offices of the Supervisor of Construction, Denver, Colo.; the Builder and Contractor, Los Angeles, Cal.; the Arizona Gazette, Phoenix, Ariz.; the Morning Journal, Albuquerque, N. Mex.; the United States Indian warehouses at Chicago, Ill., St. Louis, Mo., Omaha, Nebr., and San Francisco, Cal.; the Builders and Traders' Exchange at Minneapolis, Minn.; and at the school. For further information apply to the Superintendent of the Western Navajo Indian School, Tuba, Ariz.

**No. 590. Sump pit, pump house, and machinery.**—Sealed proposals, in duplicate, will be received at the office of the Quartermaster's Department, Marine Corps, Washington, D. C., until 11 a. m. April 29, 1912, for the construction at the marine barracks, navy yard, Norfolk, Va., sump pit and pump house, including machinery. Plans and specifications may be obtained from the commanding officer of the marine barracks at Norfolk and at the Washington office.

**Bound Volumes of Daily Consular and Trade Reports.**

The Government Printing Office will supply regularly in quarterly volumes, with complete 32-page indexes, bound sets of Daily Consular and Trade Reports from January 1, 1912. The price is \$1.50 per volume or \$6 per year, in order to cover the cost of the index and binding. Those desiring the bound volumes should write to the Superintendent of Documents, Government Printing Office, Washington, D. C.

# DAILY CONSULAR AND TRADE REPORTS

ISSUED BY THE BUREAU OF MANUFACTURES, DEPARTMENT OF COMMERCE AND LABOR

## COOPERATIVE SOCIETIES IN FRANCE.

[From Consul General Alphonse Gaulin, Marseille.]

The first cooperative store, or workmen's distributive society, in the Marseille consular district was founded at Nimes in 1878, by M. Faber, a retired manufacturer who had been in his youth a disciple of Fourier and a member of the Familistere at Guise. Another association was formed five years later in the same city by M. de Boyve, Charles Gide, the well-known economist, and a small group of workmen. In 1885, these two societies federated with a cooperative bakery, also of Nimes, and started a propaganda that resulted shortly afterwards in the formation of the Union Coopérative des Sociétés Françaises de Consommation, a national organization with headquarters at Paris. The movement spread to other cities and has been, on the whole, fairly successful, although the distributive branch of cooperation has not yet become a prominent factor in the economic development of the country.

### Number of Cooperative Stores in Operation.

According to the Almanach de la Coopération Française for 1912, there were in 1911 in this district 240 cooperative stores and distributive associations, as compared with 105 in 1901 and 60 in 1893. They had 30,096 members, and their total business for the year 1910-11 was \$1,800,343. The per capita average of purchases of only about \$60 annually indicates that the societies supply only a small portion of the commodities required by their members and their families. The total membership of these associations represents about one-half of 1 per cent of the population of the district. The average number of members per society is 130.

Among these societies there are 104 cooperative bakeries, and several others that supply bread to their members in exchange for wheat. There are also 2 cooperative meat markets, 11 stores exclusively devoted to the wine trade, and 4 for the purchase and distribution of coal. The majority are, however, general cooperative stores dealing chiefly in groceries and only a few of these sell meat, which they seem to be unable to handle profitably.

In Marseille, which has a population of 551,000, the total number of cooperators does not exceed 2,000, and about 1,200 of these belong

to a semiprivate organization open only to certain classes of employees. Nîmes still leads in the cooperative movement in southern France. Its principal society had 658 members in 1911.

**Organization of the Distributive Societies—Prices.**

Most of the distributive societies in the district are modeled essentially on the Rochdale system. In many cases, however, membership is limited to persons engaged in the same trades or professions, and even to workmen employed in the same establishments. A number have associate members, who pay a small entrance fee and share the profits in proportion to their purchases, but have no voice in the management and no interest in the collective funds and property. The regular shareholders receive, besides their proportion of the net profits, 4 to 5 per cent on the amount of the paid-up capital. The value of the shares is usually fixed at 25 francs (\$4.83), only 10 per cent of which is required upon admission, the balance being payable from the profits.

Cash transactions are the rule, but credit is occasionally extended for amounts corresponding to the value of the shares held by the members concerned; also upon payment being guaranteed by fellow members. In certain societies a special fund is maintained for this purpose.

The prices of the cooperative stores are generally below those current in the locality. The surplus is divided twice a year. The semiprivate organization at Marseille, already referred to, does not at present undertake the sale of merchandise on its own account, but has arrangements with local dealers whereby its members obtain discounts ranging from 5 to 15 per cent on the prices charged to ordinary customers. These discounts, which apply to a great variety of articles, and to practically all of the common necessities, are collected monthly through the society, which retains a small commission for its running expenses and reserve fund. Other societies have made similar arrangements for special commodities. About 30 per cent of the societies sell to the public as well as to their members.

**Use of Profits—Management—Effect on Cost of Living.**

Many societies set aside part of their profits for educational and social purposes, such as mutual-benefit funds, employees' profit sharing, and loan funds for members in straitened circumstances. The Federation of Employees of the Paris-Lyon-Mediterranean Railway Co., which groups a large number of societies, maintains, in addition to a sickness and accident fund, a special fund for the widows and orphans of members.

The general management of cooperative stores is usually vested in committees or boards of directors, elected every 12 or 18 months by the shareholders. The members of the committee receive no compensation, but each society has a salaried business manager, chosen either by the shareholders or the committee and acting under the direction of the latter. The accounts are audited at certain intervals by special committees. It appears that societies in this district experience considerable difficulty in obtaining competent business managers, owing partly to a general unwillingness or inability to pay adequate salaries. The prevailing tendency to create small societies instead of building up large and powerful associations is also an unfavorable factor in this respect. On the other hand, the low rate of interest paid on the capital invested in these societies, their practical exemption from advertising charges, their relatively inexpensive

quarters, which are generally located on side streets, the purchasing facilities and advantages granted by the trading unions and federations, allow them to compete on more than equal terms with the average retailer.

Taking into account the dividends distributed to the purchasers, it is estimated that the members of cooperative societies in the district obtain their domestic supplies, which are invariably of standard quality, at prices 10 to 12 per cent lower than those paid by the ordinary consumer. Moreover, in many localities these societies exert a steadying influence on the retail market, thus rendering a valuable public service. While the opposition of the middlemen, whose trade these societies curtail, has manifested itself in various efforts to secure adverse legislation, it can not be said that there exists in this district much hostility to the cooperative movement. Certain societies have even contracted with retailers for the sale of various articles to their members.

#### **Local and National Union.**

Nearly all the distributive societies in this district are federated into local and national unions. The majority are affiliated with the Union Coopérative des Sociétés Françaises de Consommation, which centralizes the interests of the societies and attends to the educational side and general organization of the movement. The same societies are shareholders and members of the Coopérative de Gros, or Wholesale Cooperative Society, which is an annex of the above-mentioned Union Coopérative and exists merely for trading purposes. The Coopérative de Gros is modeled on the Cooperative Wholesale Society (Ltd.), of England, but it disposes of only a small turnover and has not yet reached the manufacturing stage. It deals directly with the producers and sells to the affiliated societies practically at cost price. It maintains warehouses in various cities, including Marseille, and also sends goods on consignment to the societies. The net profits are returned to the societies. No interest is paid on the first share of stock held by each member, but 5 per cent is paid on all others. The affiliated societies receive most of their supplies from this source, but they also do a considerable amount of business directly with the manufacturers, wholesalers, and agricultural productive associations.

The Fédération des Coopératives du P. L. M., at Grenoble, the Fédération Méridionale des Sociétés Coopératives de Consommation, at Marseille, and the Fédération des Sociétés Coopératives du Gard et de l'Hérault, at Nîmes, have grouped a large number of societies, but these trading federations do not, as a rule, buy for their own account, being chiefly cooperative purchasing agencies, collecting and forwarding orders to reliable concerns.

#### **Agricultural Cooperation.**

The agricultural syndicates play the most important part in the cooperative movement of the country. The principal object of these syndicates is the collective buying of fertilizers and other farm materials. They are not supposed to engage in trade, except to transmit the orders of their members, but in actual practice they frequently make direct purchases and sales. A number of distributive societies have been formed for this purpose and are conducted by the syndicates, which have also organized cooperative societies for the handling and marketing of agricultural products.

From the first agricultural syndicates formed in this consular district in 1885, the number has increased to over 450, with a total membership of about 160,000, doing a business of several million dollars a year. Membership is open to all agriculturalists in the territory covered by the association upon payment of a small entrance fee and annual dues. The societies are managed by elected committees, the most important employing salaried secretaries. Sales are made at cost price, plus a commission of 1 to 3 per cent for running expenses and provident purposes. Profits are not distributed, but are frequently applied to the purchase of expensive machinery for collective use.

Most of the syndicates are federated into district unions, which are in turn connected with the national unions. The principal federation in southern France is the Union des Alpes et Provence, established at Marseille in 1893, and comprising 325 syndicates. A large number of syndicates in the Ardeche and Drome Departments are affiliated with the Union du Sud-Est, of Lyon. The syndicates of the Aude, Herault, and eastern Pyrenees belong generally to the Union du Midi, of Toulouse. There are also a few local unions and a number of independent syndicates. The syndicates usually collect and send the orders of their members to the unions, which deal directly and enter into important contracts with the producers. The unions and syndicates maintain warehouses, but in many cases the goods are shipped by the manufacturers to the consumers individually and charged against them. The commission charged by the unions for their services rarely exceeds 2 per cent, and is generally 1 to 1½ per cent. The surplus is divided annually among the syndicates in proportion to their purchases. The syndicates pay to the unions annual dues averaging 2 cents per member. The unions are managed on the same lines as the syndicates, only the general secretary and employees being salaried. The independent syndicates buy their supplies chiefly from the agents and representatives of the manufacturers.

#### **Results Accomplished by Agricultural Syndicates.**

It is claimed that the agricultural syndicates have brought about reductions of 30 to 40 per cent in the prices of fertilizers, besides checking fraud and compelling the delivery of pure products. They have also secured materially lower prices in other lines, chiefly for the benefit of the small farmer. By employing a portion of their profits in the purchase of machinery that comparatively few French peasants can afford to buy, and renting this machinery at a nominal charge, or even loaning it gratuitously to their members, the syndicates have also aided in lowering the cost of production in many agricultural communities.

The first association in this district organized for productive cooperation was formed by several syndicates for the protection of the local caper-growing industry against the active and dangerous competition of the more cheaply produced and inferior Algerian and Spanish products then frequently mixed with domestic capers and sold as Provence products. The success of this venture led to the organization of a similar society among the apricot growers of Roquevaire and Lascours. This society inaugurated the preparation and sale in common of apricot pulp, an industry which has flourished ever since in these two localities.

The almond growers of Codoux, in the Department of Bouches-du-Rhone, the horticulturists of Hyeres, Toulon, and Ollioules, and the strawberry growers of the Department of Vaucluse have also formed cooperative selling associations, which have proved most useful and profitable to their members. The nurserymen of Vaucluse have a special organization through which they purchase their supplies and sell their products, and which exercises general control over the plantations of the members. A prosperous cooperative creamery treating about 1,100 quarts of milk a day has been in operation at Allos since 1907. Its annual butter output averages 31,000 pounds, and it also produces cheese of the Camembert type. About 100 farmers are members of the controlling association, which started with a capital of \$6,000, including a State loan of \$2,000 and a \$400 subvention from the town.

#### **Cooperative Movement Among the Olive Growers.**

The greatest progress of the cooperative movement has been made among the olive and wine growers. In 1900 a group of olive growers in Codoux formed a syndicate for crushing their crops in common and securing for themselves the profits that went, under the existing system, almost entirely to the local millers. The results were very satisfactory and their example was soon followed in other towns, some associations being formed solely for industrial purposes, but the majority for the manufacture and commercial distribution of the oil. There are at present 21 of these associations in southern France, the most important in this district being the Société Coopérative de Défense Agricole and the Coopérative de Productions Agricoles, La Travailleuse, both of Cotignac. These two societies were formed in 1905, and their combined oil output is 55,000 to 110,000 pounds per season.

The French Government has given considerable aid and encouragement to this movement. The experts and officers of the Service Oleicole of the Department of Agriculture have not only promoted the formation of these associations, but have lent technical assistance of the greatest value. The State has also extended financial assistance by granting subventions and fiscal immunities, and particularly by long-term loans through the agricultural credit associations. These loans, which must be employed for the purchase or erection of suitable buildings and machinery, are usually granted for a period of 25 years, and may be equal to double the paid-up capital of the society. The rate of interest never exceeds 2 per cent and is generally  $1\frac{1}{2}$  per cent. In 1910, 11 societies secured loans of 4,000 to 45,000 francs (\$772 to \$8,685) and aggregating 170,000 francs (\$32,810).

#### **Methods and Management of Olive Growers' Societies.**

The olive growers' cooperative societies have, on an average, 100 members each, whose individual crops vary from 50 to 180 bushels of olives. The capital stock is divided into shares of 25 francs (\$4.83). These societies are organized and managed in the same manner as the distributive associations. Several societies have erected model mills and others have rented and adapted old mills to present requirements. The outlay necessary for the proper equipment and operation of a small olive mill varies from \$4,500 to \$6,000, divided as follows: Buildings, \$2,400 to \$3,000; machinery, \$1,600 to \$2,000; and general initial operating expenses, \$600 to \$1,000. The members receive

one-third to one-half of the value of their crops upon delivery to the cooperative mill, and the balance at the end of the season, when the profits are divided in proportion to the quantities furnished, after deducting the required amounts for the amortization of the State loans, the reserve fund, and the interest on the shares, which is usually fixed at 4 per cent. Some societies also maintain an insurance fund against sickness and accidents. It appears that the cost of manufacturing the olive oil is entirely paid by the by-products.

The oil is sold largely to wholesalers, but some business is done with the various cooperative stores and agricultural syndicates and there is an important retail trade, deliveries being made direct to consumers by parcel post. This retail trade entails various expenses, such as commissions and advertising, but the price received is 8 to 10 per cent higher than the wholesale rate. The oil produced by the cooperative societies is increasing in popularity, owing partly to the fact that it carries with it a guarantee of origin and purity.

#### Associations of Wine Growers.

The wine growers' associations, of which there are 26 in this consular district, are usually designated as "caves coopératives," or cooperative cellars. These societies, like those of the olive growers, were formed in the interests of small owners whose crops were generally handled in an unscientific and unsatisfactory manner, both from a productive and a distributive standpoint. Their principal aim is the production of wines for current consumption of standard quality and of greater merchantable value than the product of the average viticulturist. Certain cellars are used only for storing and treating the wines of the members, which the societies sell under the guaranties of their trade-marks. Other associations have been formed solely for the sale of table grapes, and there are also 10 cooperative distilleries and 5 societies which have been organized for both oil pressing and wine making.

The first cooperative cellar in this region was that of Les Vignerons Libres, which was founded at Maraussan in 1901 by a collectivist association of small wine growers and day laborers. It sells its entire production to the socialist cooperative stores. Cultivation in common is also practiced on a small scale by this society. The next cellar was established at Camps-les-Brignolles in 1906, while the latest is that of Besse. The growth of these societies is due largely to the law of December 29, 1906, authorizing the agricultural credit banks to grant long-term loans at a low rate of interest to associations of this character. The methods of organization and operation of the cooperative cellars do not differ materially from those adopted by the olive growers' associations. The grapes are graded according to the kind of wine for which they are used and separate accounts are kept for the different grades. The members are paid as soon as the bills are collected, but the society advances a portion of the value of the vintage whenever desired. A final settlement is effected at the end of each year.

The productive associations have improved the production of their members and increased their profits. A larger yield and superior quality of olive oil has been obtained. It can not be said that these societies have reduced the cost of living, but it is claimed that they offer better and purer products without advancing prices.

**AUSTRALIAN SUGAR AND JAM INDUSTRIES.**

[From Consul Henry D. Baker, Hobart, Tasmania.]

As Tasmania is the leading jam-producing State of the Australian Commonwealth, the evidence relating to the use of sugar, brought out during the sittings at Hobart of a royal commission appointed at the instance of the Parliament of Australia to inquire into the sugar trade of the Commonwealth, was of especial interest. The leading jam manufacturer of Australia, whose chief factories are at Hobart, stated that imported sugar is used for the foreign trade in jam, but only Australian sugar for the Australian trade.

There is a drawback of \$14.59 per ton on foreign sugar used to make jam for export from the Commonwealth; the import duty on jam is 4 cents a pound when importation is from countries other than the United Kingdom and 3 cents a pound on jam from the United Kingdom and certain other British territory. The duty on jam was stated to be of no real benefit to Australian jam manufacturers. This manufacturer estimated that a drawback of \$19.46 per ton on sugar made into jam for the Australian trade would give the jam manufacturers a fair profit and permit the raising of fruit prices 25 to 30 per cent. The jam manufacturers showed that the profits in their business were very small and depended on the doing of a large business, so that some of the small factories made practically no profit. According to the testimony offered, the cost of the fruit works out at 76 cents per dozen 2-pound cans, and the cost of manufacture at 74 cents per dozen.

The price of jam in Australia had been slightly raised on account of increased wages, it was said, and the prices per dozen cans were given as follows: Tasmanian trade, 1-pound tins 78 cents, 2-pound tins (in which there was a smaller trade) \$1.46; Australian trade, 1-pound tins 77 cents and 2-pound tins \$1.42. It was estimated that 60,000 tons of jam were consumed in Australia annually, and that the proportion of Australian jam to imported jam was about 1,000 tons of the former to every 72 pounds of the latter. Strawberry jam is about the only kind imported.

**Capital Invested—Sugar Prices.**

The amount of capital invested in the jam-making industry of Tasmania was stated by one manufacturer to be between \$625,000 and \$1,750,000. The same man said that the starting of a jam factory in Australia capable of competing with the existing companies would require an investment of \$500,000, and that it was not possible to start jam making and earn 6 per cent under present conditions. Competition is keen and Tasmanian jam is sold in Australia at as low a price as English jam in England. The leading firm had made contracts for periods of three to five years to encourage the fruit growers and had been exporting about 20,000 cases of jam a year to South Africa, where it controlled the bulk of the trade. But as sugar is about \$15 a ton lower in Africa than in Australia, and fruit can be obtained for half the Australian prices, this firm found that it would be to its advantage to give up the export business and build a factory in South Africa.

It was shown that all the Tasmanian jam makers buy their sugar of one firm at Sydney, which is the only refiner of sugar in the Commonwealth and controls practically the entire sugar trade of Aus-

tralia and New Zealand. Sugar for jam costs, delivered at the factory, \$98.65 per ton for 1A grade and IXD grade is \$1.22 per ton cheaper. The former costs \$88.81 per ton in Sydney. Another manufacturer gave the average price paid, delivered at a Hobart factory, as \$94.49 in 1910 and \$94.28 in 1911. It was said that imported sugar had been tried for jams, and that it gave some saving in cost; but there were offsetting objections, chiefly irregular deliveries, and the local company held the business by making monthly deliveries. It was explained that the local company regulated its prices by adding the duty of \$29.19 per ton to the c. i. f. price and then making a small deduction from the total. The imports of Australian-grown sugar into Tasmania were given as 5,550 tons in 1910 and 3,311 tons in 1911.

**Cost to Grocers—Bounties—Imports and Exports.**

Both jam manufacturers and leading grocers had much to say concerning the competition between jams and golden sirup, the latter being a by-product of the sugar refineries. An immense amount of this sirup is sold every year in Australia, especially to poorer families, who might buy jam instead if it was cheap. The wholesale price of golden sirup was given as 5 cents per pound, and the retail price 12 cents per 2-pound tin; while 8-ounce tins of plum or raspberry jam retailed for 16 cents. The cost of sugar to the grocers was stated as \$116.79 per ton (ton=2,240 pounds), or \$114.96 with the discount off, bags in. The retail price was \$124.90 per ton. The gross price for Mauritius sugar, which is preferred by local brewers, is \$111.92 per ton delivered in Hobart. That is \$77.86 in bond and \$34.06 duty and charges. The price of American glucose was given by a confectionery manufacturer as \$119.22 per ton f. o. b. Melbourne.

A bounty of \$1.46 per ton of cane of 10 per cent quality grown by white labor, provided the wages and conditions of such labor are fair and reasonable and in accordance with the provisions of the act, is granted by the Government.

The excise duty on manufactured sugar is 97 cents per hundredweight (hundredweight=112 pounds). The import duty on glucose is \$1.95 per hundredweight; on sugar made from sugar cane, \$1.46 per hundredweight; on invert sugar and invert sirup, including brewers' priming sugars, \$1.46 per hundredweight; sugar not otherwise specified, \$2.43 per hundredweight; golden sirup and sirup sugars not otherwise specified, \$0.73; molasses, free. Under these laws, the sugar production of the Commonwealth increased from 98,795 tons during the fiscal year 1902-3 to 147,470 tons for 1909-10, during which period the proportion of sugar produced by black labor declined from 68 per cent of the total to less than 10½ per cent.

Australia's import trade in cane sugar remained fairly extensive until 1906, the supplies coming principally from Java, Mauritius, and Fiji. In 1907 the exports exceeded the imports for the first time, the net exports having a value of \$807,348. In 1908 the excess of imports over exports was 96,218 hundredweight, valued at \$180,208, and in 1909 the excess was 1,832,943 hundredweight, valued at \$4,880,926. The principal countries to which Australian sugar is exported are Natal, Cape Colony, New Zealand, and New Caledonia; but the bulk of the sugar exported from the Commonwealth is not of Australian origin, but is really a reexport of sugar produced elsewhere. Out of 161,024 hundredweight exported during 1909, only 4,099

hundredweight was of Australian origin. The sugar reexported comes chiefly from Fiji, Mauritius, and Java.

#### **Refineries and Output.**

The establishment of the sugar-refining industry here considerably antedates the establishment of sugar milling, the raw material operated upon being originally brought chiefly from Mauritius and the East. There are two sugar refineries in Queensland, and one each in the States of New South Wales, Victoria, and South Australia, but there are none in either of the other States. All of these are under the control of the same company, which also operates a large refinery at Auckland, New Zealand.

In the five refineries of the Commonwealth an average number of nearly 1,500 hands are employed. During 1909 the State of New South Wales produced 14,810 tons of sugar and 1,072,000 gallons of molasses, the State of Queensland 134,584 tons of sugar and 4,763,635 gallons of molasses. It is anticipated by authorities in the sugar trade that, owing to recent shortage in the Queensland sugar crop, about 20,000 tons of sugar will have to be imported from other countries during 1912.

---

#### **POSSIBLE NEW BREAKFAST FOODS.**

An American breakfast-food manufacturer is in Hawaii investigating the taro plant with the view of putting on the market a new food product made therefrom. Taro is a popular name for *Colocasia antiquorum*, and especially for its variety *esculentum*, a tropical plant, grown in the islands of the Pacific, where it forms a principal food. Its starchy, stemlike tuberous root is now boiled or baked, made into bread or into poi, a fermented product. The young leaves and tender leaf stalks are used, respectively, like spinach and asparagus.

Cassava, or mandioc, another starchy tuber, which grows abundantly in tropical America, might also prove valuable for conversion into breakfast foods. Cassava has long been sold in flaked form in India.

Bananas and plantains are also now flaked and crisped, samples of toasted plantain flakes from the Dominican Republic being among the exhibits at the Bureau of Manufactures in Washington; they will also be loaned to interested firms.

---

#### **FREIGHT BY WATER TO PARIS.**

(From Consul Carl Bailey Hurst, Lyon, France.)

The directors of Compagnie Générale de Navigation have decided to establish at once a freight-boat service leaving Paris for Lyon every week. The boats coming through internal waterways will not stop at intermediate river ports and will take 10 to 12 days for the single trip. As the freight rates by water will be very much less than by rail, shipments to Lyon of many classes of goods may now be made more cheaply than heretofore. This will be vitally helpful in forwarding to Lyon heavy merchandise not requiring immediate delivery. American exporters having business in this neighborhood would do well to bear this opportunity in mind, because every dollar saved in transportation will make sales easier on this market.

## NOTES FROM AUSTRALIA.

[From Consul General John P. Bray, Sydney.]

**Wireless Connection with Portuguese Timor.**

Representation has been made to the Commonwealth Government by the authorities at Timor to establish a wireless station at Port Darwin, Australia, and in return the Portuguese authorities undertake to establish a station in Timor, Arafura Sea, which lies about 350 miles from Australia. The Postmaster General of the Commonwealth has the proposition under consideration, and it is said if the stations are erected they would be the first of a connecting series between Australia and the Far East, via Macassar and Hongkong.

**Diamonds in New South Wales.**

An expert from the diamond fields of South Africa, who has acquired a half interest in the pipe mine at Inverell, says that the opinion of several of the leading experts of South Africa is that if it prove a true pipe it will be found to contain larger stones than have so far been gotten out. He adds: "If I am satisfied that the prospects are good enough, cutters will come out to cut and polish the stones that are now being shipped to Europe in the rough, thus starting a new Australian industry." A well-known diamond expert from the Netherlands says that the Inverell stones are equal in brilliancy, when cut, to the best Brazilian, and denies the statement that Australian diamonds can not be properly cut. He has backed up his opinion with an offer to purchase the total output of the Inverell mine. [Previous mention of Australian diamond finds was made in Daily Consular and Trade Reports on Oct. 5, 1911.]

**Meat Exports.**

Shipments of mutton and lamb for the year 1911 showed a decided falling off from 1910, but exports of beef, veal, and pork made good gains. The following table will show comparison for the past three years:

Kinds.	1909	1910	1911				
			Total.	New South Wales.	Victoria.	Queensland.	South Australia.
Mutton.....(carcasses...	1,665,747	3,132,387	1,963,713	1,096,067	636,821	186,579	54,246

**New Automatic Postage-Stamp Machine.**

There has been patented in Australia an automatic postage-stamp machine, the following reference to which was made by a daily paper of Sydney:

A demonstration was given by the Austral Automatic Machine Co. of a useful little machine which has for its object the doing away with the necessity of using postage stamps in commercial houses. This is achieved by depositing with the post-office authorities an amount equivalent to the value of the stamps they will probably use during a specific period. This amount is registered by the postal department on the machine which is then issued to the firm. Instead of affixing a stamp, the clerks push the end of any letters for the post into the machine, which

imprints a stamp recognized by the department, and the letter is franked. The machine, which is portable and about the size of an ordinary typewriter, automatically registers the amount of postage and correspondingly reduces the amount it has been made available for until zero is reached, and then scales itself until further credit is obtained from the postal department. It is an ingenious application of the automatic principle and is of undoubted utility. In its use it will prove an absolute prevention of pilfering of stamps. It is the invention of Mr. Arthur H. Wright.

#### **Australian Interest in the Panama Canal.**

A local newspaper recently contained a report of a speech delivered by the Premier of New South Wales with reference to shipping through the Panama Canal. The Premier is stated to have said:

Sydney is now the terminal point of the steamship lines already connecting Australia and the west coast of America, and two new lines are projected, the Australian headquarters of which will also be in the city of Sydney. Within a few years the great cut across the Isthmus of Panama will be completed, and steamers will come direct from New York to Australia. It will be of great advantage to the port of Sydney if the preeminence which it now holds in connection with the existing lines with the Western States is continued in the case of New York. Sydney, in fact, is the logical destination of ships sailing from New York via the Panama Canal to Australia, and we must see that the advantages offered by Sydney are properly placed before New York shippers. Undoubtedly, with the enormous home consumption in America, there will be room for an extensive trade with the United States in frozen meat, mutton and lamb particularly, which must be to the advantage of Australian stock producers and shippers. At present it is impossible to ship frozen meat to New York except by transshipping it at an English port, which would make the cost prohibitive, besides probably injuring the quality of the meat; but when the canal is completed about two years hence, the population of New York, like that of London, will be made familiar with Australian meat. If the proposals which are being made in America for the alteration of the tariff to make wool free should come to pass, we may expect the American textile workers to take an enormous quantity of our fine wools.

#### **Australian Preference to British Goods.**

The Daily Telegraph of Sydney announces that "preference will be given to articles of British manufacture against those of foreign manufacture" by the Tender Board of the State of Victoria for supplies required up to June 30, 1915. It seems this new departure by the Treasurer of Victoria was taken after representations had been made by the British Trade Commissioner.

A new provision has been inserted in the conditions of tender for supplies for the State of Victoria, giving preference to goods of British make for several years. A clause has been in force respecting tenders for general stores, setting out that "preference will be given by the Tender Board to tenders of articles manufactured within the Commonwealth, provided the quality of such articles is equal to the particular manufacture indicated in the schedule, and the rates charged are considered reasonable." In the general stores conditions now being circulated for supplies for the period commencing on July 1 next, and in nearly all cases terminating on June 30, 1915, these words are added: "Preference will also be given to articles of British manufacture as against those of foreign manufacture." The further stipulation is made that where the goods are manufactured in the Commonwealth, the raw material, when not produced locally, must as far as possible be of British origin. In the case of cotton goods it is specifically stated that articles must in all cases be British. This is the first occasion on which the principle of preference to manufactures of the home country has been given general application. Previously it had been limited to the paper required by the Government printer. Three or four years ago the paper makers in Great Britain were allowed preference over makers in the United States, who tendered through their Sydney agents, and it is stated that this has proved effective. The new provision was introduced by the treasurer, Mr. Watt, after representations had been made by Mr. Hamilton Wickes, British Trade Commissioner.

*Bakeries* are said to be needed at the following Saskatchewan towns: Allan, Clavet, Grandora, Leney, Spy Hill, Unity, Waldron, and Young.

**CANNING VALENCIA BITTER ORANGES.**

[From Consul Robert Fraser, Jr., Valencia, Spain.]

The oranges canned in Valencia for use in the manufacture of marmalade are exclusively the bitter oranges grown in this district, supplemented occasionally by supplies of the same variety brought here by sea from the neighborhood of Seville.

The price paid by Valencia canners varies greatly either for Seville or local fruit, but as a rule is within the extremes of 75 centimos to 1.75 pesetas per arroba (15 to 32 cents per 27½ pounds). To this must be added about 75 centimos per arroba (15 cents per 27½ pounds) for shipping and brokers' expenses, loss in transit, etc., on the fruit brought from Andalusia. The latter is somewhat inferior to that from Valencia, having less juice and thicker skins. The cost of the fruit is lessened to the canners by the somewhat important amount obtained from sale of the seeds, amounting at present to 20 pesetas a barchilla (equivalent to 24 cents a quart). These are in great demand for the propagation of seedlings, which, when they attain sufficient size, are budded with sweet varieties of oranges.

**Ten Steps in Process for Canning.**

The operation of canning is extremely simple and may be divided into the following steps, each of which is performed by a different set of workers: (1) The oranges are immersed in hot water for a few moments and cleaned with a stiff brush, the immersion being solely for cleaning; (2) they are cut in half perpendicularly to their axes; (3) the interior is scooped out of the skins with a chisel-shaped wooden implement some 8 or 10 inches long by 1 inch wide; (4) the seeds are picked from the pulp by hand and the latter is (5) put in cauldrons where it is boiled by itself for half an hour; (6) it is then passed through a macerating machine, when it is ready to be mixed with the shredded peel and canned; (7) the skins, after the pulp has been removed from them, are fed into a machine which cuts them into long thin shreds such as may be seen in any ordinary marmalade; (8) these shreds are boiled by themselves for 45 minutes, when they are ready to be mixed with the pulp and canned; (9) the pulp and shredded peel are canned together in their original proportions—that is to say, the skin of one orange is here considered the proper amount to balance the pulp of one orange in the finished product, though British preserving houses frequently add extra pulp, which they obtain cheaply from manufacturers of essential oils and flavoring extracts, who use only peel for those purposes—(10) the cans are sealed and then boiled for 15 minutes, when the process is complete.

It will be noticed that no foreign substances of any sort, except the seeds, are either added to or subtracted from the fruit, and that the only machines used—not counting the boilers, which are simple open pans with an individual fire beneath each one—are two, the peel shredder and the pulp macerator. Both in the pulp-canning department proper and in the can-making department of the factory visited only 2 or 3 men were employed, the rest of the work being done by girls and women earning 14 to 27 cents for an 11-hour day.

The finished product, of which 150 tons were exported in 1911, is put up in 5-kilo (11-pound) tins and shipped almost exclusively to

Great Britain, where it is sold c. i. f. at from \$3 to \$4 United States currency per 110-pound case. [The manufacture of and trade in English orange marmalade was described in Daily Consular and Trade Reports for Feb. 17, 1911.]

### WAGES OF GERMAN COAL MINERS.

[From The Economist, London.]

In a speech before the Reichstag concerning a general wage for the whole coal industry in the Ruhr district, Herr Sydow, Minister for Trade, pointed out that the wage paid in the Government coal mines is higher than the average rate of the field in two districts and lower in one. The yearly wages paid in these Government mines and the average for the district are shown in the following table:

Year.	State mines.	All mines.	Year.	State mines.	All mines.	Year.	State mines.	All mines.
SILESIA.			RUHR.			LORRAINE.		
1908.....	\$275	\$247	1908.....	\$365	\$364	1908.....	\$288	\$310
1909.....	265	240	1909.....	354	327	1909.....	276	297
1910.....	250	235	1910.....	362	328	1910.....	273	290

The wage received by the miners varies between different parts of the field and between different mines. In the Ruhr district, the wage paid by the State is higher, as the district in which the mines are situated is less built up and less accessible than the other districts.

### NOTES OF THE RUSSIAN FAR EAST.

[From Consul John F. Jewell, Vladivostok.]

*A teachers' school and seminary* will shortly open in Khabarovsk, upon the initiative of the governor general of the Priamur district.

*Tiger hunting* by the Ussuri Cossacks was very successful during the past winter, 15 tigers being killed and 12 caught alive, 10 of which were sent to Hamburg for sale. Small parties hunting tigers for sport also met with much success.

*False scales.*—An interesting decision by the Irkutsk district court has recently been reported in the Dalny Vostok. On account of conviction for using false scales in their business, several persons have been deprived forever of the right to participate in any kind of trade.

*Fur shipments* from Vladivostok, Nikolsk-Ussurisk, and other points along the Trans-Siberian Railroad began late this year. The chief kinds are squirrel; very little sable and fox. It is expected that the prices will increase considerably, especially as the furs from the Amur Province arrived late for the Irbit fair.

### HEAVY MARINE LOSSES.

[From London Financial Times.]

During the first three months of this year, 47 vessels, representing \$8,313,000, became losses under marine insurance policies effected in London, either with Lloyd's or with the Marine Insurance Companies, or both. In addition five vessels are missing, and if these be included the loss incurred by London underwriters during the past three months reaches the gigantic total of \$9,980,000. The only underwriters who have really made money of late have been those interested in the speculative market, which caters for war risks, Oxford and Cambridge boat races and the budget, to say nothing of epidemics and other ills.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8611. Rails and iron bridges.**—An official of the American Chamber of Commerce for the Levant reports to the Bureau of Manufactures that tenders will be asked shortly by the Government of Bulgaria for rails and iron bridges for the State railroads. Plans and specifications will cost \$4 to \$10, according to the tender, and interested American firms should keep in touch with the official so as to be prepared to bid.
- No. 8612. Railway ties.**—A business man in a European country desires to be placed in communication with American producers of oak, beech, and cedar ties, both plain and treated with preservative material; he also desires samples of the tamarack wood, with prices and definite information as to the results obtained from its use as railway ties. The applicant is in haste for prices c. i. f. certain ports on the chemically treated ties in order that he may close a contract. The sizes of the ties used are 240 by 14 by 24 centimeters (7.874 feet by 5.51 inches by 9.448 inches) and 220 by 18 by 13 centimeters (7.217 feet by 7.186 inches by 5.118 inches). Correspondence may be in English, French, German, or Italian.
- No. 8613. Dry kalsomine, dry glue, and wall papers.**—An American consular officer in Canada reports that a firm in his district applies for the agency in a certain Province for an American line of dry kalsomine, dry glue, and wall papers. References are furnished.
- No. 8614. Leather, safes, household effects, and provisions.**—A firm which has several stores in Asiatic Turkey requested an American consul to place it in touch with American exporters of sole leather and belting, safes, iron bedsteads, chairs, wood furniture, glassware, kitchen utensils, stationery, biscuits and crackers, preserves, confections, chocolate, etc. Prices should be quoted c. i. f. a certain port. Correspondence preferred in French or German.
- No. 8615. Metallic filament electric lamps.**—An American consular officer in England has forwarded to the Bureau of Manufactures the name of a firm in his district which desires the names and addresses of makers of metallic filament electric lamps in the United States.
- No. 8616. Aeroplanes.**—An officer connected with an American Chamber of Commerce in the Levant requested the Bureau of Manufactures to place him in touch with manufacturers of army aeroplanes in the United States. Descriptions and prices should be forwarded to the applicant without delay.
- No. 8617. Plumbing goods, etc.**—An American consul in Russia reports that firms in his district have requested catalogues and price lists from American firms dealing in sanitary and plumbing goods and porcelain and metal ware used for canalization and heating.
- No. 8618. Portable houses.**—The chief engineer of a waterworks system in a European country expressed a desire through a consular officer to import American portable houses for use in connection with the city's waterworks. Those interested should send catalogues and price lists to the engineer, whose address is on file in the Bureau of Manufactures.
- No. 8619. Coir extracting and rope manufacturing machinery.**—An American consular officer in the East Indies reports that a company in his district requested catalogues and price lists from American manufacturers of machinery for extracting coir fiber, spinning the same, and making it into rope, etc. Catalogues and price lists should also be sent to the consulate general.
- No. 8620. Crude cottonseed oil.**—A firm in Canada requested an American consul to place it in communication with crushers of cotton seed in the United States with a view to purchasing crude cottonseed oil. The firm wants to deal with the producer and not with the refiner.
- No. 8621. Gas tar.**—An engineer of a gas works in South Africa informs an American consul that 100,000 to 150,000 imperial gallons of crude coal gas tar for road making are desired for shipment to that country. The tar must be shipped in casks or barrels. Prices including casks or barrels f. o. b. New York are requested.

- No. 8622. Carpet-weaving machines.**—An American consular officer in the Far East reports that a factory for the manufacture of grass carpets and rugs is to be established in his district, and he is advised that the weaving machines used in the United States (at Oshkosh) are considered more desirable than those in use. The consular officer is informed that an American firm has agreed to purchase 1,500,000 yards of grass rugs annually from this mill for a period of five years.
- No. 8623. Fiber.**—An American consular officer in the East Indies transmits to the Bureau of Manufactures the name of a firm which desires to correspond with American importers of fiber used in the manufacture of brushes and similar articles, with a view to introducing its fibers.
- No. 8624. Pitch.**—The manager of a coal mine in Belgium informs an American consul that he desires quotations from producers of pitch in the United States with a view to importing same for the manufacture of briquets. Correspondence may be in English.
- No. 8625. Photographic machine.**—An American consul in the United Kingdom reports that a firm in his district desires to get in touch with manufacturers of automatic photographic apparatus, those that operate after a coin is inserted and while the person stands on the platform.
- No. 8626. Brick-molding machine.**—An inventor of a new kind of building brick who contemplates the erection of a large brick-making plant requested an American consul in Belgium to place him in communication with a reliable manufacturer of brick-molding machines in the United States.
- No. 8627. Forging and casting machines.**—A reliable wholesale and retail house in France informed an American consul that it desired catalogues and price lists from manufacturers of forging and casting machines in the United States.
- No. 8628. Representation in Chile.**—American Consul Alfred A. Winslow, of Valparaiso, Chile, reports to the Bureau of Manufactures that a resident of that country expects to be in New York for two or three weeks in May, and he would be glad to meet American manufacturers who desire an active representative in Chile.
- No. 8629. Knockdown furniture.**—An American consular agent in Spain has forwarded the name of a merchant in his district who desires catalogues on mission and knockdown furniture. Prices, cash, f. o. b., Philadelphia or New York should be stated. The consular agent also wants two sets of these catalogues for filing purposes.

---

### English Smoke-Abatement Exhibit.

Commercial Agent Archibald J. Wolfe reports that at the International Smoke-Abatement Exhibition held at Royal Agricultural Hall, London, the last week in March no apparatus was exhibited direct from the United States, although a number of French and German smoke-abating devices and fuel economizers were shown. As the minds of the industrial men of the United Kingdom are now earnestly turning to the subject of fuel economy and the substitution of oil and gas in place of coal for heating, lighting, and power, an important opportunity seems to have been lost by American manufacturers. [An announcement of this exhibition appeared in Daily Consular and Trade Reports for January 12, 1912. The official catalogue of the exhibition and a collection of advertising literature gathered there on the subjects of gas heaters, automatic stokers, smoke consumers, etc., are forwarded by Mr. Wolfe and will be loaned by the Bureau of Manufactures.]

---

**Coal.**—Consul General R. M. Bartleman sends a special list of coal importers at Buenos Aires, Argentina, which may be had from the Bureau of Manufactures.

**AN EDIBLE MEXICAN TUBER.**

[From Consul Samuel E. Magill, Guadalajara, Mexico.]

The chinchayote is the tuber of a gourdlike plant grown in the State of Guadalajara, whose botanical name is *Sechium edule*. The year-old tubers are boiled and candied and are sold by street venders, being very popular among laborers and children. The larger, 2-year-old tubers are sliced and fried for table use. The present price is about 1 peso (\$0.498) for 25 pounds.

These tubers yield an excellent starch, similar to arrowroot or sago, and an inquiry was recently received at this consulate from an American firm regarding the possibility of their use in starch making. The plant is not extensively cultivated here and it is doubtful if American manufacturers could satisfactorily contract for a certain acreage to be planted. To insure a supply, such a firm would have to do its own planting on its own land. All the starch manufactured here is made from corn, no chinchayote being thus consumed. Cassava is not grown at this altitude.

Above ground the chinchayote is similar to a gourd plant, with a smaller leaf, and the flower develops into a bulbous fruit covered with prickly spines called the chayote. The tubers are the part known as the chinchayote, and these resemble a sweet potato in shape, the color under the skin being white. Each plant produces 10 to 30 tubers, having a total weight of 5 to 30 pounds, varying with age, as some plants are allowed to grow for two years, producing larger and more numerous tubers.

For cultivation, the chayotes are sprouted in a moist place and then planted, sometimes three plants together. The planting season is from February to April, and the plant requires little attention thereafter. The chayotes, or fruit, are gathered in September or October, and the chinchayotes, or tubers, mature from October to December, being taken up when they reach the desired size. The shrubs are planted 7 to 10 feet apart, loose soil that has been used for other crops being the best. The tubers grow in all directions, but mainly perpendicularly. No reliable statistics as to the acreage under cultivation or the amount which one man can cultivate are available.

The average wages now paid to field laborers here are about 50 centavos (25 cents) for a 12-hour day, with two hours off for meals. For the manufacture of starch, water power is available in some places, and electric power can be obtained near Guadalajara for \$6 per horsepower per month. Coal for factories costs about \$10 per ton on cars here.

[The Department of Agriculture states that the chinchayote is grown in Florida, California, Louisiana, Porto Rico, and the United States' tropical possessions, but that it has no record of its being put to commercial use in this country.—B. of M.]

---

**Rate of Exchange in Honduras.**

Consul Claude I. Dawson reports that during March the rate of exchange prevailing at Puerto Cortes and that part of Honduras was 40 cents gold for the Central American sol—equivalent to a premium of 150.

## NEW RAILWAYS IN CHINA.

[From Consul General Leo Bergholz, Canton.]

The destiny of the Canton-Macao Railway lies with a group of local Chinese, who are now advertising in native papers for capital with fair success. The route has already been surveyed and it is probable that construction work will be commenced at an early date. Starting at Fati, across the river from Canton, the line will run almost due south, through the districts of Shuntak and Heungshan, to the boundary of the Portuguese colony of Macao. It will be about 70 miles long and will penetrate one of the richest districts of South China.

The country through which it passes is low lying, intersected by innumerable creeks and given over to rice, fruit, and vegetable culture. A 30-mile branch will connect the main line at Chentsun with the Sunning Railway at Kongmoon, via Kaukong.

### Territory Served—Exports and Imports.

There are no very large cities on the railway, but there are innumerable villages and several towns of 10,000 to 50,000 people, among which may be mentioned Chentsun, Shuntak, Heungshan, Chingshan, Kamechuk, and Kaukong, the last two of which are ports of call for foreign steamers plying on the West River. The southern terminus of the main line will be within 5 miles of the new commercial port of Heungchow, now in process of construction, and will undoubtedly have some effect in hastening the completion of that pretentious scheme. [For an article relative to Heungchow see Daily Consular and Trade Reports dated Feb. 6, 1911.]

The people of the Shuntak and Heungshan districts are wide-awake and progressive, and have come under the influence of a large number of Chinese returned from abroad. There are probably no richer districts agriculturally in China.

So dense, however, is the population that large quantities of rice have to be imported from abroad to help out the local crops. Sugar cane is grown on a considerable scale and turned into brown sugar

for local consumption and export. Among the other manufactured articles exported from the districts touched by the railway are palm-leaf fans, mats and matting bags, groundnut, cassia, and bean oil, samshu, coarse chinaware, paper, and firecrackers. Animals shipped alive for slaughter, poultry fresh and preserved, fresh fruit, dried and salted turnips and other vegetables, native medicines, and firewood may be said to complete the list of major exports.

The principal imports are kerosene, cotton and woolen piece goods, raw cotton and cotton yarn, matches, timber, metals, coal, saltpeter, foreign clothing and hats, shoes, umbrellas, sugar, dried and salted fish, flour, vermicelli, and macaroni.

#### **Trade Expansion.**

The natives of this section originally used, and to some extent still use, groundnut and other native oils for illuminants, but the steadily increasing sales of kerosene point to an early disappearance of the native article. The market for cotton piece goods is considerable, but apparently not growing. The people prefer native woven cloths for all uses to which they can be put, and the steady increase in the number of cotton mills in China, supplemented by innumerable hand looms, bids fair to make any expansion in the local market improbable. There is, however, a good market for foreign-made clothing, hats, caps, and other haberdashery, shoes, etc.

The taste for things foreign is not confined to clothing but extends to many articles of personal adornment and to condiments and provisions, including tinned fruits, vegetables and meat, wines and liquors, cigars and cigarettes, and condensed milk. A small cigar factory, using locally grown leaf, has recently been started in the territory served by the railway, a factory for putting up a local fish has been operated for some time in Macao, and several factories for tinning rice birds, bamboo shoots, and lichees, carambolas, and other Chinese fruits have been erected within short distances of the line.

At the present time the only means of transportation and communication are boats on the innumerable creeks which intersect the delta, and wheelbarrows on the little paths which delimit the paddy fields. Both of these will remain as valuable feeders to the railway, but they will pass out of existence as means of communication between intermediate points and termini. The district draws upon Canton, Macao, and Hongkong for its foreign goods, and the completion of the railway will bring all these places incomparably nearer to it. The new line will also afford the people a wider market for their fresh fruit, vegetables, eggs, and other perishable articles.

#### **The Canton-Amoy Railway.**

The construction of a railway from Shekwan, across the East River from Shek Lung on the Canton-Kowloon Railway, to Amoy has been under consideration for a number of years, and in 1906 a survey of the route was made. The line is to be built by Chinese syndicates representing the people of the two Provinces through which it will pass—Kwangtung and Fukien. No advance has been made beyond the survey of the line, and it is probable that some years have still to elapse before construction work actually commences. The line will have a length of 275 miles in Kwangtung and about 100 miles in Fukien. It will penetrate a thickly populated country in a high

state of cultivation, and will bring rail communication to several important cities now served only by inferior waterways.

The western terminus, Shekwan, is a busy town of some 10,000 people, drawing its importance from its situation at the apex of the East River delta, opposite Shek Lung, which has a population of about 20,000. It shares with Shek Lung in the distributing trade of the delta and of a large area along both sides of the river to the east. The country about it is fertile and is devoted largely to the cultivation of rice, and bananas, lichees, and other fruit, and sugar and cattle and swine raising. From Shekwan the route follows a general easterly direction, through Waichow, to Louk Fong, and then striking north-by-east touches Kityang and Chaochowfu. From the latter place it takes at first a southeasterly and then a northeasterly direction to Wong Kong on the Fukien border. At Chaochowfu it crosses the Swatow-Chaochowfu Railway, giving it rail connection with the sea at that point.

#### **A Populous District.**

The first important city reached after leaving Shekwan is Pok Lo (with 100,000 inhabitants), whose trade has been overshadowed by that of Waichow, which has a population of 300,000. At Waichow the East River turns abruptly to the north and runs for over a hundred miles through broad and fertile valleys, thickly settled and well cultivated. To this fact is largely due the importance of Waichow, which serves commercially both this valley and that south of the river. The principal products of this section are rice, fruit, swine, and poultry. Small craft feed the city's trade from the north, while boats drawing up to 3½ feet can reach Waichow from the delta except during the season of low water. The completion of the railway will doubtless be followed at an early date by the opening of Waichow to foreign trade, as provided for in the British commercial treaty of 1902.

The line leaves the river at Waichow and runs to Hoi Fong through a hilly country interspersed with valleys and dotted with towns and villages. Of the latter only Ping Sang, Sam To Chou, Ko Tam, and Kung Ping need be mentioned. These are market towns, each serving its little valley or two and each with a population of about 10,000. Hoi Fong and Louk Fong are walled towns of 10,000 inhabitants each; both can be reached from the sea by small junks. All the way from Waichow to Louk Fong fruit, rice, and cattle are raised and small timber cut. At Louk Fong the line turns to the northeast and after passing Kwoi Tam, a walled market town of 10,000 people, and Pou Ning, a walled city of 100,000, reaches Kityang. This section is through more level country where cattle, pigs, poultry, and water buffaloes are raised; and rice fruit, grain, and sugar grown.

#### **Many Small Towns Along the Route.**

Before Pou Ning is reached the country becomes thickly dotted with small villages and towns. It is a rich agricultural district. The city of Pou Ning lies on a tributary of the Swatow River and is accessible by small craft. Its importance is overshadowed by that of Kityang, however, which stands on the river itself and can be reached by boats drawing up to 10 feet. Kityang, with a population

of 400,000, is a walled city upon which a large area to the north depends for its supplies, which this city in turn gets from Swatow.

From Kityang the line passes through a well-cultivated district to the prefectural city of Chaochow, population 500,000, situated on the Han River and connected with Swatow by a short railway constructed some years ago. Chaochowfu is an important collecting and distributing center for the Han Valley and considerable areas on both sides of it. Its foreign port is now Swatow, but with the completion of the line from Canton it will be able to draw easily upon Amoy as well as upon Hongkong and Canton itself.

There are no further important towns until Wong Kong is reached. This city with a population of 60,000, lies just within the provincial border and has a considerable trade in oranges and other fruit, indigo, vegetables, rice, sugar, cattle, and dried fish. It has water communication with the sea for craft drawing up to 1 foot only. The railway should find a market for its produce at Amoy, Chaochowfu, and Swatow.

#### What the Railway Means to Trade Interests.

It will have been observed that practically all the country through which the line from Canton to Amoy passes is agricultural, and so far without important manufactures; that, in other words, the purchasing power of the people is dependent upon the success with which they market the produce of the soil. The slow transport service offered in the past by native boats has made it impossible to go any distance from the fields to market and has seriously restricted the area of sale. It stands to reason that when Chaochowfu and other places along the line can ship their perishable fruit, vegetables, etc., to Canton, Hongkong, and Amoy by rail in a shorter space of time and more cheaply than they can now ship them a tenth of the distance by boat, only indifference on the part of the people themselves can prevent the inauguration of an era of increased prosperity.

It will have been observed, too, that the people who will be served by the railway, while able to feed themselves on fruit and vegetables, are dependent upon others for their clothing, many foreign articles of food, cotton and cotton yarn, illuminating oil, and coal (where it is used for fuel), besides many other articles known as sundries. These are now obtained from the open ports of Swatow and Canton or direct from Hongkong by junk at, in every case, a much greater expense than would be involved in importing them by rail. The people of this section have taken kindly to many foreign articles—some necessities, some luxuries; and, given a greater purchasing power, there is every reason to expect an increase in the demand for foreign imports.

[A comprehensive review of the railway situation in China, covering existing and contemplated lines, issued in pamphlet form as Special Consular Reports No. 48, may be obtained from the Bureau of Manufactures.]

---

*The Peruvian budget* for the fiscal year ending June 30, 1912, shows ordinary income of \$15,936,411 and special revenue \$188,236; and provides, according to a report from Consul General W. Henry Robertson, of Callao, for \$8,157,784 ordinary and \$8,668,447 special expenditures, thus creating a deficit of \$701,584.

**CONSTRUCTION WORK ABROAD.****TASMANIA.**

[From Consul Henry D. Baker, Hobart.]

In connection with Tasmanian railroad construction it has been the custom to advertise locally for tenders for any work to be done in connection with extensions, etc., the contractors who are the successful bidders, performing the work under supervision of the engineer in chief, Public Works Department. Nearly all the material required for railroad development is purchased in England, except that steel girders are occasionally bought in Melbourne. When for instance steel rails are required, the Agent General of Tasmania in London is instructed to advertise for tenders among British manufacturers.

**New Competitive System—American Bidding.**

Until quite recently the Tasmanian Government made it an invariable policy to permit none other than British or Australian manufacturers to compete in tenders for supplies, and to purchase nothing in any other country that could be obtained in Great Britain or Australia. However, in October, 1911, the Tasmanian railroads were placed by the State parliament under the control of a commissioner, who is to hold office for four years, and have full authority to operate the railroad system on business principles, and independent of any political considerations. Shortly after assuming office some steel rails were purchased in England through the agent general in London, and with regard to the tenders having as usual been restricted to British manufacturers, an American firm wrote to the new commissioner to the effect that they could have landed the rails in Tasmania at about \$3.60 per ton cheaper than the price at which they were supplied from England. The commissioner wrote in reply that the next time any steel rails were required, which he did not think would be for a year or so, American as well as English firms would be given the opportunity to submit bids.

In the case of any appliances or equipment being desired for Tasmanian railroads, the order is given to local merchants, if the articles required are such as may be manufactured locally or kept locally in stock. A good deal of repair work and equipment of a simple sort are supplied by the Salisbury Foundry Co., of Launceston, Tasmania. When it has been deemed necessary to import articles from the United States, as lately in the case of hand cars and motor cars, the orders have been given to the Sydney representatives of several leading New York export commission houses.

**How Offers May Be Made.**

There is comparatively little new railroad construction in Tasmania, probably not averaging over 2 miles a year, and there is scarcely any attempt at using improved appliances to save labor. American firms which may desire to introduce new appliances, machines, or equipment into the Tasmanian railroads might send their catalogues and address letters to John McCormick, Esq., engineer in chief for Public Works Department, Hobart, Tasmania. At the Agency General of Tasmania in London, 5 Victoria Street, London, S. W., a consulting engineer (Mr. William Harvey) is employed to

give advice concerning purchase in England of equipment for railroads and other public works. In the case of American manufacturers who may be represented in England, but not in Australia, it might be well to get in touch with Mr. Harvey concerning purchase of supplies for Tasmanian public works. The new commissioner of the Tasmanian Government railroad headquarters, Hobart, is Mr. George W. Smith; the chief engineer of existing lines, Mr. C. C. Nairn; chief mechanical engineer, Mr. R. Deeble; telegraph superintendent, Mr. J. J. McDonald, and chief storekeeper, Mr. S. R. Fisher. The building of Government roads, bridges, jetties, and other public works, as well as railroads, is also under control of Mr. John McCormick, Public Works Department. There is the same general system of purchasing supplies for other public works as applies to the purchase of railroad material.

#### Railroad Mileage—Government Purchases.

The Tasmanian Government railways now comprise 470½ miles, a gain of only about 8 miles within the last five years. The total cost of construction and equipment of the lines open on June 30, 1911, was \$19,827,178, representing a cost of \$42,160 per mile. No information is given in Government reports as to the precise cost of various supplies and equipment purchased, and when bids are accepted information concerning prices is not disclosed. Individuals or firms desiring to sell material here can not expect to find out what prices the Tasmanian Government might be willing to pay, but must state the prices at which they may be willing to sell. In the case of steel rails, I understand that the average price paid has been about \$50 per ton landed in Tasmania. The only details concerning supplies purchased for the Tasmanian Government railways for 1910-11 appear in the latest report of the Government railways as follows:

Fuel: Native coal, 17,265 tons; Newcastle coal, 9,763 tons; charcoal, 2 tons 8 hundredweight; coke, 400 loads; firewood, 2,777 tons.....	\$117,584	Packing: Square and round, 435 pounds; asbestos, 77 pounds; hemp, 16 pounds; 1. R. insertion, 42 pounds; cotton waste, 15 pounds.....	\$2,287
Oils: Axle, 4,915 gallons; bearing, 1,792 gallons; castor, 3,840 gallons; colza, 2,289 gallons; cylinder, 1,697 gallons; linseed (raw), 506 gallons; linseed (boiled), 112 gallons; red machinery, 260 gallons; kerosene, 10,596 gallons; sundry, 620 gallons.....	10,424	Stationery, etc.....	10,166
Tallow, etc.: Tallow, 29 hundredweight; grease, 7 hundredweight.....	257	Timber.....	37,759
Paints and varnish.....	4,311	Iron.....	30,206
		Tools.....	4,006
		Electrical material.....	2,150
		Sundries.....	28,406
		Rails and fastenings.....	41,068
		Total.....	298,215

The present rolling-stock equipment of the Tasmanian railways is given in this 1911 report as follows:

Description.	Erected new.	Repaired.		Painted and refurnished.
		Light.	Heavy.	
Locomotives.....		37	15	57
Carriages.....		653	65	77
Vans.....		232	25	14
Wagons.....	136	1,949	306	119

1 One fitted with vacuum brake.

There are three private lines open for general traffic in Tasmania, all situated in the western part of the island: The Emu Bay Railway

Co., headquarters Burnie, Tasmania, James Stirling, manager, operating 104 miles; the Mount Lyell Mining & Railway Co., headquarters Queenstown, Tasmania, Robert C. Stich, manager, operating 52 miles; and the Magnet Silver Mining Co.'s Railway, headquarters Mount Magnet, R. F. Waller, manager, operating 10 miles.

#### Harbor Work—American Supplies.

Considerable harbor improvement from time to time is carried on by the marine boards of Hobart, Launceston, Burnie, Devonport, Stanley, Table Cape, Leven, and Strahan. The most important work of this sort is that now being started at Hobart, which will require an expenditure of about \$500,000. In connection with such works it is usual to advertise for tenders, and as not more than 30 days are allowed for answer of the advertisements, the contracts must necessarily go to local firms unless foreign firms have representatives here who are in a position to immediately submit bids. There are also various street improvements, construction of abattoirs, waterworks, etc., carried on also by contract under the direction of different municipalities, such as Hobart, Launceston, Zeehan, Queenstown, Devonport, Deloraine, Cambelltown, Stanley, and Strahan. Communications to different marine boards may be addressed to their master wardens or secretaries, and to different municipalities to mayors, or town clerks.

The chief difficulty in connection with the sale of American supplies for Tasmanian public works is that such short notice is given for tenders (never more than 30 days) that there is not time for American firms to be apprised of such opportunities in time to compete. The only remedy for this is to have direct representation in Australia so as to make it possible to immediately be prepared to bid as occasions arise. One American steel corporation is directly represented at Sydney and is now securing considerable business in the supply of iron and steel for different parts of Australasia. Usually there is sufficient time for importing the material required after acceptance of the tenders. American manufacturers also are handicapped by preferential tariffs favoring the United Kingdom. In case of goods required for the Commonwealth Government, no duty need be paid, the customs being under the control of this Government. In the case, however, of goods destined for different State governments, marine boards, municipalities, etc., duty must be paid the same as if imported by individuals.

As most public works in Tasmania are carried out by contracts with private firms, lists of the leading contractors in Tasmania who bid on such works, the leading local dealers in machinery, ironworks, and other supplies, are forwarded [and may be had from the Bureau of Manufactures].

#### FORMOSA.

[From Consul Samuel C. Reat, Tamsui.]

#### Electric Lights—Gas Enterprise.

The Government has granted a franchise to a Japanese and Chinese company, capital \$100,000, for building an electric-light plant in the city of Shinchiku, with an initial 2,000 lights. The president is S. Kinoshita, of Taihoku, also president of the Taihoku Sugar Co.

Keelung, the principal port in north Formosa, will be provided with gas by the Taiwan Gas Co. This makes the third city to utilize both gas and electricity for lighting purposes.

**Large Sum Asked for Harbor Improvements.**

The Government of Formosa has presented to the Imperial Diet a bill for an additional appropriation of \$7,500,000 for harbor improvements, \$5,000,000 to be used for Takao and \$2,500,000 for Keelung. The latter harbor will be dredged to 32 feet to accommodate 10,000-ton class steamers. At Takao the 20-foot depth will be extended to over 30 feet. As this is the port from which sugar is exported, its importance has advanced as the sugar industry has grown. Practically all the sugar machinery is imported through this port. A report on the Keelung harbor, from this consulate appeared in Daily Consular and Trade Reports for November 29, 1911. The following are some facts concerning the Takao construction:

Water area, 100 acres, varying from 12 to 24 feet deep. The bar in the outer harbor has been dredged to 18 feet at low water. Total length of landing place completed by end of 1911, 9,000 feet; depth alongside, 9 to 18 feet. Anchorage in inner harbor, 50 acres, with depth of more than 18 feet, where 6 steamers of 3,000 tons can be berthed simultaneously. Here cargo can be worked with great safety.

Anchorage and outer harbor has depth of 35 feet, but opens to south and west, making great difficulty when southwestern monsoon prevails in summer, for working cargo by cargo boats. Largest steamer entering harbor during 1911 was *Cassara* (British), 3,825 tons, draft 18 feet.

---

**CANADA.**

[From Consul G. Willrich, Quebec.]

**Dry Docks Subsidies, and Construction of New Graving Dock.**

The passage on March 30 of an act in the House of Commons of Canada to amend the dry docks subsidies act of 1910 is of great importance to the port of Quebec, which for years has looked forward to the construction here of a graving dock commensurate with the needs of a fast increasing trans-Atlantic shipping business.

The amendment enables the Government of the Dominion to grant a subsidy equal to 3½ per cent on \$5,500,000, to any company that will undertake to build a dry dock at Quebec, and at such other ports as may be designated. Under the law as it stood a subsidy was limited to the same percentage on not exceeding \$3,500,000, which was not a sufficient inducement to builders of dry docks, no offers being received by the Government for their construction at the several Canadian ports now in need of them.

By thus increasing the amount on which the Government will pay a subsidy, it is believed that offers will be received at least for the construction of a graving dock at Quebec, not only because of the absolute need here for one of modern construction and largest capacity, but there is every prospect that such dock will give a fair return on the money invested.

**Excessive Marine Insurance Rates.**

This legislation has undoubtedly been hastened by the sending of a strong delegation of Quebec citizens to the Federal capital urging the needs of this port and pointing out especially the excessive rates of marine insurance due to the absence of a dry dock at this port or elsewhere on the St. Lawrence, below Quebec, able to accommodate ocean vessels even of average size when in need of repairs.

The insurance rates to Quebec and Montreal were shown to be exceptionally high in comparison with those at other ports, as will readily appear from the following figures quoted by the delegation:

*Rates on provisions, etc.*—To Quebec and Montreal, to September 10, 25 cents; to Halifax and St. John, to September 10, 20 cents; to Portland, 15 cents; to Boston and New York, 12½ cents.

*Rates on grain and general merchandise.*—To Quebec and Montreal, to September 10, 25 cents; to Halifax and St. John, to September 10, 17½ cents; to Boston and New York, 15 cents.

Increased rates to Quebec and Montreal after September 10: To September 26, 30 cents; October 10, 35 cents; October 26, 45 cents; November 10, 55 cents; and after that date 65 cents. Rates to Boston and New York do not increase during the same periods. Insurance rates at Montreal and Quebec averaged 35 cents as against 15 cents for Boston and New York.

The excess of insurance on the total value of Canadian exports by sea was estimated at over \$700,000, one-half of which at least, it is believed, must be debited to the increased risk of navigation due to the absence of proper dry-dock facilities in Canadian ports, and which sum could be saved by the establishment of modern dry docks at Quebec and other Canadian ports.

The fact that there are now at least 15 to 20 ships navigating the St. Lawrence River which could not be repaired if a serious accident happened to them was quoted to emphasize the immediate need of a modern dock at Quebec.

#### DOMINICAN REPUBLIC.

[From Consul Charles M. Hathaway, Puerto Plata.]

##### Plans for the Harbor Works.

With reference to the surveys for the harbor improvements at Puerto Plata as announced in Daily Consular and Trade Reports for March 1, the engineers have finished their work here and gone to Santo Domingo City. I am told that they are still working up their notes, but expect to submit the complete plans to the Dominican Government by April 30. If the plans are then approved, bids will probably be asked for at once. I understand that the Spanish engineers who made the survey are planning to bid. The work will be under the general direction of the Secretario de Estado de Fomento y Comunicaciones, but particularly in the charge of Mr. H. R. D. Burke (an American), director of the Departamento de Obras Públicas. The money for this improvement is, I understand, already set aside in New York under the terms of the American-Dominican convention.

#### FRANCE.

[From Consular Assistant Bartley F. Yost, Paris.]

##### Municipal Dwellings for the Poor.

The municipality of Paris is seriously considering floating a large loan for purchasing vacant lots and erecting dwelling houses to be rented at a very low rate to the poorer classes. The constant and rapid increase of rents has made serious the problem of housing the poor of Paris, and it is hoped that this will bring a measure of relief. The commission appointed to thoroughly study this question has submitted its report, from which the following vital points are gleaned:

A fractional loan of 200,000,000 francs (\$38,600,000) bearing 3.80 per cent interest is recommended, payable in 75 years from 1915, or

in periods of 75 years from a date two years after the successive floating of these loans. The loans are to be secured in part by the city (1) by offering the rents as security and (2) the resources of the municipal budget. The proceeds of these loans are to be utilized for constructing dwellings to be reserved in part for families with more than three children less than 16 years of age, or who are incapable for reason of health to gain their own living. The supervision of the construction will be confided to an architect chosen by the prefet.

The following rent schedules of the apartments shall not be lower than the following:

For families counting not more than three children—4 rooms, 400 francs (\$77.20); 3 rooms, 333 francs (\$64.27); 2 rooms, 233 francs (\$44.97).

Families counting more than three children—4 rooms, 300 francs (\$57.90); 3 rooms, 290 francs (\$55.97); 2 rooms, 179 francs (\$34.55).

The rents are to be calculated in such a manner as to insure annual returns of 5.70 to 6 per cent on the capital invested, including depreciation, the rents varying according to cost of the land and expense of construction. The charges for use of baths, washrooms, garages, etc., are in addition to general rents, sufficient to cover cost of operation, interest on cost, and depreciation.

A list of sites belonging to the city or to public charity organizations, suitable for sanitary dwellings, is to be prepared. In communities where the space is too limited, adjoining ground will be secured. The first group of municipal buildings will be erected along the Avenue Emile-Zola, rue de Javel, and rue Henri-Becque.

[From Consul Carl Bailey Hurst, Lyon.]

#### **New Bridge over the River Rhone.**

A project has been laid before the municipal council of Lyon to erect, in addition to the numerous bridges crossing the Rhone and Saone and connecting the different parts of the city, another bridge over the Rhone near the confluence of the two rivers. It will be 740 feet long and 65 feet 7 inches broad between the parapets, with three sidewalks and two roadways, the whole estimated to cost \$308,800. Bridge-building specialists are invited to offer plans. The dossier, with documents giving all the requirements, is filed with the commissioner of public highways. Inquiries should therefore be addressed in French to Monsieur le Directeur de la Voirie, Lyon, Rhone, France. [Consul Hurst's extended description of the proposed bridge will be loaned on application to the Bureau of Manufactures, Washington, D. C.]

#### **ROUMANIA.**

[From American Minister John B. Jackson, Bucharest; see also Daily Consular and Trade Reports for Apr. 1.]

#### **Large Sum for Public Works.**

The municipal council of Bucharest has applied to the Government for authorization to contract a loan of 30,000,000 francs (\$5,790,000) at 4 per cent, payable within 50 years, the proceeds to be applied to constructing a city hall, with the necessary installation and furnishings, extending the local tramway system, and to constructing an electric-power plant, filters, sewers, crematories, and other municipal improvements.

## INDIAN WOOLEN INDUSTRY.

[From report by the Director General of Commercial Intelligence at Calcutta.]

Of the five woollen mills of India, two—one at Cawnpore, in the United Provinces, and the other at Dhariwal, in the Punjab—have between them a paid-up capital of 32 lakhs of rupees (\$1,036,800), and produce 82 per cent of the total outturn of the Indian mills. These two mills weave cloth for the use of the army and police, and articles of superior quality generally, using for the high-class goods Australian wool, either pure or mixed with Indian wool.

The year 1905 was a record one both as regards the quantity and value of the woollen goods produced. In 1906 and 1907, owing to the high price of wool, there was a considerable shrinkage in production; a distinct recovery was revealed by the statistics for 1908 and 1909, and in 1910 the output was only 0.6 per cent less than in 1905, and the value was greater than in that year. The quantity of woollen goods imported into India is, however, very much greater than the production of the Indian mills. Piece goods and shawls from the United Kingdom and Germany make up the bulk of the imports. The value of the woollen goods imported in 1910 was \$9,700,000, and of the production of Indian mills \$1,570,000. There are, in various places in India, factories for weaving carpets and rugs and of pattu and pashmina, but though these industries are in the aggregate extensive, they are individually small, the weaving being done on hand looms.

The following statement gives detailed particulars of the woollen industry for the years 1908, 1909, and 1910:

	1908	1909	1910
Mills at work.....	5	5	5
Nominal capital employed.....	\$14,800,000	\$14,800,000	\$16,800,000
Persons employed.....	3,511	3,392	3,442
Looms.....	786	809	808
Spindles.....	29,221	30,421	31,206
Production.....	3,415,763 pounds	3,954,739	4,101,706
	\$14,800,000	\$14,000,000	\$15,700,000

The exports of woollen goods from India consist almost entirely of carpets and rugs, of which about three-fourths go to the United Kingdom, and the greater part of the remainder to the United States. The values of Indian carpets and rugs exported during 1908, 1909, and 1910 were \$7,700,000, \$6,870,000, and \$8,000,000, respectively.

## COTTON GROWING IN GREECE.

[Athens correspondence of London Financial Times.]

The Minister of Agriculture, Commerce and Industry of Greece states that there are under cotton cultivation in Greece between 3,500 and 4,000 stremmas (stremma = 0.2471 acre) of Egyptian cotton, in addition to 4,000 stremmas under cultivation on the estate of M. G. Christako-Zographos in Thessaly. The native cotton, short staple, is equal to good middling American, but although there is a considerable quantity of this grown in Greece, the aggregate is not taken into consideration in the above figures. The result of the first experiment having proved eminently satisfactory, further cultivation is to be undertaken. At present the demand for Egyptian seed represents the plantation of over 20,000 stremmas, and this is expected to increase.

At present prices Greek (Egyptian) cotton sells upon the Liverpool and Alexandria markets at 20 to 23 cents, and the extra quality up to 25 cents per pound. Upon this basis the seed so far sold to planters in Greece represents the production of a value of from \$500,000 to \$600,000. It is fully anticipated that in two or three years' time 250,000 acres of cotton lands will be under cultivation, which would yield, at the present low price and that received for the last two or three crops, a return of about \$15,000,000.

**Borax production.**—The enameling industry consumes about one-half of the total borax production of the United States, which, according to the Geological Survey, amounted in 1910 to 42,357 short tons, valued at \$1,201,842.

**OPPORTUNITIES IN GREEK TRADE.**

[From Consul Arthur B. Cooke, Patras.]

The letters received at this consulate from American firms seem to indicate a growing, but sometimes misdirected, interest in this market on the part of American exporters. The Patras consular district includes the Peloponnesus, the Ionian Islands, and part of the mainland of Greece, and its interests are primarily agricultural. The largest city is Patras, the metropolis of the Peloponnesus, with a population of 40,000. Improved highways are almost entirely lacking and communication is by water or by narrow-gauge railway to the interior. It is, therefore, clearly a loss of time for American exporters to attempt to develop a market here for such things as automobiles and bicycles.

Cotton textiles are in great demand here, being used by all classes. At present they are obtained chiefly from England and Italy. Agricultural implements, such as hoes, picks, plows, shovels, harrows, and other tools commonly used by the tenant farmer class, also form a large and growing part of the imports. There is slight demand for agricultural machinery, owing to the absence of large landed estates. The finer grades of calf and kid leathers find a ready sale here, being obtained from Germany, France, and the United States. Iron furniture, such as beds, is in active demand and the American article could get a foothold here if properly presented. At present England furnishes all of this class of imports. Hardware, including firearms, also finds a good sale here. A large amount of earthen and enamel ware, especially the cheaper grades, is taken by this market, the supply coming from Austria, Germany, England, and Italy. Staple groceries and manufactured foodstuffs are imported in considerable quantities.

Automobiles, bicycles, pianos, and piano players would find no appreciable demand here, nor could such a demand be easily created. The high tariff imposed practically prohibits the importation of wood furniture and of all but the finest grades of shoes. Heavy machinery finds little demand, as there is not much manufacturing on a large scale carried on in this district.

The chief articles of American origin on the local market are firearms and ammunition, sewing machines (American firm, but apparently made in Europe), fine kid and calf leather, pumps, petroleum, and cotton lint. American electric cars are used on the Patras tram line. Wherever American goods have been introduced here, they have met with favor and have tended to hold their own against competition.

---

**AMERICAN IDEALS IN CHINA.**

As noted in this journal for April 15, Mr. Robert Dollar has just carried to China an invitation by the Associated Chambers of Commerce of the Pacific Coast for Chinese business associations to send a delegation on an American tour. Mr. Dollar noted everywhere a deep interest in American institutions and policies. Following is a paragraph from his report:

The life of Washington has been published in Chinese, and is sold as fast as it comes from the press. I met many old men who could not speak a word of English, but who were quite familiar with the life of Washington and what he did to establish our Republic, a duplicate of which they are determined to get for China.

**TRADE OPENINGS IN ASIA MINOR.**

[From Consul General George Horton, Smyrna.]

**Motor Boat Possibilities.**

There are only about a dozen motor boats in use at Smyrna, although the large and beautiful harbor is nearly always quiet and safe in summer and affords a pleasant refuge from the heat. Excursions to several shore and island resorts near here are also popular. A small English motor boat has made the round trip to Mitylene, which is seven or eight hours from Smyrna by steamer.

American motor boats have received an unfortunate setback from the inability of some local importers to properly set up American boats which they imported knocked down. Competitors have taken full advantage of the fact that American motor boats are to be seen in tow in Smyrna Bay, and much of the trade has passed into the hands of British makers, although their boats cost twice as much as those of American make. Steel boats are not suitable for this harbor, the dory whaleboat being the only style which should be used. Such boats should be at least 23 feet long. Some frail lake boats have been sent to Smyrna by American houses, only to lie around uselessly and injure the American motor-boat trade.

**Trade in Neckwear.**

For several years the imports of neckwear have been increasing at Smyrna, where their sale is extensive. The following details are from the Near East:

The principal suppliers of neckwear are Italy, Austria, Germany, and Great Britain. The imports annually amount to 125,000 to 140,000 francs (franc=\$0.193). Italy, before the war, sold neckwear to Smyrna, amounting to 60,000 francs a year, at the following prices: Knots, 2.25 to 3.50 francs per dozen; scarfs of average length and breadth, 5 to 8 francs per dozen; scarfs 1 meter long and wide, 8 to 12 francs per dozen. The other countries supply Smyrna with squares, regates, knots, and plastrons. The prices per dozen for these range as follows: Squares, 7 to 30 francs; knots, 3 to 9 francs; regates, 4 to 20 francs. Austria delivers the best qualities of scarfs of all kinds at 10 to 18 crowns (crown=\$0.203) per dozen, and Germany sells second and ordinary qualities at 5 to 7 francs a dozen. England and France share in the sale of the finer grades of ties. Foreign ties are packed in cardboard boxes holding 1 or 1½ dozen, which are either packed in cases or sent by parcels post. There is also a limited trade in made-up ties, handled by Syrian venders. The native manufacturers have not yet made sufficient progress to compete with foreign makes, their articles are of inferior quality, and they supply only an insignificant portion of the trade.

Credit for three or four months is usually given on orders placed in France and England, while Italy, Austria, and Germany grant a credit of six months from date of invoice. Some buyers insist on paying cash for a discount of 5 per cent. As the houses importing ties into Smyrna are numerous, and the majority require long credit, reliable information as to their financial standing should be obtained before treating with them.

---

**Consular Trade Conferences.**

Consul General Leo Allen Bergholz, of Canton, China, advises that he expected to arrive in San Francisco, Cal., on April 11 on a visit to the United States on leave of absence. Arrangements have been made by the consul general to meet members of the chambers of commerce at San Francisco and Los Angeles, and in the event that visits are made to other trade centers of the country he will give due notice to the respective chambers of commerce. Most of Mr. Bergholz's time while in the United States will be spent at Burlington, Vt., where he may be addressed on the subject of possible trade conferences.

**NEW CAN-COVERING MACHINE.**

[From Consul P. Emerson Taylor, Stavanger, Norway.]

Application has been made for a patent on a new machine for folding and sealing the lids on cans, recently invented by a Stavanger mechanic. The machine differs from the ordinary lid-folding machines in that it contains a metal plate with openings for four sardine or other fish cans. The cans, with lids laid on, are placed in these openings and the plate is run through the machine, which automatically fastens and seals the lids on the cans. The only handwork necessary is the placing of the lid in position on the can and putting the can in the opening in the metal plate, which can be done by a boy, while a man of some skill and experience is required to operate the old machines, in which the can is placed in proper position in the machine and a lever pulled each time the lid is pressed on the can and sealed. The new machines, like the old ones, will be operated by electric power.

In addition to dispensing with skilled labor in the lid-sealing process, it is claimed that the new machine will cover 2,000 to 3,000 more cans in a day than the old machine operated by an experienced workman. The capacity of the machines now in use is about 6,000 cans per 10-hour day, while that of the new machine is 8,500 to 9,000 cans a day.

The invention is not yet perfected, for at present the machine covers only cans of uniform size; but the inventor intends to adapt it to all sizes of cans used in the fish canneries of the city. The inventor claims that the new machine is less complicated and more easily adjusted and repaired than the old machines. His invention is now being tried in one of the local canneries.

---

**Lectures on New Zealand.**

Mr. William Lock, of Nelson, New Zealand, is planning to visit the United States in September, 1912, and writes to the Bureau of Manufactures, expressing a willingness to lecture on New Zealand free of charge, before any responsible societies who may wish his services. Mr. Lock states that he received a number of requests for lectures while in the United States in 1908 which he could not fill, owing to lack of time, but that he expects to spend about two months in this country on his coming trip. He is a member of the Board of Education and the Chamber of Commerce of Nelson, and will be prepared to lecture on the educational systems, resources, people, legislation, scenery, or commercial conditions in New Zealand. Requests for lectures must reach him before his departure from New Zealand.

---

**Decreased Consumption of Cottonseed Oil in Syria.**

Consul General W. Stanley Hollis, of Beirut, reports that low prices resulting from the large and good crops of olives gathered during the last harvesting have diminished the consumption of cottonseed oil from Egypt and the United States. Prospects for the coming crops of Beirut and Lebanon olives are also assuring, though two successive years of excellent crops are practically unknown.

**URUGUAYAN HARBOR FACILITIES.***[From American Minister Nicolay A. Grevstad, Montevideo.]*

The condition of the port of Montevideo lately has caused considerable discussion among public men, in shipping circles, and in the press. As is generally known, the port is the only deep-water harbor in Uruguay. There is a harbor for small vessels at Punta del Este, Department of Maldonado, and the Government is now building a harbor at Paloma, Cabo de Santa Maria, Department of Rocha, where it is expected that 18 feet of water can be obtained and maintained. Neither Punta del Este nor Paloma has railroad connections. West of Montevideo there is a shallow harbor at Colonia, Department of Colonia, and on the Uruguay River are fairly good river harbors at Paysandu, Salto, and Fray Bentos.

The central traffic point of the railroads of the country is Montevideo, whence they spread out in all directions—east, northeast, north, and northwest. As the bulk of exports and imports pass through the port of Montevideo, which at present is practically the only outlet and inlet for the foreign commerce of Uruguay, the paramount importance of this harbor is self-evident. Vast works have been undertaken and a great deal of money has been expended, in all some \$18,000,000, in order to provide deep water and good shelter for large ocean-going vessels.

It is evident, however, that the harbor does not meet the growing needs of business. The maximum depth of 25½ feet, even if maintained, is insufficient in the face of the rapidly increasing draft of trans-Atlantic steamers being constructed for the River Plate trade. But the real maximum depth does not exceed 24½ feet, on account of gradual deposits of sand and silt due to insufficient dredging.

**LONDON ELECTRIC SUPPLY COMPANIES.***[From the Economist, London.]*

Up to the present it is hard to find an industrial group that has been less affected by the dislocation of the coal trade than the companies supplying electricity in London. They have always carried substantial coal reserves, and, being forewarned of the present crisis, were able to lay in larger stocks than usual. Hence they were not obliged to restrict the supply of power or light to their consumers.

The strike will certainly not result in cheaper coal, and if coal prices rise slightly the steam power user will find his working costs greater, while it is safe to say that the price of electricity will not be raised. Even if the coal bills of the electric power companies are larger in the future, nearly all the rest of their expenses are fixed charges. Electricity has been growing in favor for power and has many advantages over gas for lighting. The rapid growth in the use of electricity in London is shown by the increase in the output of the nine leading companies from 105,754,000 Board of Trade units sold in 1906 to 154,835,000 in 1911. The increase in 1911 was greater than in any previous year in this period. Part of this increase may be ascribed to the electrification of the Brighton Railways suburban system.

The rate of growth in capital in the last few years has been much slower than the increase in output, the total capital of the nine companies being \$51,930,188 in 1906 and \$56,444,173 in 1911. Owing to the competition of the gas companies and the cheapening of contracts, the price of electricity has slowly fallen, so that the gross revenue has only risen from \$6,511,688 in 1906 to \$7,458,159 in 1911.

The net revenues, after the deduction of depreciation charges but not debenture or other interest, amounted to \$2,756,697 in 1909 and \$2,863,035 in 1911, showing a rise of 6.2 per cent in the net compared with 6.6 per cent in the gross, showing that the companies are not working with so big a percentage of profit as they were three years ago. Considering that their combined output has risen 16 per cent in the same time, this keeping of the ratio of working expenses to gross receipts practically level represents an achievement in economy.

### PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

- No. 591. Forage, etc.**—Bids are invited until 2 p. m., April 26, 1912, by the Agricultural Department for furnishing and delivering f. o. b. Beltsville, Md., in such quantities and at such times as the department may require, the following items: One carload (about 30,000 pounds) of prime white oats, re-cleaned; 1 carload (about 40,000 pounds) of wheat bran; 2 carloads (40,000 to 48,000 pounds) of prime long timothy hay, baled; 2 carloads of prime red clover hay; 2 carloads of prime alfalfa hay; 1 carload (about 40,000 pounds) of old-process linseed-oil cake, pea size. Further information may be obtained by addressing the Division of Accounts and Disbursements, Agricultural Department, Washington, D. C.
- No. 592. Building construction.**—Sealed proposals will be received at the office of the United States Life-Saving Service, Treasury Department, Washington, D. C., until 2 p. m., May 1, 1912, for the construction of a new building at the Moriches Life-Saving Station, Long Island, N. Y. Specifications and drawings, etc., can be obtained upon application to the keeper of the station named; to the Superintendent of the Fourth Life-Saving District, Bay Shore, N. Y.; the superintendents of Construction of Life-Saving Stations, 379 Washington Street, New York; or to the office at Washington.
- No. 593. Dynamite, blasting caps, etc.**—Sealed proposals, in triplicate, will be received at the office of the General Purchasing Officer, Isthmian Canal Commission, Washington, D. C., until 10.30 a. m., May 6, 1912, for furnishing dynamite in accordance with estimate for the period ending December 31, 1912 (schedule 700); also for furnishing blasting caps, detonators, safety fuse, insulating tape, and lead wire for the period ending June 30, 1913 (schedule 701).
- No. 594. Sheet metal "tote" boxes.**—Sealed proposals will be received at the office of the Purchasing Agent, Post Office Department, Washington, D. C., until 2 p. m., April 25, 1912, for furnishing and delivering at and within the doors of the mail-lock shop at Washington, D. C., 550 sheet-metal "tote" boxes 23 inches long, 12 inches wide, 6 inches deep, and of No. 16 gauge steel.
- No. 595. Dredging.**—Sealed proposals will be received at the United States Engineer's Office, Duluth, Minn., until May 9, 1912, for dredging at Superior Entry, Duluth-Superior Harbor. Information on application to Francis R. Shunk, Lieutenant Colonel, Engineers.
- No. 596. Internal-combustion engine plant.**—Sealed proposals will be received at the United States Engineer's Office, New London, Conn., until 2 p. m., June 7, 1912, for furnishing and installing an internal-combustion engine plant at El Fraile Island, Philippine Islands. Information on application to A. E. Waldron, Captain, Engineers.
- No. 597. Glass.**—Sealed proposals will be received at the office of Superintendent of Prisons, Department of Justice, Washington, D. C., until 10 a. m., May 15, 1912, for glass required for the hospital building of the United States penitentiary at Leavenworth, Kans., in accordance with specifications, copies of which may be obtained at the Washington office.
- No. 598. Steel racks.**—Sealed proposals will be received at the office of the Purchasing Agent, Post Office Department, Washington, D. C., until 2 p. m., April 25, 1912, for furnishing and delivering at and within the doors of the mail-lock shop, Washington, D. C., steel racks with backs.

### MINERAL PRODUCTION OF QUEBEC.

[From Consul G. Willrich, Quebec, Canada.]

Based on data direct from producers, the provincial government finds that the total value of the various mineral products of this Province for 1911 reached \$8,567,143, as against \$7,323,281 in 1910. The products showing the greatest increase are limestone, with about \$500,000; bricks, \$230,000; asbestos, \$300,000. Sand production was valued at \$114,500 in 1911. Asbestos undoubtedly will continue to hold first rank despite overcapitalization and overproduction, which have hampered the sound development of this industry.

## THE FRUIT INDUSTRY IN JAPAN.

[From Consul General Thomas Sammons, Yokohama.]

### Varieties of Fruit—Market System.

The principal fruits marketed in Japan are persimmons, mikan (mandarins or Japanese oranges), pears, apples, peaches, grapes, strawberries, apricots, watermelons, melons, figs, loquats, walnuts, chestnuts, bananas, and pineapples. Except bananas and pineapples, all of these fruits are grown in Japan.

Buyers or local agents of large commission houses in various market centers collect and purchase fruits in the growing districts. The fruit is crated or boxed by them and sent to the commission houses, which offer them at a regularly established fruit exchange market, where daily quotations are practically determined. Only the greengrocers or regular fruit dealers have the privilege of buying in wholesale quantities at the exchange.

It is customary in Japan for grocers to send out their clerks to their regular customers to note their orders in the morning and make deliveries in the afternoon. Housewives seldom go shopping for vegetables or fruits.

### Packing—Retail Prices.

Hard persimmons are put up in barrels; soft ones are crated. Native oranges are invariably put up in small boxes measuring about 13 by 10 by 10 inches, and containing 70 to 160 or 170 oranges, according to size. Pears are carefully wrapped in paper and boxed. Peaches are crated. Apples are put up in boxes, usually being packed in sawdust. The size of apple boxes is practically similar to the cases containing two 5-gallon petroleum cans. Often the petroleum cases from America are turned into apple cases.

The average retail prices in Yokohama are:

Persimmons, fresh and large, 1.5 to 3 cents each; medium, 1 to 1.25 cents each; small, 2 to 6 cents per dozen.

Mikan, best grade, 45 cents per box; medium grade, 27½ cents per box.

Oranges, imported from America, 72 cents to \$1.50 per dozen; Japanese navel oranges, 24 cents to 75 cents per dozen. The so-called Japanese navel oranges are grown in small quantities in Japan from original cuttings imported from abroad. This fruit does not grow well in Japan.

Pears, one-half cent to 5 cents each; stored pears in winter are sold at 5 to 15 cents each.

Apples (Japanese), 1 to 3 cents each. There are scarcely any good American apples in the Japanese markets.

Peaches, 1½ to 4 cents each.

Chestnuts, 35 to 40 cents per gallon.

Bananas, Hawaiian, 15 to 20 cents per pound; Hongkong, 12½ to 15 cents per pound; Bonin Island, 6 to 10 cents per pound.

#### Apples Popular in Japan.

The history of Japan-grown apples, as developed in the principal cities, dates back only a few years. Young trees were imported from America and planted in Hokkaido (northern island) and in the northern Provinces of Akita, Aomori, and Yamagata. The experiment proved very successful, and about 12 years ago northern apples began to supply Tokyo and other large city markets in Japan. The people in general, however, have not yet learned to use the apple or any other fruit in their common diet, its principal use being for afternoon tea service or for children, usually to be eaten between meals. Apple jam and other forms of cooked apples are almost unknown among ordinary Japanese families.

As a rule, apple growing is considered as an incidental or indifferent source of income among Japanese farmers. No statistics as to acreage, number of trees planted per acre, varieties, average yield, irrigation, etc., are available. The latest publication by the Imperial Japanese Department of Agriculture and Commerce gives the following:

Year.	Number of trees.	Yield in pounds.
1907.....	2,151,344	55,868,000
1908.....	2,484,017	43,228,208
1909.....	2,279,362	52,044,908

The total population of Japan, exclusive of Formosa, Sakhalin, Chosen (Korea), and other distant possessions, is upwards of 52,600,000, the average apple production therefore being about 1 pound per capita.

#### Japan Exporting Apples—Fruit Growers' Associations.

Japan imports few apples; but its exports to foreign countries (Asiatic Russia principally, also China, Hongkong, and the Philippines) are annually increasing, as shown in the following table:

Year.	Pounds.	Value.
1909.....	4,471,381	\$142,030
1910.....	5,533,192	167,435
1911, first 10 months.....	8,071,532	222,519

Apples are cheapest in September and October in Japan. After December there is steady increase of about 20 per cent. The wholesale quotations in February, 1912, ranged between \$2.50 to \$3.50 per 100 pounds net.

In the apple-producing districts, each county or village generally has a fruit growers' guild, which regulates the standard size of cases, method of packing, standard of quality for export, etc. The guild sometimes specifies the price, and if any member is found underselling the specified price he is subjected to heavy fines or punishment. The guild is a semiofficial institution, and when once organized those engaged in the industry in the district are required to join.

**American Apples.**

The total imports into Japan of fresh fruit and nuts in 1909 and 1910 were less than \$24,000 a year. There was a slight increase in 1911, and it is anticipated that the total will reach a little over \$30,000 for that year. Chinese nuts and fruits, Hawaiian pineapples and bananas, and American oranges are among the imported fruits mentioned, but it appears that very few American apples are now brought in. Moreover, with a tariff of approximately \$1.50 per 100 pounds on this fruit, it seems that there are serious obstacles to overcome in placing American apples on the Japanese market.

A large part of the American apples that are imported into Japan are consumed by the foreign communities. [A list of dealers in Yokohama, supplying the foreign trade, may be obtained from the Bureau of Manufactures.]

[From Consul George N. West, Kobe.]

**Oranges Grown in Southern Japan.**

The Oonshiu, or Satsuma, orange is grown in the southern and southeastern parts of Japan, the northern prefectures and western coast being too cold. Oranges are grown chiefly at an altitude of 600 to 2,000 feet above sea level. A southerly exposure is best for the tree, and the best soil is a sandy loam, with gravel about 3 feet from the surface. The land should be hilly and rolling. The most favorable temperature ranges from 36° to 95° F., with an average of 65°. It is uncertain what degree of cold the Satsuma orange can stand without being killed, but at Wakayama, with a temperature of 22°, no trees were reported killed. Strong gales, especially sea winds in summer, cause the leaves to wither and are generally considered worse for the trees than cold weather. In the more northerly districts where oranges are grown the trees are sometimes covered with coarse matting in winter.

It is impossible to state accurately the age that Oonshiu oranges will attain, as there are no records of the dates of planting of the very old trees. There is a tree about 150 years old in Kamomura, Wakayama Prefecture, whose trunk is over 4 feet in circumference near the roots. A tree at Takatamura, Kumamoto Prefecture, is said to be the oldest in Japan. Up to 10 years ago its branches had a spread of 60 feet radius in every direction, but they are now reduced to an east and west diameter of 27 feet and a north to south measurement of 108 feet. Roots have grown from the branches of this plant, which lie on the ground.

**Methods of Cultivation.**

Oranges were formerly grafted on the Yudsu (*Citrus aurantium*), but now the Kikoku (*Citrus fusca*), or *Citrus trifoliata*, which is much hardier, is widely used. Grafting on trees is commonly done without removing them from the ground, but sometimes the trees are dug up, grafted, and transplanted. Budding is a new system in Japan, but it is gradually being widely adopted.

The Oonshiu orange tree usually grows 10 or 12 feet high, covering a space 22 or 23 feet in diameter. Its branches close to the ground, and, not being pruned, the weight of the fruit causes many branches to lie on the ground. The Japanese prefer a low tree, as the fruit can be picked without ladders, and the branches keep the ground cooler and more moist than it would be if exposed to the sun.

**COTTON-TESTING HOUSE AT SHANGHAI.**

[From Vice Consul General W. Roderick Dorsey, Shanghai, China.]

Ever since the establishment of modern cotton mills at Shanghai and the beginning of the exportation of the raw fiber to foreign countries both mill owner and exporter had been in the power of the native middlemen who operated between them and the farmer.

These middlemen are resident mostly at Nantao, a suburb of the walled city and, through their agents, who go into the cotton-growing areas, buy up the whole of a farmer's crop, paying part of the purchase price in advance, but always keeping him in want of money and so under their control. Therefore, when these agents requested the farmers to add water to their product, they were obliged to do so to obtain the balance of their money. From this practice large profits resulted to the middlemen, who sold water and cotton for the same price. The evil grew with its success until 25 to 30 per cent of moisture came to be imposed upon mill owner and exporter, operating to their great disadvantage.

To overcome this excessive moisture, foreign mill owners set up testing ovens of their own, which secured betterment to individuals but none to the general market. The Japanese established joint testing houses which did not prove profitable. This was a very serious matter for them, for, besides owning mills locally, Japanese interests took 75 or 80 per cent of all the cotton exported.

**Cotton Antiadulteration Association—Testing-House Staff.**

Seeing the better condition of the staple which was being used in other mills, the Japanese firms approached the foreigners to secure their cooperation in a scheme for the betterment of the open cotton market. Certain influential firms took favorably to the idea, a meeting was called, and a Cotton Antiadulteration Association was formed to prevent, so far as possible, the adulteration of cotton by water and other substances, in conformity with ordinances to be issued by the Chinese Government for that purpose. At this meeting regulations governing the association were adopted.

The cotton-testing house provided for in the regulations was duly established, much aid being rendered by the local chambers of commerce and the consular and diplomatic bodies in securing support from the local Chinese officials and of the Peking Government. Through Peking the cooperation of the maritime customs was assured, without which it would have been impossible to enforce compliance with the rules and regulations promulgated for the control of the cotton-testing house.

The staff as constituted at present includes a manager, who is detached from the customs service, his salary (\$4,750) being refunded to the commissioner of customs by the association; 1 secretary (Japanese), at \$900; 4 testers—1 foreign at \$1,200, 1 Japanese at \$750, and 2 Chinese at \$120 each; 7 foreign supervisors and samplers, \$900; 4 Japanese supervisors, \$750; 4 Japanese samplers, \$600; 18 Chinese assistants, \$72; 1 Chinese office boy, \$96; 2 Chinese coolies, \$48 each.

**Location—Sampling—Type of Oven.**

The main testing house is located at 41 Kiangse Road, in the heart of the International Settlement. A substation is maintained in the principal cotton-mill district, at 1358 Yangtzepoo Road, and is in

charge of two foreign and two Japanese samplers and supervisors, with a staff of native coolies paid on the same scale as those at the main establishment. The services of the house are available to all dealers in cotton whether members of the association or not, and the method for securing a certificate by cotton exporters is as follows:

When the application for test is received it is given a number and samplers are sent to the place where the cargo is stored, who, first verifying the marks on the bales with those in the request, proceed to extract samples haphazard through the consignment, 5 from every 100 bales. These samples are placed in round tins of the ordinary 2-pound size and a tag, marked with the application number, attached to each. These tins are in turn deposited in a canvas bag, which is sealed and sent to the testing house for treatment in the ovens.

These ovens, of which there are 60 at present, are made from an English design. They are about 1 foot wide by 1 foot long by 1½ feet high and are constructed of sheet iron with an inner lining of tin, between which are about 1½ inches of sand and alabaster to retain the heat, which is generated by gas, four jets to each oven. The temperature during the testing process ranges from 212° to 225° F.

#### **Testing Methods.**

The tester weighs out 50 grams of cotton from each tin and places it on shallow trays. These are placed in the oven on tin cylinders. The oven is tightly closed, but there is an aperture at the top to allow the moisture to escape and to permit the insertion of a thermometer. The cotton is left in the ovens for a full hour, when, if the thermometer indication is satisfactory, it is removed and results figured out. The time the baking began and the time completed are both recorded and the cotton is again weighed, its dry weight noted on the label, also the loss in weight, from which is found the percentage of moisture in the bale the sample represents. (The scales on which all weighing is done are metric and weigh down to 5 milligrams.)

To illustrate: The weight of cotton and moisture placed in the oven was 50 grams; the weight of cotton after test is, say, 42.72 grams, showing a loss of 7.28 grams by moisture, which is 14.56 per cent, or just a trifle below the admitted figure. Now as samples have been extracted casually 5 from every 100 bales, the standard of the consignment is arrived at by taking the average of all the samples, thus: Tin No. 1 shows 14.56 per cent of moisture; tin No. 2, 15.10 per cent; No. 3, 13.80 per cent; No. 4, 14.24 per cent; No. 5, 14.60 per cent; the average shows 14.46 per cent of moisture.

The certificate for that 100 bales would be indorsed "below standard," but if the average loss from moisture had been more than 15 per cent none would be issued.

#### **Fees—Exchange Test Certificate—Extraneous Matter.**

This certificate is issued only after fees are paid in accordance with the tariff in force at the testing house for the time being. The tariff is notified to the public in circular form; the fees are made up on a memorandum and a receipt given by the treasurer of the association on the same form, which is exchanged for the cotton-test certificate.

After the test has been made it often happens that dealers desire to have cotton repacked for export, and to secure a permit to pass same through the customs a further application must be made to the

testing house. If there is no reason to doubt the identity of the cotton with that called for in the original certificate, an exchange test certificate will be issued.

The fee schedule originally adopted in article 4 of the rules and regulations governing the testing house does not, with the present restricted volume of business, provide sufficient funds for the maintenance of the establishment. Therefore, at a special meeting of the Cotton Antiadulteration Association the committee was empowered to regulate fees to suit the demand, and in accordance therewith did, on February 1, 1912, double the scale; but this is only a temporary measure and the lower tariff will be reverted to as soon as feasible.

Seeds and other extraneous matter are picked out of a certain quantity of cotton by hand and weighed, and the percentage of seeds or extraneous matter to cotton worked out proportionally. There are two expert testers at the house who at sight can judge the percentage, and unless the applicant requests it or the testers wish to satisfy themselves, no picking and weighing is done.

#### **Opposition Encountered.**

The testing house was put in operation at the beginning of the 1911-12 cotton season. As anticipated, opposition was met with from the middlemen. Agents brought cotton to market, and in an attempt to break up the reform took it away again when they found it could not be moved except through the testing house, only to send it back when convinced of the permanency of the system. The mill owner would not accept uncertified cotton and the exporter, however willing to take advantage of the situation, was estopped by the determination of the customs authorities to issue no permit for the exportation of cotton that had no certificate from the testing house. There is no question that the standard of Shanghai cotton has improved, and the operations of the testing house give great satisfaction to all who are interested in real as opposed to fictitious values in the staple.

Owing to short crops and a more or less restricted movement because of the disturbed conditions in China, less cotton passed through the testing house than was anticipated, but 10,000 to 15,000 bales have been handled in one day without straining the capacity of the equipment. It is intended later to increase the ovens to 100, when the demand that will certainly occur in good crop years can be met without delay to the merchants.

It is believed that a portion of the advanced price for cotton in China in the early season was due to the effort of the middleman to recoup the loss he was compelled to stand from reduction of moisture. The scale of testing fees is such that it is thought it can not of itself affect the market to any appreciable degree.

#### **Membership—Other Testing Houses.**

As at present constituted the Cotton Antiadulteration Association has 24 members who have subscribed to the guaranty fund but who receive no special benefits, except a participation in a distribution of possible assets when the association is dissolved. While article 2 of the rules and regulations of the Shanghai cotton-testing house might be construed as limiting the use of the house to members of the association, such is not the case. Its usefulness and scope have been greatly enhanced by the practice of permitting all dealers to have their cotton tested upon paying the fee, and with the stringent

application of the customs export regulation it would seem that at Shanghai, at least, a way has been found to effectively prevent the abuse of moisture allowances in raw cotton.

There is no other similar establishment in China at present, but it is thought that the cotton exporting centers of Tientsin and Hankow will follow suit.

[The following documents accompanying Vice Consul General Dorsey's report will be loaned to interested firms by the Bureau of Manufactures: Rules and regulations of the Cotton Antiadulteration Association of Shanghai; memorandum of proposed arrangement by which the Chinese Maritime Customs will cooperate in measures to prevent the watering of cotton; method for securing a certificate by cotton exporters and by local mills; application for test; cotton sampling notice; sample tin label; provisional instructions for samplers and supervisors; scale of charges; fee memorandum and receipt; cotton-test certificate; application blank for new certificate for repacked cotton; exchange test certificate for repacked cotton. Reference to the Cotton Antiadulteration Association was made in Daily Consular and Trade Reports on July 28 and December 6, and an article relative to the Shanghai cotton-testing house was also published on November 15, 1911.]

### **TOMATO GROWING IN CANADA.**

[From Consul Felix S. S. Johnson, Kingston, Ontario.]

The production of early tomatoes has become prominent in the more favored parts of Ontario Province, including the Niagara Peninsula, the Leamington district in Essex County, and the neighborhood of Toronto, and it is carried on to a lesser extent throughout the tomato-growing sections of the Province. The total shipments from the Leamington district, exclusive of those consigned to Winnipeg, from July 1 to August 12, 1911, amounted to 40,000 baskets. No reliable information is available of the shipments from the other districts. Most of the early tomatoes are marketed through Toronto. The Essex growers claim that the western trade has not proved satisfactory, as the first shipments by express are expensive and come in competition with the American product, while later the cheaper shipments by freight compete with the St. Catharines tomatoes. It is also said that the fruit is not handled to the best advantage in Winnipeg, the jobber taking too large a share of the profits.

Most of the seed comes from the United States, the price running from \$1 to \$10 per pound, the general price being about \$3. The duty on seed imported from the United States is 10 per cent ad valorem, when importation is in packages weighing over 1 pound, and 25 per cent ad valorem when in packages weighing 1 pound or less. In 1911 Canada imported fresh tomatoes as follows: From the United States, 203,349 bushels, valued at \$256,127; from Cuba, 480 bushels, value \$770; from the United Kingdom, 743 bushels, value \$996.

*Armadillos* are plentiful in Borneo, Consul Orlando H. Baker, of Sandakan, stating that many of the skins find their way to market, over \$1,500 worth being annually exported.

**THE ITALIAN FRUIT MARKET.**

[From Consul General James A. Smith, Genoa.]

The principal fruits marketed in Italy are: Oranges, from December to May; mandarins, December to March; cherries, strawberries, and medlars, in May and June; peaches, apricots, prunes, and green-gages, July to October; fresh figs, August to November; grapes, October to December. Apples, pears, walnuts, filberts, almonds, and bananas are marketed all the year, the bananas being imported mainly from the Canary Islands.

All of these fruits, with the exception of bananas, are grown locally and are customarily sold by weight. Fruits which are liable to quick deterioration are gathered in the evening and sent in baskets by wagons to the city market during the night, where the sale to brokers usually begins at 3 a. m. and by the brokers to retailers at 6 a. m. Certain qualities of apples and pears consumed during the winter are packed in September and October.

**Retail Prices—Apples.**

Retail prices here, converted into American currency, average about as follows, a kilo being equal to 2.2046 pounds:

Kinds of fruit.	Price, in cents.	Kinds of fruit.	Price, in cents.
Apples.....kilo	7.72 - 11.58	Medlars.....kilo	7.72 - 9.65
Apricots.....do	15.44 - 19.3	Oranges.....each	.965 - 1.544
Cherries.....do	7.72 - 9.63	Peaches.....kilo	9.65 - 15.44
Figs.....dozen	5.79 - 7.72	Pears, summer.....do	7.72 - 11.58
Grapes.....kilo	7.72 - 11.58	Pears, winter.....do	15.44 - 19.3
Green-gages.....do	15.44 - 19.3	Prunes.....do	15.44 - 19.3
Mandarins.....each	.579 - 1.158	Strawberries.....do	28.86 - 33.775

The apple is cultivated locally and is a popular fruit. It is generally grown on the slopes of low hills, together with other fruits, vegetables, and grain. The land is sometimes irrigated, but not so much for the benefit of the apple trees as for other soil products. No data are at hand as to the yield per acre. The chief varieties here are the Mele Carle, Mele Carpendu, Mele Renette, Mele Rosse, Mele Pomelle, and Mele Limoncine. The principal places of production in northern Italy are at Albenga, Province of Porto Maurizio; Mondovi, Cuneo, and Pinerolo, in the Province of Cuneo; Aulla, Province of Massa-Carrara; and Padua. Table apples are exported in baskets to France, Germany, Switzerland, and Austria; apples for cider making are also exported in bulk to those countries in carload lots. Wholesale export prices per 100 kilos (220.46 pounds) are: Table apples, \$3 to \$5; cider apples, as low as \$1.

**Imports, Exports, and Duty.**

Apples are imported during the winter from the United States and Canada and during the spring from Australia, but practically all of these are for supplying ships calling at this port, the quantity for home consumption being insignificant. No other fresh fruit is imported from the United States. For American, Canadian, and Australian apples the wholesale price here is \$2 to \$3 per case of 20 kilos (44.092 pounds).

Official statistics show that Italy imports annually \$125,000 to \$225,000 worth of fruits "not specially named," among which would be apples and pears. The actual importation of apples can not,

therefore, be given, but it is not large. As opposed to this the exports of apples and pears, mainly to Germany, France, Switzerland, and Austria, are important. In 1909 these shipments were valued at more than \$6,000,000; in 1910, \$2,400,000; and in 1911, \$5,700,000.

The Wenatchee apple is unknown in Italy, but it would perhaps be possible to develop a market here if the fruit could be delivered from November or early December until May. To build up this trade the best method would be through a general representative in Genoa, who would at first introduce the fruit locally, and later on, if successful here, develop this business in other Italian markets. The import duty on fresh fruits is 1 lira (19.3 cents) per 100 kilos. Genoa's total annual consumption of fresh apples is about 150 carloads of 10 tons each.

---

### INTENSIVE FARMING IN THE CANARY ISLANDS.

[From Consul William W. Kitchen, Tenerife.]

The truck farmers of the Canary Islands engage in intensive farming almost exclusively, as the farms average but 2 to 5 acres in size, rarely more. The largest farm in the islands is about 140 fanegadas (the fanegada varies in the different islands, being usually a little less than 1 acre). Plowing is done with primitive plows, consisting of a rough-hewn pole or tongue to which is fastened an iron-pointed stick, drawn by oxen. These plows are not so easily injured by the large loose rocks below the surface of the soil as steel blades would be, and the low cost of labor, about 50 cents American a day, makes the demand for a modern time-saving implement slight. The results obtained with this method of cultivation are excellent, and the appearance of a newly plowed finca (farm) is equal to that of the best English and European market gardens.

The irrigation, which the average yearly rainfall of 15 inches makes imperative, is supplied on these miniature farms by the use of hand watering cans. The larger farms have cement-lined stone reservoirs, some of which have a capacity of several thousand gallons. These are filled from permanent streams by cement troughs. These leads are economically provided by forming cement grooves on the tops of the stone fences, which separate all the farms and are often used in dividing hillside farms into terraces.

A fanegada may produce 300 bunches of bananas a year. Six hundred kilos (1,300 pounds) of seed potatoes are required to plant the same area, the yield being 5 to 20 times the amount planted. One and a half to two pounds of tomato seed will plant a fanegada and yield two hundred to six hundred 60-pound cases.

---

### ROUMANIAN OIL IN GREECE.

[From American Minister John B. Jackson, Bucharest.]

It is announced that the renewal of relations between Roumania and Greece, which took place about a year ago, has led to an order for Roumanian petroleum for the Greek Government's monopoly. Previous attempts were made (in 1903-1905) to find a substitute for the American article, while the experiment made with petroleum from Russia was unsatisfactory. The present order is experimental and further orders are conditional.

**ORANGE CULTURE IN PALESTINE.**

[From Consul James Oliver Laing, Valetta, Malta.]

The following translation has been made of an article in the *Deutsche Levante-Zeitung*, and will supplement the articles which have already appeared in *Daily Consular and Trade Reports* on the citrus-fruit exports of Palestine (issue for Feb. 10, 1912) and packing oranges in Palestine (issue for Nov. 23, 1911):

About 40 years ago the orange growers at Jaffa began to cultivate the fruit on a large scale. The production increases from year to year, so that the outlay of capital can be regularly enlarged. Where single gardens of 2,000 to 3,000 trees existed there are now cultivated orchards of 15,000 to 20,000 trees. Such large undertakings had naturally a prejudicial effect on the smaller plantations; while a box of oranges formerly brought \$1.16 to \$1.54 on the spot, the return is now only 58 to 77 cents. The owner of an orchard which yields 2,000 boxes of oranges, at 77 cents a box, must, with the income of \$1,540, reckon costs of \$772. On the other hand, large orchards which produce 20,000 boxes show expenses of only \$2,895 to be paid from \$15,400 income. The future belongs here, as well as elsewhere, to the large producer.

**Cultural and Packing Methods.**

The orange tree likes a warm sea climate, and so the Arabs have for ages raised it when possible in the loamy soil of the coast. At the beginning of summer the soil is turned over with a plow, drawn by 18 to 20 horses, to a depth of about 31 inches and then left to the rays of the sun. At the beginning of winter the surface is leveled and irrigating ditches made.

In planting an orange grove holes for the plants are dug 1 yard deep and about 1½ yards in diameter. The trees are planted in squares, with one in the center. In each hole a lemon tree, a bitter-orange tree, or a sprout of an orange tree is planted. In two years the trees are budded with the variety of citrus fruit which it is desired to grow. In four years the tree bears its first fruit. Every three years the soil is manured with a mixture of horse, cow, and goat dung. Recently artificial fertilizer has been introduced with very good results. At the end of November the tree is cleaned and in March the soil is worked over.

The cost for fertilizer, water, and labor averages \$1,737 annually for an orchard of 15,000 trees. At the beginning of July, when the harvest is in sight, middlemen from Jaffa visit the plantations and estimate the crop prospects. The average price paid for fruit per box this season was 67 cents.

The picking of the fruit begins two hours after sunrise and continues four days. The fruit is stored in sheds up to about 12 inches in height, in order to let it dry and to avoid mold. Then the fruit is sorted, wrapped in silk tissue paper, and packed in boxes, the different sizes containing 86, 88, 96, 123, 136, 144, 152, 160, 250, or 300. Variation from this system is not permitted. The wood for the boxes comes from Roumania and costs \$12.50 to \$15.80 per cubic meter (35.314 cubic feet). The paper comes principally from Austria and Italy.

**The Export Trade.**

The principal market for Jaffa oranges is Great Britain. Liverpool, Manchester, London, and Hull take about three-fourths of the harvest. About 200,000 boxes go to Egypt yearly, while Hamburg and Trieste receive only 50,000 boxes. The output in 1910 was about 900,000 boxes, worth about \$1,158,000. For the 1911 season the output is estimated at 1,100,000 boxes. At the end of September the first shipments of unripe fruit go in small quantities to Trieste and Hamburg.

In order to develop the trade in Jaffa oranges new markets must be found. Russia would afford an opening if the tariff were not too high. The fruit endures long shipments at the beginning of the season; that is, from September to December; this means that it keeps in the boxes up to two months, so that shipment to India and China presents no difficulties. Oranges have been shipped to great advantage to Port Sudan, Khartum, Medina, and Mecca, and along caravan routes.

German importers have not yet found enough interest in Jaffa fruit in the inland-German market to undertake its importation extensively.

*Tea.*—Ceylon shipped 1,190,625 pounds of black and 201,529 pounds of green tea to the United States in the first two months of 1912, compared with 663,974 pounds and 107,124 pounds in the same months of 1911.

**WRAPPERS FOR ORANGES.**

[From Consul Robert Fraser, Jr., Valencia, Spain.]

American firms seek information regarding the light semitransparent silk paper used in this district for wrapping export oranges. This paper, formerly imported from France, is now manufactured in this district and is put up in bales of 30 reams, which supply wrappers for about 140,000 oranges. Each sheet is printed with 6, 8, or 10 stamps, according as it is destined to wrap large, medium, or small fruit, and the cost of stamping ranges from \$6 to \$19 per bale. The lowest of these prices is for plain gold stamps with the name and devices of individual shippers and the highest for elaborate fancy branding in gold and two colors combined. The cost of the paper itself varies from \$13 per bale for the light-drab or cream-colored sample, and \$14 for the pale pink, up to \$16 for first quality white.

Owing to the desire of packers to excel one another in the artistic presentation of their brands on foreign markets, the cost of packing oranges has almost doubled during the last 12 years. A reaction is setting in this season against the use of expensive paper and still more expensive stamping and fancy ornamentation in packing citrus fruit, the advocates of simplicity favoring a return to plain paper and the elimination of every expense which does not enhance the intrinsic value of the fruit or improve its keeping qualities. The crusade against expensive packing, however, so far is not successful, as the leading packers who have attained a world-wide reputation as much by their fancy packing as by the superior quality of their fruit are not disposed to return to uniformity and simplicity.

The light pink-colored paper is mostly employed in wrapping fruit at the opening of the season, when it imparts the appearance of warmth of color to oranges still immature and pale, but a general preference is given latterly to white paper, as it throws into strong relief the fancy stamping in gold and colors now in vogue.

The paper industry of this country is well protected by a tariff amounting to \$3.47 on wrapping paper for fruit per 100 kilos (220 pounds), or equal to about 30 per cent ad valorem. The duty on wrapping paper is assessed under the schedule applicable to paper not exceeding in weight two-thirds of an ounce per square meter (10.76 square feet).

[From the Handels Museum, Vienna, Austria.]

**Demand for Packing Material in Palestine.**

There is at Jaffa, Asiatic Turkey, a considerable demand for packing paper, which is used in the shipment of oranges. In 1910 the value of the importation reached \$32,000. The article was to a great extent supplied by Sweden and shipped through the intermediary of Hamburg agents. The packing is usually made up in bales and supplied at about \$10 to \$10.40 f. o. b. Jaffa. Owing to the steady growth in the export of oranges from Palestine, requisitions for this material are likely to increase.

**Asphalt Production in Switzerland.**

Consul Francis B. Keene, of Geneva, learns that the only exploitation of asphalt in Switzerland is at Travers, Canton of Neuchatel, by the Neuchatel Asphalt Co., of London, England. It would appear from statistics that the annual extraction amounts to about 25,000 metric tons and that there is enough asphalt to keep the company running for a hundred years.

**PRODUCTION OF STRYCHNINE AND NUX VOMICA.****INDIA.**

[From Consul José de Olivares, Madras.]

Nux vomica is abundantly produced in the following centers of the Madras consular district: In the Deccan, in Bellary, Cuddapah, Anantapur, and Karnul, in Nellore, and in the northern Circars—Ganjam and Berhampur. Seed to the amount of about 3,568 hundredweight (hundredweight=112 pounds) from the upper taluks, or districts, of the Godavari River are annually marketed. The native States of Cochin and Travancore in southwestern India produce considerable quantities of nux vomica, and the Trichonopoly district on the southeast coast also produces the seed, but to a lesser extent.

The nux vomica, strychnine, or snakewood is a slow-growing deciduous tree attaining a height of 30 to 40 feet and a circumference of 3 to 4 feet, its growth and development depending largely on the extent of the rainfall in the district to which it is indigenous. Generally the trees grow in a wild state and it is rarely that they are cultivated for commercial purposes. The young trees, however, in their wild state are in some cases attended and manured by the natives, and in such cases they come into bearing in 10 to 12 years. When it is desired to cultivate the nux vomica it is customary to plant the young seedlings in large tubs or pots of rich, loose soil, which must be kept well watered. It is reported, however, that poor results have thus far been obtained when raised or cultivated as garden or plantation trees.

**Characteristics of Seeds—Handling the Output—Prices.**

The tree bears a plum-like fruit that produces the seed—the strychnos nux vomica of commerce. This seed is round and flat, much resembling a satin-covered dress button, silvery and light bronze in color and varying in size from one-third to an inch in diameter. The seeds are harvested from March to July. In the case of the better qualities native gatherers collect the plums, from which the seeds are husked or washed out and dried in the sun. In other cases the seeds are merely gathered up from the ground beneath the trees, but the product thus obtained is of comparatively little market value.

Nux vomica gatherers are not employed on a wage plan, but sell the seeds they collect to village bazaar men, from whom the product is bought by merchants and sent to the markets at Madras. Exporters as a rule purchase the seeds from the markets, and at times they are obliged to advance funds for their supply.

Prices vary according to the quality of the seeds. If they are silvery in color, well dried, and of large size the price is \$5.84 per 500 pounds. For second-quality seeds, which are light bronze in color, of smaller size, and not perfectly dry, the prices range from \$4.87 to \$5.19 per 500 pounds. The poorest quality, which is generally inferior in appearance, of a creamy color, and very small sells for \$3.25 to \$4.22 per 500 pounds.

[From Consul Edwin S. Cunningham, Bombay.]

**Exportation through Bombay.**

The snakewood, or nux vomica, tree is not found in great numbers in the Bombay consular district, although Bombay is the port

through which a large part of the *strychnos nux vomica* is exported. Exports statistics for the last two years are given in the following table (hundredweight = 112 pounds).

Exports to—	1909-10		1910-11	
	Hundred-weight.	Value.	Hundred-weight.	Value.
United Kingdom.....	1,121	\$2,600	762	\$1,770
Italy.....	40	90		
Egypt.....	8	12		
United States.....			406	770
Total.....	1,169	2,711	1,168	2,540

The seed is bought as openly and freely on the market in Bombay as any other crude drug. The tree is not cultivated nor are the seeds harvested regularly by commercial interests. There are a few exporting firms in this part of India who, when they require seeds for any purpose, instruct their representatives in the various districts where *strychnos nux vomica* may be collected, and these representatives send out natives to gather the material. The natives collect it by hand and are paid about 65 cents per hundredweight.

#### COCHIN CHINA.

[From Consul Hubert G. Baugh, Saigon.]

Although found in four of the divisions of Cochin China the *strychnos nux vomica* tree has not been cultivated nor has the collection of seeds been made a regular business. The trees fructify in May, but most of the seeds fall to the ground and are left untouched. When the demand is strong enough the natives gather the seeds and sell them to the Chinese traders, who in turn sell them to the exporters. The work of gathering the seeds is entirely voluntary on the part of the natives, who are paid for the amount gathered and not for their time. The seeds exported from Saigon come mainly from Cambodia.

The bulk of the medicinal seeds exported go to Hongkong and to England, as shown in the following figures for the three years ended with 1911. To England, 387,828 pounds in 1909, 399,572 pounds in 1910, and 638,505 pounds in 1911; to Singapore, 724,686 pounds in 1909, 461,027 pounds in 1910, and 814,046 pounds in 1911. *Nux vomica* seeds comprise about 90 per cent of the foregoing exports. The market price of the seeds is usually about 1 cent per pound. There is no export duty, but a statistical charge of about 2 cents per package is made. Local exporters say that the business is not large enough to interest them.

[A previous series of reports on strychnine and *nux vomica* appeared in Daily Consular and Trade Reports for Oct. 20, 1911.]

"Celluloid, mica, and other similar ware" was imported into the United Kingdom to the value of \$2,183,885 in 1910, reexports being \$756,488. Consul General John L. Griffiths adds that four German firms producing celluloid articles are directly represented in London.

**THE DIVISION OF EASTERN BENGAL AND ASSAM.**

[From Consul General William H. Michael, Calcutta, India.]

The Province of Eastern Bengal had a population of 34,500,000, according to the census of 1911. This was made up by combining 27,500,000 people in Bengal and 7,000,000 in Assam.

This Province was created by Lord Curzon; and, under the administration of a lieutenant governor, during its brief existence the Province prospered in every way. A new capital was built near Dacca at a cost of about \$2,000,000. By the recent reorganization Assam becomes a district under the administration of a chief commissioner who is directly under the governor general in council.

**The Trade of the Divided Province.**

Looking through the report on the trade carried by rail and river in the Province of Eastern Bengal and Assam during the fiscal year 1910-11, one finds that the total quantity decreased by 4.5 per cent, but the total value increased by 6.8 per cent. Jute is stated to be mainly responsible for both the rise in value and the fall in quantity; and jute is grown chiefly in the districts that are to be severed.

Almost every item of import increased in value compared with the preceding year's figures, cotton manufactures, grains, provisions, and coal and coke being the exceptions. Owing, probably, to contraction of local dealers' stocks, the imports of all cotton goods decreased in quantity by 7 per cent and in value by 3 per cent. This is the most important trade and, when the added districts are taken away, may be expected to fall to a very low figure. Metals and metal manufactures increased in value appreciably. A distinct sign of prosperity is the steady increase in importations of kerosene, which exceeded in value the preceding year's figures by \$183,000.

Of the exports, according to the report, by far the most valuable is jute, but it is curious to note that while the quantity of exports decreased by 237,800,000 pounds, the value increased by 13 per cent over the 1909-10 shipments. This is ascribed to the rise in price of the raw material. The next most important article of export, tea, increased in quantity by 82,000,000 pounds, the increase in value, owing to the rise in prices, being 13 per cent.

**Effects of the Change.**

Looking to the trade of the blocks which will be severed, it is found that they are responsible for the principal increases. The three Assam blocks imported rice, coal, salt, kerosene, and sugar, while the principal articles of export were tea, timber, coal, and paddy. A curious point is that Assam exports paddy and imports husked rice from Eastern Bengal.

It is contended that there will be an enormous difference in the next trade returns from Assam, after the districts of Eastern Bengal are taken away. These districts will also lose a considerable proportion of their trade, which will probably not flow in the same proportion Assam-wards. Indeed, it is difficult to forecast the effects of the changes.

---

"Concrete Construction on the Live-Stock Farm" is the title of a new bulletin for sale at 5 cents by the Superintendent of Documents, Government Printing Office, Washington, D. C.

**SEA-BORNE TRADE OF MADRAS PRESIDENCY.**

[From Consul José de Olivarez, Madras, India.]

In October, 1911, the sea-borne trade of the Madras Presidency aggregated \$7,781,655. It is encouraging to note that the imports from the United States increased that month to \$175,859, the chief items coming direct being kerosene oil, \$153,990; metals (steel, iron, nails, etc.), \$5,780; hardware and cutlery, \$2,497; apparel and millinery, \$1,890; scientific instruments, \$1,604; lubricating oils, \$1,524; spirits, \$1,065; drugs and medicines, \$1,035; firearms, \$588; gum (rosin), \$538; paper, for printing purposes, \$504; clocks and watches, \$463, and provisions (canned goods and cereals), \$416.

It is desired to emphasize the fact that in addition to this direct import trade from the United States, consignments of American-made goods of various descriptions are frequently received from the agencies or depositories of American manufacturers and exporters in Europe and elsewhere abroad, the result being that such goods are accredited to the imports from other countries than the United States. Among the articles of American manufacture which figure to a considerable extent among the reshipments referred to are sewing machines, talking machines, drugs and medicines, provisions, hardware, machinery, and motor vehicles.

The principal exports to the United States in October were: Hides and skins, \$152,697; tea, \$9,956; pepper, \$5,675; coconut oil, \$4,147; cotton piece goods (to Philippines), \$3,001; and coir manufactures, \$1,751.

**FAR EASTERN NEWS.**

[From London and China Telegraph.]

**New Bank for China.**

A new native bank, capital \$1,000,000, is being started by the local merchants of Shanghai, and if the flotation succeeds it will be the first time that a bank in the real sense of the word, the capital of which was subscribed by the public, will have been established in Shanghai. Hitherto the banks have been one-man or two-men concerns, and their accounts were sealed books to the public that invested in them.

**Railway Building in Chosen (Korea).**

A telegram to St. Petersburg says the Japanese Government has postponed indefinitely the construction of the projected railway between Phyoenkyang and the port of Gensan, on the east coast of Chosen (Korea). A road 125 miles long will be begun in April instead, and, owing to its importance for trade between the two places, it is hoped that it will be finished as early as October.

**Higher Rates from Japan.**

The steamship companies which form the New York-Suez Conference (the American Asiatic Steamship Co., the Indra Line, the Hamburg-American Steamship Co., the Anglo-American Oil Co., the American and Oriental Line, the American and Manchuria Line, and the Dodwell Line) notified shippers from Japan that from April 1 rates on all cargo to New York are advanced by approximately 10 per cent, with the exception of cargo not otherwise specified, on which the rate will be 35s. (\$8.50) per ton weight or measurement, instead of 30s. (\$7.30) as hitherto. Cargo shipped at Yokkaichi will be subject to an additional 2s. 6d. (61 cents) per ton. The steamship companies which form the Japan Homeward Freight Conference have issued a circular to shippers stating that after May 15 an increase of 10 per cent will be made on all rates of freight (with a few exceptions), and that in addition an extra shilling per ton will be charged on all shipments to London. They state that this increase has been considered necessary owing to the general rise in labor and other charges, and to the fact that in London charges in connection with the landing and delivery of cargo are borne by shipowners, from which they are exempt at all other ports.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8630. Fiber for making paper.**—An American consul reports that a business man from the United States who recently visited his district investigated the making of paper from certain fibers abounding in the region in question. This merchant is also familiar with certain canes that grow abundantly in various sections of the United States and is of the opinion that they could be utilized in the manufacture of pulp for paper making. Copy of the report, containing further details, will be sent to interested firms by the Bureau of Manufactures.
- No. 8631. Establishment of wireless-telegraph stations.**—An American consul has forwarded a copy of a decree, with a translation, in regard to the proposed establishment of four wireless-telegraph stations in the country in which he is located. He adds that a further description of the class of station to be installed will be forwarded when the information becomes available. Copies of the decree and translation referred to will be loaned to interested persons by the Bureau of Manufactures.
- No. 8632. Contracts for projectiles.**—A special report relative to contracts for projectiles in a foreign country has been submitted by an American minister located in the country in question. This report deals with the specifications, method of inviting proposals, awarding of contracts, etc., and will be loaned to manufacturers of these articles upon request to the Bureau of Manufactures.
- No. 8633. Railway supplies of various kinds.**—A foreign Government has decided on the construction of a railway and has issued a call for tenders to supply rails, sleepers, fishbolts, etc., for which forms and specifications can be obtained from the Bureau of Manufactures. Copy of a letter from the official in charge of this matter was also forwarded by the consul submitting the report. This official believes that much of the required equipment can best be supplied by manufacturers in the United States, and he expresses a hope that in addition to the supplies mentioned American firms will tender for excavating machines suitable for cuttings, side cuttings and ballasting work, concrete mixers, stone breakers, and other apparatus used in railway construction.
- No. 8634. Railroad supplies and other Australian Government stores.**—The American consul at Newcastle, New South Wales, Australia, has forwarded a book of contract prices for Queensland Government stores for 1912-13, also Queensland Government railway contract schedules and store contracts. American firms can glean from these the nature and quantities of supplies needed, prices at which they are delivered, etc., which may enable them to compete for future orders.
- No. 8635. Automatic steam-towing equipment.**—A cablegram has been received from an American consular officer requesting catalogues of automatic steam-towing equipment from American manufacturers. These are desired at the earliest possible moment.
- No. 8636. Shoe polish.**—In response to inquiries from the United States as to the possibility of a market for shoe polish in his district, an American consul in a European country reports that the general public will not spend over 6 cents for a box of polish. If an American polish can be retailed there at that price a good market can be worked up, but it will be difficult to sell any quantity at a higher price. Recently some inquiries have been received at the consulate as to the prices of equipment for public stands where shoes may be polished; there are no public stands at present.
- No. 8637. Jute bags.**—It has been brought to the attention of a German agent for textile goods that a jute bag of excellent quality is manufactured by an American firm, the name of which he does not know. The bag is seamless and woven by a special process. The inquirer says there is a good market for such an article and that he would be in a position to accept an agency for a large district if the bag on examination appears to have a decided advantage over the domestic product. He would also consider the agency for jute cloth. Manufacturers would do well to send samples of both, writes an American consul, together with quotations. Prices should be quoted for delivery in the city in which he is located, or at least for delivery at Hamburg. Correspondence should be in German.

## FOREIGN TARIFFS.

### BELGIAN KONGO.

[From *Moniteur Officiel du Commerce*, France, Jan. 25, 1912.]

#### Prohibition on Saccharine.

By an order which went into effect in Belgian Kongo in the fall of 1911 the importation, manufacture, transportation, and sale of saccharine and similar materials are forbidden. Saccharine products and products sweetened with substances other than cane sugar, beet sugar, milk sugar, and glucose sugar—particularly those sweetened with glycerin—shall not be imported. It is specified in the order that it is meant to include in general all synthetic chemical sweetening which does not possess food value.

### CHILE.

[From report by Consul Charles L. Latham, Punta Arenas.]

#### New Tariff in Magallanes Territory.

In connection with the new Chilean duties (as announced in Daily Consular and Trade Reports for April 4, 1912), in effect April 13, 1912, the provision that certain rates of the Chilean tariff shall be in force in the Magallanes Territory is of particular interest. Up to this time Punta Arenas has been a free port and importations into the Magallanes Territory have been free from customs duty. Punta Arenas is the chief commercial city and the capital of the Territory.

The law of February 12, 1912 (Daily Consular and Trade Reports for April 4, 1912), imposes permanently the rates of the Chilean tariff on the following products imported into the Magallanes Territory: Bran, mineral waters, pepper, alcohol, wine spirit, liqueurs, brandy (with or without sweetening), starch, vetches, playing cards, barley, beer, cigars and cigarettes, pickles, brooms, brushes (except toothbrushes and nailbrushes), vermicelli, beans, fruits (dried, preserved, in the juice or in alcohol), biscuits and crackers, flour, con-

densed milk (sweetened or unsweetened), vegetables (fresh, preserved, or dried), wood, corn, butter, potatoes, fodder, cheese, common salt, sole leather, tanned hides, manufactures of leather (except belting for machines), vinegar, and wines.

The principal imports from the United States into the territory which will be affected by the imposition of the duty are alcohol and alcoholic beverages, cigars and tobacco, condensed and evaporated milk, dried and preserved fruits and vegetables, lumber, shoes, and corn.

---

#### CHOSEN (KOREA).

[From a published Reuter dispatch.]

##### **Proposed Abolition of Export Duty on Rice.**

The Governments of Great Britain and France have protested against the proposed abolition of the export duty on rice shipped from Chosen (Korea). It is held that if this export duty were abolished it would be contrary to the provisions of the rescript to the agreement by which Chosen was annexed to Japan, published August 29, 1910. It is provided in the decree of the Governor General of Chosen, published on the date above mentioned, that articles exported from Chosen to Japan should be subject to the same export duties as had hitherto been in force. The abolition of the duty would seriously interfere with the exportation of rice from Saigon and Rangoon to Japan.

---

#### FRANCE.

##### **Further Postponement of New Tare Regulations.**

The American ambassador to France has reported a further postponement of the application of the new tare regulations which were decreed August 27, 1911. According to this report the date of August 1, 1912, has been set as the time when the new regulations will take effect. As recorded in Foreign Tariff Notes No. 5, page 139, the application of these regulations was postponed first until January 1, 1912, then later until April 1, 1912.

The ambassador states that in the modification of the tare regulations, which is taking place in the meantime, certain recommendations made by the British Chamber of Commerce, and approved by the American Chamber of Commerce in Paris as meeting the objections raised by American exporters to the terms of the regulations as first decreed, are being given consideration by the French Government. These recommendations are said also to meet with the approbation of representatives of German exporters who were also dissatisfied with the regulations as originally decreed.

[From *Annales des Douanes*, Jan. 15, 1912.]

##### **Goods Imported from Canada via United States.**

Under the Franco-Canadian commercial convention of 1907 (Tariff Series No. 6 C) it was provided that certain articles imported from Canada into France (schedule A) should be entitled to the rates of the minimum tariff of France, if imported direct from a Canadian port to a French port. Owing to the absence of direct connections between Canada and the port of Marseille it has been necessary to ship Canadian goods intended for that port by way of New York, and by reason of such shipment through a third country, the goods were

dutiable at the rates of the general tariff of France unless they happened to be goods on which the rates of the minimum tariff were applicable when imported from the United States; thus the reduced rates of duty stipulated in the convention could not be claimed on Canadian goods shipped to Marseille.

The French Government has changed its requirements in this regard (decision of Jan. 5, 1912), and now the customs officials have been authorized to collect the rates of the minimum tariff on all goods of Canadian origin included in schedule A of the Franco-Canadian convention when imported into Marseille by way of New York. Such admission of goods is contingent upon the production of a special certificate signed by the French consul in New York to the effect that the goods have undergone no alterations, and that the packing and markings have not been changed in the United States—this certificate to be required in addition to the regular documents proving the origin of the goods.

The Government in making this concession lays emphasis on the fact that the relaxation of the requirements for goods shipped to Marseille via New York is only temporary, and that immediately upon the establishment of a direct line of transportation between Canada and Marseille, direct importation, as provided for in the convention, will again be required.

[From Journal Officiel, France, Feb. 13, 1912.]

#### **Proposed Duty on Crude Rubber.**

A bill has been introduced in the French Parliament providing for the imposition of an import duty on crude rubber imported from foreign countries. Under the tariff crude rubber is free of duty.

### **GUADELOUPE.**

[From Journal Officiel, France, Feb. 28, 1912.]

#### **Octroi Duty on Machinery, Fats, Bags, etc.**

By a decree of the President of France of February 13, 1912, the tariff of octroi duties in force in Guadeloupe was changed by the following amendments and additions:

The octroi duties on machinery and material for use in agriculture and manufacturing are made noneffective for a further period of four years, as provided for in the decree of May 9, 1907; the rate of the octroi on margarine, oleomargarine, and similar food fats, and also on vegetable food fats, is reduced from 20 francs to 15 francs per 100 kilos; an octroi rate of 0.04 franc each is imposed on empty jute bags, and a rate of 0.05 franc each is imposed on empty bags of hemp, linen, cotton, or other material; when such bags are imported filled with merchandise, half the rates specified for the empty bags is to be collected. (Kilo = 2.2046 pounds; franc = \$0.193.)

### **MEXICO.**

[From Diario Oficial, Mexico, Mar. 8, 1912.]

#### **Free Admission of Corn into Yucatan.**

Owing to the scarcity of corn in the Yucatan Peninsula, the President of Mexico decreed on March 8, 1912, that the free importation of corn should be allowed through the customhouses of Campeche, Isla del Carmen, and Progreso, from the date of the decree until June 30, 1912.

**PARAGUAY.**

[From *Moniteur Officiel du Commerce, France*, Mar. 14, 1912.]

**Opening of Customhouse of Humaita.**

The customhouse of Humaita, Paraguay, has been reopened to foreign commerce and the customhouses of Villa Franca Vieja and Concepcion have been provisionally closed to commerce.

**ROUMANIA.****Changes in Customs Tariff.**

American Minister John B. Jackson, Bucharest, has transmitted a copy of a law promulgated March 14, 1912, providing for many changes in the customs tariff of Roumania, most of them reductions in the rates of duty, and some of them simply changes in the classifications to include articles formerly not specially mentioned in the tariff. The law went into effect on the date of promulgation. Announcement of the proposed modification of the tariff was made in *Daily Consular and Trade Reports* for Mar. 26, 1912.

It is important to bear in mind that the present changes affect the general tariff, which applies to imports from the United States. In many instances the general rates of duty have been reduced below the conventional rates in effect previous to the present law. Thus, as a result, the rates now applicable to imports from the United States are lower than the rates formerly applicable to similar imports from countries entitled to the conventional rates by treaty with Roumania. By the law of March 14, 1912, export duties of 2 lei (\$0.386) per 100 kilos (220.46 pounds) are imposed on scrap iron, old copper, and on bran of any cereals, formerly free.

The complete text of the changes in the Roumanian tariff, in Roumanian, is on file in the Bureau of Manufactures.

**RUSSIA.****Government Assistance for the Agricultural-Machinery Industry.**

The following translation of an article from the *Trade and Industry Gazette* of February 28 has been transmitted by Consul General Snodgrass, of Moscow:

The Ministry of Commerce and Industry introduced in the Government Duma on September 24 (11), 1911, a bill the object of which is to decide what steps were necessary for the encouragement of the construction of agricultural machines in Russia. The finance committee of the Duma, after going over this bill, reported favorably and urged active measures for the development of the agricultural-machinery industry in Russia. The committee recommended the following changes in the bill:

(1) In regard to the free importation of frames, machinery, etc., instead of authorizing the Minister of Commerce and Industry, with the consent of the Minister of Finance, to allow the free importation of such machinery at the special request of the importers, the committee considers it best to have such machinery come in free of duty according to rules fixed by those ministers. The Minister of Commerce and Industry, with the consent of the Minister of Finance and the Minister of Agriculture, should be authorized, in case of need, to add to the list of machinery to be admitted free any other implements or machinery relating to agriculture.

(2) In regard to the reduction of stamp duty, the finance committee reports that the proposed reductions are insufficient to influence the sale of agricultural machines made in the country, and in view of the difficulties attached to the administration of the provisions relating to such reductions, the committee has decided to strike out this clause from the bill.

(3) In regard to reductions of the trade tax, the finance committee is of the opinion that such reductions will tend to bring more capital into the agricultural-machine business, and therefore the proposal of the ministry remains unchanged.

(4) In regard to the question of permitting parts of agricultural machines to come in free of duty, the finance committee finds it indispensable to prolong the law of May 24, 1909,<sup>1</sup> providing for the admission of such parts of machines and binder twine free of duty, authorizing the Ministry of Commerce and Industry to add to the list of parts of machines admitted free of duty all other parts of thrashing machines, of reaper-binders, and of reapers with automatic ejectors.

(5) In regard to the question of prolonging the duration of the temporary regulations of the general customs tariff, relating to the admission of agricultural implements and machinery at reduced rates, the finance committee finds it inexpedient to permit such temporary regulations to become fixed without limitation of time, thus taking the opposite stand from that of the Minister of Commerce and Industry. The committee is of the opinion that such regulations should be limited in point of time, so as to go out of effect upon the expiration of the Russo-German treaty, viz, December 31, 1917. In that event the Government in negotiating with Germany will have her hands free in the matter of the duty on agricultural machinery and implements.

(6) As to the question of awarding premiums for the construction of agricultural engines and complicated agricultural machinery, the finance committee agrees with the suggestion of the Ministry of Commerce and Industry, but considers it necessary to award premiums not only for agricultural engines but also for steam thrashers and steam reapers and mowers.

Furthermore, the finance committee has considered the proposed Government credit measures for the encouragement of agricultural machine and implement construction, and acknowledged that it is necessary to take steps for the purpose of supplying the agricultural-machinery industry with capital on easy terms, and giving the purchasers of home-made machines the most favorable credit terms possible. The committee also deems it necessary that the Government Bank should fix for transactions dealing with the home production of such machines a reduced rate of interest, and should extend to six months the discount term for certificates issued by the boards of zemstvos for the purchase of home-made agricultural machinery.

[From *Moniteur Officiel du Commerce*, France, Jan. 25, 1912.]

#### **Machines and Apparatus of Which the Use is Not Known.**

The customs officials of Russia have given notice in a customs circular that special procedure is advisable in the introduction into the country of machines and apparatus the use of which is unknown to the customs officials. In order to avoid delay and the inconvenience of expert inspection it is suggested that those interested in the importation of such machines would better submit to the customs officials not only drawings and explanatory diagrams, but also brief indications of the purpose of the machinery and a description of the method of operation and the nature of the work accomplished.

#### **TURKEY.**

[From American Ambassador W. W. Rockhill, Constantinople.]

#### **Extension of German Treaty.**

In the Turkish official gazette for February 25, 1912, there appeared an announcement of the extension of the German treaty of commerce with Turkey, 1890, and of the annexed supplementary convention of 1907, for a period of two years. This assures the continuance of the customs duty of Turkey at the present rate until June 25, 1914, as provided for in the 1907 convention of the capitulatory Powers. By that convention the rate of the customs duty in Turkey was raised from 8 per cent ad valorem to 11 per cent ad valorem, and the 3 per cent increase was to remain in force until 1914. Ger-

<sup>1</sup> See Tariff Series No. 3A, p. 14.

many, however, had a treaty of commerce with Turkey which was due to expire in 1912, and in accordance with certain provisions of that treaty, Germany did not sign the general convention of the Powers, but made a special convention with Turkey consenting to the increase of 3 per cent in the customs duties until March 13, 1912. By the present extension Germany agrees to the continuance of the 3 per cent increase until 1914.

Unless Germany had made the present extension of her treaty with Turkey, which expired in 1912, the 3 per cent increase in duties would no longer have been applicable to imports from Germany, which would have been subject to the old rate of 8 per cent ad valorem, formerly fixed as the rate of import duty in Turkey by agreement with the capitulatory Powers. And by virtue of the most-favored-nation clauses this rate of 8 per cent ad valorem would also have become applicable automatically to imports from the other principal Powers, thus effecting a general reduction of 3 per cent ad valorem in the rates of duty.

### FORMOSAN BUSINESS NOTES.

[From Consul Samuel C. Reat, Tamsui.]

#### First Automobile in Formosa.

Count S. Sakuma, Governor General of Formosa, has imported the first automobile into this island. It is a four-cylinder car and was constructed in Tokyo. Another car is to be ordered soon by the Taiwan Railway Hotel for the use of its guests.

#### Fiber Hats and Yellow Rattan.

The export of Formosan fiber hats in February reached 111,537, valued at \$85,116.

The Productive Industry Bureau says that yellow rattan is becoming an important article of commerce, the requirements for sugar packing increasing the demand. It is also used extensively for furniture making. The Formosan production for 1911 was 1,122,765 pounds, valued at \$2,500. The rattan supply is limited, its gathering in the savage districts being rather hazardous. With the extension of frontier lines the work is carried on with less personal danger.

#### Sugar Output, Oil, and Camphor.

From the January and February operations of the sugar mills the following fairly correct estimate is now made for the 1911-12 crop: Centrifugal sugar, 220,000 tons; brown sugar (native mills), 30,000 tons. The production would have been 25 per cent larger had it not been for the typhoon damage to cane last September.

The oil fields of Formosa are limited to Byoritsu, Shinchiku, but the industry is hardly promising. The output in 1910 was 12,827 gallons. The production is consumed locally.

Camphor production from the leaves has passed the experimental stage and the Monopoly Bureau will plant large areas in camphor trees during the next few years. It is claimed that after 15 or 20 years' growth the leaves are available for camphor extraction. The trees now utilized are 500 to 1,000 years old. The area of leaf-camphor afforestation is at present 10,650 acres. The Japanese wisely intend to conserve the source of supply of one of their important monopolies.

**MANCHURIAN BUSINESS NOTES.**

[From Consul Albert W. Pontius, Dalny.]

**New Substitute Timber for Railway Sleepers.**

American timbermen seem to be watching closely the progress of the great reconstruction of China as a republic. They will be interested in the newly developing use of "nara" (*Quercus glandulifera*, glandule-bearing oak), said to be an excellent and much cheaper substitute for chestnut and "keyaki" (*Zelkova acuminata*), which make the best railway sleepers in these parts. The "nara" has great durability and, although obtainable on much easier terms than either of the other two, lasts almost as long as either. There is thought to be unlimited field in China for this timber, once order is restored.

**Asbestos Mine.**

An asbestos mine was discovered last September on the hillside of Daishozan (Mount High Priest), to the east of Chinchou and seen to the northeast of Dairen (Dalny) across the bay. The lucky Japanese discoverer secured permission last January to work it, backed by a company called Washin Yoko. This mining field comprises over 400,000 tsubo (1 tsubo equals about 36 square feet), lying below the Buddhist temple, about halfway on the hillside. The filaments are snow white in some cases and pass to brown in others. Those first found were barely over  $\frac{1}{4}$  inch long, but now filaments 3 inches and longer are obtainable, with still longer ones in prospect. On February 17 the first sale of 30,000 pounds was made. There is thought to be a fine market abroad for the output.

**Through Bills of Lading in Manchuria.**

Since April 1 through bills of lading are issued from Shanghai over the South Manchuria Railway to points on the Chinese Eastern Railway, in accordance with an arrangement effected by A. H. Gintz, chief of exploitation of the Chinese Eastern Railway. The South Manchuria Railway will receive goods, pass same through the Dairen (Dalny) customs, handle and ship them to the end of their line, there to be handed over to the Chinese Eastern Railway. The Chinese Eastern Railway will receive the goods, transact the necessary customs work, and carry the goods on to destination, completing the obligation. The through freights, in principle, will be the respective tariffs, but special freight rates will be allowed by arrangement with the carriers.

This arrangement should be an impetus to trade in northern Manchuria, as the heavy expense attached to shipments into this territory have made many articles of commerce unpurchasable. Handling commissions at points of transshipment have been prohibitive, but these are now absorbed in the tariff rates.

---

**Bone-marrow Oil Used in Bohemia.**

Consul J. I. Brittain, of Prague, states that bone-marrow oil is used in Bohemia for oiling sewing machines. This oil is put up in small bottles containing 50 grams; it retails for 6 cents and wholesale at 3.6 cents a bottle. The wholesale price of vaseline oil is 32 cents, cottonseed oil 20.3 cents, and mineral oil 9.7 cents for 2.5 pounds.

## THE BRITISH METROPOLIS AND ITS EMPLOYEES.

[From Consul General John L. Griffiths, London, England.]

From a governmental point of view London is a complex organization, there being no less than 29 cities and boroughs with separate administrations within what is known as metropolitan London. Each has its own mayor and council. There is, however, an authority whose jurisdiction is coextensive with what is known as the administrative County of London, called the London County Council, whose secretary has furnished information concerning the attitude of employees toward the council and of the council toward its employees.

It may assist to a better conception of the work of the London County Council to point out that it has jurisdiction over the public-school system of Greater London, the fire department, the street car system, asylums, bridges, highways, department of health, parks, building regulations, etc.

### Tramways Department—Freedom to Organize.

Special conditions therefore prevail in the various branches of the council's work. For instance, in the street car department, where the conditions are naturally peculiar, there has been established a scheme of conciliation, the details of which are set forth in a circular entitled "Scheme for conciliation boards for tramway employees." [A copy of this pamphlet will be loaned by the Bureau of Manufactures.]

There are 10,800 employees in the tramways department, which has been under the jurisdiction of and operated by the council since January 1, 1899. During this period there has been no well-defined, organized strike to obtain certain changes in wages, hours of labor, etc., though there was, during 1911, a sympathetic strike of motormen and conductors, incited by the general strike among railway employees; this, however, was of but two or three days' duration. The chief officer of the tramways department has complete control of the staff, except certain officials appointed by the council.

There is no ordinance or law affecting the question of strikes, nor is there any legal restriction upon organization among employees, a large number of whom are conceded to be members of various trade-unions. On the contrary, freedom of membership is specifically granted under a rule of the council, which reads:

No man employed in the council's service shall be in any way prejudiced by reason of his belonging to any trade or other organization. No official or foreman shall make any inquiry directly or indirectly, under any pretense whatever, whether any workman belongs or does not belong to any trade organization, and should he incidentally become aware of the fact, he shall make no difference by reason thereof. Any interference, whether by officials, foremen, or others on the council's works, with the freedom of any of the workmen in this particular will involve instant dismissal.

### No Board of Grievances.

The council does not maintain a board of grievances, but provision is made for a presentation of personal matters by employees through the following standing order:

An official desirous of bringing under the notice of the council, or of a committee of the council, a matter concerning himself or his position, shall do so through the head of his department. If the head of the department decline to take cognizance of the matter submitted to him, or if he deal with it in a manner of which the official may think he has reason to complain, the official shall be entitled to lay his complaint before the deputy chairman, who shall hear and determine the matter or bring the same before such committee of the council as he may think best. In view of the right

thus secured to them, officials are prohibited from making personal appeals, written or oral, direct or indirect, to individual members of the council, and any such personal appeal will be held to be a breach of discipline.

It is not the general practice to receive representations other than those made in the way prescribed in this standing order, but there have been occasions on which committees have received representations made on behalf of employees by outside bodies, such as trade-unions.

### FRENCH MINERAL STATISTICS.

[From Consul William H. Hunt, St. Etienne, France.]

Statistics recently published by the French Ministry of Public Works show the total production of coal in France during 1911 to have reached 38,643,531 metric tons (metric ton = 2204.6 pounds) of hard and soft coal, compared with 37,634,893 metric tons in 1910, an increase of 1,000,000 tons.

The following table shows the production in the principal French coal-producing centers:

Districts.	Metric tons.	Districts.	Metric tons.
Nord and Pas de Calais.....	26,140,080	Bourbonnais.....	823,672
Lore.....	2,733,626	Alpes Occidentales.....	281,851
Bourgogne and Nivernais.....	2,246,573	Herault.....	262,913
Gard.....	2,093,897	Vosges Meridionales.....	188,133
Tarn and Aveyron.....	1,801,474	Creuse and Correze.....	152,216
Auvergne.....	550,658	Ouest (West).....	309,314

The Ministry of Public Works also furnishes the following statistics of the world's production of the principal mineral substances in 1911:

Minerals.	Metric tons.	Minerals.	Metric tons.
Coal.....	1,113,308,400	Copper.....	892,700
Iron.....	54,408,900	Zinc.....	854,000
Petroleum.....	39,998,100	Tin.....	116,000
Salt.....	17,219,600	Gold (fine).....	1,696,000
Lead.....	1,063,000	Silver.....	16,843,000

<sup>1</sup> Kilos (kilo=2.2 pounds).

The report says that the production of copper increased from 486,000 metric tons in 1900 to 856,650 metric tons in 1910, of which the United States produced more than one half.

### Consular Trade Conferences.

Consul General Maxwell Blake, of Tangier, Morocco, advises, under date of March 18, 1912, that he expects to arrive in the United States late in May on 60 days' leave of absence. Commercial organizations and business men desirous of discussing trade conditions in Morocco with Mr. Blake may communicate with him for appointments at the following addresses: New York, N. Y., Waldorf-Astoria Hotel, May 27 to 29; Washington, D. C., New Willard Hotel, June 1 to 7; Kansas City, Mo., 402 Keith & Perry Building, June 15 to 25; Portland, Ore., 721 King's Court, June 20 to July 1. Consul General Blake also expects to visit Chicago and St. Louis during his stay in the United States, and his address in those cities will be announced later in Daily Consular and Trade Reports.

## NOTES FROM ARGENTINA.

[By Consul General R. M. Bartleman, Buenos Aires.]

*Wool clip.*—The indications are that the wool clip this year will surpass both in quantity and quality that of the previous year.

*Skating-rink profits.*—The report of the Palais de Glace for 1911 shows that the net profit for the year closed was \$49,940 (United States gold). This shows that skating is still popular in this locality.

*American coal.*—A British steamer has arrived at Puerto Militar with 5,269 tons of coal from Newport News, Va. This is said to be the first occasion on which coal from the United States has been received for the fleet.

*Installation of washhouses.*—The Minister of Public Works has accepted the \$46,155 tender of Heinlein & Co. for installing steam washhouses in the mixed regional asylum for the insane at Oliva, Cordoba, and for persons of weak intellect at Torres, Buenos Aires.

*Stamp remittances abroad.*—The postal authorities have decided to adopt the "reply-coupon" system for international correspondence, in accordance with the regulations of the convention of Rome; 100,000 coupons have been ordered from the international office at Berno.

*Real estate sales.*—According to the report of the registrar of property, during 1911 the following sales of real estate in the Federal capital took place: With buildings, 9,706 properties; without buildings, 21,056 properties; area, 19,102,671 square feet; value, \$210,316,732 (United States gold).

*Artesian wells.*—Successful results are being obtained in various parts of the Republic in connection with borings made in search of water. At one point at a depth of about 330 feet water was struck and a continuous supply of about 600 gallons an hour was obtained. These results will probably encourage further similar attempts.

*The maize crop* for the year is estimated at 8,000,000 tons and the quality is said to be good. The shortage of forage in Europe has had a tendency to raise the prices. A drawback in connection with the shipment of this product is the high freight rates resulting from the congestion at the port of Buenos Aires and the coal strike in England.

*New iron and steel company.*—A cable from London reports the formation of the firm Pedro Vasena & Sons, iron founders and importers, into a limited liability company under the title of the Argentine Iron & Steel Manufacturing Co., with a capital of \$6,569,775 (United States gold). The head offices of the company will be in London.

*Port congestion.*—An effort has been made by the authorities to alleviate the congestion at this port. Several new warehouses have been put into service, although not yet finished, and certain goods are to be permitted prompt dispatch from the ship to the warehouses. Certain ships are to be sent to La Plata to discharge, and the goods will be sent to Buenos Aires by rail.

*Nahuel Huapi Railway.*—The construction of the new Nahuel Huapi Railway, with its extensions across the Andes, is well advanced on the Argentine side between Port San Antonio and Port San Carlos de Bariloche, and the work may be completed within two years.

The survey from San Carlos de Bariloche to the Chilean frontier has been completed by Mr. Willis, the United States engineer commissioned by the Argentine Government.

### THE SICILIAN LEMON CROP.

[From Consul Hernando de Soto, Palermo, Italy, Mar. 21.]

The following information in regard to the lemon crop in Sicily for the 1911-12 season was supplied by the president of the Citrus Chamber of Palermo:

While the less abundant flowering during the spring of 1911 already pointed to a rather short lemon crop, the general conditions continued unfavorable as the season advanced. The prolonged and excessive heat during the summer months did considerable damage, checking the development of the fruit, much of which withered and dropped off. The lack of rain chiefly affected the sections where artificial irrigation is not available, the number of groves with good irrigation facilities being comparatively small. It is not believed that the total crop (in number of lemons) will exceed 75 per cent of that of last season.

The rainfall during the autumn and winter, which is usually abundant, was very small; in fact, it was one of the driest winters experienced for many a year. As a result the fruit ripened very slowly and remained small in size, so that, in weight, the crop is expected to be fully one-third under that of the preceding year.

Owing to the brisk demands for lemons and the consequent rapid increase in prices, picking was started rather early, the growers being convinced at the same time that the fruit would not improve even if left longer on the tree. The short crop, however, will not make it possible to satisfy the exceptional demand for the large-sized fruit, which is steadily rising in price.

As practically no rain fell during February and March, 1912, and as not much rain can now be expected until the hot season sets in, it is feared that the groves will suffer considerably during the coming summer on account of the scarcity of the water supply.

The prices quoted according to the last weekly bulletin of the Chamber of Commerce, dated March 16, 1912, are as follows, per box, comparisons with the prices prevailing at the same time in 1911, being in parentheses: First quality, \$4.05 to \$4.82 (\$2.90 to \$3.45); second quality, \$3.47 to \$3.86 (\$2.30 to \$2.70); third quality, \$2.70 to \$3.47 (\$1.95 to \$2.30).

### BRAZIL'S FLOUR TRADE.

[From Consul Geo. H. Pickrell, Para.]

As a flour market Para offers many difficulties; not that buyers are insensible to price reduction, but they are largely influenced by friendship and by their own and their workmen's knowledge of and experience with certain brands of flour. It is not an easy matter to induce them to change to a new brand, for experimenting therewith may be costly enough to offset any price advantage offered. In addition, a temporary reduction in quotations is not regarded as an inducement, as repeat orders at equal prices are at times refused or accepted only after a considerable expenditure of money in cable tolls. The flour trade in this city is in the hands of two or three firms which obtain their principal supplies from two manufacturers in the United States.

While American flour much exceeds in quantity that imported from Buenos Aires (Para's imports of flour from New York City amounted to 11,096,492 pounds in 1910 and 10,589,332 pounds in 1911, in contrast to 1,597,838 pounds in 1910 and 1,329,460 pounds in 1911 from Buenos Aires), Argentine flour has some advantage in this market. It is said to be handled through one house in Buenos Aires which, because it thus controls the trade, is able to secure a very low freight rate for a stated tonnage per year.

A first essential for any American miller desiring to establish his brand in Para would seem to be local representation.

**ITALIAN HEMP CROP.**

[From Consul William W. Handley, Naples.]

The 1911 hemp crop of Naples, Italy, compared satisfactorily in quantity and quality with that of the two preceding years, amounting to 30,000 to 31,000 tons, against 27,000 tons in 1910. About one-fifth of the crop was injured in color by rain during retting.

The market developed toward higher prices from the beginning, owing to a lively demand here at the start, on account of the small crop in northern Italy. Speculators profited largely and the land owners and growers obtained exceptionally high prices. The prices at the opening of the season in August were \$195 per metric ton for light-colored and \$178 for discolored "I Paesano Extrissimo," f. o. b. Naples, cash less 1½ per cent discount, and reached their maximum of \$253 and \$282, respectively, in October. The continuous advance and excessively large business done exhausted the buyers and allowed the market to become easier, so that prices dropped to \$243 for light-colored and \$219 for discolored at the end of December.

As about three-fourths of the crop has been shipped and the remaining stocks amount to only about 7,000 tons, reductions in prices do not seem probable, particularly as many mills are still not fully supplied. Business in tows and strappaturas was equally lively from the beginning of the season and the stocks are now much reduced. The quality was generally considered satisfactory.

Hecklers were well occupied, but the prices obtained were unsatisfactory and did not correspond to the high cost of raw hemp. When raw hemp is very high the heckled product finds flax a dangerous competitor.

---

**GAS LIGHTING FRANCHISE IN GERMAN CITY.**

[From Consul Robert J. Thompson, Hanover.]

The Imperial Continental Gas Association of London recently contracted with the city of Hanover to pay 10,000,000 marks (\$2,380,000) for an extension of its franchise to 1950. Hanover proper has slightly over 300,000 population. Under the old franchise the company paid the city a royalty of 3 pfennigs (\$0.0071) on each cubic meter of gas sold to the consumers, which is to be increased after 1925 to 4 pfennigs (\$0.0095). If the consumption exceeds 55,000,000 cubic meters, the royalty is to be 4½ pfennigs (\$0.0107), and if exceeding 70,000,000 cubic meters, 5 pfennigs (\$0.0119) per cubic meter. At the conclusion of the contract which was to run until 1925, the works, mains, offices, etc., were to be turned over to the city, but the city was to provide the capital for extensions and improvements during the last five years of the contract wherever expenditures exceeded 50,000 marks (\$11,900).

In the new contract the city grants the substitution of a calorific test instead of an illuminating power test, the removal of the sulphur restrictions, and the introduction of a uniform price of 14 pfennigs (\$0.0333) per cubic meter with discounts according to quantities used.

Public lighting is to be free and may be increased by 200 lights annually. All property is to be handed over to the city free of charge at the expiration of the franchise. In case another gas plant is needed the city contracts to furnish the site with rail and water connections free to the company.

**ITALIAN MILITARY AEROPLANE COMPETITION.**

[From Vice Consul General James B. Young, Genoa.]

Il Sole, a commercial and financial newspaper of Milan, announces that a military aeroplane competition will be held by the War Department of the Italian Government, in which over \$100,000, including the contract for constructing 10 aeroplanes, will be awarded to the aeroplane firm which wins the first prize. The program of the contest has been arranged by the inspection office of the aeronautic service (l'ufficio di ispezione per i servizi aeronautici). Participation in the competition is reserved to Italian firms and builders of aeroplanes which have well-established works in the Kingdom of Italy and to foreign firms and builders which have legal representation and well-established works here. Applications should be sent to Ministero della Guerra, Rome, not later than December 1, 1912. Requests for further information should also be addressed to that office. The aeroplanes must be constructed in Italy; the motors can be of foreign make, but in awarding prizes Italian-made motors will be given preference, other things being equal.

**AGRICULTURAL MOTORS IN ALGERIA.**

[From Consul William H. Hunt, St. Etienne, France.]

The Department of Agriculture and Colonization of Algiers announces that experiments will be made with motor agricultural machines, May 27 to June 15, 1912, in the regions of Setif and Mitidja, and later in the Department of Oran. These are open to all makers of such machinery who desire to participate.

The tests will be under the supervision of a committee appointed by the governor general of Algeria, the object being to practically and theoretically demonstrate the value of tillage by mechanical traction. So far as the sum allotted permits, the governor general will grant free transportation from a French port to the railroad station nearest the experiment fields. Applications will be received up to April 30 by Monsieur Stotz, Directeur de l'École d'Agriculture, Maison Carrée, Algiers, Algeria.

**MARKING CASES FOR MALTA.**

[From Consul James Oliver Laing, Valetta.]

Complaint has been made at this consulate that packing cases containing fragile goods arrive here with the usual "Glass; handle with care" in English only. Practically all goods are landed here by means of lighters and sometimes receive rather rough handling, as the men who handle the goods do not always read English. It would be wise for American shippers to put the caution against rough handling in both Italian and Maltese. As Maltese is a distinct language, spoken by few outside the Maltese Islands, the following phrases in Maltese may be of use to American shippers to Malta:

Glass. Handle with care.—Hgieg. Immaniggiaua bil grazia.

This side up.—Din innahha fuk.

Stand edgewise. Do not allow to lie on flat side.—Kedua addeiak. Thalluix az-zak.

Keep dry.—Zomma finniexef.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8638. Hand grain seeders.**—An inquirer in Germany wishes to hear from an American manufacturer of hand broadcast seeders for grain, and he furnishes an American consulate a cut to give an idea of what he is seeking. The cut, which can be obtained from the Bureau of Manufactures, represents a German machine which is said to cost about \$16. He wishes a cheaper American sower with a canvas container instead of a tin hopper. Correspondence with this person should be in German.
- No. 8639. Accessories for furniture making.**—An American consular officer in a European country reports that a local importer, prepared to give good references, wishes to be put into direct communication with American manufacturers of horsehair, springs for chair cushions, hemp bands, and other accessories for furniture making, of which he states there is a demand in the country in question.
- No. 8640. Glass gramophone disks.**—A citizen of Moravia has recently perfected a glass gramophone disk to supplant the composition ones now in use. He claims many advantages for these disks over the present ones. Persons wishing further information should communicate direct with the inventor.
- No. 8641. Acids and vegetable oils.**—An American consular officer in a European country requests that he be supplied with the names of large American manufacturers of lime, tartaric, citric, and lactic acids, and of castor, sesame, and ground-nut oil. He states that he has inquiries for all of these articles and wishes to have the names of manufacturers who want to export.
- No. 8642. Blowers and driers.**—A business man in a Mediterranean country, who states that he is in a position to furnish first-class references, advises an American consulate that he is anxious to enter into correspondence with leading American manufacturers of blowers and driers for industrial purposes not now represented in Europe with a view to representing them and making purchases direct. Correspondence may be in English.
- No. 8643. Silk shoe laces.**—An American consular officer in a European country reports that he has an inquiry from a local importer, prepared to give good references, who wishes to be put into direct communication with American manufacturers of silk shoe laces. He writes that there is a good demand for this article.
- No. 8644. Metal ceilings.**—An American business firm writes to the Bureau of Manufactures that one of its correspondents in a South American country desires to get in touch with American manufacturers of metal ceilings and would like to hear from such firms as soon as possible.
- No. 8645. American specialties.**—Two American business men, resident in a European country, contemplate opening an American novelty and specialty office as a side line to their other business. The public is especially interested in American products of every description, and it is the intention of these men to carry at first a small line of various hardware, electric, and optical specialties, shoes, canned fruits, vegetables, preserves, meats, toilet articles, soap, tooth powder, talcum powder, etc. They will also take the agency for portable engines, vacuum cleaners, rowboats, canoes, sporting goods, etc. They inform an American consular officer that they desire to get into communication with manufacturers of these different products and solicit catalogues and price lists. Correspondence should be in English.
- No. 8646. Pitch pine.**—An American consul reports that a European business man desires to be placed in communication with wholesale dealers in pitch pine. Prices should be distinctly stated and dimensions should be given.
- No. 8647. Trinidad asphalt.**—A foreign business firm has written to an American consular officer in the United Kingdom that it desires the names of American firms dealing in Trinidad asphalt of purest qualities. Correspondence should be direct with the inquirer.
- No. 8648. Telephone protectors.**—Tenders will be received at the office of the Deputy Postmaster General, Melbourne, Australia, until May 14, for the supply of 1,200 telephone protectors. Local representation is necessary.

- No. 8649. Water supply and drainage systems.**—Tenders for the installation of water supply and drainage systems in Funchal, Madeira, will be received by the Municipal Board, Funchal, Madeira, until June 22. Local representation is necessary.
- No. 8650. Graving blocks.**—The Harbors and Lights Administration, Alexandria, Egypt, requires 50 cast-iron graving blocks for dock. Particulars, form of tender, and general conditions governing this contract may be obtained from "Administration des Ports et Phares," Alexandria, Egypt.
- No. 8651. Gas plant, etc.**—Tenders are invited by the Barry (Glamorgan) Urban District Council for the supply and erection of a water gas plant, the estimated cost of which is placed at \$14,599, and a condenser, washer, and sulphate plant, for which the estimated cost has been fixed at \$29,199. Further particulars are not given.
- No. 8652. Battery telephones.**—The Postmaster General, Perth, Western Australia, has issued a call for tenders for the supply of common battery telephones (schedule No. 190). Details are not supplied.
- No. 8653. Motor car, etc.**—Tenders are invited by the city council, Melbourne, Australia, for the delivery of one electric motor car and two electric motor wagons. Particulars, form of tender, and general conditions governing the contract obtainable from the Town Clerk, Melbourne City Council, Melbourne, Australia. Tenders must be received by the town clerk not later than May 15, 1912.
- No. 8654. Cable and switchboard.**—Forms of tender may be obtained of the Postmaster General, Melbourne, Australia, for supplying 24½ miles of paper-insulated lead-covered cable; 12½-pound conductors, 52, 26, 13, and 10 pairs (schedule No. 672, spec. No. 369); 30 miles of paper-insulated lead-covered cable (schedule No. 671, spec. No. 369); 699 relays, nonpolarized, 150 ohms resistance. Tenders must be received by May 21, 1912. The same official will receive, not later than July 23, 1912, tenders for the supply of nine sections of lamp-signaling trunk-line switchboard.
- No. 8655. Supplies for the Roumanian Government.**—American Minister John B. Jackson, of Bucharest, reports that bids are invited by the Roumanian Government for the following supplies: (1) The Director of the Hydraulic Service of the Ministry of Public Works desires proposals to supply the needs of that service for the fiscal year 1912-13. About 96,000 francs will be available for the purchase of copper, wire, nails, iron, steel, cord, electric lamps, brick, etc. (2) The Ministry of War invites bids for considerable quantities of pyrotechnic supplies of various kinds, electric carbons, lamps, etc. (3) After various conferences with representatives of the petroleum interests the Government has practically decided to proceed with the construction of a pipe line from the oil district to Constantza, on the Black Sea.
- No. 8656. Boilers.**—Tenders addressed to the Crown Agents for the Colonies, Whitehall Gardens, London, S. W., England, will be received until May 10, 1912, for the manufacture and delivery f. o. b. Liverpool, of the following machinery for the Crown Agents for the Colonies (acting on behalf of the Government of Southern Nigeria): Four Lancashire boilers; two well pumps, capacity of each, 5,000 gallons per minute; two triple-expansion, surface-condensing vertical engines for working well pumps; three triple-expansion surface-condensing vertical engines and pumps, capacity of each 1,667 gallons per minute, together with economizer, condensers, steam and water piping, feed pumps, air pumps, and all accessories according to specifications and plans, which can be obtained at the office of the Crown Agents for the Colonies.
- No. 8657. Grain elevators.**—The municipality of Antwerp, Belgium, invites tenders until May 7, 1912, for two floating pneumatic grain elevators. Particulars, specifications, and conditions of contract can be obtained at the Hotel de Ville upon application.

### Bound Volumes of Daily Consular and Trade Reports.

The Government Printing Office will supply regularly in quarterly volumes, with complete 32-page indexes, bound sets of Daily Consular and Trade Reports from January 1, 1912. The price is \$1.50 per volume or \$6 per year, in order to cover the cost of the index and binding. Those desiring the bound volumes should write to the Superintendent of Documents, Government Printing Office, Washington, D. C.

**GOLD AND PRECIOUS STONE MINING AND JEWELRY IN SIAM.**

[From Vice Consul General Carl C. Hansen, Bangkok.]

Gold is found in the alluvial sands in many districts of Siam and is washed out in small quantities by the natives.

The Kabin gold mine in eastern Siam was taken over by an English company some years ago, but, although the mines were worked to their full extent under the supervision of Cornish miners and Scotch engineers, no results were obtained and the company failed. Up to the present, the working for gold in Siam by Europeans has not been successful, and the native gold-mining industry is of little importance.

**Production of Precious Stones.**

Some years ago it was estimated that five-eighths of the world's supply of sapphires came from the alluvial workings of southeastern Siam, where these gems have been washed for by Shans and Burmese for many generations. Statistics as to the yearly amount of sapphires produced are not available, as these gems are free of both inland taxes and export duties. The customs reports show that for the fiscal year 1910 only \$433 worth was exported, going to Switzerland, but the customs also state that there is reason to believe that considerable quantities are exported by parcel post and of such there is no record.

Rubies are found in the districts of Chantabun and Krat in eastern Siam, but those of good color are small, while the larger sized ones are of poor color, but it is said that the better quality of rubies are sent overland to Burma and are there sold as Burmese rubies. According to the customs, the exports of rubies for last year amounted to \$11,100, but, as in the case of sapphires, this amount does not cover the amount which left the country through other channels.

The gem industry is in the hands of Burmese and Shans, and the alluvial deposits are washed by hand in the streams. The trade in gems is chiefly carried on by natives of India, Burma, and Ceylon.

**Imports of Jewelry.**

The total value of the jewelry imports into Siam for the fiscal year ended March 31, 1911, amounted to \$531,178, against \$634,998 for the previous year. During this period, however, the United States failed to make any direct contribution to these imports, which consisted of gold, silver, and plated jewelry to the amount of \$148,522, mounted precious stones to the value of \$114,416, and unmounted precious stones valued at \$268,240. The imports of the gold, silver, and plated ware and mounted precious stones were for the greater part supplied by the United Kingdom and Germany, while France and Belgium contributed the main part of unmounted precious stones.

The import duty on all kinds of jewelry is 3 per cent ad valorem.

*White rum*, tafia, a cheap product, is drunk by the poorer classes in Haiti, Consul John B. Terres, of Port au Prince, stating that a higher quality of rum sells at four times the price and is used by the public in general.

# DAILY CONSULAR AND TRADE REPORTS

## COMPETITIVE MARKETS FOR CEMENT.

[From Consul George Eugene Eager, Barmen, Germany.]

### Westphalian Cement Syndicate.

The cement industry in west Germany is practically controlled by the Rheinisch Westfälische Zement Syndikat, with the principal office at Bochum in Westphalia. This syndicate embraces some 35 or more cement manufactories, and fixes prices and has a monopoly of the trade for west Germany. The results of the combine have not been so satisfactory as had been expected, on account of the rivalry of the Belgian cement manufacturers, who by reason of exceedingly cheap water rates to this part of Germany can deliver their product here at a low figure. This competition has kept down the prices for cement and there seems to be little hope for improvement at present.

Correspondence with the syndicate in regard to the use of white cement in Germany would seem to indicate that there is no pure-white cement in the market. I was referred to the Portland Zementwerk Wetzlar as the only firm that made a white cement. It is said to be exceedingly difficult and expensive to render ordinary Portland cement white and for pure-white work the darker Portland cement is not usable. Therefore an effort is made to produce as light-colored cement as possible. A cement manufactured by the above factory is not white but of a very light color. It has been used for many kinds of artificial stone, sandstone, etc., and it is not much more expensive than the ordinary Portland cement.

At the present time a large percentage of all building construction is being executed in ferroconcrete and therefore the demand for cement is increasing. Great improvement has also been made in artificial building stone, some of which can scarcely be distinguished from the real. For this work a much higher-grade cement is used and the price is probably a third more than for the ordinary quality.

[From Consul George Nicholas Ifft, Nuremberg, Germany.]

### The Situation at Nuremberg.

The use of cement in Nuremberg and throughout all Germany is large and is growing, especially in connection with building operations. Concrete (known here as "Beton") figures more or less in practically

all new structures, as well as in bridge building, railway construction, and street and road improvements. Stucco work, often with elaborate decorative effects, is still much in favor throughout Germany. Cement is also finding enlarged use in the construction of ornate fountains, monuments, etc.

While it is true that Germany imports small quantities of cement (the figures for 1911 were 253,023 metric tons, valued at \$1,565,800), this practically all comes from Belgium, Denmark, Austria, and France, and from factories located close to the borders. A very small amount comes from England. Foreign cement does not constitute 5 per cent of the total used here.

Germany is, however, a large exporter of cement, and so far as my information goes is able to compete with the world in quality. As a matter of fact, German cement is exported to the United States in considerable quantities, although shipments vary from year to year.

#### German Export—Small Demand for Foreign Cement.

During 1911 Germany exported 845,850 metric tons of cement, valued at \$6,319,376. The principal foreign purchasers in the last two years were:

Countries.	1910	1911	Countries.	1910	1911
	<i>Metric tons.</i>	<i>Metric tons.</i>		<i>Metric tons.</i>	<i>Metric tons.</i>
United States.....	14,110.5	20,693.0	Helgoland.....	11,601.0	16,269.3
Argentina.....	36,375.3	47,736.6	Mexico.....	41,392.5	13,925.3
Australia.....	21,021.2	35,750.1	Netherlands.....	115,099.3	119,880.8
Austria-Hungary.....	54,036.7	53,082.6	Norway.....	10,047.5	10,222.6
Belgium.....	21,468.5	14,408.4	Philippine Islands.....	5,067.4	7,663.1
Brazil.....	32,384.6	115,664.5	Russia.....	24,945.5	43,153.8
Chile.....	42,658.1	66,373.3	Sweden.....	9,196.5	17,458.2
Denmark.....	11,408.3	11,861.6	Switzerland.....	1,384.3	12,307.1
Dutch East Indies.....	41,283.0	36,352.9	Turkey (European and Asiatic).....	19,912.6	25,588.1
Finland.....	37,352.1	42,831.4	Uruguay.....	10,857.4	21,559.3
France.....	14,537.5	27,383.9			
German East Africa.....	7,158.5	10,853.6			

In view of these figures and as result of personal interviews with users of cement I do not think that a market could be found for American cement in the Nuremberg district unless it were a special and superior product, peculiarly adapted for ornamental stucco work, and even then it would find very small demand, as the home product is itself of very high grade.

(From Consul Herman L. Spahr, Breslau, Germany.)

#### The Portland Cement Industry in Silesia.

The first Portland cement factory in Silesia was erected in 1857. There are now 11 important Silesian factories, whose total output amounted in 1910 to 4,040,000 barrels of 170 kilos (374.8 pounds) net weight each. They are now all united in a protective combination styled the Verband Oberschlesischer Portland-Zementfabriken. All of these works are in or near Oppeln, whose great limestone beds are well known as especially suitable for the production of an excellent cement. The nearness of the Upper Silesian coal mines was also a factor in the rapid development of the industry at Oppeln. The present market for Silesian cement is mainly in eastern Germany and the northeastern part of Austria-Hungary. Formerly there were large exports to Russia and the Balkan States and sometimes oversea.

The 11 factories employ 2,800 workmen, an average of one man for every 1,443 barrels produced annually. In 1888, 5 factories employed 1,600 men and produced 777,000 barrels, one man for every 485 barrels. In comparing these figures it must be remembered that the factories carry their own masons, smiths, carpenters, etc., on the pay roll for repair work only. It is only recently that the last four works joined the combine. The competition of the Berlin works has prevented any rise in prices as yet in middle Germany, the average obtained by the factories being about 3.25 marks (77 cents) per barrel, including packing.

In view of the active industry in Silesia and the difficulty of competing with low prices, it is hardly likely that American cement has a chance here. However, there is a strong demand for white Portland cement, which is usually obtained from Stettin. American concerns may be able to do business in this line with the Breslau dealers, whose addresses are obtainable from the Bureau of Manufactures. Prices should be quoted for delivery at a German port.

#### **SYRIAN MARKET FOR CONCRETE-BLOCK MACHINERY.**

[From Consul General W. Stanley Hollis, Beirut.]

At different times during the past year this consulate general has been in receipt of letters from American manufacturers of concrete-block machines. These letters, together with the catalogues which accompanied them, have been shown to a number of interested firms in Beirut, without, however, any practical results, for the reason that the American machines are entirely unknown and untried here, and for the additional reason that exporters in the United States will sell only for spot cash, being unwilling either to extend credit or to send on consignment or on trial.

A French concern which has been very successful in introducing its concrete-block machines in this market first sent one on approval and gave the consignee one year to pay for it provided it was acceptable to him; and not only was the importer of this particular machine pleased with it, but he considered it so useful that he ordered four more like it. This French company, the name of which is obtainable from the Bureau of Manufactures, is in a fair way to capture a great part of Syria's trade in these machines, and if the American concerns which have at different times written to this office asking its assistance in the introduction of their machines really wish to obtain a foothold here it will be necessary for them to follow the plan of this successful French firm.

#### **An Excellent Field for American Machines.**

There is undoubtedly an excellent field in Syria for the sale of these machines, and there is no reason why a considerable number of American machines should not be sold, as the inhabitants here are well disposed toward American manufactures.

The American-Syrian Chamber of Commerce, Beirut, is in position to secure a goodly share of the orders for these machines for American manufacturers provided the said manufacturers will follow its suggestions, which are that a complete machine, together with all the necessary molds, be sent to the chamber for exhibition. If this is done, its secretary, who has posted himself on this subject through

interviews with the leading building contractors in Beirut, has guaranteed that the chamber will do its utmost to open up a trade in these machines, as he feels confident there is a good market for them here. Manufacturers interested in this proposition may write either to the secretary of the American-Syrian Chamber of Commerce direct or through this consulate general.

#### CEMENT PRODUCTION OF THE UNITED STATES.

In 1910, according to the report issued by the Geological Survey, the production of Portland cement in the United States reached 76,549,951 barrels, with a value of \$68,205,800. This is equivalent to 12,986,152 long tons, valued at \$5.25 a ton. It is an increase over the output for 1909 of 11,558,520 barrels, or nearly 18 per cent, and an advance in value of \$15,347,446, or more than 29 per cent. This increase alone is greater than the total output of Portland cement in 1900. In addition to Portland cement there were also produced 1,139,239 barrels of natural cement and 95,951 barrels of puzzolan cement, a total of 77,785,141 barrels.

The price of Portland cement in 1910 was as low as 73 cents a barrel in some places, the average for the United States being 89.1 cents a barrel. In 1890 the average price was over \$2, and as late as 1903 it was \$1.24 a barrel.

#### GASOLINE ENGINES IN SOUTH AFRICA.

[From Consul Edwin N. Gunsaulus, Johannesburg.]

In the agricultural parts of this consular district there is a good sale for portable gasoline engines, from 1½ to 4½ horsepower, complete, with cooling tank, mounted on portable platforms. These engines are principally used for pumping and feed cutting. There is also a fair sale for stationary gas engines of 10 to 30 horsepower for driving stamp batteries in some of the smaller mines of the outside districts of the Transvaal.

In Johannesburg and in practically all of the Rand districts where current is procurable electricity is used for motive power by the different companies engaged in manufacturing and engineering pursuits, as the required installation is less expensive than with individual power plants.

Few engines are used in this district for traction plowing, although there are occasional demands for them as a result of outbreaks of East Coast fever, which cause considerable mortality among oxen, thus necessitating the substitution of traction plowing. It is stated that the cost per acre of traction plowing is \$1.10, owing to the high price of oil, against 67 cents when oxen are employed.

There are many types of gas and gasoline engines on the market here, principally of British manufacture, and practically all of the machinery houses have agencies for these lines. The sales, however, are not very large. Windmills are almost entirely employed for pumping purposes on the farms.

The names of firms dealing in general and agricultural machinery most likely to be interested in stationary and portable gasoline engines are appended [and may be obtained from the Bureau of Manufactures].

**PAINTING CEMENT BUILDINGS IN GERMANY.**

[From Consul General Robert P. Skinner, Hamburg.]

The publication in Daily Consular and Trade Reports for January 3, 1912, of an article on building methods in Hamburg prompts inquiry in regard to the class of paint used on cement structures in Germany. It is claimed that large amounts of money are expended in the United States in painting cement and concrete, with unsatisfactory results, the paint either peeling or discoloring rapidly.

According to information obtained from builders and architects, the principal precautions taken in northern Germany to prevent the peeling of oil paints is to defer their application until the cement is quite dry. When it is intended to apply color on outside walls which are still damp, water paints are used which are weather proof and which can be washed if necessary. These colors, necessarily, are not impervious to moisture.

In his textbook for 1910 Dr. Glinzer, director of the State Building School in Hamburg, says that to make oil paint adhere to cement the surface of the material should be coated with diluted sulphuric acid (1 part concentrated acid to 100 parts of water), which afterwards must be washed off and the surface allowed to dry. Or the surface may be covered with diluted silicate of soda (wasserglas), the solution to be 1 to 3 or 1 to 4, and applied three times in succession. Still another method is to apply two coats of building "fluat" at least 24 hours apart. Practical builders state, however, that the applications of sulphuric acid are not made by them, and that such success as they have results merely from careful work and the use of good materials.

**Methods of Applying Oil Paints.**

Dr. Glinzer also says that oil paint should be applied to cement in the following manner: The surface is given one coating of linseed-oil varnish, to which is added a first coat of white lead when the varnish is dry. A second coat is then added, also containing white lead together with more or less coloring matter, as the building laws forbid the use of absolutely white paint on the exterior of structures. In this climate the use of oil paints is recommended, as they are waterproof and present smooth surfaces which attract a minimum of dirt. Painting according to this method costs here about 10 cents per square yard.

Applied to iron, linseed-oil varnish when used by itself flakes off readily. It should be thoroughly mixed with red oxide of lead, caput mortuum, or ocher graphite. This mixture serves as a first coat after the perfectly clean and dry surface has been gone over with the ordinary hot linseed-oil varnish. When the dead color has dried, another coat of the color desired is applied. The oil, being partly converted into resin, combines with the coloring material, making a thick coating that is the more impervious to water accordingly as the color is finely ground or not. Lead should be used when the paint is exposed to water.

The water colors so frequently used in Germany as a rule have silicate of soda as their base. These colors can be used on cement, plaster of Paris, brick, or glass. Liquid casein paints are easily worked and are said to be durable. The discoloration of cement buildings results very frequently from the class of cement employed rather than from the color applied afterwards.

**THE PHILIPPINE EXPOSITION.**

[From Consul General George E. Anderson, Hongkong.]

The exposition held at Manila during the first half of February in connection with the annual carnival is pronounced by all commercial interests concerned to have been a notable success. Visitors to the islands from many sections of the Far East were in larger number than ever before.

The exposition was unusually effective not only in its presentation of the great variety of native products to visiting business men and others interested, but also in the presentation of foreign, and especially American, products to native planters and capitalists.

**Machinery Hall.**

The central feature of the exhibit of foreign goods was Machinery Hall, wherein Manila firms representing American and other foreign houses displayed, in the 32,000 square feet of floor space available, their more attractive and novel lines of machines and appliances. There were shown many kinds of electrical appliances, such as those for heating, lighting, and cooking, private telephone and telegraph instruments, and similar goods, as well as heavy generators and dynamos and many electrical novelties; contractors' machinery with flat and dump cars of various models, hoisting machinery, ditching machinery, and the like; several miniature water systems for local water supplies, with steam, kerosene, and gasoline engines of various sorts pumping water into tanks; sawmill installations with steam, gasoline, and kerosene power; acetylene lamps for houses and for automobiles, welding apparatus, and several models of improved generators; exhibits of agricultural implements, including rice hullers, straw elevators, and trussers in operation; ice plants in operation; various displays of concrete mixers, concrete block machines, and other concrete and cement machines; a display of steam rollers for roads.

There was in operation a miniature gas plant, which is to be used by the Bureau of Science after the exposition and is designed to burn Batan (Philippine) coal. An elaborate exhibit of diving apparatus was to be seen; likewise a splendid display of various tools, implements, and miscellaneous hardware from American houses, and motors, engines, pumps, and machines for various purposes operated by steam, gasoline, or kerosene. In short, there was a comprehensive display of all lines of machinery which those experienced in Philippine trade offer as suitable for use in the archipelago. It is a significant fact that a large portion of the machines are for small plants and with individual power—either gasoline or kerosene. Kerosene power has many advantages over any other, not only in the Philippines, but also in China.

**Native Goods—May be Made a Biennial Event.**

The exhibits of native goods of the various Provinces included mostly agricultural products, there being not only fine displays of rice, sugar, hemp, tobacco, coconuts, rubber, peanuts and other nuts, fruits, skins, and fish, but also corn, vegetables, and other Temperate Zone products, including cotton. There were also displays of the immense tobacco factories, of various woven fabrics like pina and jusi cloth, mats, hats, pottery, baskets, carved woods, furniture, saddlery, embroideries, shellwork, and native work generally.

There is some doubt as to whether the exposition will be held next year. By reason of a disagreement as to the amount of money to be voted and because the matter was brought forward too late in the session, the Philippine Legislature failed to make appropriation of the 100,000 pesos (\$50,000) needed for the enterprise. There is also on foot a movement to hold the exposition once every two years instead of annually and to organize it on a larger scale; so it is possible that, even if the finances of the enterprise can be arranged, no exposition will be held until 1914. The success of this year's undertaking, however, indicates that the enterprise merits the attention of American manufacturers of those lines of goods which the Philippines need.

#### American Firms Among the Prize Winners.

In its February issue the *Far Eastern Review* states that prizes for the machinery exhibit at the Philippine Exposition of 1912 were awarded to the following firms, the first prize carrying with it a gold medal, the second prize one of bronze:

Machinery exhibit—F. L. Strong; Germann & Co. Sugar-cane crusher—Bahman Iron Works; George L. Squier. Rice machinery—F. H. Schule (Ltd.); Bernard & Less. Metal-working machinery—Manning, Maxwell & Moore. Electric generators and motors—General Electric Co.; Siemens-Schuckert Works. Woodworking machinery—Crescent Machinery Co.; Kirchner-Leipzig. Sawmill machinery—American Sawmill Co. Acetylene illuminating and welding apparatus—Philippine Acetylene Co. Technical equipment—Siemens & Halske; H. Maihak. Hand tools—Simons Manufacturing Co.; E. C. Atkins & Co. Portable engines and boilers—Gaar, Scott & Co.; Marshall, Sons & Co. Boiler-feed pumps—American Steam Pump Co.; Blake Pump Co. Pumping machinery—Fairbanks-Morse Co.; Gould Pump Co. Internal-combustion engines—Gasometer Fabrik Deutz; Meitz & Weiss. Road roller—Buffalo Steam Roller Co. Electric household novelties—General Electric Co.; Domestic Equipment Co. Ice machinery—York Manufacturing Co.; Remington Machine Co. Blowers—American Blower Co. Stationary engines and boilers—James Leffel & Co. Rock crushers—American Road Machinery Co. Concrete mixers—Ransome Concrete Machinery Co. Industrial railroads and rolling stock—Orenstein & Koppel. Fire engines and extinguishers—Howe Engine Co.; American La France Fire Engine Co. The following firms received honorable mention: The Vacuum Oil Co., lubricating oils; Dearborn Drug & Chemical Co., boiler compounds; Barburn, Bernard & Lurenne, lantern lenses; A. J. Morse & Sons, diving outfits, submarine; Fairbanks-Morse Co., windmills; Ingersoll-Rand Co., pneumatic tools; Siemens-Schuckert Lake Works, switchboards; Dodge Manufacturing Co., transmission supplies; A. E. Decouffi, cigarette machine; Empire Plow Co., agricultural implements; Ride Engine Co., hydraulic rams.

#### Consular Trade Conferences.

Consul Henry D. Baker, of Hobart, Tasmania, is returning to the United States via Honolulu on leave of absence, and expects to arrive at Seattle, Wash., about May 29. He will remain a week in that city, Tacoma, and vicinity, and while in that part of the country may be addressed in care of the Dexter Horton Bank, Seattle. He plans to arrive at Minneapolis, Minn., about June 9, where he may be addressed in care of Mr. Howard W. Baker, manager, Butler Bros., Butler Block, Minneapolis. The consul will be in Chicago, Ill., about June 15, where he will remain for several weeks, and may be addressed in care of the University Club of that city. Mr. Baker expects to be in New York, Washington, and perhaps several other eastern cities around July 1. Commercial organizations and business men in the East who desire to arrange for conferences with the consul should communicate with him at his Chicago address.

**FAR EASTERN TRADE NOTES.**

[From Consul General George E. Anderson, Hongkong.]

*Panama Canal-Trans-Pacific service.*—It is announced that the Glen and the Shire Lines of steamers will establish a trans-Pacific service in connection with the Panama Canal. At present the lines serve Europe and the Far East.

*New Bank.*—A number of the leading capitalists among the Chinese of Kwangtung (Canton) Province are planning to establish a large bank under foreign supervision and largely with capital secured from abroad upon local real-estate security.

*Tramway for Canton.*—The construction of a tramway, possibly an elevated railway, in Canton is one of the enterprises now being seriously considered by the Bureau of Communications there. At present the plans contemplate municipal, or, rather, provincial, ownership.

*Siamese rice crop.*—It is stated that the rice crop of Siam this season is such that outgoing freight will not amount to more than 500,000 tons for the year—a record of great importance not only to rice-consuming countries but to the shipping interests of the Far East.

*Foreign piece goods.*—While there has been a reduction in the quantity of piece goods arriving at Chinese ports, the stocks so far accumulated during the revolutionary troubles are among the largest in the history of the trade. However, there is reason to believe that the interior of the country is in need of foreign goods, and that when once such wares can be moved safely, from a financial as well as a transportation standpoint, clearances will be very rapid.

*India's gold imports.*—Financial circles of the Far East are particularly interested at the present time in the increase in the amount of gold now being absorbed by India. Preliminary reports indicate that the imports of gold into India during 1911 form a record, while those of silver amounted to about the same as in the previous year, thus demonstrating that the receipts of gold have not been at the expense of silver. It is considered by bankers that the increased use of gold is of vast economic importance both to India and to the Far East generally.

**THE PHILIPPINES.**

*Sugar exports.*—Owing to damage done by drought most Philippine authorities place the exports of sugar from the islands for the year at not to exceed 180,000 tons, and probably somewhat less. Sugar producers outside of Manila and vicinity are holding their crops for higher prices.

*New pottery.*—Arrangements are being completed at Manila for the erection of a modern factory for the manufacture of sand-lime brick, tiles, sewer pipe, drain tiles, pots, and various other ceramic products. The factory is to have a capacity of 50 tons per day. It is the enterprise of Cleveland (Ohio) capital.

*Shipment from Zamboanga.*—Exports from Zamboanga, the Moro Province port, for the year 1911 increased from 1,394,158 pesos (\$697,079) to 2,465,382 pesos (\$1,232,691). Over \$500,000 of the increase was in exports of hemp, but there was also an increase of more than \$125,000 in the value of lumber shipments. Of the \$284,000 worth of copra exported over 80 per cent was sent to foreign countries direct.

*Hemp arrivals at ports.*—Receipts of hemp at ports in the Philippines have been unusually large so far the present season. They represent accumulated stocks moved to take advantage of an advance in price, and it is expected that arrivals for the remainder of the season will be comparatively light. The general movement for the year, it is reported, will not be a heavy one.

---

### TRINIDAD NOTES.

[From Consul Franklin D. Hale, Port of Spain, Trinidad, British West Indies.]

*Petroleum industry.*—Optimism prevails in most oil fields of Trinidad and among those largely interested in the many ventures. Operations at Point Fontin are progressing favorably and large steel storage tanks are being constructed by American contractors. Local sugar factories are being supplied with oil fuel from these wells. Promising work is also being done at Guapo. A new company with large capital is about to develop the field in the extreme southwest of the island. An American expert visited London in the company's interests, and under his direction large quantities of drilling machinery and supplies are being imported from the United States. The fact that a large share of the expert workmen in this special industry are from the United States partially accounts for the large importations of such American machinery. It is reported that the Central Oil-field at Tabaquite will soon erect a refinery for the production of petrol, etc., which it is claimed can be put on the market at less cost than the imported. The rapidly increasing use of automobiles, motor launches, etc., creates an increasing demand for these products, for which the crude petroleum is well adapted, the base being largely paraffin instead of asphalt.

*Sawmilling.*—A 40-horsepower boiler and a 30-horsepower engine made by Godfrey Keeler & Co., New York, and a carriage, saw, and accessories from the American Machine Co., has been recently installed in the Balata Bay district for manufacturing hardwood lumber. In this section of the island there is a large growth of balata and other tropical woods, and the promoters of the enterprise anticipate both a foreign and local demand for the lumber. As the roads are not suitable for hauling, the lumber will be shipped by lighters or barges to this city. A member of a New York firm is here investigating the possible hardwood trade with Trinidad, and has made business connections.

---

### TELEPHONE SUPPLIES FOR MALAYSIA.

[From Vice Consul General D. Milton Figart, Singapore.]

In the Straits Settlements there are now 218 miles of telegraph and 7,321 miles of telephone wire. The Oriental Telephone & Electric Co. (Ltd.) operates in Singapore, and the Government elsewhere. The 2,018 miles of telegraph and 3,118 miles of telephone wire in the Federated Malay States are all Government owned. While the Government formerly purchased some supplies from the foregoing company, it is understood that the policy is now to purchase everything through the Crown Agents of the Colonies in London.

The market for telephone appliances is certain to extend, by reason of its adoption on the various rubber estates throughout the Malay Peninsula.

**COTTON-GOODS TRADE OF CHINA.**

[From Vice Consul General W. Roderick Dorsey, Shanghai.]

The condition of the American cotton-goods trade with China is such as to merit from every person interested in it, be he manufacturer, merchant, or middleman, the most serious consideration of its future. Competition from Japan has become formidable; year by year Nippon is increasing both the volume and the percentage of its exports to Manchuria and other portions of North China, thereby gradually diverting from the United States and Great Britain a market in which only a short time ago they were supreme.

The most striking features of the trade in 1910 were the serious shrinkage in the purchases of American and British plain fabrics, and the increased importation of Japanese goods of similar grades, which were laid down in Manchuria direct at prices well below the American product. China's imports of the leading plain cottons, i. e., gray and white shirtings, sheetings, drills, jeans, and T cloths, by principal countries of origin, for five recent years are shown below:

Kind.	1906	1907	1908	1909	1910
	<i>Pieces.</i>	<i>Pieces.</i>	<i>Pieces.</i>	<i>Pieces.</i>	<i>Pieces.</i>
British.....	10,785,227	8,224,951	8,993,534	10,491,446	6,511,126
American.....	8,544,165	578,647	1,581,989	3,856,231	1,385,219
Japanese.....	733,436	840,401	986,982	1,396,237	2,369,033
Indian.....	85,093	67,905	141,312	133,855	147,952
Total.....	20,147,931	9,711,904	11,708,817	16,077,831	10,433,990

**The Rise of Japan as a Competitor.**

As the trade between the United States and China is confined practically to the grades of cotton cloth included in this table it will serve to illustrate the striking features alluded to. The short supply of American cotton in 1910 is advanced as an explanation of this condition, prices for American lengths being too high to encourage free buying, and this was Japan's opportunity.

That Empire demonstrated its independence of the American raw-cotton market by turning its attention to China and India, and purchases from these countries were increased by 133,300,000 pounds. In addition to the increase of 993,396 pieces of the leading varieties of cloth, Japan also supplied China with 35,100,500 pounds more of cotton yarn to feed native looms. Because of the effect of high cotton on the American product Japan's increase during the year under review is doubtless more apparent than real; but the truth remains that every opportunity of this sort makes its impression, for the story of Japan's commercial advance in Manchuria is evidence of the fact that, once forward, it is not easily relegated to its earlier position.

It is beyond doubt the method of distribution adopted by Japanese traders in Manchuria that has primarily enabled them to make such inroads upon American cotton goods there. A brief sketch of how they have brought these methods into use may be interesting. The material for these remarks has been furnished by American and British middlemen in Shanghai, who for years have handled America's product, and now, seeing the business passing from them, seek reasons for their inability to control the market as of old.

Before the establishment of the South Manchurian Railway and before the Russo-Japanese war the cotton-goods trade in Manchuria was solely in the hands of Chinese merchants at Newchwang, who secured supplies from agents in Shanghai. At the close of the war Japan began its commercial activity in Manchuria, and, among many other products, placed cotton goods directly before the merchant, who in the past had done his trading through Newchwang houses and was financed by them. These merchants, however, made no response.

The Japanese decided that if the Newchwang merchant would not cooperate in the market they would come in and by trading direct with cheaper goods, on attractive terms, win a place.

#### **Soya Bean an Important Factor.**

About this time Japan realized that Manchuria had the soya bean in sufficient quantities to make it an interesting item of export, as well as a valuable medium of barter in Nippon's commercial dealings with the country people. Ready assistance was received from the most important business house in Japan, which completed an organization in Manchuria primarily to buy beans and, secondarily, to sell cotton goods turned out by its own mills. To-day it has more than 200 bean centers in the Province, each of which has become a distributing point for a certain quantity of cotton cloth. In this way even the local merchant, unwilling to talk business, was passed over and the consumer in town and village directly approached and educated to like the Japanese goods that were heavy and cheap. The merchant, seeing his customers buying freely from Japan, was forced to do likewise if he would continue in trade, and what he would not do willingly he was forced to do by the persistence and ingenuity of the Japanese trader.

And so the expansion of the scheme goes on, and its effect is felt even in Newchwang, where imports of American goods declined from 836,850 pieces in 1908 and 1,143,423 pieces in 1909 to 636,753 pieces in 1910. The Japanese side of the picture is an advance in these same lines from 205,600 pieces in 1908 to 297,660 pieces in 1909 and 408,554 pieces in 1910. In addition, Japan registers an increase in what is termed "cotton cloth" from 984,087 yards in 1908 to 3,273,802 yards in 1909 and 7,242,800 yards in 1910. The opinion of a well-known Shanghai middleman is that Japan's showing, while assisted in part by dear cotton and similar factors, is due primarily to the fact that a business without local organization has been supplanted by one that is organized.

#### **American Sales Methods.**

In contrast to this direct method of marketing, the American product is sold first to a foreign house in Shanghai, which sells to local agents of Newchwang firms, who in turn ship to the Newchwang merchant, who again sells to the Manchurian agent. Here we have four concerns that must make a profit or commission before the bales reach the consumer. In addition, the passage through Shanghai adds Shanghai charges, storage, transshipment, etc., in addition to profits and commission and the high coast freight rate to Newchwang, all of which add to consumer's cost and jointly represent a considerable portion of the 15 to 20 per cent excess at which American goods appear in that market.

I am fully aware of the fact that direct trade for American goods could probably not be accomplished so expeditiously nor so cheaply as with Japanese goods, but I am convinced that some method must be devised whereby the cost of marketing American cloths can be reduced and whereby closer relations with the native consumer may be established. If the merchant in the Manchurian centers could be induced to deal direct with the Shanghai importer, the profits of the Newchwang house and its agent in Shanghai would be eliminated and shipments could be made direct via Dalny, thus saving two handlings, at least; and if goods could be shipped at a through rate of freight from the United States via Dalny, an additional saving could be effected. The time has come when the business can no longer be handled solely through Newchwang with safety, and dealers should realize this and act accordingly.

One important American firm, which has access to a well-organized system of depots in Manchuria for the distribution of other wares and the purchase of tobacco, will enter the piece-goods market for the first time, representing southern American mills, and will use these established facilities for direct distribution. While this plan approximates that of the Japanese, it does not present the same advantage of barter and exchange that is presented by bean organizations. However, it is a move in the right direction, and the energy for which this organization is famous may overcome the disadvantage to some extent.

#### **Native Product May Affect Foreign Grade.**

An active advertising and direct-distribution campaign conducted through similar channels would certainly have effect, and American mills should devise the best means to make the work successful. The producer must get closer to the consumer to win him back to the cloth he once bought so freely. Japanese competition is healthy and very real and in this part of the world is taken seriously by merchants and importers as well as by consular officers. The sooner the producer and the American trade journals awake to the fact the better it will be for all concerned. Too much stress should not be laid on "unfair advantages," but serious and intelligent attention should be given to the real cause of the American loss in Manchuria—namely, superior organization.

A factor that may in time check Japanese expansion in this market is the growing competition of Chinese mills, and they should not be lost sight of as an additional competitor with goods from the United States. At the end of 1910 there were 33 cotton mills in operation in China, with 903,416 spindles and 3,805 looms. Although the year was a poor one, it has been estimated that these mills turned out 272,000,000 pounds of yarn and the equivalent of 1,140,000 pieces of 40-yard sheetings or drills. There is, in addition, the enormous output of hand machines throughout the country, which it is not possible to gauge, but each yard of which subtracts from the quantity needed from outside sources. Native competition will grow and with increased production of raw material China's output may, before many years, assume such proportions as to affect materially the trade of all countries.

There is serious competition to be met from Japan; there is growing competition with China; and, as is demonstrated through jeans, Great Britain can not be lost sight of. If the American cotton-goods

manufacturer is serious in his desire to maintain his place in China he must quote competitive prices when possible, must devise with his exporters effective means to meet the methods of competitors, and must get, through safe channels, into closer contact with the native consumer.

### THE NETHERLANDS FLOWER-BULB TRADE.

[From Consul Frank W. Mahin, Amsterdam.]

The regular annual report of the General Society for Bulb Culture at Haarlem shows an increase of both imports and exports of bulbs in 1911 as compared with 1910. The exports, however, were less last year than in 1909, when they far exceeded any previous year, being nearly 18,000,000 kilos (kilo = 2.2046 pounds). The report of the bulb society gives the following statistics of the Dutch trade in bulbs for 1910 and 1911:

Countries.	Imports from.		Exports to.	
	1910	1911	1910	1911
	<i>Kilos.</i>	<i>Kilos.</i>	<i>Kilos.</i>	<i>Kilos.</i>
United Kingdom.....	649,500	697,800	6,446,400	6,058,200
Germany and Austria.....	68,900	43,200	4,432,200	4,854,600
France, Belgium, Italy, Spain, Portugal, Greece, and Turkey.....	543,300	716,100	937,900	951,300
Scandinavia.....	1,200	3,000	1,725,000	1,684,300
Russia.....	1,900	400	578,500	615,400
Japan.....	100,900	99,900		
United States.....	152,700	137,200	3,071,100	2,918,900
Other countries.....		103,400	46,900	205,700
Total.....	1,518,400	1,801,000	17,238,000	17,308,400

The bulbs are tulips and hyacinths, with a few narcissus and others. Considerable quantities of bulbs not included in the above table were sent by parcels post, the use of which for transporting bulbs is constantly increasing. The countries named in the foregoing are those to which the bulbs were directly sent, and from which in many cases the bulbs may have been sent to other countries.

The table shows a decline of trade with the United States in both imports and exports. The decline of exports may be only temporary, as the 1911 quantity exceeded that of any year prior to 1909, but the decline of imports seems to be permanent, as it has been in progress since 1907, when the highest mark was reached. The 1911 total was the lowest since 1905.

At present (Mar. 27) the prospect for the 1912 crop of bulbs is excellent. There has been sufficient rain, a fair amount of sunshine, and frostless weather since February. The result is that the bulbs are flowering about two weeks earlier than usual. The only present danger is a cold snap with killing frosts.

Consular invoices show the following amounts of bulbs shipped to the United States during the past two years through the following places, the Rotterdam shipments including flower roots:

Cities.	1910	1911
Amsterdam, Holland.....	\$107,139	\$57,525
Rotterdam, Holland.....	409,097	811,227
Ghent, Belgium.....	362,682	387,077

### NEW SUPPLY OF CHICLE.

As stated in Daily Consular and Trade Reports for March 19, 1912, the United States derives practically all of its 6,500,000 pounds of chicle annually imported (for chewing gum) from Mexico and Central America. Evidently tropical South America would also afford a large supply, as the following report by Consul General W. Henry Robertson, of Callao, Peru, would indicate:

Only one business man in Lima appears to deal in chicle gum. He stated that he always had about 500 pounds, more or less, in stock. His selling price is 4.50 soles (\$2.189) per arroba (25 pounds), or 17 soles (\$8.27) per quintal of 100 pounds. His supply comes from the Department of Piura in northern Peru, where large quantities are said to be produced. He was unable to give exact figures as to the amount of production, but stated that he knew of shipments of 100-quintal lots having been made from Piura, and that he believes that the supply is still abundant.

The gum is used here and in the Department of Piura by makers of straw hats for giving a certain color and shine to the straw. It is also used as a varnish of an attractive yellow cream color for renewing so-called Panama hats. [The addresses of firms in Peru who might aid in procuring chicle may be had from the Bureau of Manufactures.]

---

### POWDERED MILK IN NEW ZEALAND.

[From Consul Henry D. Baker, Hobart, Tasmania.]

Mr. D. Cuddie, Director of Dairy Produce of the Agricultural Department of Wellington, New Zealand, recently stated that the making of milk powder has not become popular in New Zealand and that he does not regard the prospects of its doing so as very bright. The farmers seem to prefer to supply their milk to butter or cheese factories and receive the by-product for feeding their young stock. The only machine in use in New Zealand for drying milk is owned by a Wellington firm [name supplied upon application to the Bureau of Manufactures], who is also understood to hold the Australian rights for this machine. The dried milk produced has a very favorable reputation in Australia and New Zealand, especially as a food for babies, and it is apparently meeting with a good sale in England. Mr. Cuddie does not believe that there is any sale for machines for producing this product in New Zealand at present.

[A report from Consul Baker on the preserved-milk industry in New Zealand appeared in Daily Consular and Trade Reports for Sept. 27, 1911.]

---

### Telephone Franchise in Ottawa.

Consul General John G. Foster advises that the city of Ottawa, Canada, has given to the Bell Telephone Co. a 5-year exclusive franchise, the company to pay \$12,000 annually (against \$5,000 formerly) and supply the city with 20 phones free. The service rates are to remain the same—\$45 for business phones and \$25 for residence phones. It is stated that by July 1 there will be about 8,000 phones in the exchange.

## LEVANTINE BUSINESS NOTES.

[From the Near East.]

**New Branches of Banks.**

It is learned that the Ottoman Bank contemplates opening several new branch offices in various parts of Turkey, and it is likely that at least one or two of these banks will be opened in the near future.

**Harbor for Damietta.**

Admiral Robinson, Egyptian Director of Ports and Lighthouses, has left for Damietta to study the proposed construction of a harbor. The expense entailed by the construction of a small port—which, by the way, will serve no useful purpose—is estimated at \$1,000,000. It seems improbable that trade will be diverted from Alexandria, which possesses the finest harbor in the Mediterranean.

**Carbonic-acid Gas Factory.**

A huge carbonic-acid gas factory has been erected at Mex, Egypt, by Mr. Feifer. The factory, provided with every modern appliance, is to supply all the carbonic-acid gas required by Egypt, Turkey, and the Red Sea.

**Irrigation in the Lebanon.**

The investigation of the proposed irrigation enterprise in the Lebanon district of Syria having been completed by the National Bank of Turkey, arrangements have been made with Sir John Jackson (Ltd.), of London, to construct the works at an initial cost of \$250,000. The district is the populous Keerawan region, where it is intended to divert the waters of the Nahr-el-Selim, a considerable mountain stream which rises below Mount Sannin, and disappears underground in a "sink" in the limestone at Tahun-er-Reifun, into two small canals which will supply water for irrigation and other purposes to some 20 villages on the slopes from Reifun to the port of Junieh, about 18 miles north of Beirut. By arrangement with the Turkish Government the charge for the water will be \$25 to \$60, which will entitle the purchaser to 1 cubic meter of water per diem in perpetuo.

**Building in Servia.**

Proposals for allocating the following sums for the purposes indicated have been discussed in the present session of the Skuptschina: \$155,000 for university requirements, including the erection of a building for the technical section; \$75,000 for the building of a national library; a subsidy of \$38,000 for the erection of a building for the Academy of Science. The following further grants have also been proposed: \$45,000 for the erection of a gymnasium, and \$140,000 for other school requirements. From the sanitary funds are allocated: \$300,000 for a lunatic asylum, \$240,000 for the completion of the public hospital in Belgrade; \$500,000 for the erection of a hospital in the interior of the country, and \$130,000 for improvements at three Servian spas.

Machinery, iron, cement, and other building materials will have to be imported for the construction of these works, and British engineers, contractors, and building-material manufacturers and merchants will find Servia a very desirable field for good, sound business and the people very friendly toward the English.

**BLOWING STUMPS WITH DYNAMITE.**

[Summary of Bulletin No. 154, issued by the Kentucky State Agricultural Experiment Station.]

Directions for blowing stumps with dynamite are followed by statements of the results of tests of the efficiency and economy of this method. Fifty per cent dynamite was used in most of the work, but 40 per cent proved satisfactory when used on some of the dead stumps.

Over 100 stumps having an average diameter of 16 inches were blown at London, Ky. The average number of sticks of dynamite used was 2.6, the average time required per stump 30 minutes, the average cost of material 25.7 cents, and the average total cost per stump 33 cents. Nearly all the stumps were dead oak. At the experiment station farm at Lexington nine green stumps averaging 22 inches in diameter were blown at an average cost of \$1.56 per stump, 10½ sticks of dynamite per stump being used. Of these stumps three black oak averaged 45 inches in diameter and were blown at a total cost of \$3.52 per stump, the average number of sticks of dynamite used being 23½.

The amount of dynamite required to blow stumps of the same kind in the same soil does not vary directly with the diameter, but more nearly with the square of the diameter, or, in other words, with the area of a cross section of a stump.

# PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

- No. 599. Navy Department supplies.**—The Bureau of Supplies and Accounts, Navy Department, Washington, D. C., will receive bids until May 14, 1912, for the following supplies. Firms interested therein should make application to the Bureau of Supplies and Accounts, giving the schedule numbers desired: Schedule 4500, candles, Portland cement, prime geese feathers, fire hand grenades, airport lenses, lead pipe, cotton twine, flax twine, double face velour, spun-cotton lamp wick, air hose, rubber hose, fire upper deck hose, aluminum in cakes; schedule 4495, oil filters, bibb brass cocks, brass cocks and faucets, faucets, brass cans, spouts and feeders, chime single bell whistles, flexible copper hose, rubber hose, steam hose; schedule 4498, water filters and coolers, grates and saddles for ranges, steam jacketed copper kettles, bake ovens, fire panels, copper coffee urns; schedule 4497, safety matches, glass pepper and salt shakers; schedule 4492, bituminous coal, semi-bituminous coal; schedule 4499, air centrifugal set compressor, pipe expanding and flanging machine, 6-roll double cylinder planer and matcher machine; schedule 4493, nickel steel recoil cylinder, torpedo bronze; schedule 4501, worm-gear chain blocks, steel bolts and nuts, empty paint cans, boat chains, wire brass cloth, emery cloth, dies for machine screws, files, brass grommets, copper hammers, scaling hammers, bronze hasps, bronze hinges, chain spur-gear hoists, toilet-paper holders, nickel-plated brass lamps, hand deck brass lanterns, globe hand lanterns, garnet paper, hull steel rivets, wood brass screws, iron machine screws, tinned wood steel screws, galvanized-iron anchor shackles, wrought-iron screw chain and anchor shankles, bench vices, pipe wrenches; schedule 4503, white ash, white cedar, white-cedar boat boards, mahogany, white oak, white-oak timber and planks, white-oak timber, New England country pine, North Carolina pine, Oregon pine, sugar pine, white pine, panel white pine, yellow pine, yellow-pine decking, white joist spruce, merchantable spruce, West Virginia merchantable spruce, spruce poles for spars, spruce staging; schedule 4496, regulas of antimony, bronze manganese ingots, monel metal, half-and-half solder, round strip solder; schedule 4502, alcohol, crystals oxalic acid, iron or steel cement compound, paint drier, glycerin, graphite lubricating grease, dry lamp-black, dry yellow ochre, raw linseed oil, petrolatum, sal ammoniac, black asphaltum varnish, white zinc in oil; schedule 4504, altos (E flat), baritones (B flat), bugles; concert (C) flutes, (E flat) terz flutes, (B and E flat) clarinets, (B flat) cornets, cymbals, bass and tenor drums, (E flat) piccolos, (tenor) trombones, first and second violins with bows. Bids will be received until May 21 for cut-off saw machine, schedule 4506. Tenders are invited until May 28 for ammunition lighter. Proposals will be received until June 25 for lightweight gray prison cloth and gray prison flannel, schedule 4507.
- No. 600. Electric elevators.**—The Bureau of Yards and Docks, Navy Department, Washington, D. C., will receive proposals until May 11, 1912, for installing three electric elevators; one in the naval hospital, Chelsea, Mass.; one in the naval hospital, Newport, R. I.; and one in the naval hospital, Portsmouth, N. H. Plans and specifications can be obtained upon application to the Bureau of Yards and Docks.
- No. 601. Condemned Navy material.**—There will be sold at the navy yard, Mare Island, Cal., material belonging to the Navy, condemned as unfit for use therein, consisting of boats, cutters, pumps, boilers, engines, clothing, musical instruments, packing, furniture, twine, nautical instruments, books, flags, medical stores, machine tools, hand tools, dishes, ordnance stores, ingot brass, scrap metal, searchlights, hand and leg irons, generating sets, diving apparatus, etc. Schedules containing form of proposals and terms of sale can be obtained upon application to the General Storekeeper, Navy Yard, Mare Island, Cal.
- No. 602. Dredging.**—Sealed proposals for dredging in Wicomico River, Md., will be received at the United States Engineer Office, Room 309, Customhouse, Baltimore, Md., until May 15, 1912. Information on application to W. C. Langfitt, Lieutenant Colonel, Engineers.
- No. 603. Panama Canal supplies.**—Sealed proposals, in triplicate, will be received at the office of the General Purchasing Officer of the Isthmian Canal Commission, Washington, D. C., until May 1, for cast-iron car wheels, covering the annual estimate for the period ending June 30, 1913. (Circular No. 703.)

## LINSEED AND LINSEED OIL.

[From Consul General Robert P. Skinner, Hamburg, Germany.]

As little or no linseed is grown in Germany very large quantities are imported, the principal center of this business being Hamburg and the chief sources of supply Russia and Argentina.

North Russian linseed is used more particularly for the production of a greenish oil used chiefly in the manufacture of linoleum and oilcloths, an industry of large proportions in this country. The details of the German trade appear in the following figures showing the total imports and exports of linseed and linseed oil, in metric tons of 2,204.6 pounds:

Imports and exports.	1908	1909	1910	1911
<b>LINSEED.</b>				
Total imports.....	468,421.0	438,866.0	420,522.0	276,102.0
From Belgium.....			357.0	486.0
From Netherlands.....	1,318.0	1,654.0	2,701.0	1,823.0
From Austria-Hungary.....	1,440.0	1,723.0	1,194.0	718.0
From Russia.....	47,680.0	36,403.0	53,381.0	50,258.0
From Morocco.....	282.0	623.0	2,098.0	841.0
From British India.....	7,077.0	15,192.0	44,396.0	75,026.0
From Japan.....		1,390.0		
From Dutch Indies.....				821.0
From Argentina.....	392,861.0	370,847.0	215,073.0	144,116.0
From Uruguay.....		4,825.0		
From United States.....	15,673.0	1,432.0	308.0	886.0
Total exports.....	8,409.0	6,828.0	11,559.0	6,343.0
<b>LINSEED OIL.</b>				
Total imports.....	1,744.6	2,034.0	1,906.9	2,564.8
From Great Britain.....	118.1	101.0	02.9	189.8
From Netherlands.....	1,540.0	1,719.8	1,633.4	2,419.9
Total exports.....	869.6	622.2	4,512.1	3,222.8
To Great Britain.....		88.5	3,400.0	2,041.2
To Austria-Hungary.....	383.9	204.9	501.0	266.5
To Brazil.....			33.2	178.7
To United States.....		.8	339.8	339.2

As the seed is on the German free list and the oil is dutiable at the rate (per 220.4 pounds) of 95.2 cents when in casks and \$4.76 when in receptacles other than casks, the importations of the oil itself are inconsiderable and the purchases from the United States not sufficiently large to call for special mention in statistical tables.

The price for River Plate linseed on February 19, 1912, for January-February shipments was \$75.45 per metric ton. The price of oil was \$18.80; for oil from February-April, \$18.30, and from March-August, \$16.65 per 220.4 pounds.

From January 1 to November 28, 1911, the world's shipments of linseed to Europe amounted to 4,813,000 quarters (41,254,286 bushels) against 5,051,000 quarters (43,294,286 bushels) in 1910 during the same period.

[From Consul General John H. Snodgrass, Moscow, Russia.]

#### Russian Exports and Prices.

No definite, accurate figures concerning Russia's linseed crop in 1911 are available as yet. However, an idea of the Empire's production of this seed may be gained from the exports, which in 1910 amounted to 157,194 tons, value \$9,928,685, and in the first 11 months of 1911 to 126,180 tons, value \$7,789,890. It is stated that the crop in 1911 was larger than that of the previous year, and at present (Feb. 26) the seed is selling for \$1.25 to \$1.50 per pood of 36.112 pounds.

#### AMERICAN LINSEED CROP AND TRADE.

The importance of linseed as an agricultural product of the United States can be seen from the following table, made up from statistics supplied by the Department of Agriculture and by the Bureau of the Census, Department of Commerce and Labor, giving data by States for 1911 and the totals for the five preceding years:

States.	Acreage.	Production, in bushels.	Farm value, Dec. 1.	Average price per bushel, Dec. 1.	Average yield per acre, in bushels.
Colorado.....	3,000	21,000	\$38,000	\$1.89	7.0
Iowa.....	10,000	128,000	237,000	1.85	8.0
Kansas.....	75,000	225,000	428,000	1.90	3.0
Minnesota.....	400,000	3,200,000	5,824,000	1.82	8.0
Missouri.....	18,000	54,000	103,000	1.90	3.0
Montana.....	425,000	3,272,000	5,890,000	1.80	7.7
Nebraska.....	2,000	10,000	18,000	1.85	5.0
North Dakota.....	1,200,000	9,120,000	16,781,000	1.84	7.6
Oklahoma.....	1,000	3,000	5,000	1.80	3.0
South Dakota.....	607,000	3,217,000	5,726,000	1.78	5.3
Wisconsin.....	10,000	120,000	222,000	1.85	12.0
Total, 1911.....	2,757,000	19,370,000	35,272,000	1.82	7.0
1906.....	2,506,000	25,576,000	25,899,000	1.01	10.2
1907.....	2,604,000	25,851,000	24,713,000	.96	9.0
1908.....	2,697,000	25,605,000	30,877,000	1.18	9.0
1909.....	2,083,142	19,512,764	29,785,000	1.53	9.4
1910.....	2,467,000	12,718,000	29,472,000	2.32	5.2

As an item of export linseed almost disappeared from the foreign-trade records of the United States in the fiscal year 1911, amounting to only 976 bushels, valued at \$2,520, in sharp contrast to the 6,336,-

310 bushels shipped five years ago. The exports, by principal countries of destination, for the last half decade were as follows:

Countries.	1907	1908	1909	1910	1911
	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>
Belgium.....	228,713	272,202	251,003	8,179	
Denmark.....	124,731	42,127			
France.....	147,110	148,797			
Germany.....	1,259,388	797,312		23,072	
Greece.....		40			
Italy.....		26,079			
Netherlands.....	1,215,540	1,090,712	138,778	27,598

British Honduras.....		6	7	3	
Canada.....	2,560	35,425	554	344	656
Costa Rica.....					
Honduras.....			1	1	
Panama.....		22	7	74	7
Mexico.....	10	1	4	25	
Cuba.....		60	375	302	273
Santo Domingo.....				19	
Colombia.....		10	8	21	
Venezuela.....	104		5		
Total quantity.....	6,336,310	4,277,313	882,899	65,103	976
Total value.....	\$7,990,383	\$5,721,337	\$1,092,539	\$118,329	\$2,520

During the same five-year period imports of linseed into the United States rose in corresponding measure, amounting in the fiscal year 1911 to 116 times the quantity imported in 1907. By principal countries of origin the imports of linseed were as follows for the years 1907-1911:

Countries.	1907	1908	1909	1910	1911
	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>
Belgium.....				179,447	199,290
France.....					1
Germany.....		8	13		
Netherlands.....	1,067		1	374	584
United Kingdom.....	79,676	14,024	34,470	9,552	693,160
Canada.....	9,603	7,418	479,189	1,410,398	2,251,083
Mexico.....				2	
Argentina.....	8	28	76,000	3,209,087	5,021,137
British India.....		35,941	3,995	193,628	2,333,863
Japan.....				4	119
French Africa.....	2				
Total quantity.....	90,356	57,419	593,668	5,002,490	10,499,227
Total value.....	\$124,494	\$71,625	\$831,871	\$8,548,837	\$21,379,180

Exports of American linseed oil were valued in the fiscal year 1911 at \$164,879, compared with \$155,858 in 1910, \$140,876 in 1909, \$172,083 in 1908, and \$203,712 in 1907. The imports are not separately stated in available data.

#### WORLD'S LINSEED PRODUCTION.

Under date of February 9, 1912, Dornbusch's Floating Cargoes List reviews the world's 1911 production of linseed as follows:

The world's production of linseed in 1911 was with one exception (1907) the largest for many years and exceeded the preceding season by about 600,000 tons. India not only yielded the highest since 1904, but gave a crop far in excess of the past 15 years' average. Argentina, despite a record acreage, unfortunately again proved more or less a failure, and we have yet to learn whether the official estimate of 638,000 tons recently published can even be relied upon. One thing seems certain, the quality is very disappointing and likely to be worse than in 1910-11. Russia is com-

puted to have yielded better than during the year previous, which receives confirmation from the large shipments of the past few weeks. North America is officially reckoned to have yielded a crop 170,000 tons better than in 1910, but concerning same there is much doubt, and commercial authorities are of the opinion that the excess is barely 70,000 tons. Canada is officially said to have trebled the previous record, but, a good proportion being under snow, the actual quantity available has yet to be defined. Of the Indian crop, the whole quantity of the seed known as "pure" has been accounted for, and about 83 per cent of the "mixed."

Argentina last season shipped about the average proportion of its crop, with America absorbing 19 per cent of the total export. North American shipments to Europe were a blank, which is likely to be repeated this year, so far as concerns the present crop. The Russian and the Danubian contributions again proved useful, although rather under the previous year's quota. Of the world's total shipments, the United Kingdom took a larger percentage than in 1910, but still fell short of preceding seasons, and compared with 1900 the United Kingdom absorbed but half the proportion of shipments.

A year ago at this time we thought that \$14.60 for Calcutta would produce a good consumptive trade, whereas \$15.60 proved the lowest spot price during all 1911, with spot London linseed oil not touching under \$163 per ton. From present indications it may be predicted that, although the record high prices of 1911 are not likely to be repeated, values will remain more or less at a lofty level, and in the neighborhood of \$13.40 Calcutta linseed should have considerable attraction for crushers.

The world's production of linseed for the past 10 years, compiled from official returns, was as follows:

Years.	India.	Argentina.	North America.	Canada.	Russia.	Total.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1902.....	342,624	703,976	732,122		542,224	2,390,956
1903.....	481,567	937,601	682,513		461,314	2,562,995
1904.....	571,832	740,000	585,613		471,846	2,369,291
1905.....	347,400	591,912	711,944		421,000	2,072,256
1906.....	353,400	825,764	626,500		540,500	2,346,164
1907.....	425,200	1,100,710	646,278	40,670	550,590	2,763,448
1908.....	163,200	1,048,862	645,125	35,133	556,339	2,448,649
1909.....	288,800	716,515	467,825	55,325	558,360	2,106,825
1910.....	427,600	585,000	317,950	95,050	1,650,000	2,085,600
1911.....	557,600	636,000	494,250	323,000	1,670,000	2,677,850

<sup>1</sup> Estimated.

### USE OF MILK BOTTLES IN GERMANY.

[From Consul General A. M. Thackara, Berlin.]

American firms are seeking to introduce in Germany various devices for the improved handling of milk. One of the large glass-bottle manufacturers in Berlin has informed this office that machine-made milk bottles are used in this city, but most of the bottles are handmade.

In Berlin the sale of milk in bottles at retail constitutes only a part of the total quantity consumed. Many of the German families buy their supplies from the milk stores or perambulatory milk wagons in bulk. The quantity desired is measured out and poured into pitchers, cans, or other receptacles belonging to the purchaser.

Specially pure milk for children and invalids, for which an extra price is charged, is always delivered in glass bottles carefully sealed by paper capsules or by other means. When bottles are used for transporting milk they are provided with paper capsules. Patent wire-rubber stoppers are also employed.

[A list of Berlin milk dealers—one of whom handles 35,000 gallons daily—and of German manufacturers of milk bottles may be had from the Bureau of Manufactures.]

**COTTON-GROWING EFFORTS.****ASIATIC RUSSIA.**

(From Consul General John H. Snodgrass, Moscow.)

An irrigation company made up of wealthy Moscow merchants, formed three years ago with a capital of \$15,000,000, is considering the feasibility of irrigating a tract of 672,500 acres in Ferghana for cotton growing. A concession of 1,345,000 acres has been obtained from the Government, and it is understood that the Government will guarantee the undertaking with a loan at 4½ per cent.

Cotton is Russia's principal import, amounting to \$50,000,000 a year. While the measures taken by the Government to encourage cotton growing have already largely increased its cultivation, the annual output now being 198,000 short tons, valued at \$77,250,000, the demand for cotton is so great that an amount nearly as large is brought from other countries, chiefly from the United States. Wishing to create a supply of Russian cotton equal to the home demand, the Russian Department of Agriculture has undertaken a number of projects with the view to increasing the area of irrigated lands in the cotton-producing portion of the Empire and the development of cotton culture.

**Irrigation Projects in Eastern Russia.**

About \$5,000,000 has been requisitioned for irrigating the north-east part of the Golodnaya steppe, in Turkestan, and the central part of the Muganskaya steppe, in Transcaucasia. A canal irrigating 32,280 acres was opened in the Muganskaya steppe in April, 1911, and a second canal irrigating 21,520 acres is nearly completed. In four years all the irrigation works in these two regions will be finished, giving not less than 511,100 acres suitable for cultivation.

Investigations are to be made in eastern Transcaucasia, in the central part of the Golodnaya steppe, and in the lower course of the Amou-Daria River, within the boundaries of Bokhara. It is proposed to commence explorations in the Transcaucasian and Turkestan districts to ascertain what facilities for irrigation exist in those parts of the Empire. Another project calls for the irrigation of the Milsкая steppe, in Transcaucasia, which has an area of 416,950 acres.

A law relating to the water administration in Turkestan and a compendium of rules repermitting private irrigation enterprises in that region are being prepared, to be passed upon by the Council of Ministers during the coming winter. The question of getting immigrants for the newly irrigated lands in Mugan and on the Golodnaya steppe will come up before the Government Duma.

Engineers are to be sent to the United States, India, and Egypt to learn the latest improvements in irrigation methods, and five cotton experiment stations have been established in Transcaucasia and Turkestan. There are also some cotton-exhibiting plantations, the number of which will soon be increased to 12, and more Government specialists are being designated to assist cotton growers.

To avoid delay in completing works already begun and in investigations, the year's appropriations have been increased by \$221,450, which will be used to better the conditions of cotton growing.

**Loans for Cotton Growers—Experiments with Other Fibers.**

The Agricultural Department deems the organization of a cheap and generally accessible system of credit in Turkestan and Trans-

caucasia indispensable, and the Government proposes to establish a special small-credit organization for cotton growers with a capital of about \$7,000,000, or to permit credits to be given by the already existing savings banks and county cash offices.

In endeavoring to diminish the requirements of raw cotton, the Russian Department of Agriculture has given attention to the evolution of the flax and hemp industries, in the cheapening of spinning methods, and the utilization of flax waste as a new spinning material in place of cotton. These questions are not regarded as decided, and the department is considering the establishment of two experiment stations in Moscow, at a cost of \$120,000, requiring \$30,000 annually for their maintenance.

#### **Conditions in Turkestan—Government Earlier Irrigation Work.**

Little irrigation work has been done in Turkestan, although the conditions there are very favorable and repeated attempts have been made. There are two large rivers in that region, the Syr-Daria and the Amou-Daria, besides a number of small streams. About three-fourths of the country is made up of plains lying some 980 feet above sea level. The lowest portions of the plains are north and southeast of the Aral Sea, where the sandy deserts of the trans-Caspian district approach the Caspian Sea, which lies 84 feet below sea level. The soils of Turkestan are generally fertile, but always require irrigation. The country contains 453,000,000 acres, a little less than all western Europe, of which only about 8,000,000 acres are irrigated and cultivated. The amount of water that can be had for irrigation is reasonably estimated as sufficient to irrigate a large portion of the country, and in any case to grow cotton enough to supply the Russian demand. Lack of means makes it impossible for the landowner of Turkestan to build his own irrigation system.

The first productive attempts at irrigation were made at the end of the last century. The canal of Emperor Nicholas I was completed in 1898 and runs through part of the Golodnaya steppe, and a second canal was built about the same time. These canals irrigate only 51,660 acres. The irrigation of 166,050 acres in the northeast part of the Golodnaya steppe was undertaken in 1900. The building of the canal for this project was found difficult to continue, and only recently the Government allowed \$2,500,000 for its completion. This sum, as well as the amounts formerly appropriated by the Government, are insufficient to irrigate the area necessary to produce an adequate supply of cotton for the country. To double the production of cotton in Turkestan would require a Government outlay of \$200,000,000.

#### **Regulations for Private Irrigation Enterprises.**

In view of the increasing economic demands, and the enormous amount of arid land in Turkestan, other means must be found to hasten irrigation, which the Government believes is the only way to prepare for colonization and the widening of the cotton-producing area. Hence a project is under consideration to permit the irrigation of Government lands through private enterprise. The chief features of this project are as follows: (1) Land can be leased for not to exceed 99 years, and in some cases the lessee may purchase outright; (2) lots of land not exceeding 13,450 acres may be leased for

not more than 36 years by applying to the Chief Bureau of the Agricultural Department; for larger tracts or longer leases, application must be made to the Council of Ministers; (3) preliminary investigation of the land desired for lease can be made only upon presentation of the plan of the investigation, and with the obligation of completing them at a certain time.

This project was framed by the Chief Bureau of Agriculture and is now under consideration by the committee on cotton.

#### ASIATIC TURKEY.

[From Consul Edward I. Nathan, Mersina.]

The latest estimate of the cotton crop of the Province of Adana, Turkey, in 1911, is 85,000 bales, of which about 25,000 bales were retained by the spinning mills of Adana and Tarsus. The exports of cotton from Mersina in 1911 were valued at \$1,875,870, divided principally as follows: Austria, \$1,252,002; France, \$83,722; Germany, \$115,324; Italy, \$180,042; and Spain, \$209,238.

The cottonseed crop amounted to 30,000 tons, of which 15,000 tons were used locally for cattle feeding and 6,000 tons for the Mersina oil mill. The remainder was exported to England. Cottonseed cake to the value of \$28,466, the first ever made in Mersina, was exported to England.

The local cotton is principally short fiber, though a small quantity of long-fiber (American) cotton is produced. The long summer drought and the lack of irrigation here are unfavorable to the cultivation of American cotton, and the difficulty of picking that cotton is another drawback, as labor is scarce here. The local cotton is picked with the stalk and hull and is separated from the hull later. This is mostly done by hand, but lately some American machines have been imported for this purpose.

Adana cotton seed contains only 16 per cent of oil, of which 11½ per cent is extracted.

#### ERITREA.

[From Consul General James A. Smith, Genoa, Italy.]

The recent report of the Milan company which holds a concession for cotton growing in Eritrea places the 1911 cotton crop produced in the colony at 8,440 quintals (quintal = 220.4 pounds), as compared with 5,472 quintals in 1910. The company also produced about 8,000 pounds of cottonseed oil, 72,000 pounds of grain, and 80,000 pounds of cotton seed. With other subsidiary products, the company's balance sheet shows a turnover of about \$364,000, against \$142,000 for the preceding year, and a net profit of about \$28,000.

This favorable showing has encouraged the further extension of the company's cotton-growing area at Agordat and Carcabat and the cultivation of a new region bordering on the Red Sea near Sahel. The proximity of the latter place to transportation facilities gives it a great economic advantage. During 1911 the company spent about \$27,000 in improving and extending its hydraulic system for irrigation. A new flour mill was erected at Massaua and an electric-lighting plant at Agordat. The problem of supplying drinking water to the 5,000 workmen employed during the cotton season has been solved

by the use of wells and windmills, the water being carried to the fields through iron pipes. Water was formerly brought from a distance by camels. The capital of the company has been increased to \$210,000.

#### BRITISH WEST AFRICA.

[From Consul William J. Yerby, Sierra Leone.]

Considerable progress has been made by the Government during the past year in the construction of roads in the cotton-growing districts of Southern Nigeria, and the staff of the cotton-growing association is now better able to inspect the farms where the bulk of the cotton is produced. According to the latest reports from Lagos, the crop will be late. It is claimed that a much larger area was planted in 1911 than in 1910. It is not expected that the crop will escape suffering to some extent from the cold winds from the desert, but, allowing for this, the crop is expected to reach 7,000 bales of 400 pounds each. The purchases of cotton in Lagos during January, 1912, were 175 bales.

#### Prospects in Northern Nigeria.

The following is taken from a recent dispatch of the governor of Northern Nigeria:

Strenuous efforts are being made to encourage the natives to grow cotton on a large scale. Experimental plots have been established in various centers and the relative merits of three different varieties of cotton have been tested. An excessive period of drought has militated not only against the success of these experiments but also against that of the cotton crop as a whole; therefore the crops almost everywhere have been below the average. Buying depots are now being opened by the British Cotton Growing Association in the chief cotton-growing centers, and a ginnery on a large scale is in course of construction at Zaria. As soon as the natives begin to realize that cotton is a crop which is not affected by the local supply and demand, and for which there is always a ready sale to an unlimited extent, they will embark largely in its cultivation.

Although the governor does not share the extremely roseate views that have been expressed in the past concerning the rapid development of an immense output of cotton from the Protectorate, he expresses himself as believing that under proper guidance and encouragement there will be a steady and continuous increase of production, and the industry will have a marked effect on the prosperity of the country.

The people have for centuries been accustomed to the growing of cotton and have little to learn as to methods of cultivation. The problem lies in the improvement of the local varieties of cotton, and in the discovery of means by which the productiveness of the plants can be increased. Though the outlook in the Hausa States is distinctly hopeful, the prospects of cotton growing on a very large scale are much more promising in the fertile lands of the Provinces bordering on the Niger and Benue Rivers.

#### The San Francisco Exposition.

The Department of Commerce and Labor is advised by President Charles C. Moore, of the Panama-Pacific International Exposition, that the directors have fixed February 20, 1915, as the opening day. The mildness of California winters enables this world's fair at San Francisco to arrange for "its continuance from winter to winter, which will be of the utmost advantage to participating nations, States, and individuals."

**NEW SHIPS AND SHIPPING.****SCANDINAVIAN-AMERICAN LINE.**

[From Consul General E. D. Winslow, Copenhagen, Denmark.]

The United Steamship Co. of Copenhagen, which operates the Scandinavian-American Line, shows a prosperous year for 1911. The company has 119 ships in commission and the total gross income was about \$7,190,000, net profits \$1,340,000, while \$500,000 was written off for depreciation, and about \$400,000 set aside for reserve fund. Salaries took \$61,000. Stockholders received 6 per cent against 5 per cent in 1910; shares are quoted at 113. The large amount placed in reserve fund is deemed necessary by the directors to meet the demand for new ships of greater tonnage capacity.

The company will this year do a certain amount of its own insuring. The company has been somewhat surprised at the decline in third-class passenger traffic to both North and South American ports, but freight rates having advanced and tonnage offered being so heavy, the decreased revenue from third-class passengers was not felt.

---

**NEW BRITISH VESSEL FOR EASTERN TRADE.**

[From Consul Hunter Sharp, Belfast, Ireland.]

The *Demodocus* was launched here on March 26 for the China Mutual Steam Navigation Co. (Ltd.), of Liverpool, for trade with the Far East. It is 460 feet in length, with a gross tonnage of 6,800. The cargo space is divided into six holds, which are unobstructed by pillars and therefore capable of receiving cargo consignments of large dimensions. The propelling machinery consists of a set of triple-expansion engines, supplied with steam from two multitubular boilers, with an auxiliary boiler for the deck machinery.

---

**NEW ORLEANS AND PANAMA.**

[From Consul General Alban G. Snyder, Panama City.]

The United Fruit Co. proposes to establish about November 1, 1912, a triweekly service between New Orleans and Colon to take care of the increased passenger and freight business which has recently developed on this route. Two of these ships will be in the direct service to Colon and the other in the coastwise service, making in all nine ships engaged in New Orleans-Colon trade.

---

**EUROPE AND ARGENTINA.**

[From Consul General R. M. Bartleman, Buenos Aires.]

The Shipping Gazette reports that the Banque Française and the Banque Transatlantique are founding a new steamship company to take over from the Société d'Études de Navigation the concession for the South American mail traffic. The company will have \$3,000,000 capital and issue \$5,000,000 in bonds. The intention is to build a steamer of 19 knots for service between Bordeaux, Lisbon, Rio de Janeiro, and the River Plate. Others interested are the Société de Transports Maritimes and the Compagnie Générale Transatlantique.

It is reported that the Johnson Line has decided to build two more 4,000-ton steamers for the increasing traffic between Sweden and

Argentina. Operations were commenced by this line in 1904 with two vessels and at the beginning of this year there were six boats. The additional ships will permit establishing a fortnightly service.

#### NEW JAPANESE CARGO BOAT.

[From Consul George N. West, Kobe.]

A new cargo boat for the Nippon Yusen Kaisha was launched at the Kawasaki dockyard on March 5. It has been named the *Shizuoka Maru* and is to be placed on the American service. The dimensions are: Gross tonnage, 6,200; breadth molded, 50 feet; length, 400 feet; depth molded, 30 feet. Speed, 15 knots.

#### NEW CUBAN GUNBOATS.

[From American Minister A. M. Beaupré, Habana.]

There were launched on April 1 two Cuban gunboats, *Habana* and *Pinar del Rio*, which were constructed at the Krajewski-Pesant shipyards in Regla, across the bay from Habana. Each vessel has a displacement of 80 tons and is to be provided with one 3.7-centimeter cannon, located forward.

#### SHIPPING FACILITIES OF BANGKOK.

[From Vice Consul General Carl C. Hansen, Bangkok, Siam.]

The shipping activities of Bangkok have more than doubled during the past 10 years. During the fiscal year 1910-11, 927 ships, with a tonnage of 865,607, were cleared inward, as compared with 454 ships, tonnage 380,477, for the year 1900.

The nationality of the shipping has also undergone a change, as may be seen in the following table, which gives the inward shipping of the port of Bangkok for the years 1899 and 1910:

Nationality.	1899		1910	
	Number.	Tonnage.	Number.	Tonnage.
United States.....	Nil.	Nil.	Nil.	Nil.
British.....	301	271,622	94	133,406
German.....	78	75,529	404	415,393
Norwegian.....	22	15,837	205	216,868
All other countries.....	61	35,390	58	44,338
Total.....	462	397,718	822	810,007

#### Present Shipping Facilities.

*European line.*—The only Bangkok-European direct line of steamship service at present is maintained by the East Asiatic Co. (Ltd.), which provides monthly sailings of first-class cargo and passenger steamers between Bangkok and Copenhagen, these vessels calling also at London and other European ports. Three steamers of 2,100 to 2,250 registered tons net each are now in this run, the voyage taking from 55 to 60 days. Three new motor vessels of about 3,200 registered tons net each will be put on the route in a few months, and after May there will be sailings from Bangkok to Copenhagen every three weeks.

*Java-Siam line.*—The Royal Packet Steam Navigation Co. dispatches a first-class cargo and passenger steamer every four weeks from Bangkok to Batavia, Cheribon, Samarang, and Soerabaya direct.

*Saigon-Bangkok line.*—Fortnightly service between Bangkok and Saigon is provided by the Messageries Fluviales de Cochinchine. This service connects with steamers for Cochin China, Cambodia, and Laos, and with the mail steamers of the Messageries Maritimes.

*Bangkok-Singapore service.*—The Norddeutscher Lloyd keeps up a regular weekly service which connects with the Imperial German mail line at Singapore. Besides the above steamers there are a number of cargo vessels which also carry passengers.

*Coastwise steamship service.*—The Siam Steam Navigation Co. (Ltd.) has a fleet of eight steamers for the trade on the west coast of the Gulf of Siam. These carry passengers and cargo to and from the more important ports of the Malay Peninsula and Singapore. The Straits Steamship Co. (Ltd.) has recently started in competition with the above company for the west coast run. The east coast service is provided for by steamers of the East Asiatic Co. (Ltd.), which make weekly trips to Chantaboon and Krat.

*Bangkok-Hongkong run.*—The North German Lloyd has departures of steamers from Bangkok to Hongkong about every third day. The Chino-Siam Steam Navigation Co. runs chartered Norwegian steamers in competition with the North German Lloyd. This competition has reduced the freight from Bangkok to Hongkong to 23 cents Mexican per picul (133½ pounds), the former rates being 25 to 30 cents (\$1 Mexican in Far East now worth about \$0.46). The run from Bangkok to Hongkong takes 7 to 8 days. The Bangkok-Singapore rate has also been reduced to 17½ cents Mexican, formerly 22½ to 25 cents per picul. The voyage from Bangkok to Singapore takes 3 to 5 days.

The bulk of the cargoes from Bangkok consists of rice and teak wood, the shipments of rice for last fiscal year amounting to 1,172,556 tons and of teak wood to 89,165 tons. Up to March 31, 1911, no American merchant vessel has touched at Bangkok since 1893. Freight from Bangkok to the United States and vice versa is as a rule transhipped at Hongkong and Singapore.

### **SOUTH MANCHURIA RAILWAY RETURNS.**

[From Consul Albert W. Pontius, Dalny, Manchuria.]

The tenth semiannual report of the South Manchuria Railway Co., covering April–September, 1911, shows profits of \$127,432. The total assets are now \$129,256,035, the cost value of the railway and enterprises being \$52,012,335; expenditures on harbor, buildings, land, and mines now reach \$14,630,924; \$2,609,642 has been spent on constructing and laying out shops, while \$2,162,034 represents the outlay of the electric-light department. The gas and electric systems are returning steady profits. The stringent measures adopted for plague prevention cost the company an extra \$70,880. The disappearance of the epidemic early in the term occasioned a healthy revival in the shipment of produce over the railway's main line, receipts being \$218,236 greater than in the same period of 1910.

[The company's complete report, in English, showing construction work and detailed balance sheet will be loaned on application to the Bureau of Manufactures, Washington, D. C.]

**HARBOR FACILITIES AT CURAÇAO.**

[From Consul General S. Listoe, Rotterdam, Netherlands; see also Daily Consular and Trade Reports for Apr. 3, 1912.]

It is generally known that the Dutch colonies in the West Indies have for several years undergone difficult economical conditions. In view of this, the Dutch Government in the spring of 1911 appointed a commission to investigate and endeavor to find a means of bettering conditions in the colonies, so as to place them on a more profitable financial basis. After this commission had interviewed former colonial officials and residents, it sent three representatives to the colonies to make a personal investigation.

The committee, consisting of Dr. Bos, chairman, Dr. S. de Monchy, secretary, and Mr. van Vollenhoven, former manager of the large firm Deli Mij, in the East Indies, made a careful investigation and published its findings in a complete and lucid report; in consequence the States General voted \$48,800 for improving and widening St. Anna Bay Canal at Curaçao. Of this amount \$20,000 is proposed for removing rocks, the balance to be used for purchasing a sand-sucking machine which, with the dredging machine already on hand, will insure the navigability of the canal.

St. Anna Bay, which forms the entrance to the 33-foot deep harbor Schattegat, near Willemstad, but which is in reality used largely as a harbor, is 1,200 by 50 yards and 30 feet deep. It is proposed to widen this canal to 70 yards and deepen it to 36 feet. The Colonial Department had wished to make its breadth 90 yards, but finally decided that this could readily be done later, should occasion arise, and with no more expense than if done at present.

The Government has for several months had an application from a syndicate for a concession to use Schattegat Harbor, with a pledge of \$2,800,000 for improvements, of which the Government should pay \$600,000 in installments covering 10 years. The syndicate stipulates that a 36-foot depth be maintained in the canal, and that the Government deepen it should this later appear necessary, and that no vessels should be allowed to use the canal as a harbor.

The Government some time ago requested the Commissie van Handelspolitiek to report its view of the commercial and maritime prospects for Dutch enterprise as a result of opening the Panama Canal. Until this report appears no final action will be taken on the syndicate's application. It is not probable, however, that the Government will favor this concession, the \$600,000 appropriation for which must receive the approval of the States General.

The colonies are strongly opposed to the concession, particularly the local chamber of commerce, the Colonial Council, and many private business men directly affected, all of whom maintain that the colonies both can and desire to look after their mercantile and maritime interests themselves.

The Government must also consider that, in case the concession is granted, all firms and individuals having interests along St. Anna Bay Canal, such as wharves, docks, warehouses, etc., must be reimbursed for their losses. On the other hand, should the Government refuse the concession, it must first be furnished ample assurance and guaranty that the colonies are in position to undertake the responsibility of improving the harbor themselves and carrying out the proposed plans.

**ONTARIO NOTES.**

[From Consul Fred C. Slater, Sarnia, Canada.]

**Bridge Renewals—Spraying Fruit Trees.**

Serious damage has been done in this section by floods, caused by melting of heavy snows. Many bridges along the various streams have been destroyed, replacing which will cost many thousand dollars.

In this southernmost section of Ontario interest is growing yearly in the fruit industry, and with it an ever-increasing realization of the advantages of scientific spraying and pruning of trees. It is said "where one farmer treated his orchard against disease and pests a few years ago there were at least 10 last year, and this spring will find the majority engaged in scientific spraying. Judicious pruning has also been a contributing factor." This system of orcharding has brought the fruit, particularly the apple of this locality, to a high standard and reputation in the market.

**New Industries—Agricultural Experimentation.**

Many towns and cities in this locality are bidding for industries, and to that end offer bonuses and other concessions to most factories that show stability. On April 8 Chatham voted 1,500 to 80 in favor of granting a bonus to an American company for locating a factory to make gas and gasoline engines and supplies. The company agrees to begin with at least 50 employees, with not less than \$30,000 in wages the first year and not less than \$60,000 thereafter.

The Ontario Government has provided an agricultural expert to have charge of the farms in connection with its nine institutions, including three hospitals for the insane, and cultivating in all something over 4,000 acres. At some of the places plots will be reserved for experimental purposes. It is hoped not only to raise products for the upkeep of these institutions but to enrich the cause of scientific farming as well.

**SOUTH AFRICAN NOTES.**

[From British and South African Export Gazette.]

*Leather goods* of all kinds to the value of \$7,650,000 were imported into the Union of South Africa in 1911, against \$7,600,000 in 1910.

*The coffee industry* in British East Africa is in a very flourishing condition, the returns in many cases being as high as \$100 per acre.

*Coal mining.*—The first fully equipped anthracite mine in the Transvaal was recently opened by the Mary Anthracite Colliery Co. near Ermelo.

*Basutoland.*—The advance in the trade requirements of Basutoland is indicated by the fact that the population now numbers about 402,500, an increase of over 54,700 since 1904.

*Window glass* to the value of \$1,090,000 and plate glass amounting to \$1,235,000 was imported into British South Africa last year. The supply is practically a British monopoly.

*Farm machinery.*—Reports from Hanover, Cape Province, state that irrigation is working wonders in that part of the Karoo, and steam plows and other agricultural machinery are in increasing demand.

*Electrical supplies.*—The Kalk Bay municipality is to undertake the supply of electricity to Wynberg, the latter furnishing \$75,000 to \$100,000 toward the cost. Material and fittings will be required for making the necessary plant extensions.

*Rag shipments* from Japan to the United States were formerly extensive, but Consul Geo. N. West says they have entirely ceased from Kobe. With the large increase in Japanese newspapers all rags obtainable are needed for local paper mills.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8658. Cotton oil in cans.**—An American consular officer in the Levant reports that there is a strong demand in his district for American cotton oil in cans containing 2 to 5 pounds. Names of agents who will sell cotton oil thus put up may be had on application to the Bureau of Manufactures.
- No. 8659. Fireless cookers.**—Several firms in the Near East have informed an American consular officer that they would like to secure agencies for American manufacturers of fireless cookers. The consular officer states there is a growing demand in his district for this line of goods, and American firms would do well to take advantage of the opportunity offered.
- No. 8660. Shoes.**—An American consular officer in Asia Minor reports that a strong house in his district is planning to open stores for the exclusive sale of American footwear. American manufacturers in this line should get in touch with this firm as soon as possible.
- No. 8661. Dress trimmings, millinery, ribbons, and knitted wear.**—A manufacturer's agent in the United Kingdom is seeking to obtain agencies for American manufacturers of dress trimmings, ribbons, millinery novelties, and knitted wear. He informs an American consular officer that he has had nine years' experience with the goods which he desires to handle, and he offers to supply references to anyone interested.
- No. 8662. Sugar machinery.**—An American diplomatic officer reports that the progress of the sugar industry in a Central American country might result in the sale of some sugar machinery if catalogues, price lists, etc., were sent to certain persons whose names he furnishes.
- No. 8663. Gunstocks.**—In response to inquiries from the United States, an American consular officer reports that an engineer and government contractor in his district is authority for the statement that a concession is open for a large number of gunstocks for a certain foreign government. This person desires to get in touch with some American manufacturer of this article. As the time for receiving bids is short, communications should be addressed direct to the inquirer with the least possible delay, lowest possible wholesale prices, *c. i. f.*, certain city should be stated, and also the time required to deliver a large order.
- No. 8664. Children's clothing.**—A wholesale and retail firm in France, selling men's, boys', and children's clothing, would like to receive from American manufacturers catalogues and price lists of children's "rompers" and play clothes, with a view to acting as exclusive agent in that district for such manufacturers. The American consul who submitted the report states that correspondence may be in French or English.
- No. 8665. Coal depositories and wharf enlargement.**—An American consul in a Latin-American country reports that an official is taking steps to have a concession granted by the Government for the establishment of coal depositories and the enlargement of a certain wharf. He has expressed a desire to interest American capitalists in this proposition, with a view to turning over the concession to them. Further particulars contained in the report can be obtained by interested persons upon application to the Bureau of Manufactures.
- No. 8666. Government loan.**—A telegram has been received from an American consular officer stating that a foreign government has decided to negotiate a loan for the reconstruction of the burnt section of a certain city in the country. The amount of the loan will be \$1,500,000.
- No. 8667. Oilskin capes and mackintosh overall leggings.**—The American consulate general at Cape Town, South Africa, has forwarded a notice regarding tenders for oilskin capes and mackintosh overall leggings for the Department of Posts and Telegraphs, Cape Town. Copy of this notice can be obtained from the Bureau of Manufactures. Bids must be received by June 5. Samples of both of these articles have also been dispatched, and when received will be loaned to interested persons or firms by the Bureau of Manufactures.

## PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

- No. 604. Construction of public buildings.**—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., for the construction (including plumbing, gas piping, heating apparatus, electric conduits and wiring, and lighting fixtures) of the following buildings: (1) Until May 21 for post office at Alameda, Cal. The building will be one story and basement, and has a ground area of approximately 6,100 square feet; fireproof construction throughout except roof; stone facing; tile and tin roof. (2) until May 24 for post office at Bonham, Tex. Building is to be nonfireproof; one story and basement, of approximately 4,230 square feet ground area; brick faced with stone trimming. (3) Until May 25 for post office at West Point, Miss. Building is to be one story and basement, of approximately 4,160 square feet ground area, brick faced with stone and terra-cotta trimming and tile roof. (4) Until May 27 for post office at Westfield, Mass. Building will be one story and basement, has a ground area of approximately 4,350 square feet; fireproof construction except roof; stone and granite facings. Drawings and specifications of these buildings may be obtained from the custodians of sites at the various points, or of the Supervising Architect.
- No. 605. Coal.**—Sealed proposals for furnishing coal will be received at the office of the Lighthouse Inspector, Third District, Tompkinsville, N. Y., until May 3, 1912. Blank proposals, specifications, and other information may be had upon application to that office.
- No. 606. Pile and reenforced concrete pier.**—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until May 11, 1912, for a pile and reenforced concrete pier at the navy yard, Philadelphia, Pa. Plans and specifications can be obtained on application to the bureau or to the commandant of the navy yard named.
- No. 607. Artesian well.**—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until May 22, 1912, for drilling an artesian well in the United States post office, Minneapolis, Minn., in accordance with specification, copies of which may be had at the office of the superintendent of building at Minneapolis, Minn., or at the office of the Supervising Architect.
- No. 608. Motor survey launch.**—Sealed proposals for constructing the motor survey launch *Captain J. J. Meyer* will be received at the United States engineer office, Jacksonville, Fla., until May 15, 1912. Information on application to J. R. Slatery, Captain, Engineers.
- No. 609. Electric passenger elevators.**—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until May 28, 1912, for an electric passenger elevator in the United States post office and courthouse, Shreveport, La., and for an electric passenger elevator in the post office, Lander, Wyo., in accordance with specifications and drawings, copies of which may be obtained at the office of the Supervising Architect.
- No. 610. Supplies for field medical service.**—Sealed proposals, in duplicate, will be received at the field medical supply depot, United States Army, 21 M Street N.E., Washington, D. C., until May 15, 1912, for furnishing and delivering the following articles: 7,500 blankets, gray, 66 by 88 inches, to weigh not less than 5 pounds each; 4,000 suits pajamas, outing flannel, fast colors, sizes 36, 38, and 40; 6,000 pillowcases, cotton, completed pillowcase to measure 17½ by 29 inches; 6,300 sheets, cotton, warp 88, filling 82, completed sheet to measure 50 by 86 inches; 2,000 rolls muslin, to be made up in same manner as standard sample; 1,000 cases, canvas, for bedding; 3,000 pouches, hospital corps, canvas, empty; 500 yards muslin; 150 cases, operating, small; 400 pounds absorbent cotton; 2,000 boxes, packing. Bids will also be received on chests made either of basswood, iron bound, or of three-ply veneer, fiber covered, samples of which may be seen at the depot. Further particulars can be obtained of Maj. C. R. Darnall, Medical Corps, United States Army, in charge of depot. (Circular No. 112.)

**NOTES FROM NEW BRUNSWICK.**

[From Consul Theodosius Botkin, Campbellton, Canada.]

**Purchases of Automobiles.**

Several additional automobiles have recently been ordered and a number of others are being negotiated for by people in this community. Altogether at least nine new cars will be added to the number in evidence last year. Four will be direct importations from American manufactories; the others of American origin from branch establishments in Ontario, where the parts are assembled and the cars finished. There is also much discussion of a proposition to establish a local garage, with four or five touring cars, to accommodate the public and especially summer visitors to Restigouche camping and fishing resorts.

**Coal Imports.**

This community consumes annually 3,000 tons (six cargoes) of Pennsylvania anthracite, imported direct from New York. The town requires 500 tons for its power plant and town offices. The expenses per ton are: Freight, \$1.50; insurance, 10 cents; wharfage, 5 cents; discharging, 20 cents; and drayage, 20 cents; total, \$2.05. The coal now retails at \$8 and \$8.25, according to grade, delivered. The consumption of soft coal is very large. It all comes from Nova Scotia mines.

**Pulp-Wood Shipments.**

Certain Maine paper mills have contracted for 50,000 cords of rossed pulp wood, to be delivered on board at Dalhousie and another point, and have chartered two steamers for that service. The first of the shipments is to be made early in May. The average cargo for steamer is 2,200 cords, and 10 such cargoes were shipped from Dalhousie to American mills in 1911.

**Caution Against Potato Imports.**

People who have been hoping to obtain new varieties of seed potatoes from the importations from Scotland and northern Europe, and therefore adaptable to this climate, are greatly disappointed by the report from Ottawa that the Dominion botanist at the Government's experimental farm has given warning of a serious canker disease among the importations from Great Britain and continental Europe.

It had been known that a potato canker had found its way into Newfoundland with potatoes imported from Europe, but no such disease had yet appeared in Canada. \* \* \* It is one of the most serious diseases known, affecting not only the farm lands on which potatoes are grown, but also decidedly injurious to the health of the consumers of affected potatoes. Boiling does not destroy the injurious properties. \* \* \* The disease is characterized by nобular excrescences, which are often larger than the tuber itself. These cankers affect the eyes of potatoes and are very small in the early stages. Any tubers found with smaller or larger outgrowth rising from where the eyes are situated should under no consideration be used for seed or table purposes.

Warning is given to be exceedingly careful in using potatoes that may have been imported from Great Britain or the continent of Europe, and to destroy all suspicious-looking potatoes by fire and not throw them on the ground, for the disease if present will establish itself permanently in the soil.

## FOREIGN SUGAR INDUSTRY.

### PORTUGUESE EAST AFRICA.

[From Consul George A. Chamberlain, Lourenco Marques.]

The director of agriculture for the Province of Mozambique has returned from a tour through Portuguese East Africa and has published interesting information in regard to the sugar industry.

He finds that the present total output for the seven mills in operation amounts to 27,700 tons per annum. Besides these seven estates, three more are in process of development, two of which, the Movene and Incomati concerns, are in the district of Lourenco Marquez, and consequently within easy touch of that port as well as of the railway into the Transvaal. This is an important consideration, as the Union of South Africa is bound by the Mozambique treaty to receive products of the Portuguese colony free of duty for seven years to come.

The native labor employed in the production of sugar in Portuguese East Africa is estimated at 11,000 men during harvest, which number is reduced by about half at other times. The vagaries of tropical climate are illustrated by the fact that harvesting on the Zambezi occurs from May to December, while at Inhambane, a few hundred miles south, it loses a month at each end. However, the shorter season produces more sugar per man per acre. The output per man is estimated in the different districts, from south to north, as follows: Inhambane, 3 tons; Inhanguvo, 3 tons; Lusitania, 2.8 tons; Zambesia, 2.4 tons. These figures are found to be unjustifiably low, as in Natal, where the rugged nature of the country prohibits the use of steam plows, a coolie averages 4 tons.

#### Area—Methods—Varieties of Cane.

The total area under cane in the Mozambique Province is 30,000 acres, but not all of this was cropped this season. The general practice in cultivation is to steam plow and ridge, the furrows being afterwards straightened by hand. This suggests an opening for the

American steam harrow as a labor-saving device, labor being an item of great and increasing importance.

The method of planting is to lay the cane sections flat, end to end, in the trench, and cover them to the depth of 2 inches. In cases where the land is not plowed at all the plants are stuck upright or with a slight slant, in the soil, with the idea of protection against the borer, which is supposed to feed only on the eyes under ground. This theory, however, has not been altogether sustained. The director of agriculture sees a great need for a steam hoe, taking three rows of cane at a time.

There are between 30 and 40 varieties of cane under cultivation on the various plantations, but the Yuba predominates and has been known to attain to 12 ratoonings on the Zambezi and is still producing. This cane is adapted to free and open soils and to land that can not be irrigated, but on heavy alluvium the more luscious canes are preferred and give larger returns in sugar. Most of the Province's sugar land is heavier than that of Natal, is capable of being irrigated, and can support heavier canes.

**Yield and Cost—Labor a Serious Problem.**

The yield of cane per acre at Inhambane is figured at from 33 to 38 tons. In 1910 it averaged 40 tons, 10,007 tons producing 1 metric ton (2,204.6 pounds) of sugar, which works out at 4 tons of sugar to the acre. The Inhambane estate takes high rank in the Province, its records surpassing those of any other sugar property in the colony. The cost of growing and manufacturing a metric ton of sugar is \$26.75 to \$29.20. As one goes north the production per acre decreases and the cost increases to a maximum of \$43.80 per metric ton of sugar produced.

Strange to say, the limiting factor in the production of sugar in this Province is labor, on account of the fact that this colony supplies monthly thousands of natives to the Rand mines. This question of labor is rapidly becoming critical, and as the local government is bound, through the Mozambique treaty, not to restrict for seven years Transvaal's recruiting in Portuguese territory, the planters and industrialists in the Province can not see any chance of immediate relief, save possibly through the importation of coolie labor from India.

[A list of East African sugar estates, of possible interest to American manufacturers of sugar machinery, steam plows, narrow-gauge railways and rolling stock, etc., transmitted by Consul Chamberlain, may be secured from the Bureau of Manufactures.]

---

**MEXICO.**

[From Consul Wilbert L. Bonney, San Luis Potosi.]

It is generally agreed among planters and farmers in the agricultural portion of eastern San Luis Potosi that sugar cane is the most profitable staple crop that can be put in, and the acreage is accordingly increasing as rapidly as labor and capital can be secured; but the extension is slow, as clearing the land is an expensive process, and facilities for handling the cane must be provided, often out of the profits of the growing crop. Around the American colony of San Dieguito there are about 5,000 acres of cane, and it is estimated that the area is increasing about 10 per cent each year.

**Clearing the Land.**

The cost of clearing is an uncertain but important factor, usually exceeding the first cost of the land. In the cane section sometimes 450 palm trees occur to the acre. Many of them are 60 feet high and 18 inches in diameter at the base. These palms, said to be suitable for pulp manufacture, are wasted, with the exception of a few used for fences and fuel. They are cut down at a cost of \$1.50 per hundred, but the expense of dragging them off the land and piling is two or three times greater. It requires several years to dry them for burning. If a large area is to be cleared, a traction engine is often used. When it can be done, it is undoubtedly better to pull the trees out than to cut them, as the stumps will not rot for several years and the yield in cane will more than pay the extra expense. Of course, the small farmer can not always spare the time and capital, and by planting stumpage land he can get in more cane and secure quicker returns, but the stumps interfere with plowing and planting, besides taking room. It is estimated that the gross returns from land with stumps removed will be 50 per cent greater than from stumpage land.

With a traction engine, pulling sometimes six trees at one draw, 600 trees can be uprooted in 10 hours at a cost of about \$5 for the day's work. The work of dragging them away and piling is estimated at \$10 for 600 trees, making a total of about \$10 per acre for clearing off a thick growth of palms. Plowing and planting is estimated at \$15 per acre, so that the cost of preparing palm land and starting a cane crop may be roughly placed at \$25 per acre. If done on a small scale, the cost might greatly exceed these figures, while large planters, with machinery and system, claim they can do the work for less. When the work is done with mules the trees must be cut into several pieces after felling. Dragging the trees over the land fills up the cavities made by uprooting. The best cane soil is that which produces heavy bamboo and a thick growth of palms. If a traction engine is used in clearing, it becomes a valuable asset later for running a cane mill, pumping, and hauling.

**Yield per Acre—Cost of Land.**

The sugar-cane industry as conducted in this section is suited to small-scale production as well as to large sugar-plantation methods, as there is an excellent local market for the raw sugar molded into cones, which sell at times for higher prices than can be obtained for refined sugar. Mills for grinding are purchased from the foundry in San Luis Potosi. A mill with a capacity of 5 tons per day can be purchased for \$1,000, without power, and smaller mills for proportionately less.

One tract of 15 acres of new land, without irrigation or fertilizer, last year yielded the high average of 42 tons of Mexican cane to the acre. The small planter without a sugar mill can sell his cane to neighboring mills for about \$2.50 per ton, if he is located favorably with regard to transportation. One small planter this year is said to have taken 4,800 pounds of raw sugar per acre, selling it at \$12.50 per carga of 400 pounds, realizing \$150 gross per acre from his small tract. Another planter states that he realized \$7 per ton of cane, which at 30 tons to the acre, would represent a gross return of \$210 per acre. Each man's experience differs with the methods used,

the scale on which operations are conducted, the exact nature of his land, and the accidents inseparable from pioneering.

Land of first quality in the section referred to, within 5 miles of the railroad, can not be had for less than \$15 per acre, and closer in for \$25 to \$40 per acre. Land that is classed as prairie, with small brush and tough bunch and other native grasses, ranges from \$12.50 to \$20 according to location. Such land is not so good for cane; it may produce two or three satisfactory crops, and then the cane gradually deteriorates. Land that overflows, where the water runs off with the receding streams, is the best for cane, as such land is almost always covered with palms and bamboo, and the annual inundation of the rainy season deposits the silt which returns what the cane takes away. Such land will produce heavily and indefinitely without fertilizer or irrigation.

#### **Profits and Production Charges.**

The small planters give little attention to net figures and usually allow nothing for their own labor in stating their returns. It is probable, however, that both their gross and net returns per acre exceed those of the large producers. A small tract selected for special adaptability to cane growing, with the personal supervision of the owner, can be made to show a gross return of upward of \$200 per acre, while large planters operating a numerous force of native help over varying lands do not claim a gross return greatly exceeding \$140 per acre.

One of the largest planters of the district, who keeps full cost accounts, furnishes the following data for the grinding of 1911: Cane cultivated, 1,288 acres; average yield per acre, 19.96 tons; first, second, and third year stubble yielded 25 to 30 tons per acre. The low yields were from stubble 5 to 12 years old. An experiment with D74 cane yielded 35 to 40 tons per acre. Mexican cane was produced at an average cost of \$1.21 per ton. Grinding was in progress from January 1 to June 1, the mill extraction being about 65 per cent. An average of 1 ton of sugar was produced from 10.07 tons of cane. The sugar for the most part, was sold as fast as produced, and therefore the planter did not receive the benefit of the rise in prices occurring the latter part of the year. The granulated sugar was sold delivered at nearest railroad station, for 3.38 to 3.86 cents per pound. The seconds were sold for 2.47 cents per pound. From the same cane there were produced about 152,000 liters (liter=1.0567 quarts) of alcohol, the selling price being 13 cents per liter. The cost of all sugars from planting to delivery, not allowing interest on capital, is figured at 1.095 cents per pound. The average mixed-juice analysis for the season was as follows: Brix 18.2°, Beaumé 10.1°, sucrose 15.7 per cent, purity 86°.

#### **Cultural Methods.**

The development of the cane lands depends much upon the improvement of transportation, which is a controlling factor in the outlying sections. Small custom mills located among small planters would no doubt find sufficient business, since in the present stage of the industry grinding takes time which might be given to clearing, cultivating, and extending operations. The methods of planting and cultivating have not been systematized and consist chiefly of traditional native methods modified by the American planters to suit their own practice.

The latter have not yet had time to experiment; their anxiety has been to get their land planted. Another reason for adopting temporary methods is that the land is so cheap as compared with the product that there has been no inducement to undertake close cultivation. (For further data regarding the cane district and results of 1910 grinding, see Daily Consular and Trade Reports of June 16, 1911.)

### GERMANY.

[From Consul Alfred W. Donegan, Magdeburg.]

The exports of sugar from the German Empire were unusually small during the first two months of the present calendar year. This was doubtless due, in part, to the fact that England, customarily a large purchaser of German sugar, imported little sugar from Germany during January and February. [British official statistics show imports into the United Kingdom from Germany of 7,336,947 English hundredweight of refined sugar and sugar candy and 7,838,251 hundredweight of unrefined sugar, valued respectively at \$25,861,635 and \$20,863,880, in the calendar year 1911, each total being an advance over the corresponding figures for 1910.—B. of M.] It is said that English importers are awaiting a decision regarding the proposed increase in Russia's sugar exports under the Brussels convention.

The marked falling off in German shipments of sugar during the current campaign is shown by the following table of exports for the six months, September, 1911, to February, 1912, and of the corresponding periods during the past 10 years, given in hundredweight of 110.23 pounds and representing raw sugar quantities:

Campaign year.	Exports.	Excess over 1911-12.	Campaign year.	Exports.	Excess over 1911-12.
	<i>Cwt.</i>	<i>Cwt.</i>		<i>Cwt.</i>	<i>Cwt.</i>
1911-12.....	2,748,800		1906-7.....	12,481,700	9,732,900
1910-11.....	9,788,800	7,040,000	1905-6.....	10,396,400	7,647,600
1909-10.....	9,022,300	6,273,500	1904-5.....	7,561,900	4,813,100
1908-9.....	7,460,100	4,711,300	1903-4.....	8,179,000	5,430,200
1907-8.....	10,066,100	7,317,300	1902-3.....	9,141,900	6,393,100

The total exports during the season 1911-12 were 5,935,900 hundredweight less than the average for the past 10 seasons. The enormous decrease is in large part ascribable to the poor crop of last season, which was scarcely more than large enough to supply the demand for local consumption.

[From Consul General A. M. Thackara, Berlin.]

### Invert Sugar in Germany.

There are no data available which would indicate exactly the production of invert sugar, but according to official statistics there were 2,323 metric tons (2,204.6 pounds each) of liquid refined sugar inclusive of invert sugar sirup manufactured in Germany in the year ended August 31, 1911, as against 2,619 metric tons during the preceding campaign year.

Invert sugar, which was first manufactured in Germany for commercial purposes about 20 years ago, is used for the improvement of wine, for the production of wine according to Petiot's process, in the

preparation of champagne, liqueurs, fruit preserves, and fruit sirup, and especially as a substitute for honey.

To produce invert sugar a solution made by dissolving very pure cane or beet sugar is heated to the boiling point in a closed receptacle and then passed into another closed vessel by means of an injector operated by carbonic acid with a pressure of at least four atmospheres. The second receptacle should contain carbonic acid of 0.25 to 0.5 atmospheric pressure. The sugar solution dissipated to a vapor is inverted by the carbonic acid. In this process formic acid and mineral acids can also be used instead of carbonic acid.

#### Exports—Uses of Glucose.

The inversion produces a colorless sirup that is sweeter than cane sugar, whose taste is more pleasant than that of rock candy, and which does not crystallize. Only when exposed to light does a portion of the dextrose separate itself from the rest of the solution. It is impossible to distinguish invert sugar from pure honey without making tests.

Statistics of the import and export trade do not differentiate invert sugar, but it would probably be classed under the following head: "Starch sugar (grape sugar, glucose, dextrose, maltose), fruit sugar (levulose), and other kinds of fermentable sugar not otherwise mentioned, crystallized or in the form of sirup; also dextrin sirup and burned sugar of all kinds." The total German exports under this classification during the last two calendar years, valued respectively at \$190,638 and \$214,438, were as follows in metric tons:

	1910	1911
Total exports.....	2,840	2,771
To Great Britain.....	780	840
To Switzerland.....	1,438	1,417

No statistics are available giving the amount of invert sugar used as an adulterant in honey nor the amount of glucose employed as an adulterant in candies, etc. However, I am informed that glucose is used for the preparation of wine; as a substitute for malt in breweries; as a substitute for honey in bakeries and biscuit factories; to adulterate sirups and honey; to manufacture artificial honey; in mustard and tobacco factories; in the manufacture of liqueurs, bonbons, fruit sirup, conserved fruits, etc.

[From Consul General Robert P. Skitner, Hamburg.]

#### Invert Sugar as a Substitute for Honey.

Invert sugar is an amorphous compound ( $C_6H_{12}O_6 + C_6H_{12}O_6$ ) consisting of equal parts of dextrose and levulose, occurring in nature as a normal constituent of honey and certain fruits, produced by the action of ferments or by heating sugar cane with dilute acids.

Its principal use is as an adulterant of or substitute for honey, and according to the statements of the most important manufacturers of sugar goods in Germany its production is quite limited. To give to invert sugar the characteristic aroma of honey, a small quantity of natural bees' honey is added, or the product is exposed to the aroma of linden or rape blossoms. It is said that artificial honey of this kind can not be distinguished from the natural product. No men-

tion of this particular kind of sugar appears in official export statistics, and it is impossible to ascertain the amount of domestic consumption.

#### Methods of Manufacture—Prices.

A recommended method of manufacture has been invented by E. Besemfelder, according to which a solution of saccharine of about 70° Brix and of a purity quotient of 98° or 99° is inverted by means of 1.5 per cent of sulphate of aluminum while heated to a temperature of 85° during three hours. Thereupon a solution of aluminate of barium or strontium, which should be as concentrated as possible, is added until it is neutralized, and the whole is finally heated in a weak current of carbonic acid of a temperature of 100°. Through the latter portion of the process the solution is freed from all salts and needs only to be filtered and steamed in vacuum.

According to Swedish patent No. 14979, issued in 1902, it was claimed that a pure and clear sirup of good taste could be obtained from molasses. The sugar mass after having been acidulated is added to a more or less invert-sugar solution previously prepared. The invert-sugar solution should be made of sugar having a very low content of ash and which has been manufactured from the original sugar mass.

Raw invert sugar can be fermented directly. It is stated that invert sugar is used in the manufacture of still wine, champagne, and liqueurs. The price of this sugar to-day (Feb. 20) is 43.50 marks per 100 kilos (\$10.35 per 220.46 pounds) in barrels of 300 kilos f. o. b. Hamburg.

---

### FRENCH OLIVE CROP.

[From Consul General A. Gaulin, Marseille.]

While fairly abundant in certain districts, the French olive crop for the year 1911-12 appears to be of only average size. In the Var the production is estimated at 18,950 metric tons, as compared with 22,000 tons for the previous year. There are no available statistics for the other regions. The total crop in 1910 was 71,084 tons, as compared with 48,582 tons in 1909 and 125,212 tons in 1908.

A ministerial decree promulgated on March 24 fixes at 18 francs per hectare, or \$1.40 per acre, the rate of bounties that will be distributed to the French olive growers for the year 1911. As stated in a previous report [Daily Consular and Trade Reports, for Dec. 30, 1911] the minimum number of trees required per hectare varies according to the cultural methods prevailing in the different districts.

---

### COPRA OF AMERICAN SAMOA.

[From J. L. Dwyer, Secretary of Native Affairs, Pago Pago.]

The bids for the copra crop of Tutuila, the South Sea island possession of the United States, were opened on March 1, 1912. A German firm of Apia, Samoa, bid \$77 per ton of 2,240 pounds, while several other firms bid \$84 to \$85. The tender of the Pacific Oil and Lead Works, of San Francisco, Cal., at \$93.75 was accepted. The area of Tutuila (American Samoa) is 54 square miles, and copra is the principal crop, the exports of which in the fiscal year 1911 amounted to \$51,049 worth to Japan and \$99,040 worth to the United States.

## CONSTRUCTION WORK ABROAD.

## CANADA.

(From Consul Abraham E. Smith, Victoria.)

**Rapid Development on Vancouver Island.**

The remarkable progress made on Vancouver Island during the past five years continues in 1912.

Bank clearings in Victoria for the first three months aggregated \$37,759,723, compared with \$31,350,917 for the first quarter last year. Building permits aggregated \$2,852,725, compared with \$614,340 in January, February, and March, 1911. Dominion statistics for 1911 show that the largest actual building gain in Canada (\$1,458,130) is credited to Victoria, of which \$1,000,000 was for enlarging Parliament buildings. Victoria's municipal estimated revenue for 1912 is \$1,633,410, and estimated expenditure \$1,625,460. Customs revenue for the fiscal year ended March 31, 1912, reach \$1,984,893, an increase of \$449,600 over the previous year. Construction items of interest follow:

*Victoria.*—A contract just signed for a new \$150,000 building for the Northern Crown Bank covers an 8-story reinforced concrete structure.

Bids will soon be asked for the new \$100,000 First Presbyterian Church, to seat 1,200, with schoolhouse seating 500.

Plans are being drawn for an amusement house to be erected for the National Vaudeville Co., which controls theaters in Vancouver, Nanaimo, and New Westminster.

Andrew Sheret is erecting a \$43,000 three-story brick block of 6 stores and 48 rooms.

*Nanaimo.*—The Western Fuel Co., owned by San Francisco parties, is constructing a sea wall and water front road here, to cost nearly \$1,000,000, to provide increased wharfage for the growing business of the company. It is stated that the total receipts of the city for the current year amount to just under \$100,000, all to be expended on civic improvements.

*Wellington.*—The Pacific Coast Collieries Co., owned by New York capitalists, is installing a new plant at South Wellington and Suquamish, which will increase its daily production from about 800 tons to 3,000 tons.

*Comox.*—The Canadian Collieries announce that \$2,000,000 will be spent in improvements. Steam will be replaced by electricity. A hydroelectric plant to develop power will be built at Putledge River, to cost \$750,000, and 6½ miles of railway will be built to the new No. 8 shaft being opened. Clarence Hoard, an American engineer, has contract for railroad work. The enlargement will give employment to 700 additional miners.

*Duncan.*—A new \$15,000 railroad depot is being erected and new freight sheds are to be built. The Dominion Government is also erecting a \$50,000 building for post office, customhouse, and Indian office. Another station on E. & N. Railway is to be erected a few miles south to be called Malahat.

*Quatsino.*—The American town builder, Col. Montgomery, the original locator of Fort Worth, Tex., has bought a large tract of land here and proposes to lay out a town site.

*American engineers.*—The provincial government has engaged, for 5 years, R. H. Thomson, for 22 years city engineer at Seattle and later harbor engineer there, to superintend laying out the great Strathcona Park of 248 square miles on this island, at \$15,000 salary, while the mayor of Victoria has offered A. H. Dimock, present city engineer of Seattle, \$7,500 a year if he will accept the post of city engineer.

(From Consul General John G. Foster, Ottawa.)

**Construction of Railway Car Shops.**

Sir William Mackenzie, president of the Canadian Northern Railway, has announced that car shops are to be built in the vicinity of Ottawa. A large acreage of land has been secured for yards and shops, but no definite information has yet been given as to the size of the proposed shops.

[From Consul Theodosius Botkin, Campbellton, New Brunswick.]

**New Business Structures, Hospital, Opera House, etc.**

There is a promise of much building operations at Campbellton during this spring and summer. A number of additional brick and concrete business structures are contemplated, and a fine new hospital and numerous dwellings are planned. Great local interest has been aroused in the current report that a company is planning to erect a large fireproof opera house, the building alone to cost \$40,000 to \$50,000, on a site facing 100 feet on the principal street.

[From Consul Fred C. Slater, Sarnia.]

**Winter Harbor Plans Recalled.**

The press announces that the project of building a winter harbor on Sarnia Bay, Ontario, has been recalled and that the harbor plans and specifications have been ordered returned to the department at Ottawa and the receiving of tenders for the proposed work canceled.

---

**CHILE.**

[From Consul Alfred A. Winalow, Valparaiso.]

**College, Station, Car Shops, and Presidential Palace.**

Sr. Arnaldo Grindlerlach has been awarded the contract to reconstruct the Santiago Agricultural College at a cost of \$20,000 (United States gold).

Appropriations have been made for constructing a railway station and car shops at Santiago to cost \$91,250 and \$57,717, respectively.

It is expected work will begin early in 1913 on the proposed new President's Palace at Santiago, Chile, to cost about \$1,100,000. The plans are well under way.

---

**GERMANY.**

[From Consul Herman L. Spahr, Breslau.]

**Construction Work in Breslau District.**

*Hospital.*—The erection of a county hospital, to be opened in the summer of 1913, will be begun soon at Koschmin, Posen. The cost of building is estimated at \$26,000. Address: Kreisausschuss, Koschmin, Posen.

*Schools.*—An eight-grade schoolhouse will be built this spring at Hermsdorf unter Kynast. Address: Schulvorstand, Hermsdorf u/K, Silesia. At Eichenau, Oberschlesien, a six-grade school is projected. Address: Schuldeputation, Eichenau, O/S.

*Linen mill.*—Mr. Paul Trobitz, of Schmoelin, Sachsen-Altenburg, contemplates putting up a linen-weaving mill at Alt-Laessig, Bez. Breslau.

*Mining equipment.*—At the Donnersmarck mine the following additions are planned: (1) Construction of track scales; (2) conveyor for ashes from the boiler house; and (3) electric lighting for the workmen's colony. Address: Die Verwaltung der Donnersmarckgrube, Schwientochlowitz O/S.

*Shooting gallery.*—The rifle club of Niederhermsdorf, Kreis Waldenburg, Silesia, has given a contract for putting up a shooting hall and stand at a cost of about \$5,000.

## PHILIPPINE ISLANDS.

[From Consul General George E. Anderson, Hongkong.]

## Plans for Railway Extensions.

On January 23 there was signed the contract between the Philippine Government and the Manila Railway Co. for loans on the part of the Government of funds for the extension of the company's railway lines in the south of Luzon, the total advances for the work ultimately to be about \$2,250,000.

The general railway situation in the islands is indicated by Governor General Forbes in his annual message to the Philippine assembly, in the course of which he said:

I am glad to be able to inform the legislature that the effect of the construction of railroads has been more beneficial even than had been hoped. The Manila Railroad Co. during the year has opened up its lines to the following points: Batangas, on the Manila-Batangas line; San Pablo, on the Luta-Lucena line; Mojon, on the Calamba-Santa Cruz line; Santa Cruz, on the Noveleta-Naic line; and Rosales, on the Paniqui-Tayug line. The opening up of these railways has had an almost magical effect in stimulating industry and fostering production; territory in which crops had not been harvested for years is now being cared for; and particularly in the Provinces of Batangas, La Laguna, and Tayabas the advent of the railroad seems to have made the difference between a backward and a progressive situation.

## Lines Under Construction and Projected.

The railroads mentioned and under construction include the 73-mile line from Manila to Batangas, now complete, the 40-mile line from Luta to Lucena, of which about 25 miles are completed; the 27-mile line from Calamba to Santa Cruz, of which about 15 miles are now completed; the 30-mile Noveleta-Naic line, of which about 10 miles are complete; and the 28-mile Paniqui-Tayug line, of which about 12 miles have been completed. These railways are constructed under the company's contract with the Government made in 1906. The sections covered by the new contract are between Lucena and Legaspi, and aggregate 110 miles, and the projected system is to include a branch to connect this through line with a new port to be established on the east coast of Luzon.

The Government has also contracted for the immediate advancement of the work on the Aringay-Naguilian Railway, which is to complete the connection of Manila with Baguio, the summer capital. In all about 350 miles of railway are under construction, or contracted for, to be completed by 1918.

[Additional information relative to Philippine railways appeared in Daily Consular and Trade Reports on Dec. 21, 1911.]

## SOUTH AFRICA.

[From Consul Nathaniel B. Stewart, Durban, Natal.]

## Abattoir, School, Law Court, etc.

Work has just commenced on a new municipal abattoir which is to be one of the most up-to-date structures of its kind in the world. The estimated cost is \$165,461, and its completion is expected within 12 months.

The new \$140,000 building of the Durban Technical Institute has been completed. The institute is similar to American technical schools, and it is hoped that it will finally produce sufficient locally trained skilled workers of all kinds to supply the country's needs.

The new \$390,000 Law Courts building, of Durban, is nearing completion. It contains rooms for the circuit court, the native high

court, and four for magistrates' courts, also quarters for public works and provincial police officials.

A Cape brewing company is erecting at Durban a branch brewery to cost \$45,000. A Johannesburg company is erecting a new bioscope theater at a cost of \$40,000.

There would not have been sufficient time for American contractors to examine plans and submit bids on construction work for the foregoing buildings unless locally represented. The operations are only mentioned to show the general industrial progress of the district and the utilization of large amounts of materials and supplies.

### SALE OF AMERICAN GOODS IN PERU.

[From Vice Consul Charles Lyon Chandler, Callao.]

The primary questions affecting the sale of American goods in Peru are those of price, quality, terms, representation, distance from place of production, and local prejudice.

European articles here, when they compete, average one-tenth to one-third cheaper than American goods. This handicap is sometimes overcome by the superior quality of the American article, but before entering this field the prices and nature of the competition to be met should be accurately ascertained. Questions of quality and local prejudice are often closely interwoven. It takes time to create a local fancy for an article, and the smallest trifle may upset the regard for the quality of an article, some minute detail found imperfect perhaps sending the order to Europe instead of to the United States.

Certain phases of industrial education have been so neglected in the United States, until the past few years, that foreigners have wondered that we had any foreign salesmen at all. Much is now being done in this line, but much remains to be done toward turning out salesmen who can show their initiative in other tongues than their own. Only quiet, tactful, persistent work will land orders in Latin America, and the pusher and hustler is often misunderstood and gets no orders.

The time from Panama to Callao, shortened from 27 days in 1868 to 14 in 1900, has been halved in the past 12 years, with an increase in our exports to Peru. While the Panama Canal will shorten the voyage from the United States, it will also shorten the distance to Europe and care must be taken not to flood this market beyond the needs of its people.

### METRIC SYSTEM IN DENMARK.

Consul General E. D. Winslow, of Copenhagen, advises that the metric system of weights and measures went into effect in Denmark on April 1, 1912. It will be well for business men to note this change from the old system. All merchants will be subject to fines ranging from \$2.70 to \$27 for nonconforming with the act.

Chargé d'affaires Norval Richardson, of the American Legation at Copenhagen, writes that much interest is being manifested in Denmark in the change to the metric system and that a great many prizes are being offered to merchants by various trade associations for the best display and explanation of this system.

[Complete textbooks on the metric system may be obtained free on application to the Bureau of Standards, Washington, D. C.]

**FAR EASTERN TRADE NOTES.**

[From Consul General George E. Anderson, Hongkong.]

**Bamboo Paper Napkins—Trade Improvement—New Steamer Services.**

The use of bamboo pulp for the manufacture of paper napkins is receiving particular investigation at the present time. It is proposed to use the carbonate of soda process of bleaching, but there is some uncertainty as to whether or not a supply of soda can be obtained locally.

Trade in the West River country in Kwangtung Province is gradually opening up, and large amounts of goods collected during revolutionary troubles are being exported. The increase in exports of live stock has been exceptionally large. Trade as far inland as Nanning is said to be greatly improved.

Announcement was made at the regular half-yearly meeting of the Nippon Yusen Kaisha that not only are the five new ships for the American and European trade, mentioned in Daily Consular and Trade Reports on April 2, soon to be in use, but that seven more steamers, aggregating 48,000 tons, will be constructed immediately thereafter for these and similar services. The company has already made its plans and submitted propositions to the Japanese Government for the usual subsidies for services to New York and to Brazil by way of the Panama Canal. These new lines will entail an increase in the concern's capital of \$25,000,000 to \$30,000,000, which will be raised by the issue of mortgage bonds.

**New Housing Plan.**

Details of a scheme are being completed in Hongkong, more or less under Government sanction, for the erection of concrete or stone dwellings for housing 150 Portuguese families, in a separate district to be known as "Cidade Camoens." The influx of large numbers of Chinese from Canton and the surrounding country as a result of continued political troubles has resulted in an abnormal demand for houses, and the consequent high rents have pressed heavily upon people of modest incomes, among the latter being particularly the Portuguese residents of Hongkong.

The proposed dwellings are to be erected upon a 150-acre tract, the larger portion of which is to be especially reserved by the Government for the erection of similar houses from time to time. The enterprise is being financed by a bond issue secured by mortgage. Houses will be leased only to approved tenants, but they may also be purchased on time payments.

The establishment of the colony will involve the construction of special schools and churches, waterworks, and similar conveniences and improvements. The estimated original outlay for the first lot of houses is \$735,000 Hongkong currency—about \$339,000 gold at present exchange.

**Philippine Items.**

Public works in the Philippines are to be pushed during the current season. Estimates have already been prepared for the construction of public buildings, roads, bridges, and the like, involving an expenditure of over \$500,000.

The formation of a company, capitalized at \$175,000, for the operation of a coconut-oil factory and for the manufacture of soap and

similar articles from by-products is announced at Manila. The concern has the backing of some of the more prominent capitalists of the islands.

The city of Manila is building 10 tennis courts for the use of the public in the sunken gardens opposite the city hall. The courts will have the accompaniments of baths, lockers, and reading rooms, which will be made by transforming the bastion near Victoria gate into an up-to-date club.

### VENEZUELAN COMMERCIAL NOTES.

[From Consul Thomas W. Voetter, La Guaira.]

*Curtailed crops.*—For several months the rainfall throughout Venezuela has been much less than usual for this season. As a result pasturage for live stock on the interior plains has been scanty and crops of vegetables throughout have been much less than usual and prices have been higher. It is now believed that the crop of cacao has been seriously damaged, and the exports of this article from the coming crop will be much less.

*Coastwise schedules.*—A slight change in the itinerary of the coast boats of the Compañia Costanera y Fluvial is announced. In the voyage between Maracaibo and Puerto Cabello these boats will touch at Curaçao, Dutch West Indies, instead of confining their ports of call to Venezuelan ports. There are three boats in this service, *Guayana*, *Venezuela*, and *Manzanares*. All these boats are old and slow, and it is not believed that much of the trade now enjoyed by the boats of the Red D Line will be lost on account of the new service.

*Reduced dock charges.*—The La Guaira Harbor Corporation (Ltd.), which owns and operates the docks at this port, formerly charged on merchandise landed on Sundays, holidays, and after 6 p. m. on other days the additional sum of 4 bolivars per ton of 1,000 kilos. The additional charge for landing goods on the days mentioned has been reduced and is now 2.50 bolivars per 1,000 kilos (bolivars=19.3 cents; kilo=2.2046 pounds). This sum is in addition to the regular charge for ordinary working days and hours, which is 2 bolivars per 1,000 kilos.

*Navigation impeded.*—Another result of the dry season has been low water in the Orinoco, seriously interfering with navigation. One steamer of the Compañia Costanera y Fluvial, the *Delta*, ran into an obstruction, was seriously damaged, and had to be taken to Trinidad for repairs. It is now announced that other steamers of the line along the coast and river from Maracaibo to Ciudad Bolivar will not attempt to ascend the river to Ciudad Bolivar, but will end their voyage at Cano Colorado, which is near the mouth of the northern branch of the Orinoco delta. The cargo can there be transhipped to the light-draft river boats which can take it to Ciudad Bolivar.

### Consular Trade Conferences.

Consul General William H. Bradley, of Montreal, Canada, reports that he expects to be in the United States during the month of April on leave of absence and that his address will be in care of the First National Bank, Ridgefield, Conn. Business men who are interested in trade with Canada, and particularly with the Montreal district, may communicate with Mr. Bradley at the address mentioned.

**BRITISH COMMERCIAL NOTES.**

[From Consul Albert Halstead, Birmingham.]

**New Automatic Electric-lighting Plant.**

The Hardware Trade Journal calls attention to a new gasoline-driven dynamo that is entirely automatic in its action. The low-speed gasoline or gas engine is equipped with an exhaust valve lifter for relieving the compression of the engine during starting and for stopping. The usual type of belt-driven dynamo, with a controller and standard type solenoid starting switch, is employed. There is a small switchboard provided with two ammeters (one for indicating the current generated and the other for showing the current used), a voltmeter, a patent relay controlling the starting and stopping of the engine, a circuit breaker, safety fuse, and voltmeter switch. The whole plant is automatic and no large storage battery is required. When light is needed the engine commences to work as soon as the switch is put on, and stops when the switch is put off.

**Interurban Automobile Service.**

The use of motor wagons to carry parcels between Birmingham and London [see Daily Consular and Trade Reports for Aug. 30, 1910] has proved so successful that the postal authorities are about to make an extension of the service to Manchester. A motor wagon will leave Birmingham at 9.15 p. m. with the view of reaching Manchester just before 6 the next morning, having a carrying capacity of 4,640 pounds, which it is estimated would convey some 20,000 postal parcels during the week. Post-office employees will travel with the vehicle and the sorting will be done en route, stops being made at various points between Birmingham and Manchester. At the same time a motor wagon will leave Manchester for Birmingham. The success of this service indicates that the British General Post Office will by degrees largely increase the carriage of parcels by motor van.

In connection with this development of mechanical traction it may be stated that there is an increasing tendency on the part not only of large commercial firms, but also of companies engaged in collecting, carrying, and delivering freight to use motor vehicles instead of the railroads.

**American Cars in England.**

An examination of a special issue of an automobile technical paper, which makes a specialty of new cars, shows that there are now on sale in the United Kingdom 25 automobiles of American make, all of which have depots in London and a number of which have agencies throughout the country. These cars are the Bedford, Buick, Cameron, Cadillac, Chalmers, E. M. F., Everitt, Flanders, Ford, Hudson, Hupmobile, K. R. I. T., Maxwell, Mitchell, Metz-Lion, Oakland, Overland, Pathfinder, Paige-Detroit, R. C. H., Seabrook R. M. C., Stanley, Stoddard, Warren, and White Petrol and White Steam. The total number of British-made cars mentioned is 69, French 48, Belgian 7, Austrian 1, Italian 7, Swiss 1, and Dutch 1.

It would appear, therefore, that the American automobile manufacturers have entered the British market with great energy, and reports indicate that they have had considerable success, despite the tendency to decry the comparative low price at which American cars are sold.

**CREMATION IN SWITZERLAND.**

[From Consul D. I. Murphy, St. Gall.]

Cremation appears to be rapidly gaining in popular favor, judging from the recently published annual report of the St. Gall Feuerbestattungs-Verein (Crematory Society). Of the 535 individuals who died in St. Gall, in 1911, 201 were cremated, an increase of 12 per cent in cremations over previous years.

It is remarkable that an organization, whose sole object is to reform funeral customs, should have enrolled over 800 members in a single year and boast of a membership of 3,541, and this in St. Gall, a city of less than 40,000 population. The yearly dues are 40 cents, while the entire cost for cremation is somewhat less than \$22, including coffin, flowers, urn, and care of the ashes for 20 years. In case the deceased is not a member, or where a body is brought from another place, a slight extra charge is made. Bodies of the poor are cremated without charge when it is shown that it was the wish of the deceased to have their remains so disposed of. For minors, the wishes of parents or guardians are respected.

There are now 9 crematories in Switzerland—at St. Gall, Zurich, Basel, Geneva, Berne, Lausanne, Chauxdefonds, Winterthur, and Biel, the total number of cremations in 1911 being reported as 7,750—an increase of over 22 per cent compared with 1910. The St. Gall crematory, it is claimed, is the only one in Switzerland owned and operated by a society, all the others being municipal affairs.

[For previous reports on cremation see Daily Consular and Trade Reports for Mar. 11, Apr. 15, June 25, and Aug. 17, 1908; Mar. 5 and 24, and Nov. 8, 1909, and Feb. 10, 1910.]

---

**THE ZUIDER ZEE FISHERY.**

[From Consul Frank W. Mahin, Amsterdam, Netherlands.]

The average value of the total catch of fish in the Zuider Zee is about \$600,000 a year. In 1910 it was about 25 per cent below this; in 1911 it was fully up to the average. This gain was due to the larger catch of anchovy last year, the value of which was about double that of 1910. Fewer herring were caught in 1911 than in the preceding year, but prices were much higher. The catch of flounders was also relatively small, but prices maintained the steady advance of the past five years.

The average quantity of smelt was caught in 1911, but the fish were smaller than usual, and consequently were very cheap. It has been suggested that fishing for smelt should be limited more than at present, to improve both size and price. The supply of eels was larger than in 1910, and prices were satisfactory. The catch of eels is steady and growing, as is also that of shrimps.

[Consul Mahin's review of the fishing industry of the Netherlands during 1910 was published in Daily Consular and Trade Reports on Dec. 18, 1911.]

---

*Asiatic rice trade.*—A review of the rice situation in the Far East with special reference to its bearing on Hongkong's trade in that cereal, transmitted by Consul General George E. Anderson, has been forwarded to the Department of Agriculture.

## FOREIGN TRADE OPPORTUNITIES.

(Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.)

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8668. Cotton carding and spinning machinery.**—An American consular officer in the Far East reports that an American corporation doing business in his district desires to hear from manufacturers of cotton carding and spinning machinery, suitable for a small factory to be run by steam. The same company would be glad to communicate with American manufacturers of hand-power cotton-spinning machinery, if any such machines are on the market. It is believed there is a good opportunity to dispose of such machines among the natives of the country in question.
- No. 8669. Textiles.**—A business man in England has furnished an American consular officer a sample of a textile which he says is manufactured in the United States. He desires to enter into negotiations with the manufacturer of this textile, so that he may make purchases, which, he states, may aggregate as much as \$475,000. The sample of this goods can be obtained by interested firms upon application to the Bureau of Manufactures.
- No. 8670. Chairs for theaters and public buildings.**—A firm in France selling furniture at retail and taking contracts to furnish theaters and other public buildings with chairs informs an American consulate that it would like to receive from American manufacturers catalogues and price lists of such chairs. Correspondence should be in French.
- No. 8671. Well-digging machinery.**—The Government of a Latin American country has voted \$10,000 for the purchase of a deep-well-sinking plant and the sinking of one or more trial wells. The ground is of alluvial character. American firms interested should address an official whose name is given in the report submitted by an American consul.
- No. 8672. Railroad material.**—According to the report of an American consular officer, plans are being completed for the construction of a railroad in certain States of Mexico. American manufacturers and exporters of all kinds of railroad material should communicate direct with a person named in the report.
- No. 8673. Hydraulic irrigation plant.**—An American consular officer reports that the erection of a hydraulic irrigation plant is being planned for pumping water from a certain river in the country in which he is located. American manufacturers interested should correspond, in Spanish, with an individual who represents the company undertaking this project. This concern might also be in need of ditching machinery, all kinds of farming implements, etc.
- No. 8674. Motor car.**—An official in an Asiatic country informs an American consulate that he is desirous of purchasing an American motor car and would appreciate illustrated catalogues and price lists c. i. f. certain city. Price lists should be in English or Indian currency. Correspondence may be in English.
- No. 8675. Kid and box calf leather.**—A commercial organization in a European country writes the Bureau of Manufactures that it has several inquiries for kid and box calf leather, and it would be glad to hear from American manufacturers of this class of goods open for export business.
- No. 8676. Maple sugar and maple sirup.**—A large wholesale grocery firm in Canada has requested an American consulate to obtain the names of American firms desirous of importing maple sugar as well as maple sirup in carload quantities. American firms desiring to establish business connections with this concern should write to the consulate referred to at once, as the Canadian firm will be ready to make shipments about the middle of May.
- No. 8677. Shoe pegs.**—The Bureau of Manufactures is in receipt of a communication from an official of a trade organization in a European country requesting the names of firms in the United States that manufacture shoe pegs and which are desirous of doing an export trade in this line. The communication states that the organization has inquiries on hand from several markets for supplies of this nature.

## ARTIFICIAL FERTILIZER TRADE.

### RUSSIA.

[From Consul John H. Groat, Odessa.]

#### Fertilizers Are Much Needed.

The growing requirements of a rapidly increasing population, and the demands of a steadily developing trade in grain at more and more remunerative prices, necessitate timely care to provide against the exhaustion of the soil of Russia. As a measure of the rate at which this exhaustion is progressing may be taken the calculation that, in all their alimentary and fodder products taken together, the Russians annually draw from the soil about 666,000 tons of phosphoric acid and do not return to it more than 185,400 tons, thus robbing it of as much as 480,600 tons annually, a process which can not be long continued with impunity.

Artificial fertilizers are still so little employed in Russia that, on a general average, not more than 44 pounds per year of phosphoric acid are given to every 100 dessiatines of cultivated land, i. e., a little more than 2 ounces per acre. In Belgium the proportion is about 125 times as great. This explains why the crops in Russia are so small when compared with the area under cultivation. The remedy lies in the abundant use of phosphorites, phosphates, Thomas slag, saltpeter, sulphate of ammonia, and kali or potash salts. With regard to the production of these, Russia is in an unfavorable condition. Although phosphorites are found in many places in Podolia and in central Russia, etc., the industry finds an obstacle in the way of its proper development in the absence in most of these parts of the required pyrites and frequently in the poor quality of the phosphorites (coprolites).

As regards simply pulverized phosphorites, their uses are limited to special soils and conditions. Superphosphates and the materials for their production are therefore brought principally from abroad. The same applies to Thomas slag, about 18,000 tons of which is pro-

duced in Russia, and that by only one factory located in south Russia, while imports have risen from 99,000 tons in 1908 to 153,000 tons in 1911. No places are known in Russia where saltpeter can be mined profitably. Consequently practically the whole supply is imported, mainly by way of Hamburg. Some sulphate of ammonia is produced as a by-product at gas works, etc., but it is seldom used as a fertilizer, being, in fact, exported. Kali salts in quantities to repay mining cost are not known in Russia, being imported. The above easily shows that artificial fertilizers brought from long distances and passing through many hands can not be cheap in Russia, nor generally accessible, and much remains to be done in the way of cheapening methods of transportation.

### DENMARK.

[From Consul General E. D. Winslow, Copenhagen.]

#### Large Increase in Imports—Scientific Soil Treatment.

The Government makes about 1,500 experiments every year in different localities with fertilizer. The farmers are thus taught the scientific treatment of their land. In 75 per cent of the treatments a much larger yield per acre is obtained, and the experiments prove almost infallibly the necessity of properly "feeding" the soil. The import of artificial fertilizer shows a yearly increase. In 1870 only about 30,000,000 pounds were imported, while recent annual imports reach 300,000,000 pounds, of an estimated value of \$2,700,000. Yet the authorities say that the use of fertilizer is comparatively small and many vast areas could be made very productive by the use of fertilizer. Of course, all farmers use stable refuse to a certain extent. It is estimated that the average cost of fertilizer now used is about 54 cents to 1½ acres.

Agricultural and cottage societies in the Kingdom offer members fertilizer at cost price and furnish advice and instruction as to the treatment of the soil. Upon a request by a member an intelligent examination of the farmer's soil is made. In the production of rye in Jutland artificial fertilizer has given good results. Chile saltpeter, superphosphate, and potash are the principal ingredients, although experiments made with Chile saltpeter and superphosphate alone brought fine returns. The use of potash alone did not give any increase in production.

### ITALY.

[From Consul General James A. Smith, Genoa.]

#### A Trust in the Chemical Fertilizer Industry.

There has been formed at Milan the Super-Milano, with about \$100,000 capital, its purpose being to control the sale of chemical fertilizers in Italy. The sale of superphosphate products of the following firms in northern Italy will be controlled by this new company:

Unione Italiana fra Consumatori e Fabbricanti di Concimi e Prodotti Chimici, of Milan; Fabbriche Riuniti Agricoltori Italiani, of Milan; Fabbrica Sale di Bario, Concimi ed Altri Prodotti Chimici, of Milan; Seesa Cantu di Carati Giussani, De Bernardi e Co., of Milan; Prodotti Chimici Superfosfati, of Vercelli; Fabbrica Concimi, of Pordenone; Ligure Lombarda, Prodotti Chimici, of Genoa; Fabbrica Concimi Chimici, of Brescia; Industria Chimica Fossanese, of Fossano; Società Anonima

Bolognese per l'Industria dei Concimi e Prodotti Chimici, of Bologna; Società Anonima Cooperativa Concimi Chimici, of Lendinara; Fabbrica Cooperativa di Perfosfati, of Ceres; Fabbrica Perfosfati, of Udine; Stabilimento Industriale Rosetti, of Forlimpopoli; Tito Campani e Co., of Borgo S. Dormino; Carlo Biraghi e Co., of Parma; Francesco Marinoni, of Este; Cav. Ernesto Lucca, of Vercelli; Angelo Scaini, of Udine.

[From Consul Arthur Garrels, Catania.]

#### **Extensive Use of Fertilizers.**

Prof. S. Accardi, director of the Circuit Seat of Agriculture of Girgenti (Direttore della Cattedra Ambulante di Agricoltura di Girgenti), in an article on the utilization of artificial fertilizer in Italy gives some statistical information, which in part follows:

Sicily consumes to-day about 67,000 tons of superphosphate and about 220 tons of Scorie Thomas (phosphate slag). Superphosphates and chemical fertilizers are used most largely in the culture of beans and leguminous forage products, while Scorie Thomas is used to neutralize the deficiency of lime in rich black soils.

According to figures furnished by Dr. G. Azimonti the annual consumption in pounds per acre of superphosphates by the various Provinces of Sicily are as follows: Caltanissetta, 46.4; Catania, 16.1; Girgenti, 66; Messina, 3.5; Palermo, 16.1; Siracusa, 5.3; and Trapani, 11.6. It is estimated that fully \$7,913,000 worth of phosphate fertilizer is used annually in Sicily.

Rainieri estimates that the average consumption per acre of phosphate fertilizer in Italy during 1909 was 114.7 pounds for a cultivated area of 51,515,297 acres. Italy spends yearly over \$20,072,000 for fertilizing substances. About \$15,051,000 of this amount represents the value of phosphate fertilizers and the remaining \$5,018,000 that of fertilizing substances containing nitrogen and potassium.

#### **CHINA.**

[From Consul General George E. Anderson, Hongkong, Jan. 4.]

#### **Bone Meal Trade.**

There has been a considerable increase in shipments of bone meal from India and the East Indies to the United States by way of Hongkong during the past few months. Considerable trade has been carried on in this commodity for some time between India and the Pacific coast, Hawaii, and Australia. Hongkong has been a port of transshipment, where the meal has been stored and shipped after being brought within the requirements of the American quarantine laws. Shipments from India have generally been made on option of transshipment at Hongkong for the United States, including Hawaii, or to Australia. After considerable agitation freight rates across the Pacific on this commodity were lowered, with the result that the trade has almost doubled in the past two months. There is strong demand for this fertilizer in Hawaii for sugar plantations and the Pacific coast is increasing its imports apparently in proportion to lowering freight charges.

[From Consul General Roger S. Greene, Hankow.]

#### **The Supply of Bones.**

A California firm makes inquiry regarding bone meal. There are no bone-meal factories in this vicinity at present, though it has been reported that a French factory may be established here to grind bones and also to manufacture small articles of bone. Under the present unsettled conditions it is impossible to state when this project will be realized.

As regards bones, the customs returns state that in 1910 the exports to foreign countries (practically all to Japan) amounted to 14,914,000 pounds, while exports to Chinese ports came to 2,161,466 pounds.

A local merchant informs me, however, that he understands the total quantity of bones available in this neighborhood to be about 300,000 piculs, or 40,000,000 pounds per annum, with considerable variation, according to the number of cattle killed for their hides. If the prices of hides are high the quantity of bones on the market will be large. The state of the exchange between gold and silver also has to be taken into consideration for this purpose. My informant states that there is a large export of bones to Ningpo and Shaoshing, where they are burned, ground, and used for fertilizer.

Prices vary from 1.10 to 1.70 Hankow taels per picul of 133½ pounds. This would be equivalent, at the United States official valuation of the Hankow tael for the December quarter of 1911 (\$0.588), to from 65 cents to \$1 gold per picul, or from 49 to 75 cents per 100 pounds, this being for average sizes and quantities. Apparently, prices do not vary much according to the time of year. It is stated that the largest quantities arrive in the hide season, from December to April.

---

#### CANADA.

[From Vice Consul Geo. W. Stephenson, Jr., Yarmouth, Nova Scotia.]

##### **Fertilizer from Dogfish.**

Information is sought as to the operations of the dogfish reduction works at Clarks Harbor, concerning which an article appeared in Daily Consular and Trade Reports for May 27, 1911. The liver oil secured is marketed crude, bringing 38 cents a gallon at the factory. In making the fertilizer the fish are first cooked, then pressed, and finally run through a drier. No great difficulty has been found in making this fertilizer, and the approximate price received at the factory is \$28 a ton.

---

#### WEST INDIES.

[From Consul Thomas R. Wallace, Fort de France, Martinique, F. W. I.]

##### **Phosphate Mining on French Island.**

An inquiry is made regarding the "new deposit of phosphate rock on the island of Connetable, which is off the coast of French Guiana," and "if the old deposits of both phosphate and guano are being worked at the present time." Connetable Island is far from this place, but an official who is familiar with the island has furnished the following information:

The Grand Connetable Island, off the coast of French Guiana, is a French possession. It is intended to be used as a lighthouse station by the French Government, and this fact will limit to some extent the removal of phosphate rock now being worked on the island.

The deposit of phosphate rock is found about 7½ miles from the mouth of Approuague River. It was about 165 feet high originally, but large quantities have been removed and it is now much lowered. The phosphate is found within a radius of 1½ miles. The deposit has been worked about 40 years. No new deposit has been reported. The rock contains aluminum and lime phosphates and is worked principally for the extraction of aluminum. It contains acid phosphates 33 to 38 per cent, lime 0.50 to 1.60 per cent, sesquioxide of aluminum 50 to 55 per cent.

The American company which has the concession to work the deposit is taking out 4,000 to 5,000 metric tons annually. A small quantity of guano is picked up on the island but the quantity is insignificant.

As of possible interest it may be added that an English company started to work a deposit of phosphate of alumina in the small island of Redonda, near the island of Montserrat, British West Indies, in 1907. The better grades average 35 to 36 per cent phosphoric acid.

### GERMAN-AMERICAN TRADE ADVANCE.

[From Vice Consul General E. H. L. Mummehoff, Hamburg.]

With a gain of \$1,721,980 over the declared exports during the first three months of 1911 and of \$1,207,973 over those of the corresponding quarter of 1910, the shipments to the United States and its insular possessions invoiced through the consulate general at Hamburg and the agencies at Kiel and Lubeck amounted to \$8,795,435 for the first quarter of 1912, as is shown by the following tabulation:

Exported—	1910	1911	1912
From Hamburg:			
United States.....	\$7,068,564	\$6,534,399	\$8,186,535
Philippine Islands.....	335,122	375,084	383,390
Porto Rico.....	127,065	121,285	123,615
Hawaiian Islands.....		450	1,449
From Kiel.....	8,562	1,004	3,352
From Lubeck.....	59,549	87,024	98,094
Total.....	7,567,462	7,073,455	8,795,435

There were no exports from the agencies at Kiel and Lubeck to the American insular possessions during the first quarter of the years mentioned.

### OIL FUEL FOR LOCOMOTIVES.

[From Consul J. N. McCunn, Glasgow, Scotland.]

A recent issue of the Glasgow Herald contained the following mention of the installation of the Holden liquid-fuel apparatus on a Scottish railway:

An interesting experiment in the use of oil fuel for locomotives is being made by the Caledonian Railway Co. At the locomotive works in Glasgow an engine has been fitted up with oil-burning apparatus. The oil is stored in a cylindrical tank placed on the tender in a part of the space usually occupied by coal. The oil flows from the tank to the engine injectors, which force it into the firebox at two points about 18 inches apart, where a current of steam from the boiler causes it to assume the form of fine spray spreading itself through the firebox. By means of a thin layer of wood or coal fire covering the firebars this spray is ignited, and so generates steam for the motive power as well as for the injecting and spraying. The extent of the flame is regulated by a valve on each of the injectors. The firebox, in addition to the customary firebrick arch, is equipped with a firebrick wall to protect the copper front plate from the effects of the great heat produced by the oil fuel. The special fittings are such as to permit of the engine using oil or coal, as may be found desirable.

On a trial nonstop run from Glasgow to Stirling and return the engine consumed  $1\frac{1}{2}$  gallons of crude oil per mile; drawing a full train it is estimated that the fuel consumption will be 3 gallons per mile.

**FOREIGN TARIFFS.****AUSTRALIA.**

[From Commercial Intelligence, London, Mar. 20, 1912.]

**Proposed Reciprocity With Canada.**

In the reciprocity negotiations between Canada and Australia the Dominion Minister of Trade and Commerce intends to ask for a reduction of the Australian tariff on the following articles: Agricultural implements, ammunition, boots and shoes, metal manufactures, textiles and clothing, vehicles, bicycles, and motors. To facilitate negotiations the Canadian Minister of Trade and Commerce has decided to go to Australia.

Discussing Canada's contemplated demands the Australian Minister for Trade and Customs said in an interview:

In several of the articles mentioned (in the cablegram) no preference is now granted to Great Britain. Agricultural machinery is one of these. Some of the items are free and others are at a fixed rate of duty. In such a case as that of boots and shoes the Government, though it would be quite prepared to consider any proposal that might be submitted, could nevertheless not consent to accord any preference that would have a prejudicial effect on the industry in Australia. One item on which the Government would be disposed to negotiate would be printing paper. On that there was no preference at present. The matter was worth consideration and he would be prepared to give it attention with a view to seeing whether some form of acceptable arrangement with the Dominion was not practicable. In mutton and lamb and butter New Zealand secures from Canada a preference which substantially assists this trade. In mutton and lamb the preference operates to the extent of  $\frac{1}{4}$ d. (about 1 cent) per pound against Australia.

[From Australian customs circulars.]

**Trade Description of Boots and Shoes.**

The following decision has been rendered by the Department of Trade and Customs of the Commonwealth of Australia under the trade descriptions act, 1905 (see Tariff Series 17B):

In the case of boots and shoes with heels composed of pulp, except for a thin outer strip of leather, the trade description must include a statement to that effect, e. g., "Pulp and leather heel."

**Apple Wrapping Paper.**

Since paper for wrapping apples was put on the free list by the tariff amendments which went into effect in December, 1911 (see Tariff Series 17D), provisions for the payment of drawback on such paper, effective under the tariff before the amendment, are canceled.

**Parts of Machines.**

Parts of any article, machine, or appliance shall, although specifically or generically provided for in the tariff as parts, if imported with any such article, machine, or appliance in a complete or substantially complete state, be dutiable under the tariff number applicable to such article, machine, or appliance. Articles, machines, and appliances shipped in an unassembled condition, ready, or practically ready for assembling, shall be treated as though actually assembled. (Order of the Department of Trade and Customs, Feb. 23, 1912.)

**Weighting of Tobacco.**

With regard to unstemmed leaf tobacco, the tare of about 10 per cent of any shipment is to be ascertained, and an average tare fixed for the remainder; or, at the discretion of the collector, the invoice weights may be accepted for bonding purposes, but in such cases the

correct net weight of each package must be ascertained by actual weighing at the time of removal from the customs warehouse to the factory. (Order of the Department of Trade and Customs, Feb. 23, 1912.)

### BELGIUM.

#### Specific Rates of Duty.

The following specific rates of duty went into effect in Belgium March 1, 1912, in place of the ad valorem rate of 15 per cent formerly applicable to oilcloth and linoleum of all kinds:

[Kilo = 2.2046 pounds. Franc = \$0.193.]

Tariff No.	Articles.	Duty.
Ex. 64	Oilcloth of all kinds:	
	Linoleum—	
	For floors—	
	Single color..... per 100 kilos..	10
	With printed designs..... do.....	12
	With inlaid designs..... do.....	15
	For walls..... do.....	18
	"Pégamoid" and similar products..... do.....	75
	Oilcloth—	
	For wrapping..... do.....	18
	For floors—	
	Single color..... do.....	10
	With printed designs..... do.....	12
	For walls..... do.....	90
	Not specially mentioned..... do.....	35

### BRAZIL.

[From Consul General Julius Lay, Rio de Janeiro, February, 1912.]

#### Proposed Change in New Consular Regulations.

The Minister of the Treasury of Brazil, in deference to a request of the Commercial Association of Rio Janeiro, consented to delay the putting into force of the new consular regulations until the next session of Congress. There has been some dissatisfaction expressed with the new requirements for consular invoices, and it is reported that the matter will again come before Congress. [See Daily Consular and Trade Reports, Mar. 2, 1912.]

### BRITISH GUIANA.

#### Withdrawal of Export Duty on Balata.

According to a Reuter dispatch published in the newspapers in Great Britain, the export duty on balata gum in British Guiana has been abolished.

### COLOMBIA.

#### Penalties for Fraudulent Invoices.

American Minister James T. DuBois, Bogota, has transmitted a copy of a resolution of the Treasury Department of Colombia, which was published the latter part of 1911. The document contains the following provision relating to inaccuracies in invoices:

If the importer, in view of the discovery of fraud, should abandon merchandise declared for duty at a lower rate than that rightly

applicable to it according to the customs tariff, the amount of the duty is to be collected by the sale of the goods at auction, and if the amount of the duty is not realized from such sale, execution for the amount remaining due shall be made against the owner of the goods.

[From Consul Isaac A. Manning, Barranquilla.]

The attention of shippers should be called to the necessity for extreme care in the filling out of manifests and declarations of merchandise intended for the Republic of Colombia. When merchandise imported into Colombia has been wrongfully manifested and declared, in order to evade the payment of the customs duty rightly due, such merchandise shall not be abandoned in the customhouse by the importer. The importer is held liable for the payment of the duty on such merchandise at the rate rightly applicable to it, and is further liable to a fine. Under this ruling that prohibits the abandonment of merchandise falsely declared, a number of shippers have recently been required to pay very heavy fines; under the customs rulings formerly in force, the merchandise would simply have been abandoned in the customhouse.

#### **Tariff Classifications.**

Diamond chips for cutting glass have been placed under class 6 of the customs tariff, dutiable, including surtaxes, at about 17 cents per kilo (kilo=2.2046 pounds).

Gasoline for all purposes has been placed in the second class of the customs tariff, dutiable at 1 cent per kilo, gross weight, and has been exempted from surtaxes.

---

### **GERMANY.**

#### **Customs Treatment of American Catalogues.**

Referring to a previous report (published in Daily Consular and Trade Reports Mar. 2, 1912) to the effect that since December 1, 1911, American trade catalogues had been subject to an import duty of 30 marks per 100 kilos, under tariff No. 670 of the German tariff, Consul General Robert P. Skinner, Hamburg, has reported that the ruling by which such catalogues were made subject to duty has apparently since been revoked. Complaint was made when duty was charged on American trade catalogues imported by a well known firm, and it is said that the amount of the duty paid in that instance was afterwards refunded, indicating that the catalogues are now regarded by the authorities as subject to free admission.

---

### **ITALY.**

[From Consul General James A. Smith, Genoa.]

#### **Duty on Barium Hydroxide.**

The Italian customs duty on barium hydroxide was increased by decree of March 16, 1912, from 2 lire per 100 kilos (\$0.175 per 100 pounds) as follows: Barium hydroxide, crystallized, 4.50 lire per 100 kilos (\$0.394 per 100 pounds); barium hydroxide, with the water of crystallization extracted, 8 lire per 100 kilos (\$0.70 per 100 pounds).

**NETHERLANDS.**

[Reported by American Minister Lloyd Bryce, The Hague.]

**Changes in Import Duties.**

By a royal order dated February 23, 1912, the rate of import duty on spirit of nitrous ether is changed from 2.05 florins to 2.35 florins per kilo (from 37 to 43 cents per pound), and the import duty on similar substances prepared from alcohol or with alcohol, not specially provided for in the tariff of the Netherlands, is changed from 2.25 florins to 2.35 florins per kilo (from 41 to 43 cents per pound).

---

**NORWAY.**

[From Board of Trade Journal, Mar. 7, 1912.]

**Exemption from Duty for Wireless Apparatus.**

According to official information received by the British Government, a Norwegian order in council was issued on February 9, 1912, providing that no customs duty shall be collected on apparatus for wireless telegraphy imported into Norway.

---

**PORTUGAL.**

[From Mittheilungen des Handelsvertragsvereins, Mar. 20, 1912.]

**Proposed Free Port at Lisbon.**

The Senate of Portugal has approved a bill for the creation of a free port in Lisbon; at the time of this report the bill had not been voted on by the Chamber of Deputies. It is proposed to turn over the charge of establishing and operating a free port to a private company for a period of not more than 60 years. This company is not to be subsidized by the Government, and the only advantages which will be conceded to it by the Government consist in the use of the premises for the period stated. At the expiration of the period decided upon the Government is to take over the control of the free port, on payment of the value of the buildings and other improvements that the company may make during the period of its occupation.

---

**COBALT'S SILVER SHIPMENTS.**

[From Consular Agent E. C. Wakefield, North Bay, Ontario, Canada.]

Cobalt's shipments of silver bullion for the quarter ended March 31, 1912, reached 1,616,333 ounces, of a total value of \$955,488. The tremendous increase that this indicates can be shown by a comparison with the figures for the two preceding years. In 1910, bullion shipments for the whole year aggregated 945,703 ounces, valued at \$501,815, an amount less than the shipments for the first two months of the present year. In 1911, the bullion shipments from Cobalt totaled 3,772,920 ounces, valued at \$2,120,428. This means that the average monthly shipment during 1911 was 314,410 ounces, worth \$176,702. Statistics for the first quarter of 1912 show a large gain on these figures, the average monthly shipment for this year amounting to 538,778 ounces, worth \$318,496.

**MALAYSIAN BUSINESS NOTES.**

[From Vice Consul General D. Milton Figart, Singapore.]

**New Hospital—Reduced Royalty on Tin.**

A committee of the King Edward VII memorial fund at Penang has invited architects to submit competitive designs for a maternity and children's hospital, offering premiums of \$240 and \$57 gold. The designs are to be submitted before April 30. This will involve demands for various classes of builders' hardware, hospital equipment, etc. Full particulars can be obtained from J. Kirk, Esq., honorary general secretary, Penang, Straits Settlements.

The Federated Malay States Government is prepared to consider applications for a reduction in particular cases of the tin won from lodes or from low-grade alluvial workings or from mines where ore is refractory to win or treat.

**Marine Motor Service.**

The Malacca Marine Motor Service & Lighterage Co. (Ltd.), capital \$34,000, proposes to establish a regular safe and rapid service of modern motor launches within the harbor limits of Malacca and neighboring islands.

On March 8, 1912, the first vessel of the Singapore Marine Motor Service was launched, and it was expected to have six motor launches running in the harbor within a few weeks. The launches are 36½ by 8½ by 3½ molded depth and draw loaded, main draft, 18 inches. They are fitted with the well-known Kelvin motors, which develop 14 to 16 horsepower and the boats attain a speed of 6½ knots. They have been built to local government marine requirements and have fore and aft buoyancy chambers, being practically unsinkable. The two large ones have 30 to 40 horsepower engines and one carries lavatory and fittings.

**European Settlers—Japanese Coal.**

The recent census of the Federated Malay States points out that the extension of the rubber planting industry has increased the European male population returned as engaged in agriculture from 108 in 1901 to 882 in 1911.

A Reuter telegram in the local press states that on account of the English coal strike arrangements have been made with the Mitsui Bussan Kaisha to send 26 cargoes of coal to Singapore. This has given rise to some comment as to whether the Government wharves are in a position to handle this coal in view of the disapproval of the Government of the scheme to allow colliers to discharge their cargoes into coal hulks which could be anchored in the roads until a vacancy occurred at the wharves.

**Local Agencies of American Houses.**

A great many requests for trade information come from American manufacturers who have local connections. The manufacturers invariably fail to advise the consulate general of this, and in many cases lack of such information has contributed more or less to an unsatisfactory reply. It is suggested that when firms write for information regarding the market for products in this district, some statement should be made regarding their connections and past business transacted.

**Rubber Machinery.**

In connection with the recent suggestions from this consulate pointing out the market for rubber machinery of American manufacture, the following note from Grenier's Rubber News will be of interest:

We learn from home that there is a tendency for rubber machinery of all kinds to become larger and heavier, and as an illustration of this we have the example of a firm in Leeds which has just built a large hydraulic vulcanizing press—one of the heaviest that has been made in Britain for use in rubber work. It has been specially designed to use excessive water pressure, and to give an enormous pressure per square inch on the surface of the material. The whole machine is extremely solid and suitable for extraordinarily heavy work and the steam pressure that can be admitted to the platens is up to 150 pounds per square inch.

**Improvements at Port Swettenham.**

Port Swettenham is the shipping port of Kuala Lumpur, capital of the Federated Malay States, which is rapidly becoming an industrial center of the Malay Peninsula, being easily accessible to both the tin and rubber industries.

A deputation from the Selangor Chamber of Commerce recently called on the Government, pointing out with regard to Port Swettenham the shortage of lighters; insufficient crews; inefficiency of labor on shore; control of the coolies; necessity for an experienced European officer to be in charge of the port; shortage of railway trucks; the system of transfer from railway to ship; the construction of the ocean-going steamers' wharf; anchoring buoys; and a bigger crane.

During the discussion a plan of the proposed additions to the wharf was shown to the deputation, from which it appears that it is proposed that a new wharf of about 1,160 feet in length will be constructed to extend from the present pontoon wharf in the direction of Sungei Aur. The cost of the work is estimated at \$1,130,000 gold, and some three years will probably expire before the work can be completed. In addition to this, a semipermanent wharf for the discharge of lighters is about to be erected at the entrance to the Sungei Aur, and the railway line will be extended up to this wharf and freight sheds will be provided. The general manager for railways stated that it was hoped that this wharf would be completed in about four months.

Concerning rolling stock, the chief secretary mentioned that a large number of trucks from England are arriving. It was proposed to order at once some 600 trucks more, which it is anticipated will be sufficient for some time. A heavy crane with a capacity of 20 to 30 tons will also be considered.

**Developing the Federated Malay States.**

The Malay States Government Information Office, London, states that for further developing and opening the country, the Federated Malay States Government is wisely pushing the extension of their magnificent railway system. About \$3,000,000 (United States currency) expenditure for new construction work is authorized this year, the most important being the Pahang-Kelantan line, which will eventually join the Siamese system. The department will also begin extending the line from Province Wellesley into Kedah on the north, deviation of the main line from Kuala Lumpur to Salak south, and completing the Kuala-Selangor line, while \$400,000 will be spent on a branch line opening up the Rawang coal field, which promises a valuable new industry. Seven new locomotives and a large addition to the rolling stock, both passenger and goods, will be made during the year.

**DIAMOND MINE PROFITS IN SOUTH AFRICA.**

[From Consul W. J. Yerby, Sierra Leone.]

**The German Southwest African Diamond Fields.**

The Government authorities of German Southwest Africa estimate that the revenue from the diamond industry will amount to \$2,432,500 in the budget year of 1912. This amount is mainly composed of the export duties and to a smaller extent the mine taxes. According to the Berliner Tageblatt, the estimates for this year are of special interest, as it had been reckoned that the export duties would be reduced or converted, but the budget again provides for the imposition of export duties of 33½ per cent, which may be assumed as proof that a decisive alteration in the duties can not be counted on for the time being. Having regard to the fact that a number of diamond fields will be worked out this year, and the northern fields can not certainly be expected to furnish much production, the Government authorities estimate the output of diamonds at 850,000 carats for this year, as compared with an estimate of 900,000 carats for 1911.

**Profits of One German Concern.**

The Financial News publishes the following from its Berlin correspondent:

The balance sheet of the German Colonial Co. for Southwest Africa at Berlin for the half year April 1 to September 30, 1911, was presented at a board meeting on February 28, and the administration declared that according to estimates a dividend of about 35 per cent might be expected for the year 1911-12. This is another reduction of the dividends of the company, which paid 64 per cent for the year 1909-10 and 50 per cent for the year 1910-11, due to the unfavorable economic condition of the colony and the decrease of the output of diamonds.

[From the South African Mining Journal, forwarded by Consul Edwin N. Gunsaulus, Johannesburg.]

**Profits of a Transvaal Concern.**

A profit of \$2,585,454 is disclosed by the report of the Premier Diamond Co. for the year ended October 31, 1911, in addition to \$1,515,165 worth of diamonds on hand and unrealized special accounts for \$85,191. Practically the whole of the balance (\$1,450,973) was realized in November and December at an advance in stock prices. During the company's year 250 per cent (\$486,650) was paid as dividends on the preferred shares and 200 per cent (\$389,320) on the deferred shares. A further dividend of 300 per cent later declared payable on the deferred shares made a total for the calendar year of 500 per cent, against the previous record of 400 per cent.

The earth washed during the year, 8,325,000 loads, was a million loads less than that handled in the preceding year, owing to the scarcity of native labor, but the value per load increased enough to make the aggregate profit nearly equal to that of the previous year. The recovery per load was 83½ cents, against 77½ cents in 1909-10, but the weight recovered per load fell from 0.230 to 0.213 carat per load. The increased value per load was therefore due to the increase in the average value of the diamonds.

The average number of loads hauled per 24-hour day was 29,055; the cost mined and washed, 50½ cents, and the average cost per carat won, \$2.37½. The yield of diamonds was 1,774,206 carats, a decrease of 371,627 carats from the previous year. Recruiting costs came to \$16.30 per head for 12,169 natives forwarded by recruiting agents in 1911, against \$8.47 per head for 13,017 natives in 1910. Voluntary natives numbered 2,856. The natives received 65½ cents each per day and found themselves. The number of white employees averaged 729, receiving \$1,017,696 in wages.

[The diamond trade for 1911 was also reviewed in Daily Consular and Trade Reports for Feb. 21, 1912.]

Consul Stuart K. Lupton, of Karachi, learns that 1,000 freight cars and 88 engines are to be purchased this year for the Northwestern State Railway of India. The purchases are made through the Government agency in London, but the orders are all for British-made goods.

**CANADIAN LAKE SHIPPING.**

[From Consul A. G. Seyfert, Owen Sound, Ontario.]

Only one of the five Canadian Pacific steamers which formerly sailed from Owen Sound to Fort William will in the future call at Owen Sound. The eastern terminal of this line has been changed to Port McNicholl, and the fleet will sail from that port at the opening of navigation.

The great flood from the melting snow on April 6 did at least \$1,000,-000 damage in the locality of Georgian Bay. An enormous amount of dredging will be necessary to remove the rocks and soil washed into the harbor. Bridges and dams that withstood floods for many years were swept away.

The Dominion Government is erecting wireless stations at Midland, Tobermory, Sault Ste. Marie, and Fort William. All will be in operation when navigation opens this season. The Canadian Pacific fleet of steamers, in winter quarters in Owen Sound Harbor, is fitted out with wireless for communication with the Government stations.

The Northern Navigation Co., headquarters Collingwood, has ordered a new \$750,000 passenger and freight steamer from the Western Shipbuilding Co. of Port Arthur for the 1913 season. The new steamer will be the largest and most costly ever built in Canada, and the finest vessel on the Great Lakes. The boat is to be 452 feet in length, and 55 feet beam, with accommodations for 500 first-class passengers.

As a result of congestion of business and labor troubles in England, an order for a full-sized \$140,000 canal steamer has been placed with the Collingwood Shipbuilding Co. by the Keystone Transportation Co., at Montreal; and if the company succeeds in turning it out on contract time, September, 1912, this will constitute a record for shipbuilding in Canada. The new vessel will be 258 feet long, with 42.6 feet beam, 20 feet depth, 800-horsepower engines, and a speed of about 10 miles an hour. Its capacity will be about 82,000 bushels of wheat.

---

**HOLIDAY COURSE IN SPANISH LITERATURE AND ART.**

The Spanish minister at Washington has called attention to a "holiday course for foreigners" which has recently been organized by the Department of Public Instruction with the object of affording to foreigners an opportunity to acquaint themselves with the fundamental ideas of Spanish literature and the beauties of the court museums and the monuments of art in Toledo, the Escorial, Avila, and Segovia.

An explanatory pamphlet issued by the board for the promotion of studies and scientific research states: "The primary aim of the course, which is to be held in Madrid from June 15 to July 24 of the present year, is to offer to foreigners interested in the study of Spain and its language, and especially to professors and teachers, the opportunity of attending lectures and of being introduced to some of the leading works and masterpieces of Spanish literature. Facilities will also be given for becoming acquainted with the country through lectures, excursions, and visits to museums. Prospective students should note that some knowledge of the language is expected." This pamphlet, which gives additional information, will be loaned upon request by the Bureau of Manufactures.

**FOREIGN TRADE OPPORTUNITIES.**

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

**No. 8678. Representation in Argentina.**—An American consular officer in Argentina reports that a resident of his district has just left for the United States with a view to conferring with manufacturers and others who might desire to establish sales connections in that country. He states that he has had long experience in Argentina and wishes to hear from all firms that are interested in this proposition. His itinerary will include all the leading cities of the United States, which will give interested persons an opportunity to interview him personally.

**No. 8679. Dry dock.**—The American consulate general at Ottawa, Canada, reports that the Dominion Government is calling for tenders for the construction of a dry dock in the vicinity of Quebec. Tenders will be received until July 2, 1912. The construction of this dock is to be provided for under an act, copy of which was forwarded by the consul general and can be obtained upon application to the Bureau of Manufactures.

**No. 8680. Wool.**—A business firm in the Levant informs an American consulate that it desires to be put in communication with American buyers of wool. No commission houses desired. This firm will furnish samples on request by responsible firms with satisfactory references. Correspondence may be in English, and a list of references is furnished by the inquirer.

**No. 8681. Copper sheets and cotton goods.**—An American consul in the Near East reports that a firm in his district desires to make connections with American concerns for the representation of the following: Round copper sheets; also cotton goods, consisting of T cloths, cabots, sheetings, prints, etc., and remnants. Samples should be forwarded with prices and discounts. Correspondence with this firm, which furnishes references, may be in English.

**No. 8682. Axle oil for coaching stock.**—The American consulate at Karachi, India, has forwarded a notice calling for tenders for the supply of 540 tons of high-grade axle oil for lubricating axles of coaching stock for a period of 12 months from August 1, 1912. Tenders must reach the manager, Northwestern Railway, Naulakha, by June 11, 1912. Samples (not less than 1 imperial gallon of the oils tendered for) should be dispatched to the chief storekeeper, Northwestern Railway, Naulakha, Lahore, by the same date. Copy of the notice, containing specifications of the oils and further particulars, will be sent to interested persons by the Bureau of Manufactures.

**No. 8683. Coal.**—The Bureau of Manufactures is in receipt of a communication from a business organization in the Near East stating that the present seems a favorable time for the introduction of American coal. It is believed that a good business can be done in this line if satisfactory arrangements can be made with American shippers. Correspondence is desired by this organization as soon as possible.

**No. 8684. National park for Argentina.**—The American consulate general at Buenos Aires, Argentina, has forwarded copies of La Nacion, containing the project of the National Park of the Iguazu, also a plan of the same, which the director general of municipal parks, Mr. Carlo Thayer, presented to the Minister of Agriculture. The consul general reports that an effort will be made to secure blue prints of the proposed undertaking, and these will be loaned by the Bureau of Manufactures when received.

**No. 8685. Tenders for public requirements.**—A dispatch has been received from an American consular officer stating that the present is a peculiarly opportune time for American activity in the country in which he is located. Further particulars can be obtained by addressing the Bureau of Manufactures.

**No. 8686. Canned fruits and vegetables.**—An American consul in the Near East reports that a business man in his district has requested c. i. f. quotations on canned fruits and vegetables. Exporters should state size and weight of cans. Payments will be made on receipt of goods.

- No. 3087. Automobiles.**—The commercial attaché of a European embassy in Washington informs the Bureau of Manufactures that he has a request from his country for strongly built automobiles of small horsepower to sell retail at destination for \$300 to \$1,000. The firm making inquiry desires to make connections with an American manufacturer not represented in the country in question.
- No. 3088. Cabots and sole leather.**—A business firm in the Levant informs an American consulate that it desires to receive c. i. f. quotations on three qualities of cabots, as follows: First quality, 36 inches wide, 40 yards to the piece; second quality, 27 inches wide, 33, 80, 85, and 91 yards to the piece; third quality, 36 inches wide, 40 yards to the piece. Quotations for heavy and medium-weight sole leather are also requested. Applicant prefers that accounts be payable on arrival of goods.
- No. 3089. Beer bottles.**—A foreign business man requests an American consulate to obtain quotations on plain beer bottles, with and without caps, in two sizes, preferably liters and half liters. Manufacturers of combination tin and cork caps, also hand-capping or corking machines, are asked to mail catalogues, prices, and terms f. o. b. New York.
- No. 3090. Tallow and resin.**—A general export and import agent in a Mediterranean country, who states that he is in a position to furnish first-class references, informs an American consulate that he desires to purchase American tallow and resin, and he would like to receive offers from American producers or exporters of these articles. Correspondence may be in English.
- No. 3091. Freight sheds.**—The Belgian States Railways invite tenders for erecting a goods shed at Midi Station at an estimated cost of (section 1) \$180,000 and (section 2) \$75,000. Specification No. 122 obtainable from the Bureau des Renseignements, 15 Rue des Augustins, Brussels, Belgium.
- No. 3092. Ice-making machine.**—The Coast Guards Administration, Alexandria, Egypt, will receive tenders for the installation of an ice-making machine for steamship *Noor-el-Bahr*. Tenders will be received through local agents only.
- No. 3093. Telephone material.**—Tenders will be received by the Deputy Postmaster General, Melbourne, Australia, for the following material: (1) Until May 14 for 1,075 common battery telephones, 100 telephone switches, and 1,000 condensers (schedule No. 665). (2) Until May 21 for 30 miles of paper-insulated lead-covered cable (schedule No. 671), 24 miles of paper-insulated lead-covered cable (schedule No. 672), and 699 nonsolarized relays (schedule No. 680). (3) Until July 23 for lamp-signaling trunk-line switchboard of nine sections, and associated desk equipment (schedule No. 637). Local representation is necessary. For copies of the specifications and forms of tender, application should be made to the High Commissioner for the Commonwealth of Australia, 72 Victoria Street, London, S. W., England.
- No. 3094. Permanent road materials.**—Tenders will be opened on May 14 at the offices of the Chemin de Fer l'Etat Roumain, Bucharest, for the construction of permanent way for the line to be built from Zimnicea to Zimnicea Harbor. The upset price is put at about \$195,000. Although this contract will probably be awarded to a Roumanian firm, the carrying out of the work may involve the purchase of materials out of the country.
- No. 3095. Tramways.**—Tenders are invited by the Public Works Department, Constantinople, Turkey, for the construction of electric tramways in Stambul. Tenders will be received through local agents only. Specifications, particulars, conditions of contract, etc., may be obtained from the Ministère des Travaux Publics for \$2.19.
- No. 3096. Dredging in Canada.**—The American consulate general, Ottawa, Canada, reports that tenders will be received until May 6, 1912, for dredging required at the following places: Vernon River, Prince Edward Island; Cheticamp, Margaree Harbor, Sydney Harbor, D'Ecousse, Digby, Musquodoboit, Mill Cove, Nova Scotia; and Fredericton, St. Andrews, and St. Stephen, New Brunswick. Tenders must be made on the forms supplied. Combined specifications and forms of tender can be obtained on application to Secretary, Department of Public Works, Ottawa, Canada. Contractors must be ready to begin work within 30 days after the date of acceptance of tender.

**HONGKONG UNIVERSITY OPENED.**

[From Consul General George E. Anderson; see also Daily Consular and Trade Reports for Jan. 14, 1911.]

Hongkong University, the institution founded and endowed by a number of British, Parsee, and Chinese gentlemen for the education of Chinese young men, and organized under the patronage and control of the government of Hongkong, was formally opened on March 11 by Sir Frederick Lugard, retiring governor of the colony, with elaborate ceremonies in which the Chinese residents of Hongkong took a prominent part.

The university starts with a complete building equipment and an endowment of \$1,429,099 local currency. The building was constructed by the late Sir Hormusjee Mody, a Parsee merchant of Hongkong, as his contribution, at an expense of \$180,000 local currency. The endowment includes subscriptions from Chinese sources, mostly from three Chinese residents of the Straits Settlements, amounting to \$751,179; British and other subscriptions in the East, \$144,650; British subscriptions in Great Britain, \$466,584; and interest and other items, \$66,706. The faculty is substantially British in all lines but Chinese language and kindred subjects.

The assured income of the university from the beginning will be about \$100,000 local currency, or something like \$45,000 gold, per annum, including \$14,000 local currency per annum appropriated by the legislative council of Hongkong as government support.

**VENEZUELAN FOREIGN TRADE.**

[From Consul Thomas W. Voetter, La Guaira.]

Official publications show the foreign trade of Venezuela for the six months ended December 31, 1911, to have aggregated \$21,176,905, made up of imports \$9,654,926 and exports \$11,521,979, and distributed by countries as follows:

Countries.	Imports.	Exports.	Countries.	Imports.	Exports.
United States.....	\$3,044,402	\$3,823,102	Italy.....	\$304,424	\$69,473
Austria.....	1,328	130,457	Netherlands.....	608,698	125,699
Belgium.....	55,579	30,639	Porto Rico.....		2,946
Colombia.....		42,411	Spain.....	361,480	554,561
Cuba.....	816	37,515	Trinidad (B. W. I.).....	62,285	320,268
Curacao.....	4,821	417,003	United Kingdom.....	2,867,912	682,527
France.....	689,425	2,773,882	All other.....	450	606
French Guiana.....		41,726			
Germany.....	1,593,326	2,450,172	Total.....	9,654,926	11,521,979

Included in the above figures are the following quantities of coined money: Imports—United States, \$1,013,572; France, gold, \$39,082, silver, \$106,150; Trinidad, \$14,957. Exports—United States, \$1,737; Germany, \$4,369; France, gold, \$4,026, silver, \$57,900; Trinidad, \$2,950. The transactions with France were on account of new coinage, both gold and silver, being made in that country for Venezuela, and the shipment of worn currency there for reminting.

*March exports* of domestic merchandise totaled \$202,413,533, against \$158,670,456 in 1911 and \$140,380,053 in 1910.

# DAILY CONSULAR AND TRADE REPORTS

ISSUED BY THE BUREAU OF MANUFACTURES, DEPARTMENT OF COMMERCE AND LABOR

## METAL BUILDING MATERIALS ABROAD.

[From Consul E. A. Wakefield, Port Elizabeth, South Africa.]

For many years there has been a brisk demand for sheet metal in South Africa, and nearly all for building purposes. In the large towns galvanized iron is used for fencing small inclosures, for out-buildings, warehouses, roofs, water tanks, and, in some instances, dwelling houses. Up country, it is quite commonly used for dwellings. Steel ceilings and side walls are becoming more popular, especially in inland towns. On the coast the moisture-laden winds are apt to cause rust unless the metal be frequently painted.

There are various kinds of roofings in general use, such as pottery tile, galvanized iron, slate, rubber roofing, and tar and gravel. So far as known, there are no tin roofs. Pottery tile roofing is purchased from France and England, French imports for this district exceeding those from Great Britain. Exact figures of importations are not obtainable, as they are included with other earthen and china ware.

French tiles sell here at \$7.30 per 100 square feet (120 tiles), while English tiles sell for \$10.95 per 100 square feet (70 tiles). However, French tiles require more timber for roof construction because of smaller size, and each tile must also be fastened with wire. English tiles require little or no fastening. Most of the best buildings are tile roofed.

### Galvanized Iron—Market for American Wares.

Galvanized iron, or, more properly, galvanized steel, is imported from both England and the United States, the former supplying about 80 per cent of the imports. Probably 60 per cent of the English galvanized steel is rolled from sheet steel produced in America. During 1910 galvanized steel to the amount of 20,954 hundredweight, valued at \$75,129, was imported into this district.

While most of the steel ceilings come from England, the American product has a fair market here with probably slightly increasing proportionate sales. There are no manufacturers of steel ceilings in this consular district. The class of product imported locally sells at 6 to 9 cents per square foot.

Quality and price being comparatively favorable, there is no obstacle in the way of further development of American trade in these lines. A large school is soon to be erected in Port Elizabeth at a cost of nearly \$200,000, and some of these materials will be used. The duty on tiles is 15 per cent ad valorem; on steel ceilings, 15 per cent; on galvanized steel, 3 per cent; and on tin plate or sheets, 3 per cent; and in each instance there is a preferential rebate of 3 per cent ad valorem in favor of English products.

(From Consul Stuart K. Lupton, Karachi, India.)

#### Strong Competition—Customs Duties.

Competition in the sale of sheet-metal goods is very strong. India is largely supplied by Great Britain, the majority of import houses here being conducted by British subjects. Germany seems to be increasing its trade by a close application of common-sense principles. German traveling men return again and again to the district, although they may lose money on the first two or three trips.

Customs duties are levied on tin and iron roofing, steel ceilings, and side walls as follows: Iron plate and sheets, other than corrugated, and strips, galvanized, tinned, planished, or lead-coated, 1 per cent ad valorem; iron sheets, corrugated, galvanized, or black, 1 per cent on fixed valuation of 180 rupees, equal to \$58.40 per ton; steel plates, sheets, other than corrugated, if galvanized, tinned, lead-coated, or planished, 1 per cent ad valorem; steel sheets, corrugated, galvanized, or black, 1 per cent on fixed valuation of 180 rupees, equal to \$58.40 per ton.

No special mention is made of stamped ceiling and side walls, except under the heading "Other sorts," at a duty of 1 per cent ad valorem.

#### Imports by Countries.

By principal countries, India's imports of sheets and plates during the last three fiscal years were:

Plates and sheets.	1908-9	1909-10	1910-11
<b>GALVANIZED IRON.</b>			
Great Britain.....	\$79,644	\$76,537	\$80,009
Belgium.....	5,219	5,412	133
United States.....	628	64	.....
<b>TINNED.</b>			
Great Britain.....	8,622	4,529	7,281
Other countries.....	.....	37	.....
<b>STEEL.</b>			
Great Britain.....	335,256	283,411	358,366
Belgium.....	223,324	227,364	125,445
Germany.....	82,949	66,975	37,305

The United States has not figured in this last-mentioned item since 1906, when credited with \$558. Although the imports of steel plates from Belgium appear from the statistics to exceed those from Germany, I am informed that this is not the case, the greater portion thereof being merely cargo placed on ships at Belgian ports. A large portion of the corrugated steel sheets is of very heavy grade, about three times the thickness of the ordinary 27-gauge. This is worked up into tubes for culverts, telegraph poles, etc.

**Building Methods in Vogue.**

Although I have been in Karachi three years, I have not seen stamped metal ceiling or siding here. The majority, in fact almost all, of the houses in Karachi are built of local products and in the cheapest manner possible. A very poor grade of sandstone is used for the walls, and cases are known where houses less than 30 years old have had to be torn down on account of the deterioration of the lower tiers of stone. Ceilings are of the very cheapest quality of matchwood, imported chiefly from Hungary. Roofs are covered almost without exception with tiles. A cheap native tile laid in mortar costs about \$1.95 per 100 square feet. This requires a continuous sheathing, and is also very heavy, about 12 pounds to the square foot. The best quality of tiling used is manufactured in Karachi and laid without mortar on continuous sheathing. This tile sells for \$1.20 per square yard, or about \$13.50 per 100 square feet.

Karachi is a place where people move a great deal. Almost all of the better classes among the European residents know that they will leave Karachi in two or three years, or have hopes of doing so. The result is that almost all dwellings are owned by a few landlords, who save as much money as possible in construction. Even the business houses are in the same condition. The well-to-do native is accustomed to this class of construction and does not seem to care for any change for his own use. Many small houses are being put up at present, but all are constructed in the manner spoken of. There has been more or less talk for the past four years of a new customhouse and a municipal building, but the discussions have not yet reached a point where sites are being considered.

[From Consul Edward I. Nathan, Mersine, Turkey.]

**Iron and Steel Products in Asia Minor.**

The imports of iron and steel products at Mersine are deserving of more attention by American manufacturers who, with a single exception, have neglected this market. Much construction work has been going on here in the past two years, and steel joists, corrugated sheet iron, wire nails, and iron pipe have been imported in greater quantities than before. The principal imports of iron and steel in 1911 included about 400 tons of steel joists and 800 tons of mild steel from Belgium; 150 tons of what is known as Milan steel, which is packed in cases and comes from Austria; also about 600 tons of malleable iron from Sweden, which is used largely for the manufacture of native tools and implements.

No attempt has been made by Americans to compete with any of these articles. Corrugated sheet iron for roofing is the principal import of this class from the United States. In 1911 the value of such imports was \$8,183, but the value of similar imports from Great Britain during the same period was \$28,588. A small quantity of iron pipe valued at \$637 was also imported from the United States, but the principal sources of supply for iron pipe were Great Britain and Germany. American wire nails formerly monopolized this market, and indeed the entire Levant, but lower-priced French and Belgian nails have taken their place. Large quantities of spades, without handles, and all kinds of tools are imported every year, but no American goods are seen. American nail pullers, files, and saws, as well as other articles for construction work, could be sold here.

There were also heavy imports of steel rails and all kinds of railroad material at Mersine during the past two years. These were all for the construction of the new sections of the Bagdad Railroad which is to traverse the plain of Adana. As this is a German concession the necessary material was imported direct from Germany and Belgium. Contracts for buildings in Mersine have been given by the municipality to a French company which will also doubtless import its material direct.

[From Consul Lester Maynard, Harbin, China.]

#### **Metal Tiles Unknown in Harbin.**

Metal Spanish tiles, metal shingles, and steel walls and ceilings have never been introduced into this market, and the local builders and architects, although admitting that they know practically nothing about them, are inclined to doubt the possibility of their introduction.

Approximately 650 tons of corrugated iron were imported into Harbin during 1911. The returns of the Imperial Chinese Maritime Customs show that 662 tons were imported through the custom-houses at Manchouli and Suifenhö during 1910, the value being declared at \$48,979 United States gold. Practically all of this corrugated iron comes from Great Britain, and the principal grades are Nos. 28 and 29, the former selling for about \$66 and the latter \$69 per ton. The duty on corrugated iron is 0.275 haikwan tael (haikwan tael is at present 70.6 cents) per picul of 133½ pounds avoirdupois. The duty on tin in sheets is 1.725 haikwan taels per picul, and on tin slabs 1.50 taels.

The extremely cold winters of this district cause the suspension of all construction work, and as a consequence the short building season of about six months is very active. I believe if one of the local builders or architects could be induced to introduce metal ceilings and walls or metal shingles, a fair demand could be created.

[From Consul General A. Gaulin, Marseille, France.]

#### **Roofing Materials and Metal Ceilings.**

Tiles are practically the only roofing material employed in this district, rubber and metal roofing being used to a very limited extent. The annual output of the Marseille brick and tile factories averages over \$2,000,000 in value, and the quantity exported each year exceeds 165,000 metric tons.

The ordinary flat tiles are quoted at the present time (Feb. 12, 1912) at \$13.50 to \$15.45 per thousand, and round tiles \$9.65 to \$12.95, according to size. Flat tiles laid on roof cost 35 to 40 cents per square meter (10.764 square feet), round tiles \$1.15.

The sale of metal roofing here would be chiefly dependent upon price. It is feared, however, that metal roofs would prove too hot in this climate. Whatever is used of this product now is entirely of domestic manufacture.

[From Consul General Ernest L. Harris, Stockholm, Sweden.]

#### **Introduction of American Goods.**

Inasmuch as Swedish manufacturers are unable to supply all of the Kingdom's demand for metal roofing, there is a considerable sale here of foreign products of this nature. The market thus far has been supplied chiefly by Germany, Belgium, and Great Britain. Attempts to introduce these goods are also being made by American

manufacturers, and it would appear that their efforts are meeting with some success.

The price ordinarily obtained in Stockholm for black flat sheets is about \$10 for 440 pounds. These are sold in strips, the sizes of which are usually 1.2 by 0.6 meter (3.937 by 1.9685 feet). Galvanized flat sheets are quoted about 20 per cent higher. Formed roofing and siding does not seem to be in current use. Ornamental metal ceilings are not used so much as those made of gypsum and papier-mâché.

[From Consul Wilbert L. Bonney, San Luis Potosí, Mexico.]

#### Business Disturbed at Present.

In this market tin plate is purchased from England; cases containing 112 sheets of charcoal tin of good quality, each 14 by 20 inches, are laid down here for \$4.32 per case. I am informed that American exporters can not compete with this price.

Houses, business structures, and public buildings in this district are built with cemented roofs, and tin or corrugated iron are used only in industrial buildings and plantation works. The tin and corrugated iron usually come from England. There might be a better prospect for business in this line in the eastern part of the State, where American colonists in many cases put up frame buildings.

Building methods are conservative in this country, and at present conditions are such that no new work is being undertaken. When normal conditions are restored and building and remodeling resumed there should be a market for American metal goods, but they will require demonstration and pushing.

### JAPANESE FUEL AND IRON OUTPUT.

[From Consul General Thomas Sammons, Yokohama.]

Statistics of the production of Japanese collieries during 1905-1910, inclusive, follow:

Articles.	1905	1906	1907	1908	1909	1910
	<i>Metric tons.</i>	<i>Metric tons.</i>	<i>Metric tons.</i>	<i>Metric tons.</i>	<i>Metric tons.</i>	<i>Metric tons.</i>
Coal.....	11,542,397	12,980,103	13,803,969	14,825,363	15,048,113	15,981,324
Pig and cast iron.....	133,941	143,176	141,149	145,011	163,376	187,793
Iron and steel, "Kera" direct process.....	1,126	1,133	884	685	475	474
Wrought iron.....	1,305	1,381	1,064	93	284	19
Bessemer and open-hearth						
Ingots and castings.....	54,096	69,096	88,479	92,323	100,245	167,886

The Eleventh Financial and Economic Annual, issued by the Japanese Department of Finance, shows that on December 31, 1909, there were 681 machine shops, 595 tool works, and 1,000 foundries and metalware establishments in operation throughout the Empire. These employed 13,688, 11,903, and 16,987 operatives, respectively, the women workers numbering 156 in the machine shops, 962 in the tool factories, and 1,863 in the foundries. The average wages of machinists and toolmakers are not given in the report, but founders received 27 cents per day in 1906, 31 cents in 1907, 33 cents in 1908, and 33½ cents in 1909. There were also 44 plants listed as "metal refineries," employing 1,196 operatives.

## CHINESE PORK FOR EXPORT.

## HANKOW.

[From Consul General Roger S. Greene.]

Hankow is the center of the Chinese export trade in dressed hogs, the industry being entirely in the hands of the International Export Co. (Ltd.). All the foreign shipments, amounting in 1910 to 21,523 carcasses, go to Great Britain. The 1911 figures are not yet available, but the company handling the trade places the shipments at 19,903 carcasses.

There has been some misapprehension as to the food on which these hogs are fed. This is usually rice bran, refuse rice, and other grain from native breweries and distilleries, bean oil cake, and the hulls, etc., left from the manufacture of bean curd. While the scavenger pig also exists, it is apparently not the source of the ordinary meat supply for the foreign market. The conditions under which the animals are slaughtered and dressed are said to be satisfactory and the buildings of the local plant are modern and well kept.

The abnormal conditions now prevailing in China make any price information very unreliable, especially with the present erratic exchange rates. Pigs cost about \$20 Mexican per head here, in quantities. At the rate of \$0.434, as given by the United States Treasury Department on January 1, 1912, this would be \$8.68 gold, but at recent bank rates in China it would be over \$10 gold. This price is on the basis of 160 pounds gross weight, but most of the pigs weigh between 185 and 210 pounds. The net weight of the dressed pig is about 20 per cent less, but about \$1.30 gold can be obtained for the head and by-products. The net cost per pound would therefore appear to be about 5.8 cents gold per pound. The retail price is 6 to 6.5 cents gold per pound at the present exchange rate.

**Report of an English Investigator.**

In 1911 an official investigation of the entire industry here was made by Dr. Reginald Farrar, of the Local Government Board, London, who prepared an extensive report. A copy of the part dealing with the export of dressed hogs from China is forwarded herewith [and may be obtained from the Bureau of Manufactures]. From discussions of this report with local physicians, I have come to the conclusion that the favorable view taken by Dr. Farrar of the pork at present exported is justified. It appears that parasitic and tubercular infections of Chinese pork are comparatively rare. A brief abstract of Dr. Farrar's report follows:

As far as could be ascertained, pork is being exported to England from only two places in China, Hankow, on the Yangtze River, and Harbin, in Manchuria. The shipping of pork from Shanghai is under consideration.

A prejudice entertained by certain European residents of China against the use of Chinese pork, on the ground that the Chinese pig is a scavenger, eating garbage, and therefore likely to transmit parasitic diseases, has been transmitted to England, but I have ascertained that not only the pigs exported to England, but in general those sold in the native markets for Chinese consumption, are grain-fed pigs reared on farms under conditions which compare favorably with those obtaining in England. It is true that pigs are to be seen rooting in the streets and feeding on garbage in many cities of China, and it is also probable that these animals are eventually eaten by the poor persons of the coolie class. Pork is freely eaten by Europeans at Shanghai, Hankow, and Harbin, and, I am told, in Yunnan.

Pork is the staple meat food throughout China and that which I have seen exposed for sale in native shops has nearly always been good fat meat, not such as would come

from the lean, pendulous-bellied scavenger pigs. I may add that the average Chinaman is as dainty in his feeding as the average Englishman, and the idea of eating garbage-fed pork is as repugnant to him as to ourselves.

#### **Danger of Disease Slight—Kinds of Pigs Used.**

I could find no evidence that parasitic diseases are more common in Chinese than in English pigs, and the testimony of medical men practicing in China is that trichinosis is extremely rare in China, and practically unknown in the Yangtze Valley. *Cysticercus cellulosae* and other parasites are uncommon. As regards the possibility of the transmission of plague from infected districts in China, Prof. Zabolotny, one of the Russian delegates to the International Plague Conference, who has been testing the liability of various animals to infection with human plague derived from a pneumonic strain, states that he has found the pig relatively highly resistant.

The larger part of the pork that has been shipped to England has been obtained from the Province of Hunan, which is a rich and fertile country devoted chiefly to rice growing. On most of the farms from one to several dozen pigs are kept, almost uniformly under very favorable conditions. The Hunanese pigs are a special breed, differing from those I have seen in other parts of China. They have short, erect ears, short snouts, rounded jowls, compact bodies, with broad backs and short hams, and slender tails. The color is piebald black and white and the bristles relatively short and fine. The fibers of the meat are fine and the animal is a good fatterer.

The pig commonly sold in the Hankow native markets is the Honanese. This appears to be a native pig, to the breeding of which no especial attention has been devoted, and which is not far removed from its wild progenitor. This pig has long pendulous ears, a long snout, straight lean jaw, a lean body, with sagging, pendulous abdomen, narrow back, prominent spine, long lean hams, and a tail longer and coarser than that of the Hunan pig. The flesh has a peculiar odor which differentiates it from Hunanese pork, is paler, and has coarse and tough fibers. Even when especially well fed, this animal does not fatten as well as does the Hunan pig.

#### **Veterinary Inspection.**

At Shanghai the animals killed at the international and the French municipal abattoirs are inspected by skilled veterinarians and all pigs showing traces of tuberculosis are rejected. The greater number of rejections are made for rouget de porc (swine erysipelas, Rothlauf), the total rejections for all causes during the first 5 months of 1911 numbering 17 out of 14,998 pigs examined. At Hankow the pigs slaughtered are inspected by the police medical officers. At Harbin the inspection is made under the Russian imperial meat-inspection regulations, with equal strictness in the public slaughterhouse and private factories. This inspection includes microscopic examination of all animals killed.

### **CANTON.**

[From Consul General Leo A. Bergholz.]

#### **Pork from Yunnan Province.**

The finest pork in China comes from the Province of Yunnan, and has a reputation throughout the country similar to that of the Yorkshire hams in England and the Westphalian hams in Germany. The pigpens are marvels of cleanliness, and the food for the animals is carefully prepared.

Upon the passage of the pure-food law in the United States, the provincial government established a special bureau to supervise the sanitary conditions of the meat factories, especially those making hog products, engaged in the foreign trade. Since then only meat from hogs which ante and post mortem veterinary examinations have shown to be free from disease has been allowed to be shipped abroad. This applies particularly to the exportation of dried meats to the United States and lard to the Philippines. The hog products sent to the United States are sausages of various kinds and prepared dried meats, for consumption by Chinese, and their preparation is very simple. Sausages are made of meat from the hind thighs of hogs, which are chopped fine, mixed with 4 drams of sugar, rice wine, and

table salt, 8 drams of soy, and a pinch of pepper to each 1½ pounds, and dried in the sun until ready for tinning. Dried oysters and duck's livers are added to some varieties. Prepared meats are put up in a similar manner, except that the meat is sliced instead of chopped.

#### **Slaughterhouse Conditions and Inspection.**

A special slaughterhouse has been constructed according to hygienic principles for the killing of hogs for the export trade. The building is of brick, with large open spaces for ventilation on all sides, and the floor is made of concrete.

Animals used for the export trade are practically subjected to two different examinations before being killed. Hogs are first brought from the general city hogpens, where an inspection is carried out by the police department, and then transported to specially constructed pens in connection with the slaughterhouse, where they are again subjected to a thorough inspection by special sanitary inspectors. Only such animals as are passed and stamped as healthy by the inspectors are allowed to be killed. Should an animal show any sign of disease it is at once condemned. By paying strict attention to the ante-mortem examination, the percentage of diseased carcasses as revealed by the post-mortem examination is reduced to a minimum. Every precaution is also exercised in the post-mortem examination to detect the unhealthiness of the animals.

The sides of the hogpens connected with the slaughterhouse are of iron rails, the floor is of concrete, and the inspector requires the floors to be cleaned at least once a day. As these buildings are situated on the banks of the river, draining as well as cleaning can be easily carried out. Animals in the hogpens are fed twice daily with cooked cabbage and rice mush.

Lard is prepared by boiling the fat tissue and the fat portion of the meat in a boiler till all of the oil is extracted. The residue is then poured into large China basins and stirred until it solidifies. No foreign substance is used in the preparation of lard.

#### **Report of Philippine Customs Official.**

Mr. F. W. Wilson, chief of the customs secret service of the Philippines, who made a careful examination of hog pens and slaughterhouses at Canton early in 1911, reported to the Philippine Government as follows:

The corrals, pork markets, and lard factories appeared surprisingly clean and sanitary. The slaughterhouses are hardly worthy of the name, as each butcher appears to kill his hogs at his own place; but these were also surprisingly clean. The site chosen for a new central lard factory is across the river from Canton proper. It has a couple of good buildings and is, on the whole, very suitable. An arrangement has been made with certain pork dealers whereby the swine will be slaughtered at this factory.

All swine slaughtered pass through certain principal corrals, where a tax is collected on those weighing over 30 pounds, these taxes having been collected upon 588,890 pigs during 1910. Inspectors are stationed at these corrals, and the meat is also inspected in the markets. We found the pens clean and the food wholesome, the latter consisting chiefly of refuse from the manufacture of rice wine, bran from bean and rice flour, sweet potatoes, and squash, which are cooked together.

[Several photographs of the slaughterhouses and sausage and lard factories, forwarded with the foregoing report, may be obtained from the Bureau of Manufactures.]

**SHANGHAI.**

[From Consul General Amos P. Wilder.]

**No Pork Exported from Shanghai.**

Practically nothing has been done at Shanghai in the exporting of dressed hogs, one shipment of 22 carcasses in August being the total for 1911. There seems to be no provision here for supervision and inspection, for I am informed that no records of such shipments are kept in the British consulate and that hogs are not exported with consular papers. Should the trade develop at Shanghai, suitable regulations would doubtless be put in force, but there is little possibility of its growth at this time.

---

**HARBIN.**

[From Consul Lester Maynard, Harbin, China.]

**Frozen Pork Shipments.**

The refrigerating plant of T. D. Kuznetsoff, of Harbin, has sent a trial shipment of 50 frozen hogs to Vladivostok. The pork successfully passed veterinary inspection, and it is believed that if this shipment proves satisfactory a new and profitable field will be opened up for Harbin exporters.

---

**USE OF AMERICAN TERMS.**

[From Consul General George E. Anderson, Hongkong, China.]

Hongkong importers complain that American exporters or manufacturers use American terms in foreign correspondence and in catalogues which are not understood abroad. For example, one firm calls attention to the fact that the term common in the United States "for carloads" is not generally understood in the Far East. The firm says:

It would be better if in quoting prices manufacturers would state "for a minimum quantity of ———," instead of using the term "for carloads." You will appreciate that importers pay more attention to quotations terms for which are distinctly clear to them, and it may be that at times certain importers not knowing the quantity intended by the expression "carload" will not give so much attention as they would to a quotation quoting prices "per piece," "per dozen," "per yard," "per ton," and so on, with a proviso of minimum quantities of so many "pieces," "dozens," "yards," "tons," etc. This may be but a small point, but in dealing with Chinese we believe that it may be a point that will count.

---

**English Company To Build Motor Ocean Vessels.**

Chargé d'Affaires Norval Richardson, of the American legation at Copenhagen, reports that much interest is being manifested in Denmark over the formation of an English company to build Diesel-motor, ocean-going vessels of the *Selandia* type. [A description of the *Selandia* appeared in Daily Consular and Trade Reports on Mar. 26.] The new shipyard, which is to be located on the Clyde, expects to begin work in 1913, and, according to the Danish press, has guaranteed to the Burmeister & Wain Co., of Copenhagen, builders of the *Selandia*, one-fourth of all the orders received for Diesel motors.

**SPURIOUS ANTIQUES IN THE EAST.**

[From Consul General George E. Anderson, Hongkong.]

The attention of tourists traveling in this portion of the world should be called to the fact that spurious goods of all sorts are upon the markets of the Far East for sale to them. Not only are there spurious "antiques" of all sorts, such as chemically treated "old" brass, modern make "antique" porcelains, so-called "ancient" wall hangings, and works of art of all sorts, but there are some especially clever base imitations of standard modern goods.

The imitation of antiques in this portion of the world has taken on all the forms to be found in Europe and elsewhere and has some features peculiar to the East, but the chief imitations of this class have had to do with Chinese porcelains and brass, ancient Chinese and Japanese armor and weapons, old Korean chests, old carved furniture, and similar goods, and in lesser degree of some of the various works of art in fine bronze, ivory, lacquer, and the like, in much of which in fact good imitations are not practicable.

**An Extensive and Growing Business in Imitations.**

The imitation of old Chinese porcelains, as has long been known to connoisseurs, has long since become a branch of business so extensive and so successful that the sale of a genuine old piece nowadays is an event. While this is generally understood by collectors the general public does not seem to appreciate the fact, for seven large new shops handling such goods were opened last year upon the principal shopping thoroughfare of Hongkong within the three months preceding the opening of what is generally considered the tourist season in this port. The trade in these imitation ancient porcelains has developed so far that there are regular auction sales in Hongkong of this imitation ware. To local people these goods are sold as imitations, but a considerable portion of them eventually find their way into the hands of people without knowledge of the actual facts and spurious "ancient" Chinese vases and other porcelains made in Europe and Japan have been scattered all over the world.

Similar imitations of ancient brasses and bronzes, ivories, lacquers, and other art objects are made and sold in these or similar sales; in fact there is almost no limit to the business. Genuine old pieces in brass, bronze, porcelain, jade, or in hangings or other embroideries or in similar goods beloved of collectors are practically not to be had on the market in Hongkong or other eastern ports except in very limited quantities, and to some extent, at least, there is better opportunity to acquire good Chinese and Japanese pieces in New York or London than in Hongkong or Shanghai. In spite of this fact, generally known to collectors and more or less known to the casual traveler, dealers here do a thriving and a very profitable business.

**Baits for the Tourist.**

Perhaps the worst feature of the situation is the fact that while there is a fair supply of good, standard quality modern art goods of all these classes the vast mass of such goods now sold are imitation goods of a quality false in some respect; and while the average tourist buyer may be on the lookout for imitation antiques he may be readily deceived by the "bronzes" of baser and cheaper metals, "silver" of pewter, particularly souvenir spoons and the like, clay "filled" silk, brass in all shapes and grades made in imitation of old pieces; in

short, practically everything of any merit in Chinese or Japanese art, ancient or modern, which may be looked for.

There is almost no limit to the classes of goods now sold in regard to which care must be taken. For example, silk goods are being adulterated to an extent and in a way never before followed, and quantities of Japanese and Chinese goods supposed to be made from the native-worked Japanese or Chinese silks are partly American cotton. Silk hosiery is sold which is not only not all silk, but is undersized and otherwise unwearable. Embroidered screens will be found made of the flimsiest materials glued in the most temporary manner. Ivories will be found to be bone or imitation ivory.

There will be found a real grade and an "export" grade of porcelains like the beautiful Satsuma porcelains of Japan. Imitation cloisonné ware is on the market in great quantities. Japanese carved "cherry" wood furniture made for sale not only in Japan but in other parts of the Far East and sold generally in Hongkong and even made for direct export to the United States and Europe, is now generally made in white soft wood stained and varnished. Much of the Japanese silver for sale in all these ports is pewter or silver of so low a grade as to lose all merit as such. Chinese blackwood furniture in some cases is white wood stained, but this is not so prevalent now as it was, for the reason that the Chinese guild concerned has stopped the practice of imitating the expensive heavy "black" wood.

#### **Imitations Made to Order.**

Another feature of trade in such goods may be indicated by the fact that recently a large order was placed in Hongkong for "Siamese" brass, and most of the brass workers of this port at present are busily engaged in beating out beautiful brass trays with the usual Siamese engraved decoration and characteristics, to be sold in Siam as Siamese—beautiful work, but not what it is sold as being. Considerable modern Chinese brass is made in Japan and some even in Europe.

Some of these goods are sold as imitation or second or third class goods, but there are many dealers who are not very scrupulous about calling the attention of their customers to the fact that such goods are imitation, and actual misrepresentation is common. Many of the more patent deceptions have long been understood by casual travelers in the Far East, but there are very modern and up-to-date imitations of old or other meritorious goods which deceive even more experienced travelers. It seems needless to add that travelers in the Far East should not only buy antiques, curiosities, and the like with the greatest care, but should also give particular attention to the actual composition, standard quality, and real merits of modern goods purchased. Against prevailing conditions reputable business men in all eastern countries have long been contending, but the present system is profitable and so long as people will buy them such goods will be sold, and the only adequate protection for the purchaser is his own wariness.

---

#### **Bound Volumes of Daily Consular and Trade Reports.**

The Government Printing Office will supply regularly in quarterly volumes, with complete 32-page indexes, bound sets of Daily Consular and Trade Reports from January 1, 1912. The price is \$1.50 per volume or \$6 per year, in order to cover the cost of the index and binding. Those desiring the bound volumes should write to the Superintendent of Documents, Government Printing Office, Washington, D. C.

### THE GOLD MINES OF FORMOSA.

[From Consul Samuel C. Reat, Tamsui.]

Gold mining in Formosa is no new enterprise. The discovery of the first gold dates back to the Chinese régime. In 1890, when Liu Ming-Chuan, that astute and progressive administrator, was carrying forward the first railroad construction, Chinese coolies found the yellow metal while excavating for the foundation of a railroad bridge over the Keelung River at Shichito. In all subsequent prospects no mines have been located outside of the Keelung River watershed.

Both placer and quartz mines have been operating for many years, but placer mining has been virtually abandoned. There are now just three quartz mines being worked, and their annual output appears to be diminishing. But the statistical information is somewhat misleading, for the supply of treatable ore at two of the mines will last for many years. Although undoubtedly the grade is growing less, the supply is good and the value is holding fairly well. By enlarging their plants and by installing improved machinery the companies will be able to treat lower-grade ore in larger quantities. These mines are located in north Formosa, within 10 or 12 miles of Keelung, the chief port of Formosa. They are called Botan-ko Kozan, Kinkwaseki Kozan, and Zuiho Kozan, the address of each being Keelung, Formosa.

#### **The Botan-ko Mine.**

The Botan-ko consists of 600 acres, and has been operated since 1903. Its equipment is 6 Huntington mills; 6 gravity stamps, 1,000 pounds each; 20 small stamps; and 13 motors. The system is amalgamation, concentration, and cyaniding; sand, percolation, and slime treatment.

This mine smelts its own concentrates. This is a gold ore with a small amount of silver. It also contains about six-tenths of 1 per cent of copper. There is a great deal of ore worth about \$2.50 a ton, and the company is planning to treat 200 to 400 tons per day by enlarging the capacity. There is some ore worth nearly \$5 per ton. At present about 100 tons a day are being treated. The Botan-ko mine should run for several years, but only by treating lower-grade ore in larger quantities. Hydroelectric power is used.

#### **The Kinkwaseki Mine.**

The Kinkwaseki mine comprises 2,246 acres. The general equipment is not unlike the Botan-ko, except that there are 80 light stamps. The ore is not highly silicious. There is here a cyaniding ore also, and about 100 tons are treated daily by smelting. This mine should run for many years because of the large amount of ore. Some ore of this mine has been worth \$9 a ton. The company intends to increase the capacity of its plant in order to handle the treatable ore. The power is hydroelectric and steam.

#### **The Zuiho Mine.**

The Zuiho mine comprises 2,046 acres. Its equipment is 9 Huntington mills. The same process of cyaniding, sand and slime, is used here. This mine sells its concentrates to the Kinkwaseki. The ore consists of two classes—oxidized and sulphide. They are eventually

treated together. The amount of ore treated daily is about 85 tons, with a value of \$6 per ton. This mine is now a small producer and is on the decline. Power is derived from electricity generated by steam.

In contradistinction to many enterprises in Formosa, these gold mines are being exploited by private capital. The following figures cover the product of the three mines for the quinquennial period, 1906 to 1910:

Year.	Botan-ko.	Kinkwa-seki.	Zuiho.
1906.....	\$318,324	\$346,463	\$215,369
1907.....	275,785	301,796	220,542
1908.....	191,535	694,859	186,707
1909.....	176,202	709,890	166,964
1910.....	134,147	683,947	231,896
Total.....	1,095,993	2,746,954	1,049,477

### AUSTRALIAN NOTES.

[From Consul William C. Magelssen, Melbourne.]

#### Uruguayan Agricultural Students on World Tour.

A party of engineers of agriculture from the Montevideo University, Uruguay, has just completed a visit to the State of Victoria, as a part of a world tour, and were while here under the guidance of the chief field officer of the Department of Agriculture. The members of the party are investigating agricultural and land settlement questions on behalf of the Government of Uruguay. They have been through Europe and will proceed through New Zealand and the United States on their way home. The embassy was greatly impressed with the development of Victoria and the great possibilities of the State. [Another body of these students is making a 3-months' tour of the United States, as announced in Daily Consular and Trade Reports for November 3, 1911. It is understood that the party coming from Australia is about to join them in Salt Lake City.—B. of M.]

#### Large Orders for Locomotives.

In the State of Victoria there has been an altogether unexpected development in railway traffic within the last few years, the passenger and goods business having increased beyond all anticipations. This has resulted in immediate demands for additional haulage power, and 40 engines have been ordered from England and the United States, of which 15 Baldwin locomotives are already in service. An elaborate program of locomotive construction has now been decided on by the Victoria Railway Department, and during the next three years 210 locomotives are to be built in the State. These will be constructed at the rate of 70 per annum—30 at Newport, 20 manufactured in parts by Victorian contractors and erected at Newport, and 20 manufactured wholly by private firms. While it is believed by the department that no Victorian firms will be able to undertake building complete locomotives during the first year, and that it will be necessary to allot such work to firms in other States of the Commonwealth, it is thought that by offering inducements for a continuance of the work Victorian firms will be enabled to undertake the construction of the 20 whole locomotives in each of the succeeding two years.

**NEW CHAMBER OF COMMERCE IN GREECE.**

[From Consul A. B. Cooke, Patras.]

Patras is the chief port and metropolis of western Greece. It has 40,000 inhabitants, and is the commercial center and distributing point for the Peloponnesus and the Ionian Islands, representing a supporting country of well over 1,000,000 people. It is the center of the currant trade, which represents an annual business of \$12,000,000 to \$15,000,000. It also has large interests in olives, olive oil, citrons, wine, cheese, and tobacco.

There are three lines of fast steamships from this port to New York direct, with a service more than once a week, the journey taking 14 days. The business of Patras is steadily growing, especially its outward trade to New York. Its import trade is also increasing, as indicated by the fact that in 1911 duties collected at this port on incoming merchandise were \$100,000 more than in 1910.

The business men of Patras are keenly alive to the interests of their city, and are taking steps to bring it into closer commercial relation with the outside world. One of the most notable recent measures was the reorganization in 1911 of the chamber of commerce of Patras. This chamber had been in existence in its old form for more than 50 years, but its organization was not of such nature as to handle to the best advantage the problems of a growing and busy city. In 1911, therefore, through the zealous efforts of a small group of leading business men, the chamber was reorganized along modern lines, with boards to handle the various questions that came before the city. It now consists of some 250 of the principal business and professional men, with rigid requirements for membership.

The chamber has purchased and fitted up sumptuous quarters on the leading square of the city, consisting of committee rooms, luxurious reading rooms, a public hall, billiard rooms, a grill, and all other appointments of a modern club. In the reading rooms are the daily papers of five European countries, magazines, commercial journals, illustrated weeklies, and monthly periodicals from almost all quarters of the world.

The chamber will take pleasure in giving any information with regard to Patras, its business, or the country which it represents. Letters addressed to "The President of the Chamber of Commerce, Patras," will receive prompt attention. The letters may be in English.

Journals wishing to have their issues displayed in the reading rooms are invited to send them addressed "Reading Rooms, Chamber of Commerce, Patras, Greece."

---

**ANTIQUITY OF CHINESE BURIAL CUSTOMS.**

[From Vice Consul General Myrl S. Myers, Mukden.]

There is no demand in the Mukden district for American funeral cars, hearses, etc., and it would be difficult to create one. The catafalque employed in China was used before the Christian era, and I believe, with the exception of the T'ang dynasty, which held the throne of the Chinese Empire from A. D. 618 to 907, it has been used ever since. In most cases the situation of the burial grounds and the condition of the roads preclude the use of a 4-wheeled vehicle.

**INDIA WHEAT ELEVATOR PROBLEM.**

[From Consul Stuart K. Lupton, Karachi.]

The revised financial statement of the Punjab for the fiscal year ending March 31, 1913, contains a provision of two lakhs of rupees (\$64,880) for the erection of a wheat elevator at Lyallpur. Lyallpur is the seat of the Punjab Agricultural Experiment Station, and it is stated as well that storage accommodation was insufficient during the past year. The estimate adds:

It is hoped that, if the Government leads the way, private enterprise may be directed to this channel, which has been found so useful in America, not only for the storage of wheat but also enabling the cultivator to get it properly classified and to obtain credit for his produce without putting it immediately upon the market. The success of the venture can not be assured without the cooperation of the Northwestern Railway and of the port authorities at Karachi; but if it is demonstrated that the elevator system is suitable to the requirements of the great wheat-producing tracts in the Punjab, it will clearly be to the interest both of the railway and of the port to provide facilities for export in bulk.

I am of the opinion that this will be the entering wedge for the construction of elevators in Northwest India. The opponents of the system claim that no trust can be placed in the probity of the persons placed in charge of the elevators, and that false certificates will be responsible for more trouble than is found in the present system. Certain exporters in Karachi by long residence, etc., have acquired facilities for handling export wheat which are superior to those of the later comers and do not wish to see their competitors placed on an even footing. Furthermore, the Port Trust has been committed to a very large expenditure for additional stacking grounds for export, and they are loathe to admit that this expenditure (about \$1,297,600) is practically wasted. Although a local firm last year requested a site in the Karachi Harbor for erecting an elevator at its own expense, permission was refused by the Port Trust.

It is very probable that this work at Lyallpur will be placed in the hands of the Public Works Department, although this is not certain. Further information in regard to this work will probably be given out later by the Financial Secretary at Lahore.

---

**FRUIT JARS IN ENGLAND.**

[From Consul General John L. Griffiths, London.]

With reference to the trade in fruit jars in the United Kingdom, while there is a large sale of fruit bottles (glass) and jars to the large preserving firms, the most common containers are simply round glass bottles, with wide necks. The jars are usually upright and round, with a small groove near the top for fastening securely the parchment paper for the top by means of strong string.

The containers used by housewives consist almost wholly of old bottles and jars in which jams, jellies, etc., had been purchased from the local tradesmen, such jams and jellies having been prepared by the large manufacturing concerns. As these bottles and jars are not returnable to the tradesmen, it will be apparent that housewives may readily accumulate a sufficient stock for bottling their own home-made products. The custom of preserving fruits in their juices, as is done in the United States, does not prevail in this country to any appreciable extent, and hence there has been, and is, practically no demand for the air-tight American jars.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8697. Real estate.**—An American consul reports that a foreign Government official is interested in the purchase of land in the United States, and it is thought that he will shortly leave to investigate American real estate. He is especially interested in the Pacific northwest.
- No. 8698. Coal.**—A business firm in a Mediterranean country believes that the present is an excellent opportunity for American coal exporters to gain the local market. It is stated that the supply of foreign coal is low, and prices, both of foreign and domestic, are rising rapidly. This firm advises an American consular officer that it desires to get in touch with coal exporters in the United States, as it is thought that American coal will be able to compete successfully in that market.
- No. 8699. Hydraulic pumping plant.**—A resident of a Latin American country has a concession for the construction of a hydraulic pumping plant to be used for supplying water for irrigating his lands, and an American consular officer reports that American manufacturers and exporters who can supply machinery, etc., needed for the installation of such a plant should communicate with this person at once.
- No. 8700. Rubber and coconut estates.**—An American consular officer in the Far East reports that a company in his district wishes to make connections with American firms desirous of purchasing rubber in that region, and is prepared to enter into contracts with firms for the supply of this product.
- No. 8701. Anchors, chains, ships' plates, and shipbuilding supplies.**—A business man in Italy informs an American consular officer that he desires to be placed in communication with American manufacturers of anchors, chains, ships' plates, and shipbuilding supplies of all kinds with a view to representing them on that market. He states that he is in a position to furnish satisfactory references and is in touch with the leading shipbuilding yards as a contractor for furnishing them with the various supplies mentioned. Correspondence may be in English or Italian.
- No. 8702. Railroad material.**—If American exporters and manufacturers of all kinds of railroad material, for construction and operation, will communicate direct with a representative of a railway company in Mexico they may be able to find a sale for their products. An American consular officer reports that this company proposes to build a railroad between two points in that country.
- No. 8703. Post-office boxes and equipment.**—An American consular officer in Canada reports that a firm in his district, well known as extensive dealers in office equipment and furniture, desires to be put in touch with American manufacturers of post-office boxes and equipment. This firm desires to hear from such manufacturers at the earliest possible moment.
- No. 8704. Representation in Germany.**—A business man in Germany, who has been engaged in the clothing business in that country for 15 years, has expressed a desire to an American consular officer to represent any line of American goods suitable to that market. He furnishes references. Communications should be addressed direct to the inquirer and should be in German.
- No. 8705. Newspaper printing press.**—An American consul in Africa reports that a commission agent in his district desires quotations from American manufacturers of newspaper printing presses for a \$5,000 rotary press. An order for such a press is about to be placed, and American offers will be considered. Sale can not be made on a strictly cash basis, but fairly liberal credit may secure order; part payment to be made with order, and seller protected by ample guaranty.
- No. 8706. Azimuth mark and stellar camera huts.**—The American consulate general at Ottawa, Canada, reports that tenders will be received until May 6, 1912, for constructing azimuth mark and stellar camera huts for the Royal Observatory at Ottawa. Plans, etc., can be seen at Department of Public Works, Ottawa.

## COMMERCE OF THE NETHERLANDS.

[By Consul General Soren Listoe, Rotterdam.]

Generally speaking, the year 1911 was a prosperous one for the Netherlands, for while domestic drought and foreign wars at times threatened the interests of the farmers and business men, fortunate circumstances and the geographical location of the country influenced escape from serious losses.

If the agricultural interests of the Netherlands suffered during 1910 from too much moisture, the reverse was the case last year. Owing to the low character of the country, however, part of which is under sea level, the numerous canals and ditches crossing and recrossing the fields and grass ranges remained filled with water until late in the summer, and, while the pastures withered for a time thus reducing the supply of cattle feed, a moist autumn caused the grass to grow again, and the loss to the dairy interests was reduced. The crops of grain and roots were naturally short, but the practically total failure of these products in many parts of Germany created higher prices and the Dutch farmer shared in these increased returns.

### Operations of the Money Market.

The money market was fairly steady and rates were easy throughout the greater part of 1911, especially as compared with some other European centers of finance. While in October discount rates in the open German market had risen to 4½ per cent, the quotation here, though for a short period, was as low as 2 per cent, and the German markets took advantage of this low discount rate by borrowing, thus restoring equilibrium. The discount rate of the Netherlands Bank dropped to 3½ per cent on January 9, and on May 15 to 3 per cent, remaining at that rate until September 30, when it increased to 4 per cent, apparently the result of the Turco-Italian war.

As it was apparent to observers of financial matters that an upward movement in the rates was inevitable, bill brokers bought heavy items for discount at the bank just before the rise, thus relieving the open market of anything resembling tension.

The carry-over rate last year averaged 3.24 per cent against 4.27 per cent for the previous year. This decrease was at least partly

due to the stringent measures observed by the most reliable financial institutions to suppress speculation on the part of people of limited means by demanding a margin of 10 to 25 per cent for securities to be carried over.

**Stock Exchange—The Netherlands Bank.**

The stock exchange during last year was anything but prosperous. The public was slow to invest, especially on speculative securities. The State loan of \$16,797,880, for which the Government toward the end of 1910 declined an offer of 96½ per cent, was early in 1911 taken over by a syndicate at 95½ per cent to be issued for public subscription at 96 per cent, and has since been at a discount, at one time of 2½ per cent.

The value of bonds, securities, etc., offered and subscribed to in the Netherlands last year was \$397,389,864 against \$467,165,406 in 1910. Of the total last year, Netherlands securities, etc., were valued at \$79,632,582, and foreign securities at \$317,757,282.

American issues were not subject to fluctuations, nor did the public operate in stocks as freely as in former years, although the fairly low quotations prevailing prompted to a limited extent some purchases. This restraint, it is asserted, was due to various causes.

The position of the Netherlands Bank was further strengthened last year as regards gold available, which amounted to \$56,000,000 at the end of the year against \$53,000,000 for 1910 and \$47,600,000 for 1909. The enormous efflux of silver coins, however, reduced the bank's balance of the white metal to less than \$4,800,000 at the end of last year compared with \$9,333,333 in 1910 and \$19,600,000 in 1909.

Improvements in the East Indian colonies necessitated last year the exports of gold and silver coins valued at \$1,600,000 and \$5,200,000, respectively.

**Receipts and Sales of Coffee.**

Considerable interest was manifested in Java coffee last year. The price early in January was 17.5 cents per 1.1 pounds, advancing in the February and June auctions to 18.8 cents, continuing to improve in sympathy with Santos up to October, when it was quoted at 20.8 cents, which figure was maintained until the close of the year.

The imports of coffee into the Netherlands during 1911 amounted to 1,871,100 bags, against 1,442,100 bags in 1910. Of the quantity received in 1911, 1,542,800 bags were from Santos, Brazil; 175,400 bags from Java, 67,000 bags from Central America, 34,400 bags from Venezuela, 30,200 bags from Africa, 20,800 bags from Padang, Macassar, and Menado, and 500 bags from other East Indian places. There were sold in the Netherlands last year of the East Indian coffee 95,257 bags and 243 cases by private firms and 22,845 bags by the Netherlands Trading Co. There were also auctioned by the Government at Batavia, Java, during last year 7,450 piculs of 136 pounds each against 11,800 piculs for 1910. The stock of coffee in the Netherlands at the end of 1911 was 636,300 bags, against 511,800 bags at the close of the previous year.

There has been a marked increase in the receipts and deliveries of Santos coffee. The Royal Dutch Lloyd Steamship Co., running a regular line between Brazil and the Dutch ports, will add two

large steamers to its fleet during the present year, and thus keep up a regular fortnightly service, which will contribute to strengthen the coffee markets in the Netherlands.

#### **The Rice Market.**

The total imports of rice into the Netherlands last year were 3,110,000 bags, compared with 3,279,000 bags for the preceding year. It is estimated that 1,612,000 tons of rice were shipped from various ports last year, of which 1,446,000 tons arrived in Europe. Cleaned rice was quoted on the Netherlands market in March at \$2.30 per 110 pounds, reaching \$3.20 in September, and remaining firm during the fall.

The quantity of Burma rice available for export during the present year is estimated at 2,450,000 tons against 2,600,000 tons for last year, and of the Saigon crop 700,000 tons, compared with 650,000 tons in 1911. It is evident that the Japanese product is needed for home consumption, and can not longer be counted upon for the foreign market.

Several shipments, aggregating 7,500 tons, of Texas rice were imported by a Rotterdam miller at the beginning of 1911. These shipments were made primarily to relieve the American market of the large stock of that kind on hand. The quality is said to be excellent, but the price too high for this market. Negotiations were pending at the beginning of the present year to ship the greater part of this rice back to Texas, which would prove a profitable deal on account of the high prices prevailing at the time on the American market.

#### **Retains from the Tobacco Sales.**

The various auctions held in the Netherlands last year for the sale of West Indian tobaccos realized a total of \$32,400,000, against \$22,800,000 in 1910. The total proceeds from the Sumatra crop were \$18,986,000, a gain of \$5,200,000 over the preceding year, although the crop was 29,000 packages below that of 1910. The average selling price, however, was 20 cents per 1.1 pounds higher than for 1910, due to the splendid quality of the tobacco, which made it desirable for wrappers. The average price for the year was 52.4 cents per 1.1 pounds. There were purchased of the Sumatra crop for the United States last year about 29,000 packages compared with 21,000 packages for 1910. The new crop, which will be marketed during the present year, is estimated at 264,000 packages, a gain of 30,000 packages.

The proceeds from the 457,929 packages of Java tobacco were \$10,952,000, compared with \$7,650,000 from 303,532 packages in 1910. The average price last year for this crop was 13.6 cents per 1.1 pounds, against 14.9 cents in 1910.

There were 14,961 packages of Borneo tobacco, valued at \$1,160,000, sold in the Dutch markets last year at an average price of 52.4 cents per 1.1 pounds, against 14,586 packages, with a valuation of \$860,000, and sold at 40.4 cents for the preceding year.

Maryland tobacco continues to enjoy a good reputation in this market. The French "Regie" sent its agents to the United States in October with orders to purchase all they could use. When these purchasers left, prices declined and the Dutch dealers bought large quantities. The prices of Kentucky and yellow Virginia tobaccos

are too high for consideration on this market. The market in burley tobacco was uncertain. Prices at the beginning of the year were low and the Dutch dealers bought large quantities, but in May prices advanced, and importations were suspended until the fall.

There were 3,400 packages of Manila tobacco sold at auction in Amsterdam last year at good prices, and the imports at Rotterdam were disposed of privately.

The Austrian Government last year decided to return to the old system of buying the tobacco for the "Regie" from sundry merchants instead of giving the contract to one firm.

#### **Receipts, Shipments, and Prices of Sugar—Tea Imports.**

The year 1911 was a remarkable one for the sugar trade. At the beginning of the year the market was easy, due to the large 1910-11 crop, the year opening with \$4.30 per 110 pounds; but from then up to the beginning of September prices gradually increased. The continued hot weather last summer caused fears that the beet-root crop would be seriously injured, and wild speculative purchases were prevalent, the prices for October-December deliveries reaching in September \$8.35 per 110 pounds. When the new crop began to arrive prices dropped to \$6.70 per 110 pounds and the year closed at that price.

The imports of raw sugar for consumption into the Netherlands last year were 85,793 tons, compared with 56,698 tons the preceding year. Of the total last year 43,446 tons came from Germany, 32,946 tons from Belgium, and 6,347 tons from the Dutch East Indies. The exports of raw sugar amounted to 67,323 tons, against 48,535 tons, practically all of which was destined for the United Kingdom. The shipments of refined sugar amounted to 128,747 tons, compared with 67,187 tons for 1910. Of the total last year, 105,064 tons went to the United Kingdom.

The imports of Java tea into the Netherlands last year showed a continued decrease. The total quantity of this tea handled by the Tea Establishment was 133,767 chests, of which 66,975 were for home consumption and 66,792 for export. The prices were firm and it was only when the new supplies from China began to arrive that prices weakened. The average price for the year was 18.2 cents per 1.1 pounds.

#### **Trade in Nutmegs, Mace, and Cloves.**

The prices of nutmegs have been low for some years, with large stocks on hand. The past year, however, indicated a partial recovery. The imports into the Netherlands in 1911 were 1,015 tons, against 1,010 tons the preceding year, and the available stock in the bonded warehouses at the end of 1911 was 1,425 tons. The price for the average good quality—110 to 120 nutmegs per 1.1 pounds—was 11 to 15 cents.

There was a good demand for mace throughout the year, and the prices were 15 per cent higher in the December sale than in March. Papœa mace sold as high as 56 cents per 1.1 pounds. The total arrivals last year were 310 tons, against 285 tons in 1910, and the stock on hand at the end of the year was 37 tons.

Amboina cloves amounting to 1,160 bags of 110 pounds each were imported. Sales were slow and the prices were 18 to 20 cents per

1.1 pounds. Zanzibar cloves sold at 16 cents in January and 11 cents in December. There were 407 tons of cloves in the bonded warehouses in the Netherlands at the beginning of December last.

**Speculation in Pepper—Receipts and Sales of Cinchona Bark.**

There was much speculation in pepper last year, and the prices advanced from 8 to 11.5 cents per 1.1 pounds, notwithstanding the large visible stocks on hand. The arrivals into the country were 2,862 tons, against 2,070 tons for 1910, and the stock on hand at the end of the year was 3,936 tons.

There was a decline in the imports of cinchona bark last year compared with the previous one. The Government product arriving amounted to 6,696 packages and of private cultivation 87,671 packages, against 7,059 and 96,284 packages, respectively, for 1910. At the inscriptions there were sold 14,690,951 pounds of factory bark, with 966,528 pounds of quinine, and 2,106,082 pounds of pharmaceutical bark, with 71,643 pounds of quinine.

**Demand for Cocoa and Cocoa Butter.**

To cope with the increasing consumption of cocoa and chocolate there has been a greater output in practically all the producing countries, and in the second half of the year there were rumors of a cocoa valorization, based upon the same principles as those of the Brazilian coffee trust. The imports of Java cocoa were 26,500 bags, a decrease of 700 bags compared with 1910. The Guayaquil product was in good demand, and large quantities were imported at \$12 to \$15.50 per 110 pounds, according to grade. There was a brisk business in Trinidad cocoa, and the year closed at \$13.50 per 110 pounds. The Surinam crop was not up to expectations in quantity, but the quality was somewhat improved.

At the monthly auctions during 1911 one firm offered for sale 2,241,800 pounds of cocoa butter, against 2,088,000 pounds the previous year. The prices during the first five months were 31 and 32 cents per 1.1 pounds, but increased in June to 40.5 cents, which price prevailed until the November auction, when quotations declined and closed the year at 31 cents. There were also sold supplies of lower grades at an average price of 27 cents per 1.1 pounds. The demand for cocoa butter is steadily growing.

**Increased Prices on Kapok—The Hide Market.**

There were 66,784 bales of East Indian kapok imported into the Netherlands last year, against 67,176 for 1910. The prices increased about 10 per cent on this product compared with 1910. The quotations at the beginning of the year were 6 to 18.4 cents per 1.1 pounds according to grade.

The year 1911 opened with poor demand and weak prices for Java hides. About March the market improved and the prices advanced to such a degree that tanners complained that the prices of hides were higher than for leather. Prime cattle hides, fit for the chrome tanning, were firm throughout the year and found ready buyers. Buffalo hides were not in good demand, and several lots remained unsold. South American hides arrived regularly throughout the year, but were generally sold to foreign countries, as the home demand was limited. The East Indian dry cattle hides sold at 16 to 48 cents

and the dry buffalo hides at 12 to 27 cents per 1.1 pounds, according to size and quality. South American dry salted hides were quoted at 13 to 27 cents.

**Increased Imports of Rubber—Tin Trade.**

For over 50 years the Rotterdam rubber market has been established, and up to 1895 all the African product was brought to this market. The total imports of rubber into Rotterdam last year were 2,637,800 pounds, against 2,530,000 pounds for 1910 and 2,508,000 pounds for 1909. Of the total last year, 1,430,000 pounds were from Africa, 935,000 pounds from Java and Sumatra, 215,600 pounds from South America, and 57,200 pounds from Borneo. To the foregoing total might be added 1,876,600 pounds of jelutong and 1,683,000 pounds of Surinam leaf balata. The arrivals of rubber at Amsterdam were 519,200 pounds, of which 266,200 pounds were plantation output. Prices of rubber ruled downward during last year.

The increase in the price of tin, which was started during the latter months of 1910, continued throughout 1911. In January it was quoted at \$41.40 per 110 pounds and in December at \$49.20. The imports of tin in 1911 were 492,111 slabs of 74.8 pounds each, of which 432,411 slabs were Banca, 55,200 slabs Straits, and 4,500 slabs Biliton. The Netherlands Trading Co. will auction off 460,000 slabs of Banca tin during the present year. The exports of tin out of the Netherlands last year were 20,598 tons, of which 11,251 tons were destined for Germany and 3,033 tons for the United States.

**Market Conditions in Linseed and Rapeseed.**

The prices of linseed fluctuated during the greater part of last year. The market became firm for a time, based on unfavorable crop reports. American importers came into the market and bought not only the available supply of seed and oil, but contracted for future shipments. The prices paid for linseed were \$136 to \$180 for the La Plata, and \$151 to \$189 for the Bombay per 4,320 pounds. The total receipts of linseed in Europe during last year were 5,061,000 quarters, of which Argentina furnished 1,948,500 quarters, British India 2,451,000 quarters, and Russia 661,500 quarters. Conditions in the Dutch oil mills were unsatisfactory, owing to fluctuation in seed prices. The highest and lowest quotations for linseed oil last year were \$22 and \$14, respectively, per 220 pounds, and the closing price for the year was \$16.

The trade in rapeseed was steady throughout last summer, as the demand was fully met by the British Indian product, but owing to the unfavorable reports from the Danube and other sections the quotations were firmer, and the year closed with the relation between the market quotations of seed and oil out of proportion. The failure of a speculator at Antwerp caused forced sales of large quantities of oils and seeds at Paris and Berlin, and this contributed to disturb the market.

**Prices of Turpentine and Rosin—The Indigo Supply.**

The prices of turpentine were high during the first three months of 1911, being \$14 to \$18 per 110 pounds, but they gradually dropped to \$8.20 in November, and at the close of the year the ruling price was \$9.20.

Rosin was firm up to May, market quotations for that month being \$4.40 per 110 pounds. The prices gradually dropped to \$3.56 in

November, but regained somewhat toward the end of the year, when sales were good.

During last year there were 815 cases of Java indigo imported into the country, of which 47 cases remained unsold at the end of the year. Owing to the limited supply the new arrivals were sold at advanced prices, but in June a reaction set in and brought prices down fully 10 per cent. Prices at the end of the year were \$1.04 to \$1.56 per 1.1 pounds, according to grade.

**Quotations in Oleo and Cottonseed Oils, etc.**

The prices of some of the materials used in the manufacture of margarin were high at the beginning of last year. By March neutral lard had decreased from \$31 in January to \$23 per 220 pounds. Oleo oil was quoted at \$23 in January, but by April was down to \$20.50, at which prices the Dutch manufacturers until August bought large stocks of the best grades. In the latter month oleo oil advanced to \$27.25 and neutral lard to \$24.50, and the year closed at these prices.

Cottonseed oil remained high during the greater part of the year, notwithstanding the fact that the price of lard was considerably lower than for some time, which naturally caused a smaller demand for compound lard. The consumers had not contracted for future supplies and were consequently obliged to enter the market regular. The prices for choice butter oil were over \$16 per 220 pounds, but declined to \$15.64 in May. This price remained for the old crop oil even when a record new crop was reported, and which was offered at \$14 and later at \$12.85, at which price a large business was done. There were 225,000 barrels of the old crop on the market when the new oil began to be marketed. At the beginning of November as much as \$16 was paid for spot oil, but in the last part of the month and in December the price was down to \$14.

**Decreased Consumption of Petroleum—Increased Cost of Breadstuffs.**

The imports of petroleum into the Netherlands last year were 3,091,000 barrels, against 3,420,000 barrels for the previous year. The consumption of petroleum in this country, however, has been on the decrease for the past five years. That consumed last year amounted to 1,132,000 barrels, against 1,204,000 barrels five years ago.

Prices of all kinds of breadstuffs, excepting wheat, advanced considerably during the latter part of last year, due to the drought. That the wheat market was not affected was probably due to the large crops during 1910 and 1911. Wheat was quoted at the end of 1911 at \$95 per 2,400 kilos (1 kilo=2.2 pounds), rye at \$72 per 2,100 kilos, corn at \$74 per 2,000 kilos, and barley at \$72 per 2,000 kilos.

**Decreased Output of Herring.**

The 1911 herring catch was a disappointment, the total catch of the Dutch herring fleet being only 650,000 barrels, against 750,000 barrels for 1910 and 753,000 barrels for 1909. The total number of vessels employed in the herring fishery was 768, compared with 737 in 1910 and 748 in 1909, and the number of men employed on the fleet last year was 9,200.

On account of the excessive heat during July and August and the high temperature of the sea water, half of the catch of many of the

ships was spoiled more or less and had to be destroyed. The prices obtained for fish were satisfactory, being as follows, per barrel: July, \$7.40; October, \$8.40; and December, \$7.60.

#### Import and Export Trade of the Country.

The following statement shows the principal articles imported into and exported out of the Netherlands during 1910 and 1911 in tons of 2,000 pounds:

**Purchases from the United States.**

The principal articles of import into the Netherlands from the United States during 1910 and 1911 are shown in the following table, in short tons:

Articles.	1910	1911	Articles.	1910	1911
<b>Grainstuffs:</b>	<b>Tons.</b>	<b>Tons.</b>	<b>Provisions:</b>	<b>Tons.</b>	<b>Tons.</b>
Corn.....	150,260	198,277	Lard.....	11,330	12,562
Flour.....	66,288	80,196	Meats.....	1,540	3,237
Wheat.....	77,527	100,602	Tallow, etc.....	7,638	7,668
Cotton, raw.....	6,196	19,022	Seeds.....	2,422	707
Fruit.....	10,238	4,163	Tobacco and cigars.....	12,616	19,278
<b>Oil:</b>			Woods.....	8,792	10,669
Cottonseed.....	18,014	20,428			
Petroleum.....	273,080	407,753			
Other.....	64,191	67,272			

As will be seen from the foregoing table practically every item entering into the import trade from the United States shows an increase in the receipts compared with 1910.

**Increased Shipping—Merchant Marine.**

The Dutch shipping and shipbuilding interests were prosperous during 1911 and the prospects for the present year are good. The mercantile fleet did not show the increase in the number of its ships that might have been expected. This was partly due, however, to the large number of old vessels disposed of during the year, which numbered 20, of 37,457 tons, against 27 steamers, of 89,231 tons, added to the fleet. The principal companies which added to their tonnage were as follows: Nederland Steamship Co. (Amsterdam-East Indies), 5 vessels, of 31,601 tons; Rotterdam Lloyd (Rotterdam-East Indies), 4 steamers, of 1,408 tons; Navigation & Coal Co. (Netherlands-England), 2 steamers, of 2,843 tons; Ocean Steamship Co. (Amsterdam-East Indies), 2 steamers, of 8,998 tons; and Indian Lloyd (Rotterdam-Bombay, a new line established in 1911), 4 steamers, of 16,509 tons.

That those interested in the Dutch merchant marine foresaw bright prospects in the near future was manifested by the large number of orders for steamers given by the steamship companies during last year, as follows: Holland America, 3 steamers, of 52,000 tons; Rotterdam Lloyd, 6 steamers, of 40,000 tons; Royal Dutch Lloyd, 2 steamers, of 28,000 tons; Nederland Steamship Co., 4 steamers, of 27,000 tons; Royal Packet Co., 6 steamers, of 16,500 tons; and other companies, 20 steamers, of 49,700 tons, making a total of 41 steamers, of 213,200 tons. Of this total, 29 steamers with a capacity of 100,500 tons are being constructed in the Netherlands. The capacity of the Dutch shipyards is being increased to meet the increased output. There are at present two slipways of 600 feet in length being constructed at Flushing, on which steamers up to 16,000 tons can be built.

**BRITISH SILK EXHIBITION.**

[From Consul General John L. Griffiths, London.]

The British Silk Exhibition will be held at Princess Skating Club, Knightsbridge, London, S. W., under the auspices of the Silk Association of Great Britain and Ireland, June 5 to 19. The offices of the exhibition are at 3-4, Newgate Street, London, E. C.

**NEW STEAMER SERVICES.**

[From Consul Louis Goldschmidt, Nantes, France.]

**New Steamer for the Havre-New York Run.**

The new passenger steamer of the Compagnie Générale Transatlantique, *La France*, built at St. Nazaire, has the following dimensions: Length, 712 feet; width, 75 feet; draft, 29 feet; gross tonnage, 24,800; net tonnage, 8,300. Eight turbines, developing 40,000 horsepower, give an average speed of 23 knots. The crew will number 587, including civil employees and physicians, and accommodations are provided for 1,885 passengers—535 first-class, 442 second-class, 184 third-class, and 724 immigrant.

A certain importance is attached to the fact that *La France* went to Brest to make the official trials instead of to Havre as has been the custom. It is rumored that the port of Havre is not deep enough to accommodate such large vessels and that the Compagnie Générale Transatlantique is studying the possibility of making of Brest the home port of their American lines. Brest has perhaps the largest natural harbor in Europe, with a constant depth of water of over 140 feet, and is nearer North America than Havre by about a day.

[From Acting Consular Agent James Murison, Almeria, Spain.]

**Direct Almeria-New York Service.**

The Fabre Line has arranged for a monthly boat to call at Almeria for cargo and passengers to the United States. The first steamer left this port on March 24 direct for Providence and New York. Through tickets and combined freight rates are in force for Cuban and Canadian business, with combined ocean and railway rates for passengers going to the Pacific coast or points in the Southwestern and Southern States.

Emigration to South America has been of considerable importance for some years, and it is expected that a similar flow will now take place to the United States. Emigrants to the number of 8,732 left this port during the year 1911. It is also hoped that with the establishment of direct communication the trade between the United States and Almeria, which has hitherto been small with the exception of grape exports, will show some increase.

[From Consul F. T. F. Dumont, Guadeloupe, French West Indies.]

**Improved Guadeloupe Connections.**

An important announcement is made by the Compagnie Générale Transatlantique, changing the sailings of the boats of this line.

Beginning April 17 a boat will leave St. Nazaire, France, every fourth Wednesday for Colon, Panama, via Guadeloupe, Martinique, Venezuela, and Colombia. A boat will leave Bordeaux, France, beginning May 1, every fourth Wednesday, for Colon, calling at Santander, Spain, and proceeding via Guadeloupe, Martinique, Trinidad, Venezuela, and Colombia. The return schedule to France is altered to correspond. This takes the place of the former twice-a-month schedule and increases the service between France and the countries mentioned two trips each way per year.

The monthly steamer service maintained between Martinique and Haiti, via Guadeloupe, St. Thomas, Porto Rico, and Santo Domingo, which connects at Pointe à Pitre, Guadeloupe, northbound, with the

St. Nazaire-Colon boat, is changed to a round trip each four weeks, increasing this service by one round trip a year.

The time from France to Guadeloupe is 11 days, and the new schedule gives Guadeloupe a steamer every two weeks each way instead of twice a month.

[From Consul Charles M. Hathaway, Jr., Puerto Plata, Dominican Republic.]

#### **Change in Dominican Steamer Service.**

Beginning with April, 1912, the itinerary of the French Line service between France and the island of Haiti (see Daily Trade and Consular Reports, Jan. 13, 1912) will be changed by making Bordeaux the European terminus for passengers and by the omission of St. Thomas. Connections for the ports formerly reached through St. Thomas will now be made at Port au Prince. The change will shorten the round voyage from Havre to Havre about three days.

#### **Additional Colombian Ports of Call.**

The United Fruit Co. announces a new Colombian fast freight and passenger service. Commencing April 24 the vessels employed on the New York-Santa Marta run will also call at Cartagena and Sabanailla (Puerto Colombia), affording a weekly service to and from those Colombian ports.

#### **INTERNATIONAL DRY-FARMING CONGRESS.**

[From Consul General John G. Foster, Ottawa, Canada.]

The Seventh International Dry-Farming Congress is to be held at Lethbridge, Alberta, Canada, October 21 to 26, 1912. During the same week there will be an international exposition of dry-farmed products, farm machinery, and labor-saving devices for the home and farm sanitation. There will also be held at the same time the Second Annual Convention of the International Conference of Agricultural Colleges and Experiment Stations, and the Second Annual Convention of the International Congress of Farm Women. There will be a conference on soil, tillage, and machinery, one on crops and breeding, one on agricultural forestry (or forestry as it pertains to the farm), one on live stock and dairying, one on agricultural education, one on farm management, and one on scientific research as it relates to agricultural subjects. Two hundred acres will be available for soil-tillage demonstrations in connection with the machinery exhibit. The secretary-treasurer, Mr. John I. Burns, invites correspondence for further information.

#### **Gain in Tampico's Declared Exports.**

Consul Clarence A. Miller reports that declared exports from the Mexican port of Tampico to the United States during the first three months of 1912 showed the remarkable gain of \$732,204 over the corresponding period of 1911, the totals being respectively \$827,000 and \$94,796. The principal articles in the March, 1912, quarter were: Hair, \$1,049; hides, \$28,482; honey, \$4,222; chicle, \$19,168; coffee, \$8,084; garlic, \$7,233; hemp, \$1,118; ixtle, \$63,164; onions, \$5,882; sarsaparilla, \$13,331; crude oil, \$668,058.

## FOREIGN MARKETS FOR HORSESHOE NAILS.

[From Vice Consul Charles B. Henderson, Johannesburg, South Africa.]

**Swedish Nails Popular in the Transvaal.**

It is estimated that over 90 per cent of the horseshoe nails imported into this district are made by one Swedish firm [name on application to Bureau of Manufactures]. The nails of this make are a little heavier and stronger than others which have been introduced here, and it is claimed that they are more serviceable and can be driven into a hard hoof without bending. They are also cheaper than the nails offered by English and American manufacturers.

Racing plate nails are put up in 1-pound paper boxes, packed in wooden cases of 25 pounds, and sell for 43 cents a pound. The regular horseshoe nails are packed in wooden boxes of 25 pounds net, and sell for the following prices per box: No. 4, \$4.38; No. 5, \$3.65; No. 6, \$3.28; No. 7, \$2.98; No. 8, \$2.68; No. 9, \$2.49; No. 10, \$2.43; No. 11, \$2.37; No. 12, \$2.31. The above prices are those charged by the importers to farriers, who are allowed a 5 per cent discount and 30 days credit. The nails generally used for ordinary shoeing here are Nos. 4, 6, 8, 10, and 12. The customs duty is 3 per cent ad valorem, those of British make being admitted free.

[From Consul General James A. Smith, Genoa.]

**Horseshoe Nails Made in Italy.**

Large quantities of horseshoe nails are made in Italy, at Crema, in Lombardy, and at Pinerola and Bard, in Piedmont. Some Swedish nails are imported, but this importation is diminishing owing to the high customs duty and to the growth of the home industry, which is able to supply a large part of the home demand and export small quantities. From \$58,000 in 1908, the imports fell to \$25,000 in 1910. The exports also fell from \$55,000 in 1908 to \$26,000 in 1910.

Swedish nails are received in cardboard boxes of 5 kilos (11 pounds) gross. The prices per quintal (220.46 pounds) of Swedish and Italian nails are shown in the following table:

	Swedish.	Italian		Swedish.	Italian.		Swedish.	Italian.
No. 4.....	\$17.37	\$16.98	No. 7.....	\$11.58	\$13.50	No. 9.....	\$10.42	\$12.74
No. 5.....	15.44	15.82	No. 7½.....	11.38	13.50	No. 9½.....	10.23	12.74
No. 6.....	13.51	14.67	No. 8.....	11.00	13.12	No. 10.....	10.04	12.74
No. 6½.....	12.54	14.25	No. 8½.....	10.80	13.12			

To the prices of the Swedish nails must be added \$3.18 per 220.46 pounds for import duty on the nails and \$13.51 per 220.46 pounds for import duty on the cardboard containers. In lots of 8 tons the Italian manufacturers grant a discount of 25 per cent. [A list of the leading dealers in horseshoe nails in Genoa may be obtained from the Bureau of Manufactures.]

*Russian commercial commission.*—Consul General W. Stanley Holis, of Beirut, reports that the Russian commercial commission which is touring the Levant and Near East in the interests of Russian trade extension visited that Syrian port during the week of March 18.

## RUSSIAN COMMERCIAL NOTES.

[From Consul General John H. Snodgrass, Moscow.]

*Improving the Dnieper.*—In the near future, it is said, the project for building locks and dams for the Dnieper will be realized; \$16,000,000 will be spent, and it will require about six years to complete the work.

*Railway order.*—The Russian Minister of Railways has requested the Council of Ministers to sanction a grant of \$13,000,000 for acquiring rolling stock for the Amur Railway and also for completing an order for 200 locomotives.

*Russian farm machinery.*—The Russian Baltic Car Co. is perfecting a sheaf binder of its own design that is expected to be an improvement over similar American machines. The American binder is said to crush the grain and to be unsuited to Russian agriculture. The factory, which is seriously attempting to compete in the Russian market with the agricultural machinery imported from Austria, Germany, Great Britain, and the United States, manufactures large steam automatic thrashers of the American type as well as more simple implements, such as plows, drills, sorters, horse thrashers, etc.

*Organizing chambers of commerce.*—In the great majority of Russian cities chambers of commerce do not exist. Recently, through the influence of the Russian Government, boards of trade have been planned, and it is believed that before the end of the year many such organizations will have been established, not only in the larger cities but also in the provincial towns, where an industrial awakening of real magnitude has developed during the past few months. To encourage the organization of such bodies, the Minister of Commerce and Industry has offered the following suggestions for the upbuilding of the proposed chambers: (a) The unification of all the chambers, so that there will be a real national board of trade; (b) close attention to the requirements of domestic commerce and industry; (c) the regulating, maintaining, and subsidizing of those institutions that are considered useful to commerce and industry.

## STEEL PENS IN THE TROPICS.

[From Consul Milton B. Kirk, Manzanillo, Mexico.]

Experience in several tropical countries shows that the ordinary steel pen used in the United States rusts very quickly during the wet season or at a seaport, which renders it practically useless. Bronze or brass pens, or those coated with bronze, do not seem to be thus affected. Ink deteriorates very quickly in tropical climates and often has the consistency of gum. On the ordinary steel pens this aids the rust and is hard to wipe off if left for a short time. With the bronze or brass pen or with a pen coated with bronze, the coated ink is easily wiped or burnt off.

In order to avoid this rusting of steel pens, a box containing the usual 1 gross might be divided in a way that would expose only 1 dozen at a time, or pens might be packed in oiled paper envelopes holding a dozen each and then placed in the usual cardboard boxes. It is not believed that the additional cost of packing would be enough to affect the retail price, and the pens would be more serviceable in tropical climates, thus aiding their sale.

**OLD SHEFFIELD PLATE.**

[From Consul Charles N. Daniels, Sheffield, England.]

With further reference to the articles on "old Sheffield plate" in Daily Consular and Trade Reports for February 13, 1912, it may be stated that it is not manufactured at the present time.

The method formerly used was to braze or weld a thin sheet of silver on either side of a thicker sheet of copper, and then to roll this combined metal to a sheet of the thickness required, which would result in a sheet of copper coated on both sides with an actual surface of silver. The process of electroplating is much cheaper and quicker, and has superseded the old method to such an extent that articles manufactured by the old process would now cost quite as much as the same articles in sterling silver.

Genuine "old Sheffield plate" has an added value on account of its antiquity. In some parts of England unscrupulous manufacturers do not hesitate to produce copies of old patterns by the electroplating process and then palm them off on unsuspecting purchasers as genuine. The Cutlers Co., of Sheffield, successfully prosecuted two leading dealers in the United Kingdom for selling this "imitation" ware as "old Sheffield plate," and it has now been decided by the courts that the term "old Sheffield plate" means articles made from metal consisting of silver fused upon copper and not copper electroplated, and that any dealer applying the term "old Sheffield plate" to an article made in any other way than by the fusing process is guilty of fraudulent description and may be proceeded against.

There is any quantity of electroplate made in this city which would be entitled to the name of "Sheffield plate." The decisions of the courts referred to have particular reference to the term "old Sheffield plate," which to-day is the only safe description under which to buy plate if one expects to secure genuine examples of the old process.

**LEVANTINE BUSINESS NOTES.**

[From the Near East.]

**Reconstruction of Constantinople's Burned Area.**

The Ottoman Council of Ministers has authorized the Mayor of Constantinople to issue a loan of \$1,700,000 for reconstructing a part of the Stamboul quarter destroyed by fire.

**Farm Machinery for Egypt's Ruler.**

The Khedive of Egypt lately purchased a considerable quantity of new machinery for use on his Anatolian estate. This machinery has been shipped from Egypt for Dolman by a well-known Leeds firm. His Highness has also transported to Dolman a large number of horses and some 150 fellaheen laborers.

**The Drainage of Swamps in Greece.**

We give the following particulars in answer to a number of inquiries that we have received from the readers of the Near East. There are about 35 swamps and swampy lakes to be drained, all in different districts of Greece, from north to south, and some in the Aegean and Ionian Islands. The expenditure is estimated, for each swamp separately, from 5,000 to 800,000 francs (franc=19.3 cents). The latter figure is for the drainage of the swamps near Vonizza; other drainages are in Halkis, the island of Negroponte, in Eretria, in Thessaly, Attica, Laconia, Phokis, Arcadia, and Argolis, varying from 10,000 to 60,000 francs, and in other districts from 5,000 to 10,000 francs. We understand that the money is to be deposited, if not already deposited, in the National Bank of Greece.

**BUREAU OF MINES PUBLICATIONS.**

Bulletin 10. Use of permissible explosives. 1912. 34 pp. 5 pls.

Bulletin 23. Steaming tests of coals and related investigations, September 1, 1904, to December 31, 1908. 1912. 380 pp. 1 pl.

Technical Paper 8. Methods of analyzing coal and coke. 1912. 21 pp.

Technical Paper 10. Liquefied products from natural gas; their properties and uses. 1912. 23 pp.

Technical Paper 11. The use of birds and mice for detecting carbon monoxide after mine explosions and fires, by G. A. Burrell. 1912. 14 pp.

Bulletin 34. Tests of run-of-mine and briquetted coal in a locomotive boiler. 32 pp. Reprint of United States Geological Survey Bulletin 412. Copies will not be sent to persons who have received Bulletin 412.

The Bureau of Mines has copies of these publications for free distribution, but can not give more than one copy of the same bulletin to one person. Requests for all papers can not be granted without satisfactory reason. In asking for publications please order them by number and title. Applications should be addressed to the Director of the Bureau of Mines, Washington, D. C.

**AMERICAN BICYCLES IN BRITISH COLUMBIA.**

[By Consul General David F. Wilber, Vancouver.]

Formerly, most of the bicycles sold here were manufactured in the United States. Later, for some reason, English machines supplanted them and these have been replaced in turn by Canadian bicycles, which now make up the largest number sold here. With the improvement of roads and streets that is going on in this district and city, there is a very good market here for bicycles; and there seems to be a good opportunity for American dealers, by obtaining local representatives and making a vigorous campaign, to sell a much larger number of machines than they do at present. If American manufacturers expect to gain their proper share of this business, they must not rely upon jobbers, but must have direct representation and must carry on a vigorous sales policy.

**SUIT-CASE PRICES IN ENGLAND.**

[From Consul General John L. Griffiths, London.]

With reference to a possible market in the British Isles for suit cases, the following local retail prices are given:

Fiber suit cases, covered in green canvas, with eight leather corners and two double-action locks, size 24 by 15½ by 7½ inches, \$5.23; 26 by 15½ by 9 inches, \$6.33.

Covered in green canvas, lined jean, two-slide nozzle locks, eight capped leather corners, size 26 by 14 by 6 inches, \$3.28; 22 by 14½ by 6 inches, \$3.58; 24 by 15 by 7 inches, \$4.07; 27 by 15½ by 7 inches, \$4.43.

Extra wide fiber suit cases, size 27 by 16½ by 8½ inches, \$7.66; 30 by 17½ by 9½ inches, \$8.63; with eight molded leather corners, lined Holland, two-slide nozzle lock, and center clip.

**SEALING FREIGHT CARS IN ENGLAND.**

[From Consul General John L. Griffiths, London.]

Car seals are not in use on British railroads as in the United States. A very large proportion of the freight cars in this country are open, and when loaded are covered with a tarpaulin sheet tied to stanchions fitted on the cars. With reference to closed cars, the usual custom is to bolt and lock the door and then to fasten it with a movable iron bar (running the length of the car), which is then strongly secured by padlock. In what little sealing is done, lead is used. In the case of very valuable freight or bullion, an additional protection is provided by one or more officials traveling inside the car.

## PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

- No. 611. Gunboat.**—Proposals for constructing by contract gunboat No. 19 will be received at the Navy Department, Washington, D. C., until July 1, 1912. A circular of requirements for said vessel is now ready and plans and specifications will be ready for distribution among prospective bidders after May 1. Forms of proposal and contract may be had on application to the department after June 1.
- No. 612. Screws and bolts.**—Proposals, in duplicate, will be received at the office of the Chief Signal Officer, War Department, Washington, D. C., until May 1, 1912, for furnishing and delivering to the Signal Corps 5,000 gross assorted screws and bolts, or such part thereof as may be required from May 1, 1912, to April 30, 1913, to be ordered from time to time as the necessities of the service may require. (Proposal No. 580.)
- No. 613. Frame buildings and water and sewer extensions.**—Sealed proposals will be received at the Indian Office, Washington, D. C., until May 18, 1912, for furnishing materials and labor for a frame schoolhouse and frame quarters and installation of water and sewer extensions at the Tohatchi Indian School, New Mexico, in strict accordance with the plans, specifications, and instructions to bidders, which may be examined at the Indian Office, the offices of the Supervisor of Construction, Denver, Colo.; the Builder and Contractor, Los Angeles, Cal.; the Journal, Albuquerque, N. Mex.; the Arizona Gazette, Phoenix, Ariz.; the United States Indian warehouses at Chicago, Ill., St. Louis, Mo., Omaha, Nebr., and San Francisco, Cal., and at the Navajo School. For further information apply to the superintendent of the Navajo Indian School, Fort Defiance, Ariz.
- No. 614. Supplies for Life-Saving Service.**—Sealed proposals will be received at the office of General Superintendent, United States Life-Saving Service, Treasury Department, Washington, D. C., until May 9, 1912, for furnishing supplies required for use of the Life-Saving Service for the fiscal year ending June 30, 1913; the supplies to be delivered at such points in New York City, Grand Haven, Mich., and San Francisco, Cal., as may be required, and in the quantities named in the specifications. The supplies needed consist of beds, bedding, and furniture, brooms and brushes, crockery, hardware, household goods, lamps, lanterns, etc., lubricants and preservatives, medicines, etc., ship chandlery, stoves, etc., tools, and miscellaneous articles, all of which are enumerated in the specifications attached to the form of bid, which may be obtained upon application to the office of the General Superintendent, Washington, D. C., or to the Assistant Inspector of Life-Saving Stations, 507 Hudson Street, New York City, Superintendent Twelfth Life-Saving District, Grand Haven, Mich., and Superintendent Thirteenth Life-Saving District, 311 Customhouse, San Francisco, Cal.
- No. 615. Supplies for arsenal.**—Sealed proposals, in triplicate, will be received at the Rock Island Arsenal, Rock Island, Ill., until May 17, 1912, for furnishing hardware, leather, steel, iron, cleaning materials, oils, paints, chemicals, materials for heating and lighting, paper, lumber, etc., during the fiscal year ending June 30, 1913. Information furnished upon application to the commanding officer, Rock Island Arsenal.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

**No. 8707. Electric automobiles and appurtenances.**—An American consul in a South American country has requested to be supplied with catalogues of electric automobiles and appurtenances, such as transformers, etc., as also the price of same f. o. b. New York City. Several inquiries have been received, and it is possible that sales may be effected.

**No. 8708. Hand and power baling machines.**—A business firm in the West Indies informs an American consular officer that it desires literature and prices on hand and power baling machines to be used in connection with the preparing of sugarcane leaves and tops for the local market.

## CHILD-LABOR LEGISLATION.

### GREECE.

[From American Minister George H. Moses, Athens.]

The last session of the Greek National Assembly enacted a law which forbids the employment of children under 12 years of age in mills, factories, mines, on buildings or other outdoor work, in messenger or transportation service, in shops, restaurants, coffee houses, wine shops, bakeries, or hotels; provided that children of more than 10 years may be employed by parents or guardians in domestic industries which are not dangerous or where machinery is not used, but in no case shall a child's employment be such as to prevent its regular attendance at the primary schools, or for more than three hours daily. In orphanages or philanthropic institutions where trades are taught the limit to a child's daily work shall be three hours.

After five years these occupational restrictions will be applied also to children between 12 and 14 years and to those who have not completed their attendance at the primary schools. For such children the day's work will be limited to 6 hours with 10 hours for children under 18 years, who will not be permitted, however, to work more than 8 hours on Saturdays or legal holidays.

The hours of employment are to be reckoned from the time of entering the establishment until the moment of exit. There must be at least one recess during the day of not less than 30 minutes for children whose labor is limited to 3 hours daily, and of not less than 2 hours for young persons and women, except on Saturdays, when 1 hour will be given. These recesses must be granted to all employees at the same time, except in mines or where furnace fires must be maintained, and no continuous employment for more than 6 hours without a recess is permitted.

### Restrictions as to Hours and Occupations.

Children under 16 years and women are not to be employed on Sundays or holidays in factories, mines, shops, restaurants, bakeries, etc., nor shall children under 18 years or women be employed in factories, in construction or like work, or in shops before 5 o'clock

in the morning or after 9 o'clock at night. In case of rush of work, by permission of the prefect of the district young persons and women may be permitted to work 12 hours daily on all working days except Saturday for a period not exceeding four months in the year, and by royal decree issued at the instance of the appropriate ministry women of more than 18 years may work at night if necessary.

Without special license children under 14 years shall not sell articles in the streets, nor shall any person under 16 years sell in the streets earlier than 5 o'clock in the morning nor later than 9 o'clock in the evening. Newsboys of 12 years or more are excepted from these provisions. Without special police license no child under 14 years shall be employed as an artist or otherwise in theaters. Women and children under 15 years shall not be employed in mines. Pregnant women shall not be compelled to work for 8 weeks before and 4 weeks after confinement, and their absence during such period shall be counted as leave without liability to loss of situation.

Children under 16 years shall not be employed in factories nor in messenger or transportation service unless they present a medical certificate that they are in sufficient health for such employment, and by royal decree children and women may be prohibited from employment at places where their morals will be endangered or where the work is too heavy for them.

---

#### ENGLAND.

[From Consul Augustus E. Ingram, Bradford.]

Child labor, or the half-time employment of children in the textile factories of Yorkshire, England, has recently been the subject of much discussion owing to the action of the education committee of the county council of the West Riding of Yorkshire which has passed by-laws restricting such labor.

Previously a child between 12 and 14 years of age could obtain partial exemption from school attendance—or become a "half timer," in common parlance—provided he had made 300 school attendances per annum for five years at not more than two schools; the new by-laws provided that a certain standard of efficiency (Standard VII) must be attained before a certificate of exemption would be granted. It is claimed by the chambers of commerce at Bradford and Halifax that this restriction would amount to abolition of half-time labor, as only in exceptional circumstances has a child reached the seventh standard before 14 years of age.

As these new regulations affected only the urban districts in the West Riding (that is to say, exclusive of the municipal boroughs having a population of over 10,000, and urban districts having a population of over 20,000) great complaint was made not only of the inequality of treatment and the consequent disadvantage of families residing in certain sections, which led to their changing their place of abode, but also of the conflict between these local regulations and the factory acts which permit half-time labor. The result has been that at the March meeting of the West Riding county council the by-laws were amended so as to permit partial exemption for children between 13 and 14 years of age if they have made 350 school attendances per annum for five years at not more than two schools.

**Number of Half-Timers—Juvenile Employment Bureau.**

The importance of this subject is evident from the fact that the total number of half-timers in England is estimated at 37,403, there being 21,248 in Lancashire and 9,265 in Yorkshire. It is believed, however, that half-time labor in this country is doomed, and that eventually national legislation will be introduced abolishing the system.

A return has recently been issued by the Bradford education committee showing that in 1911 there were 512 children under 14 years of age in Bradford who, having been in the seventh standard for six months and having passed the labor examination at the end of that period, were in full-time employment. Under the factory acts, however, these children may not be employed in a factory or workshop but may take full-time employment in any other occupation.

The Bradford education committee has also recently adopted a scheme, under the provisions of the education (choice of employment) act, 1910, to assist boys and girls under 17 years of age in the choice of suitable employment. A subcommittee consisting of members of the education committee and representatives from the Chamber of Commerce, the Chamber of Trades, Trades and Labor Council, the local branch of the National Union of Teachers, and the Guild of Help, will be appointed and a central office established in the city under the name of the Bradford Juvenile Employment Exchange and Bureau. An officer will be regularly available at the bureau to interview applicants for employment and to confer with the officer in charge of the juvenile branch of the Labor Exchange before the names of applicants are submitted to employers.

**School-Teachers to Aid—The Committee's Work.**

Among other provisions it is proposed that the head teachers of the day schools shall assist by furnishing the subcommittee with information as regards the employment obtained by each pupil leaving school and the character, conduct, and capabilities of the pupil. If any pupil has not within three months before leaving obtained suitable employment the head teacher will forward an application to the subcommittee.

The four main points to be considered by the employment committee in organizing its work are summarized under the following heads: (1) The system of obtaining and keeping registers of the children; (2) arrangements for giving general advice and information to parents and children with regard to the choice of employment; (3) placing children in particular vacancies; (4) organization for keeping in touch with boys and girls who need particular attention. The possibility of utilizing voluntary workers is discussed, and it is suggested that the most desirable method in Bradford is that this shall be done by establishing voluntary district committees linked up with the juvenile employment subcommittee.

---

*Wool-shortening machine.*—A supplementary report from Consul Benjamin F. Chase, of Leeds, describes the new British machine for shortening wool that was briefly mentioned in Daily Consular and Trade Reports on September 2, 1911. The consul's report and accompanying samples of cloth will be loaned to interested firms by the Bureau of Manufactures.

**SIAMESE TRADE NEWS.**

[From Vice Consul General Carl C. Hansen, Bangkok.]

**Importation of Arms and Ammunition Limited.**

The importation of arms and ammunition in quantities by dealers is prohibited by the Siamese Government. Special individual permits must be secured for each person desiring such goods, and only goods for which these permits have been secured may be brought in. The firm or agent usually carries samples from which the buyer selects the model desired. Then he secures a permit for himself and the dealer imports goods to fill the order.

Mannlicher and Mauser rifles and Browning pistols may be brought in personally only by Europeans, and they are required to give a guaranty that such arms will be for strictly personal use and will not be disposed of except by special consent of the Siamese Government.

The total imports of firearms into Siam during the fiscal year ended March 31, 1911, were valued at \$13,659, of which the United States supplied only \$27 worth. Of total imports of ammunition and explosives valued at \$21,049, the United States furnished \$11 worth. The United Kingdom and Germany supplied the greater part of this trade.

**Sporting Goods and Games.**

With the rapid extension of a modern school system and the growing interest in games and sports of all kinds, especially badminton, football, and tennis, there has come a growing demand for sporting goods and games in Siam. Up to 1907 the imports of these goods were not of sufficient importance to warrant a separate classification in the customs returns, but in the fiscal year ended March 31, 1908, they amounted to \$13,700; in 1909, to \$12,187; in 1910, to \$13,724; and in the fiscal year 1911, to \$15,793. The bulk of these goods come from the United Kingdom, which last year supplied \$13,437 worth, against \$483 worth from the United States. It is probable that interest in popular educational card games could be developed, especially if these were printed in Siamese characters.

**Hardware and Cutlery—Lamp Trade.**

The share of the United States in the hardware and cutlery trade of Siam is still small, amounting to \$23,578 for the fiscal year ended March 31, 1911, but it shows a fair advance when compared with that of five years ago, when it amounted to \$5,001. The total imports of hardware and cutlery for 1910-11 amounted to \$401,123, while the yearly average for the past five years was \$458,059. Of the 1910-11 imports Germany supplied \$91,655, the United Kingdom \$72,934, and Austria-Hungary \$38,750. The trade of the United States in this line has been held back by the lack of American business houses in Siam to push American goods, and perhaps, also, to the failure of American manufacturers to supply special articles which the Siamese trade demands, such as betel sets and utensils for the table, kitchen, and toilet. Manufacturers in other countries have made exact imitations of such articles and have built up a large trade. Modern articles of hardware are steadily supplanting the ancient models, however, and the trade of the United States has gradually been extended. At present all articles of hardware and cutlery find a good market here.

Ordinary kerosene lamps are used in most Siamese houses outside of Bangkok, as only that city has electric lighting and coal is too expensive for use in producing illuminating gas. The greatest demand is for wall lamps, which are used in the thousands of houseboats which line the rivers and canals of Siam, and in the homes of the peasants. Such lamps sell at 25 to 50 cents each, but nearly every kind of lamp finds a sale in Siam. Only the most ordinary lamps are made in this country by the Chinese tinsmiths, the rest being imported. The following table shows the value of the imports of lamps and parts in the fiscal years ended March 31, 1910 and 1911:

Countries.	1909-10	1910-11	Countries.	1909-10	1910-11
United States.....	\$44,026	\$27,144	Hongkong.....	\$12,636	\$17,316
United Kingdom.....	26,096	15,873	All other countries.....	10,085	6,219
Germany.....	19,624	15,352			
Japan.....	14,655	21,334	Total.....	157,146	136,741
Singapore.....	30,094	33,503			

#### Tobacco and Beverage Trade.

Most of the tobacco produced in Siam, about 3,000,000 pounds a year, valued at \$500,000, is consumed at home, the exports last year amounting to only 10,267 pounds, most of which went to Hongkong. The tobacco leaf grown here is said to be of peculiarly fine texture and would probably displace foreign tobacco in the local markets if it were cured by modern methods. At present the leaves are kept in the dark until partly dry, then folded lengthwise one upon another, cut into cross sections, and exposed to the sun for a day or two, after which they are ready for consumption. One of the chief uses for tobacco here is for cigarettes. A considerable quantity of native tobacco is mixed with areca nut and betel leaf and used for chewing, the imported tobacco never being used for this purpose.

The imports of tobacco and its manufactures into Siam for the fiscal year ended March 31, 1911, amounted to \$407,841, against \$412,305 for the previous year. These imports consisted of cigars, \$78,311; cigarettes, \$159,760; and tobacco, \$169,770. The United States supplied \$96,942 worth of cigarettes and \$726 worth of tobacco, and the Philippines sent cigars valued at \$11,194, against \$5,731 in 1909-10. Tobacconist's stores to the value of \$26,796 were imported in 1910-11, against \$22,825 in the previous year, the United Kingdom and Austria-Hungary furnishing the largest shares.

Instead of being used for a beverage, the leaves of the tea plant, after being fermented, are rolled into balls, one of which is placed in the hollow of the cheek and allowed to remain there until the soluble contents have been exhausted by the saliva. This use of tea is common in northern Siam. The tea plant is cultivated to only a small extent, but is found wild on hill slopes. In lower Siam, tea drinking is indulged in to a considerable extent, especially among the Chinese.

The tea imports into Siam in the fiscal year 1910-11 amounted to 10,665 piculs (1,422,000 pounds), valued at \$291,915, nearly all of which came from China and Hongkong. The imports of beer, wines, and spirits during 1910-11 were valued at \$524,282, against \$537,530 for the previous year. The only alcoholic liquor produced in Siam is arrack, and its production and sale is regulated by the Government.

**China and Glassware—Stationery and Photographic Supplies.**

The imports of china and earthenware into Siam dropped from \$393,721 in 1909-10 to \$338,306 in 1910-11, of which amount \$316,462 came from Oriental ports. The imports from the United States amounted to \$122. Despite the decreased total, the imports of the finer grades of china showed a gain of \$10,019. Glass and crystal ware imports amounted to \$124,874, a decrease of \$6,733 from those of the preceding year. Hongkong, the United Kingdom, Germany, and Singapore led in this trade, the share of the United States being \$1,275. The production of glass and crystal ware in Siam is confined to a few Chinese, who make a small amount of the commoner goods. No attempt has been made to compete with foreign wares.

All of Siam's supplies of stationery come from abroad, and with the development and extension of the school system the demand will increase yearly. In 1909-10 the United States furnished \$2,516 of a total of \$126,569 worth of these goods imported, and in 1910-11, \$2,335 out of a total of \$144,976. The imports of cameras and photographic materials, none of which came from the United States, dropped from \$58,054 in 1909-10 to \$38,159 in 1910-11.

**Electrical Goods and Apparatus.**

Electrical goods are not manufactured in Siam, and Bangkok is the only city in this country which has an electric light and power plant. There is a market here for electric fans, lighting fixtures, telephone apparatus, street-railway equipment, motors, cables, insulators, and a variety of similar goods. The portion of this trade supplied by the United States increased from \$1,868 out of total imports of \$43,394 in 1906-7 to \$23,733 out of \$143,410 in 1909-10, but dropped to \$16,232 out of \$167,279 in 1910-11. In the latter year the United Kingdom led in this trade, with Germany second, and the United States third.

**Perfumery and Soaps—Woolen Goods.**

Perfumery is extensively used in Siam, and eau de Cologne, Florida water, scented hair lotions and oils, face creams, and cosmetics are in constant demand. German, French, and English firms send out salesmen every year or six months to look after this trade. Few, if any, American perfumes are found on the Siamese market. The people here prefer jasmine, rose, and violet scents. No definite statement can be made of the amount imported, as the customs give no separate classification for these goods.

Although there is now a soap factory in Bangkok, the imports of soap in 1910-11 amounted to \$93,909, an increase of \$7,686 over the preceding year. The United Kingdom supplied \$75,239 worth, Germany \$4,522, and the United States \$403. Certain well-known brands of American soaps are in demand, but they can not be obtained in most of the local stores, and goods from other countries are substituted.

Neither wool nor woolen goods are produced in Siam, and the demand for these goods is limited mainly to the colder months, October through January in northern Siam and November through January in the southern part. The chief demand is for flannels, woolen blankets, shawls, and piece goods. It appears from the customs returns that no attempts to enter the Siamese markets have been made by American firms.

**Marine Products—Coffee Growing—Live Stock.**

Marine products form an essential part of the food supplies of the people of this country, especially in lower Siam, where the rivers and the Gulf of Siam contain an abundance of sea food, such as oysters, crabs, and turtles. Fish are less abundant in upper Siam, and large amounts are shipped from the south. It is said that the Siamese eat fresh or dried fish at every meal. Most of the fish are salted or dried. Besides supplying the home demand, the Siamese fisheries annually export about 22,000 tons to Singapore and Hongkong.

An attempt was made during 1911 to can the fish known by the native name of "pla too," but the project failed. This fish is well known in the Far East for its delicate flavor. A dried form of river fish called "pla heng" is said to rival Bombay duck in delicacy. In 1910-11 Siam imported canned salmon and sardines, and other fish not canned, valued at \$152,508.

Coffee growing, which has been an experiment by missionaries in Chantabon Province for some years, has now been taken up by the general population, and coffee planting is being rapidly extended. At present the yield is only 10,000 to 20,000 pounds a year, all of which finds a market in Bangkok, where the taste of this coffee is finding favor with many Europeans.

The following are recent live-stock statistics for the Kingdom: Bullocks, cows, and calves, 1,627,507; buffaloes, 1,527,738; horses and ponies, 57,647; elephants, 3,215. Most of the bullocks are bred by Indian traders in Siam and are shipped to Singapore for distribution to different parts of the Straits Settlements and the Malay States, where they are used as draft animals.

[Partial reviews of Siam's trade for the fiscal year ended Mar. 31, 1911, appeared in *Daily Consular and Trade Reports* for Nov. 25, 1911, and Feb. 5, 1912.]

---

**IRON FENCES IN CANADA.**

[From Consul F. M. Ryder, Rimouski, Quebec Province.]

Ornamental iron fences are seldom seen in this locality, probably due to the increased cost over the ordinary wood pickets, the material used in the construction of these fences being very reasonable in price.

A number of the farmers are gradually discarding the heavy fence rails which have surrounded their properties for decades and are erecting serviceable wire field fencing with attractive entrance gates; the wire is securely stapled to cross rails and substantial posts of white cedar, which are set 6 feet apart, as fences must be of sufficient strength to hold up under the heavy snowfalls of this region.

One of the many advantages of wire fencing is becoming so apparent in this section, at least, that the time is not far distant when municipalities will demand the removal of all rail or board fences along the public highways of the Province, for the reason that these form a barrier for drifting snows, and it is almost impossible to maintain a good winter road where they exist. It is customary to remove the rails in winter, leaving only the fence posts standing, but this work is not always attended to in season and, as a consequence, many of the country roads are rendered impassable from November until May.

There are several large concerns, located in this Province and also in New Brunswick, which manufacture wire fencing, poultry netting, etc.

**MERGER OF CARLSBAD KAOLIN COMPANIES.***(From Consul Will L. Lowrie, Carlsbad, Austria-Hungary.)*

Through the merger of four of the largest concerns operating kaolin mines and refineries in the Zettlitz (Carlsbad) district the entire deposit is now controlled by two firms. The Zettlitzer Kaolinwerke A. G. has increased its capital from 1,000,000 to 7,500,000 crowns (\$203,000 to \$1,522,500) in order to absorb three independent firms, and is in a position to control the market. Kaolin from the Bohemian deposits has been sold for some years under a trust agreement and the present price is 64 crowns (\$13) a ton in 10-ton lots.

The property owned by the Zettlitzer Kaolinwerke includes the refinery at Sodau, the largest on the Continent. In connection with the independent firm it has secured deposits at Spittengrun, near Carlsbad, which will be available for the next 50 years at the present rate of output.

**Character of Zettlitz Kaolin.**

The Zettlitz kaolin has been used in the ceramic industry for almost a hundred years. All of the 50 porcelain and earthenware factories in the district use large quantities, and the export to Germany, Russia, Italy, and the United States amounts to 38,000 tons annually. It is considered one of the best china clays in the world. The deposit is centered at the village of Zettlitz, 2 miles from Carlsbad. The first stratum, often several meters thick (meter=39.37 inches) and known as "wilder erde" or "schlicker" (mud), is not fit for industrial purposes, although geologically it is the oldest kaolin earth. The next stratum, 10 to 20 meters thick, is a white and brown earth formed in the Miocene and Diluvian periods. This is lost in the underlying granite. More than half of the crude material is removed in the process of refining; in fact, only about 40 per cent of pure china clay is secured. Its analysis is as follows:  $\text{SiO}_2$ , 45 to 48 per cent;  $\text{Al}_2\text{O}_3$ , 37½ to 40 per cent;  $\text{H}_2\text{O}$ , 13 per cent.

It is stated that the Zettlitzer Kaolinwerke may absorb the remaining independent concern in the district and that the price of raw and refined kaolin may be advanced materially. This would affect the cost of chinaware, of which \$730,000 worth was exported from the Carlsbad consular district to the United States last year.

**Statistics of Industry.**

The following figures regarding the kaolin industry, from the last yearbook of the Eger Chamber of Commerce, may be of interest:

In the district of the Eger Chamber of Commerce kaolin is mined in the Zettlitz-Carlsbad section, and also in the vicinity of Kaaden, Pomeisl, Poschezau, Braunsdorf, and Wildstein. The world-famous Zettlitz-Carlsbad district alone produced about 170,000 tons of raw kaolin, and from that quantity 43,000 tons of refined product for the china industry, while an additional 8,000 tons was mined for the paper-manufacturing industry in 1910. Of the total amount, 30,000 tons A1 of refined kaolin and 8,000 tons A2 were exported, principally to Germany. The export to Germany increased 2,500 tons in 1910. First quality Zettlitz kaolin meets with no competition either at home or abroad. The mean price obtained for refined kaolin was 64 crowns (\$13) per ton f. o. b. Carlsbad in 10-ton lots.

The Kaaden district produced 36,000 tons of crude, or 10,000 tons of refined, kaolin in 1910. This is used in the manufacture of china and paper. Germany is the chief importer of this grade, and paid on an average 18 crowns (\$3.65) per ton f. o. b. Kaaden in 10-ton lots. The Wildstein district produced about 50,000 tons raw and 12,000 to 15,000 tons refined kaolin in 1910.

The best quality of kaolin comes from the Zettlitz district and receives the highest prices. This section is the largest producer in the district of the Eger Chamber of

Commerce. Of the 43,000 tons of refined kaolin produced 26,000 tons are produced by the Karlsbader Kaolinindustrie A. G. and Messrs. Zebisch & Pfeiffer, each firm contributing about the same amount. The porcelain works of Eduard Lorenz & Co. (Ltd.) not only manufacture raw kaolin, but built a large modern kaolin refinery in Dallwitz a. Eger in 1910 with a capacity of 9,000 tons per annum. This plant has been in operation since 1911.

It can be seen, then, that by far the greater part of the production of the Zettlitz district is in the hands of the firms which have just been amalgamated. There remains but one outside firm.

### BRITISH IMPERIAL TRADE COMMISSION.

[From Consul General John L. Griffiths, London.]

The Royal Commission mentioned in Daily Consular and Trade Reports for April 15 as being appointed to inquire into the natural resources and improvement of trade of the British Empire is officially charged with the following duties:

To inquire into and report upon the natural resources of the Dominion of Canada, the Commonwealth of Australia, the Dominion of New Zealand, the Union of South Africa, and the colony of Newfoundland; and, further, to report upon the development of such resources, whether attained or attainable; upon the facilities which exist or may be created for the production, manufacture, and distribution of all articles of commerce in those parts of the Empire; upon the requirements of each such part and of the United Kingdom in the matter of food and raw materials, and the available sources of such; upon the trade of each such part of the Empire with the other parts, with the United Kingdom, and with the rest of the world; upon the extent, if any, to which the mutual trade of the several parts of the Empire has been or is being affected beneficially or otherwise by the laws now in force, other than fiscal laws, and generally, to suggest any methods consistent always with the existing fiscal policy of each part of the Empire, by which the trade of each part with the others and with the United Kingdom might be improved and extended.

It is understood that the commission will immediately enter upon its work. The appointment of this commission is another evidence of a purpose which has been so strongly manifested within the last two or three years to bring all parts of the British Empire into a closer and more effective commercial union. Still another evidence of this is the British Empire Commercial Congress to meet in London on June 11, as announced in Daily Consular and Trade Reports for April 16.

### NEW GOVERNMENT PUBLICATIONS.

The following books may be had from the Superintendent of Documents, Government Printing Office, Washington, D. C., for the price affixed:

Wireless Telegraph Stations of the World, including shore stations, revenue cutters, and vessels of the Navy, corrected to January 1, 1912, consisting of 165 pages; issued by the Bureau of Steam Engineering, Navy Department. Price, 15 cents.

Geochemistry. Data of geochemistry (with bibliography) on water analyses; 782 pages; issued by the Geological Survey. Price, 55 cents.

National Monetary Commission reports, volumes 1 to 23, which comprise a complete review of banking, finance, and currency of the world. Cloth bound, \$15 per set.

Immigrants in Industries, Part 2—Iron and Steel Manufacturing. Prepared by Immigration Commission. Price, 55 cents.

Immigrants in Industries, Part 3—Cotton Goods' Manufacturing in North Atlantic States, and Part 4—Woolen and Worsted Goods—Manufacturing. Prepared by Immigration Commission. Price, 70 cents.

Immigrants in Industries, Part 14—Cigar and Tobacco Manufacturing; Part 15—Furniture Manufacturing; Part 16—Sugar Refining. Prepared by Immigration Commission. Price, 55 cents.

**ENGLISH POULTRY SHIPPED TO UNITED STATES.**

[From Consul Homer M. Byington, Bristol.]

During 1911, a poultry raiser in this district exported to the United States \$13,436 worth of White Orpington poultry for breeding purposes. Believing that American poultry raisers would be interested in the methods adopted by this poultry man, I visited his farm. The stock generally consists of 2,000 birds, although others are sent to neighboring farms, which return any desirable ones wanted.

The egg business is not considered, the concentration being upon breeding. The poultry ground is arranged in the form of a hollow square with the houses and runs extending outward. About 15 fowls are kept in each house with a rectangular run of 15 by 30 feet. The birds for these pens are classified when about 3 months old in groups of 15, the pullets and cockerels being kept separate, which results in their better development. Once the pens are established, if a cockerel is taken out for more than a day the others will not let him return and he must thereafter be kept separate.

When the birds have attained their growth, the best ones are selected and kept in smaller pens in groups of 3 and 4. For the ordinary pullets exported to the United States the poultryman receives \$5 to \$10 and for the ordinary cockerels \$10 to \$15, while the specially selected pullets bring \$25 and upward and the specially selected cockerels, \$50, \$100, and upward. He states that the English climate gives him an advantage over American breeders, in that the January, February, and March hatched birds compare favorably with the American April, May, and June hatched birds. The breeder has tried American hot-air incubators, but with poor success, which he attributes partly to the climate here. He has had better luck with water-heated English incubators. However, with so large an establishment the proprietor has not time to attend personally to the incubators constantly, but must depend upon the foreman for results. The latter is an old gamekeeper and prejudiced in favor of the natural process of hatching by hens, from which the results are most satisfactory.

---

**CHANGES IN BRITISH FOREIGN TRADE.**

[From Consul General John L. Griffiths, London.]

For the first three months of 1912 British imports aggregated \$914,356,699, exports \$577,269,642, and reexports \$151,766,431.

Taking into consideration the diminished exports for March, 1912, in consequence of the coal strike, the returns for the three months must be regarded as fairly satisfactory, showing as they do in comparison with 1911, which was a year of great trade prosperity in the United Kingdom, a gain in imports of about 6 per cent, and in exports of 3.82 per cent. A proportion of the increases must be attributed to the higher prices commanded by foodstuffs which, of course, as a London financial paper claims—

Represent a direct loss to the nation, but there has been, on the other hand, a considerable saving in the cost of some raw materials, notably cotton, which partially balances the accounts. Perhaps the most noticeable feature, however, is the way the balance of trade has moved against this country, the increase in exports being much less than that in imports, and this can hardly be regarded as a satisfactory sign.

**AMERICAN TRADE LOSSES IN AZORES.**

[From Consul E. A. Creevey, St. Michael's.]

There is a growing disposition among the importing firms of the Azores, most of which are located here, to make their purchases in either Germany or England, and they are doing so because there are, practically speaking, no facilities for getting American goods direct from the United States. Transshipment via Europe means loss of time, more or less damage because of too much handling, and increased costs. In fact, one of the most important importing firms of this city, which is the distributing port for these islands, canceled orders amounting to more than \$10,000 during 1911 because there was no certainty of the goods arriving in time for the fall trade.

England and Germany have an advantage over the United States, inasmuch as they enjoy fortnightly facilities for delivering their wares direct to this island by two small steamers that bring out miscellaneous cargoes and return with pineapples for the London and Hamburg markets. The Germans, however, are at present getting the better part of all foreign trade and their goods are fast replacing goods formerly supplied by the United States, and their success is due to the fact that they systematically cover this field by salesmen and can guarantee prompt deliveries.

In the matter of charges, terms, etc., the principal importers of the Azores do not ask or expect extended credit and are in position to make satisfactory financial arrangements. What they need most is a service by which they may obtain their American goods when they want them.

For the reason that so many of the inhabitants of the Azores have been in the United States, and naturally are more familiar with American goods than with the goods of other foreign countries, it remains for the United States to provide the means of supplying their goods to them. With a regular service monthly, or even a steamer every two or three months, with positive sailing dates, the United States can have the bulk of the foreign trade.

---

**A NEW PROCESS FOR DEFROSTING MEAT.**

[From *Dailgety's Review*, Sydney, Australia.]

A demonstration, held at Plymouth, of a new method of defrosting meat is described in a report from the New South Wales Agent General in London. By this process frozen meat is thawed in a chamber so constructed that the atmospheric pressure can be regulated and excess moisture extracted without bursting the tissues of the meat. It is claimed that frozen beef and mutton can then be placed on the market in such a condition as to compare favorably in appearance with prime English meat. This demonstration was attended by representatives of the meat trade of Australia, Great Britain, the United States, and South America.

The beef and mutton had been held in a temperature of about 18° for about three weeks after removal from the ship. It was then placed in the patent chambers (beef for 48 hours and mutton for 24 hours), in a temperature of 62°. Upon removal from the chambers the beef was compared with prime English beef and with a frozen quarter from Queensland treated under the old system. It compared favorably with the English meat and was far superior to the Queensland. It had a fine bloom, was free from mold, and there was an entire absence of "leakage." The kidneys and suet fat remained in the treated quarters and when cut were free from bone taint or bone odor. Quarters of treated beef and carcasses of mutton were cut up in the presence of the visitors with satisfactory results, defrosting having been thoroughly carried out. On the following morning the treated meat, cut and uncut, was inspected at the Smithfield Market and found to be still satisfactory and free from the drawbacks of frozen meat marketed in the usual way.

**COMMERCE DISSEMINATES NOXIOUS PLANTS.**

[From Consul Augustus E. Ingram, Bradford, England.]

Burrs similar to those found in Australian wool were recently discovered in some scoured Kent wools purchased from a Bradford wool merchant. Hitherto English wool has been considered entirely free from objectionable vegetable matter such as burrs, the presence of which so depreciates the value of wool. The explanation is believed to be that the dust from some Yorkshire combing establishment has been sold for fertilizing purposes to farmers, and having been spread upon the land the seed has germinated. A local trade journal commenting on this incident states that no greater calamity could befall the English wool trade than for English wool to become infested with burrs; rather than run such a risk by using the refuse of a wool-combing establishment it would be better to burn this fertilizing material. It might be well for American farmers to take timely warning, as in our more kindly climate the risk of introduction and multiplication might prove even greater.

A botanical observer reported a year or two ago that on the Bradford sewage works at Frizinghall he had picked no fewer than 160 species of plants either foreign to the country altogether, or plants which, although British, do not occur naturally in the Bradford district. Many of the plants undoubtedly owed their presence to their introduction in wool from which the seeds had been washed at the wool combers and then carried through the sewers. Among them were several species of medick or burr of Australian origin, which flowered and seeded abundantly; the thorn apple (*Datura stramonium*) also flowered and seeded; several species of *Amaranthus* were found, as also the "prickly poppy" of Mexico; and one composite, suspected of oriental origin, proved a puzzle to local botanists and experts; but as wool is brought to Bradford from spots where botanists rarely penetrate, a plant new to science is not inconceivable even in the midst of a busy industrial town.

Yorkshire botanists only last year discussed the origin of the large number of exotic plants that have recently sprung up in the heavy woolen district of the West Riding. A Leeds botanist reported that he had discovered plants—some luxuriant in character and others featureless—which are found respectively in Peru and Siberia. The explanation arrived at was that these exotic growths had their origin in seeds carried in the dirt which invariably accompanies the large quantities of rags that arrive in Batley and Dewsbury from all parts of the world.

Another explanation was found in the timber yards. A piece of waste land adjoining a local timber yard became covered with a mysterious plant, which proved to be of a genus found only in the Azores. Upon inquiry it was found that a large quantity of rough wood had been received at the timber yard from the Azores, and that the dirt and adhesive matter had been thrown onto the waste land.

---

Consul General William H. Michael, of Calcutta, India, forwards a price list of a Glasgow firm manufacturing carriage bolts and nuts and iron wood screws, which may be obtained by application to the Bureau of Manufactures.

## CUBAN BUSINESS NOTES.

[From the Cuba Magazine.]

**Tobacco Crop Good.**

Weather in Cuba this past winter has been most propitious for tobacco growers and from Vuelta Abajo to Mayari reports agree that the quality of that crop this year will be excellent.

**New Sugar Mills Projected.**

High prices of sugar this season have encouraged capital to invest in plantations and factories in Cuba. It is rumored centrals are to be built at Bayate in Oriente, on Manati Bay on the north coast of the same Province, and at Palacios in Pinar del Rio. Meanwhile actual work is progressing on a new factory at Moron in the center of the island, and McLaughlin Bros., of New York, are erecting a mill at no great distance from Bayamo in the east.

**Desiccated Cane Shipments.**

The Simons plant for desiccating sugar cane has made its first shipment. The plant is situated at Central Preston on Nipe Bay in Oriente. The process is new and not generally understood; the cane is shredded, dried, and shaped into blocks, in which condition it is shipped north and there treated by diffusion in the beet-sugar factories of Wisconsin. The inventors claim that they obtain all the sugar in the cane, avoid duties, and get a bagasse from which white paper can be made.

**Pineapple Shipments to Spain—Glass Jars Wanted.**

The Cuban consul at Cadiz, Spain, says:

"For more than 20 years there has existed in Spain a provision firm of great importance, Trevijano Hijos, of Logrono, whose products have made it extremely well known in Latin America. About a year ago, while consul in Madrid, I succeeded in inducing this house to prepare a pineapple preserve. The result has been so favorable that at the present time Milian & Co., exporters of fruits, of Habana, ship monthly to the above firm 400 crates of pineapples.

"There is no doubt that the presentation of its products contributes notably to the success of every industry and, this idea in mind, I proposed to secure a vessel suitable for preserves, which would at the same time look well and be economical. I wrote to numerous glass manufacturers of various European countries and in this way was able to secure the models which, thanks to the kindness of Dr. Emilio del Junco, our present Secretary of Agriculture, were shown in the National Exposition. It would be difficult to find anything better. This sample I chose from among more than 50 which were sent to me by various manufacturers. It comes from Germany, and its cost is 10½ cents f. o. b. Hamburg.

"In case that in Cuba we could not manufacture the same class of package there is no doubt that it could be duplicated in the United States. The customs duties to be paid on manufactured glass on its entry into Cuba would not prove an obstacle, for they are very low—97.5 cents per 100 kilos, or, if marked with the name of the Cuban establishment for which it is intended, 75 cents per 100 kilos. It is the custom to export preserved pineapples either whole, cut into slices, in rectangles or cubes, or grated, and in the form of marmalade or sirup."

**SHIPBUILDING IN THE UNITED KINGDOM.**

[From Consul General John L. Griffiths, London.]

At the close of March the amount of tonnage under construction in the shipyards of the United Kingdom aggregated 1,686,000 tons. At the close of 1911 the aggregate was 1,519,000 tons, which was without precedent up to that time, but the addition to that total of 167,000 tons indicates extraordinary activity in the shipbuilding industry. The building of large ships still continues, since at Belfast the total of 328,600 tons under construction represents only 26 vessels. Three vessels of 40,000 tons and over are now being built. Of the total tonnage under construction, 75,600 tons are destined for the British colonies, 48,600 tons for Germany, and 44,000 tons for Norway.

**FRENCH EXPERIMENTS WITH TARRED ROADS.**

[From Consul William H. Hunt, St. Etienne.]

In a report made to the French Academy of Science particular attention is drawn to the danger to the eyes from dust arising from tarred roads. To determine the effect, mixtures of fine road dust to which tar in varying proportions was added were made up, and the eyes of rabbits dusted with the mixtures. The results were conclusive. While the pure road dust had little or no effect on the rabbits, their eyes were greatly affected by the presence of tar and serious diseases broke out after these applications, showing the noxious effect of the tar.

Tarring produces good results only if the roads are well built and in repair, and composed of sufficiently hard materials; if the tar fully penetrates the crevices and does not form an external crust which the first winter rains would raise up and transform into mud; and, finally, if the drying conditions during the bad season are satisfactory. With these few restrictions, it may be said that tarring effectively protects the surface of highways against motor-car traffic, and even against ordinary traffic if the latter be not extraordinarily heavy.

The use of superficial tarring is becoming more and more extended, principally in the neighborhood of Paris. In the St. Etienne district and other parts of provincial France, progress has been slower except near a few large industrial centers. However, a certain increase in the mileage of tarred roads was reported from 1908 to 1909. The appropriation allowed for these experiments in 1909 in 24 Departments amounted to \$19,077, covering 126 kilometers of tarred roads, compared with 75 kilometers in 1908. (One kilometer equals 0.62137 mile.)

**Other Substances Employed.**

In the Department of Loire the tar is spread hot by hand or by a spray. Another method consists in rendering cold tar fluid by the addition of 10 per cent of crude oil and spreading it by the same means as the hot tar.

In the Department of Seine et Oise recent experiments have been made with divers tar and oil emulsions; deliquescent salts also have a real effect, but unfortunately of short duration, so that they can be employed only for special occasions, such as fêtes, races, etc. This department employs every year solutions of calcium chloride for watering certain sections of the roads which are not in a sufficiently good condition to receive a coat of tar, at the cost of 2 cents per square meter (1.196 square yards). If the weather is too dry the road is sprinkled with ordinary water.

Chloride of magnesium produces the same results, but the price is higher. It is used in Germany, where 3 per cent solutions (because of their low congealing point) lay the dust in the streets during winter. Emulsions such as westrumite and similar products appear to be abandoned of late because of their high price and short duration.

In France a few experiments have been made with crude petroleum, so much employed in America, but they were not continued on account of the high cost and the inconvenience of the mud which appears with the autumn rains. Besides the superficial coatings mentioned, certain binding materials are employed as a substratum to the macadam. Tar macadam is extensively employed in England, and has recently been tried in France.

**AUTOGENOUS WELDING IN GERMANY.**

[From Consul General A. M. Thackara, Berlin.]

Autogenous methods of welding metals are used extensively in Germany, practically all of the larger manufacturers of metal wares, tubes, automobiles, bicycles, steam boilers, etc., having their own welding plants.

Recently there has been a notable increase in the number of small welding apparatus, that is, those having a carbide capacity of 2 kilos (4.4 pounds) or less. These can be used without having the special license from the police authorities required for apparatus having a capacity of over the above amount. There are comparatively few independent welding plants. In by far the greater number of factories acetylene is used for welding instead of hydrogen gas, those plants using acetylene having their own generating apparatus. German engineers claim that although the prices of acetylene and hydrogen are practically the same, it requires from three to five times as much hydrogen to do a given piece of work, and, furthermore, hydrogen is not suitable for welding pieces of more than 8 millimeters (0.315 inch) in thickness.

The price of hydrogen is about 1 mark (23.8 cents) per cubic meter (1.3 cubic yards), which is approximately what acetylene costs the producer having his own generating plant. The price of oxygen is about 2 marks (47.6 cents) per cubic meter. The temperature limit for hydrogen is 1,900° C. (3,452° F.) and of acetylene it is 3,500° C. (6,332° F.). The metal thicknesses that may be welded by the two systems are one-third inch and 1½ inches, respectively.

One authority estimates that autogenous-welding apparatus is used in upward of 12,000 plants in Germany. The industry has become of such importance that an association called the Verband für Autogene Metallbearbeitung, at Stuttgart, has been formed to protect its interests.

Courses in the manipulation of welding apparatus have been given by Theo. Kautry, Teutobergerstr. 40, Cologne am Rhein, and by Hugo Baendel, Koloniestr. 6, Berlin. The Handbuch für Carbid und Acetylene, by Prof. Vogel, published by Friedr. Vieweg & Sohn, Braunschweig, has been recommended to this consulate general as the best work describing the different German welding apparatus. This book costs about 15 marks (\$3.57) and may be purchased from the publishers direct or through any local book dealer.

[The names of manufacturers of autogenous-welding machinery in both the United States and Germany may be obtained from the Bureau of Manufactures.]

---

**IRON-TUBING IMPORTS OF JAPAN.**

[From Consul General Thomas Sammons, Yokohama]

Iron tubing valued at \$2,125,000 was imported into Japan in 1911, of which the United States contributed \$778,000 worth. The valuation placed on iron tubing imported into Japan in 1910 was \$1,613,000, and during the year 1911 Germany nearly doubled its importations, while Great Britain's increased approximately 25 per cent. The importations of American iron tubing during 1911 remained stationary as compared with 1910, the importations for the latter year being valued at \$775,000.

**PROPOSALS FOR GOVERNMENT SUPPLIES.**

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

**No. 616. Navy Department supplies.**—The Bureau of Supplies and Accounts, Navy Department, Washington, D. C., will receive bids until May 21, 1912, for the following supplies. Firms interested therein should make application to the Bureau of Supplies and Accounts, giving the schedules desired by number: Schedule 4519, black metal buckles, stay binding, checks, silk laces, Dowlas linen, silesia, silk, terne-plate roofing tin; schedule 4513, iron chain cables, lavatories, square long sail needles, porcelain urinals, steel bolts and nuts, blacksmith's forges, combination locks and latch, wire steel nails, portable scales with wheels, steel wheelbarrows, cast-steel crucible wire; schedule 4522, chairs; schedule 4525, officers' messes chinaware, crews' messes chinaware, laundry fresh-water soap, crews' messes tableware; schedule 4518, foundry coke, gauge glasses, Klinger gauge glasses and frames, rubber hose; schedule 4512, hose expanders, window glass, air hose, rubber fire hose, wire-wound rubber hose, ball spun lamp wick, rubber mats, machine-spun oakum, cotton white tape, burlap, white table felt; schedule 4508, strip and sheet gum gaskets, hose washers; schedule 4520, tandem steam road roller; schedule 4521, sand; schedule 4514, brass voice seamless tubing, copper sheathing, Muntz metal sheathing, half-and-half solder, spelter solder, soft wiping solder; schedule 4517, copper tubing, brass nuts, rod brass, rolled sheet brass; schedule 4509, lead covered lighting and power (rubber insulated) wire; schedule 4515, white ash, white pine, yellow pine; schedule 4510, white pine; schedule 4516, lump borax, mineral kerosene oil, dry Venetian red, spar varnish, American process white zinc in oil; schedule 4523, distillate, mineral kerosene oil; schedule 4524, gasoline.

**No. 617. Olive-drab cotton webbing.**—Sealed proposals, in duplicate, will be received at the Rock Island Arsenal, Rock Island, Ill., until May 6, 1912, for furnishing and delivering at the arsenal olive-drab cotton webbing, in accordance with specifications, copy of which will be furnished upon request to the Commanding Officer, Rock Island Arsenal.

**No. 618. Buildings and water and sewer systems.**—Proposals will be received at the Indian Office, Washington, D. C., until May 24, 1912, for furnishing materials and labor for the erection of a frame office building and frame quarters and installation of water and sewer extensions at the Colorado River Indian School, Arizona, in strict accordance with the plans, specifications, and instructions to bidders, which may be examined at the Indian Office, the offices of the Supervisor of Construction, Denver, Colo., the Builder and Contractor, Los Angeles, Cal., the Arizona Republican, Phoenix, Ariz., the Post, Denver, Colo., the United States Indian warehouses at Chicago, Ill., St. Louis, Mo., Omaha, Nebr., and San Francisco, Cal., the Builders and Traders' Exchange, Minneapolis, Minn., and at the school. For further information apply to the Superintendent of the Colorado River Indian School, Parker, Ariz.

**No. 619. Switchboard and frame for Signal Corps.**—Sealed proposals, in duplicate, will be received at the office of the Chief Signal Officer, War Department, Washington, D. C., until May 6, 1912, for furnishing the Signal Corps with the following: (1) One switchboard, common battery, 2-position, in accordance with specifications Nos. 567 and 321d, and drawings Nos. 688d-3, 688g-1, 688-L, 688m, and 688o, serial number 459; (2) one frame, distributing and protecting, sectional angle irons, with 240 pairs capacity, and equipped with 140 pairs central energy heat coil and lightning arresters, and with 400 pair line terminals capacity, equipped with 240 pair line terminals. Protectors to be W. E. Co. type 84-B, in groups of 20, detachable from frame, line terminals in blocks of 20-pairs detachable from frame on horizontal side. (3) Extra parts for item 2: 100 heat coils, 50 pairs carbons, and 200 mica dielectrics. (Proposal No. 581.)

**No. 620. Olive-drab cotton duck.**—Sealed proposals, in duplicate, will be received at the Rock Island Arsenal, Rock Island, Ill., until May 6, 1912, for furnishing and delivering at the arsenal various quantities and qualities of olive-drab cotton duck, in accordance with specifications, etc., which can be obtained by interested persons or firms by addressing the Commanding Officer, Rock Island Arsenal.

## CORK INDUSTRY OF SPAIN.

[From Consul Charles S. Winans, Seville.]

Barcelona and Seville are the chief Spanish ports from which cork is shipped to the United States. The extent to which each shares in this trade is shown by the following summary of the invoices declared for export to American purchasers during the calendar years 1910 and 1911 [the figures for Barcelona being added by the Bureau of Manufactures]:

Corkwood and manufactures.	Barcelona.		Seville.	
	1910	1911	1910	1911
Corkwood .....	\$152,744	\$403,300	\$1,024,773	\$719,674
Shavings and waste .....	529,908	454,217	60,802	82,573
Corks .....	1,229,774	1,808,521	23,586	18,792
Drums .....	259	84,317	1,891	12,941
Soles .....	1,107	4,457	12,916	9,606
Paper .....	502	14,652		
Life preservers .....			9,040	13,627
Other .....	2,059	144		1,239
Total .....	1,916,253	2,760,608	1,141,108	838,512

From the Huelva agency, in the Seville consular district, \$5,950 worth of cork shavings was shipped to the United States in 1910 and \$15,015 worth in 1911; from the Cadiz agency \$18,539 worth of corkwood and waste was declared in 1910 and \$10,450 worth in 1911. The total declared exports from the Seville district were therefore valued at \$1,165,597 and \$883,977 for these respective years, the decrease in 1911 being due in large measure to a lack of shipping facilities. The total exportation of cork bark and shavings and corks from the port of Seville to all countries amounted in 1911 to 12,979 metric tons, 7,592 tons of which went to the United States.

### Stripping Methods.

The cork tree is a species of oak (*Quercus Ilex*, better known as *Q. Suber*) whose outer bark, which is the commercial cork or "cork-

wood," is first harvested when the tree has a circumference of about 16 inches, and thereafter regularly every 9 or 10 years throughout the life of the tree. The best bark, commercially speaking, is produced when the cork tree is 50 to 100 years old. Instead of injuring the tree, stripping the bark seems to add impetus to the growth of a new coat.

Stripping the bark, which is usually done during the summer months, is necessarily a rather delicate operation, as great care must be taken not to wound the tree. The local method of cutting is by a hatchet, which perforates the bark in complete circles at the base of the tree and at the lowest fork of the branches; this cylinder-like coat by a downward slash is then generally loosened from the inner bark of the tree and is removed by prying with a wooden wedge. The same treatment is accorded such larger branches as will yield bark at least one-half inch in thickness. The bark taken from the tree trunk sometimes measures more than 2 inches in thickness, and the total yield of the tree occasionally reaches 500 pounds, though this yield varies enormously, from 50 pounds upward, in accordance with the age and size of the tree.

After having been stripped the bark is generally left for a few days to dry. It is next weighed and then taken to the boiling station. The simple boiling process makes the bark soft and flexible, and, quite as important, renders easy the scraping off of the woody, weather-hardened outer coating, which is commercially useless.

#### **Foreign Markets—Local Manufactures.**

Occasionally the boiling station is located near the cork forest; in other instances, at the shipping point, where the cork factories are situated. At these factories the bark is sorted very carefully, according to quality and thickness, and is then (if for sale as raw corkwood) baled for shipment. It may be said that by far the greater quantity of the cork yield of Andalusia is exported in this unworked state to England, Germany, Austria, and Belgium, as well as to the United States. An important American firm has a branch house in Seville from which it ships to its home factory a very large quantity of the "corkwood" to be manufactured into articles of commerce.

Other local factories produce for domestic and export purposes a relatively small number of manufactured articles, although with the installation of machinery the output is gradually widening in scope and increasing in quantity. In the manufacture of these articles there is a very great amount of unavoidable waste, which is largely exported in the form of cork shavings, for use in making linoleum and other by-products of cork.

Of all the uses to which corkwood is now put, the manufacture of corks themselves still remains preeminent. Formerly in this consular district corks were made almost entirely by manual labor; the workers cut the bark into small squares, from which they whittled out each cork by hand. At the present time this method is still employed in the very small and unimportant "home" factories, where the family constitutes the working force, but the larger local establishments use very satisfactory machinery for the production of corks and disks. One local factory, to supply the export demand for the typical "handmade cork" (an almost square cork with rounded corners), has invented and installed a simple moving blade

machine, operated by hand; this combines speed and accuracy, and turns out the desired "handmade" type of cork.

#### **Cork-Making an Interesting Process.**

The manufacture of a cork is a rather interesting process, when watched from the beginning. Before use at the factory the cork bark in loose bales, is boiled for about half an hour to render it pliant; upon drying, it is sorted into at least ten grades of differing quality and thickness. This sorting is most important, if waste is to be reduced to a minimum, for corks are cut from the bark transversely, and are hence limited in their diameter (rather than in their length, as might at first be supposed) by the thickness of the bark. After sorting, the sheets of bark are cut into strips and squares, according to the length of the cork desired. Next the cork itself is carved out of the small square block, polished by a sand-papering machine, washed, sorted, and disinfected. The corks are counted by an ingenious French machine, and shipped in sacks of strong burlap containing generally 100 to 150 pounds.

Cork disks, for use in lining metal stoppers, are fast becoming an important article of trade in the cork industry. In their manufacture simple machinery is employed, operated, in some factories, by an electric motor. Among the other articles in the manufacture of which cork is increasingly used are insoles, life-preservers, cigarette tips, instrument handles, polishing wheels, carburetor floats for automobiles, and insulating for pipes. These articles, however, are not much made here. For the manufacture of such few cork articles as are here produced, the local factories are, as a rule, fairly well equipped with machinery, when the very low cost of manual labor is considered. Many of the employees, especially for the machine processes, are women who attain a degree of dexterity. Electric power from the city supply has been installed in several plants.

The enormous waste of cork which is inevitable in the manufacture of cork articles—approximately from one-half to two-thirds of the total material—is not in reality a loss. Naturally the best of the cork bark is utilized in cork products, and the refuse and shavings are exported to England, Germany, and the United States to be used in such valuable by-products as linoleums, cork tiling, and other composition articles.

#### **Possible Opening for American Machinery.**

At present there is no export duty on cork shavings; on corkwood the export duty amounts to 97 cents per 220.4 pounds. There has been and is much agitation of the question of raising this export duty tenfold to encourage the home industry, and the same question is being seriously considered by Portugal. The Spanish owners of domestic factories are heartily in favor of this "protective" law, as are also the various labor organizations, and it is believed by those who are best informed that it is but a matter of time when the exportation of unworked cork will be practically prohibited by the increase in export duty.

In effect, this prohibition will doubtless mean the establishment in the Seville consular district of cork factories under foreign management and the expansion of the present local plants into manufacturing of all the more important cork articles. For this purpose

much supplementary machinery will be needed; and there will be an opportunity to introduce American machines, which are not well known at present. Machines of Spanish, French, German, and one Canadian make are mostly used.

[Other recent articles on the Spanish cork industry appeared in Daily Consular and Trade Reports on July 5 and Oct. 18, 1911, and a review of the French cork trade was published Feb. 24, 1912.]

### PREVENTION OF SHORT-PAID POSTAGE.

Consul Alfred Winslow, of Valparaiso, in a recent report again calls attention to the subject of short postage on letters from the United States to Chile, stating that the consulate receives by each mail from the United States from 6 to 15 letters bearing only 2-cent stamps. The consul quotes from a letter received from one of the leading import houses in Chile, as follows:

The frequency with which we receive letters from the United States insufficiently stamped makes it desirous that attention be officially called to the fact. In the case of correspondence of value this would be a small matter, but as we are constantly flooded with all kinds, a large proportion of which is of no use to us and is unsolicited, the almost daily payment of 12 cents and more on each of a large number of letters becomes tiresome.

Foreign postage is one of the subjects treated in a bulletin just issued by the Bureau of Manufactures, entitled "Factors in foreign trade," in which it is stated for each country whether Postal Union or other rates are applicable and whether there is a parcel post with the United States. In a summary of postal regulations there are given in detail the Postal Union rates, parcel-post regulations, and a list of countries for which international reply coupons are available. Copies of this bulletin, if placed in the hands of those in charge of mailing letters to foreign countries, would do much toward preventing short-paid postage, of which consuls and others have repeatedly made complaint. Copies of the bulletin may be obtained by application to the Bureau of Manufactures.

### INTERNATIONAL COTTON STATISTICS.

[Report of Arno Schmidt, secretary International Federation of Master Cotton Spinners and Manufacturers' Associations, forwarded by Consul Church Howe, Manchester.]

Stocks of cotton held by spinners throughout the world on March 1 amounted to 4,200,413 bales, as compared with 4,060,740 bales in 1911. The stocks of American cotton amounted to 2,815,942 bales, against 2,565,500 bales 12 months previously. The spindles of the world are 139,312,870 and returns by the international federation have been received from the owners of 123,564,126 spindles. In Great Britain there are 55,164,794 spindles, and firms representing 48,220,302 spindles have made returns. There are 39,776,223 mule spindles, and 8,444,079 ring spindles. Spindles in course of construction at present are 710,332.

[From the Lancashire Cotton Spinners and Manufacturers' Directory for 1912.]

#### The Lancashire Cotton Industry.

The net increase in the number of spindles in Lancashire during 1911 was the lowest since 1902. During the year 137,785 spindles were added to those in operation in the county. There was, however, a substantial addition of 17,452 looms, the largest increase since the year 1906. The chief increases in spindles are: Oldham, 85,147; Blackburn, 52,156; Bolton, 32,500; Accrington, 23,204; and Wigan, 10,440. The chief extensions in looms are: Burnley, 4,564; Nelson, 2,010; Clitheroe, 1,506; Hyde, 1,333; Bolton, 2,222; and Ashton-under-Lyne, 1,026. Throughout Lancashire there are now 758,712 looms.

**CONSTRUCTION WORK ABROAD.****CANADA.**

[From Consul General John G. Foster, Ottawa.]

**Construction of Dry Dock at Quebec.**

The Canadian Department of Public Works has advertised for tenders for constructing the Quebec Dry Dock under the dry docks subsidies act (announcement of which was made in Daily Consular and Trade Reports for Apr. 20 and 27, 1912). Tenders will be received up to July 2. It is intended that the dry dock shall be at Lauzon, or in the estuary of the River St. Charles, or on the Beauport Flats, in the Port of Quebec. Applicants will be required to submit with their proposal a report signed by their engineer setting forth in detail (1) the respective advantages from the viewpoint of the shipping interests of each of the above-mentioned sites; (2) plans and specifications with full and detailed estimates of cost.

The dry dock is to be not less than 1,150 feet usable length, 110 feet clear width at entrance, and at least 37 feet in depth over sill and keel blocks. The dry dock is to be completed within four years from the date of the execution of the subsidy agreement. No proposal will be considered unless accompanied by an accepted check for \$50,000.

**Widening of Soo Canal.**

The Department of Railways and Canals at Ottawa has advertised for tenders for widening the lower entrance channel way, Sault Ste. Marie Canal. Tenders will be received until May 10, 1912, by the Secretary of the Department of Railways and Canals at Ottawa.

[From Consul Abraham E. Smith, Victoria, British Columbia.]

**Buildings and Enterprises on Vancouver Island.**

Construction work in Victoria continues active, some of the enterprises being summarized as follows:

The Westholme Lumber Co. is constructing a 7-story \$100,000 block for Hibben-Bone Co., the new St. James Hotel structure, the Bell apartment, all in Victoria, and a big warehouse for Brackman & Ker (Ltd.), at Nanaimo. The company also has contracts for a large salmon cannery at Aliford Bay, near Skidegate, Queen Charlotte Islands, for the British Columbia Fisheries (Ltd.), a \$15,000 bungalow at Somenos, and a tramway for carrying lime and rock for the Vancouver Island Cement Co.

A 3-story apartment and business block is being built for H. Harkness, by Scott Bros.

The Canadian Pacific Railway is calling for tenders for constructing machine shops, roundhouses, turntable, and repair tracks in Victoria West, expenditure \$100,000. Such works are now all at Wellington, but hereafter the car shops will all be at Victoria.

The Victoria and Vancouver transfer companies are to be consolidated (capital \$500,000) and worked by motor traction. A full equipment of motor vehicles for all kinds of delivery and private accommodation is to be imported.

The railway subsidies granted by the Dominion Government of \$12,000 per mile include the following extensions on Vancouver Island: Esquimalt & Nanaimo Railway, Wellington to Alberni, 60 miles; McBride Junction to Sandwich, 45 miles; Sandwich to Camp-

bell River, 38 miles; and near Campbell River toward Fort George on the G. T. P., 100 miles.

Three American air compressors, made by Chicago Pneumatic Tool Co., have arrived to assist the city engineers in rock excavation for sewers. The compressors drill and remove 300 feet of rock per day, justifying the expense of \$2,200 each.

The new \$80,000 Odd Fellows Building in Victoria will include a ballroom 70 by 90 feet, with galleries, etc., the largest in the city; a large banquet hall, kitchens, dressing rooms, lodge rooms, social hall, and balcony.

The new Provincial gaol, to be built on a 25-acre suburban site, will cost \$100,000.

The British Columbia Permanent Loan Co. has decided to erect a 10-story \$200,000 office building of steel and reenforced concrete, with 125 rooms and offices.

The new municipal hall for Oak Bay, suburb of Victoria, will be built at once by A. H. Mitchell, whose tender was \$10,500. Building permits issued in Oak Bay in April involve \$27,000 expenditure.

Contract has been awarded for a 7-story office and mercantile building of reenforced concrete for Duncan Campbell.

[From Consul Frank C. Denison, Fernie, British Columbia.]

#### **New School Building.**

Notwithstanding that about \$75,000 was expended for new school buildings during 1910 and 1911 and that they would accommodate about 750 pupils, it has been decided that another large brick building is necessary that will furnish room for 500 to 600 more scholars. It is expected that Fernie voters will indorse the appropriation of \$50,000 for its erection. It is intended to have work started upon the new building by the middle of May.

### **UNITED KINGDOM.**

[From Consul General John L. Griffiths, London.]

#### **Proposed British Railway Improvements.**

The following facts are condensed from the London Times of April 10:

The program of new works proposed by existing railway companies in the United Kingdom in bills and provisional orders in the present session of Parliament contemplates a total expenditure of \$20,011,242, exclusive of \$867,502, for Edgware & Hampstead Railway works authorized by previous acts and intended to be replaced by deviations and alterations at an extra cost of \$642,052.

Existing companies propose to construct a new railway 45 miles single and 20½ miles double tracks. Double-line widenings aggregate 29½ miles, most important being the Great Central outside Sheffield and at various points between Mexboro and Barnethy, total 22½ miles, estimated cost \$2,400,381. Of 28½ miles of single-line widenings, 26½ miles will be constructed at different points on the Great Eastern, estimated cost \$661,557; and double-line deviations, alterations of levels, etc., 4½ miles.

By individual companies the largest expenditures will be made on electric railways in London district. The London Electric Railway Co. contemplates spending \$3,664,474 and the London & North Western \$2,877,425. A new line to Watford and widenings between Finchley Road and Wembley Park will cost the Metropolitan \$1,825,638. The Metropolitan District Co. contemplates \$1,190,175 expenditure on widenings between East Putney and Wimbledon, and the Great Western and Midland companies propose outlays of \$1,942,488 and \$1,697,941, respectively, in South Wales and other parts of their system.

Existing companies propose to spend the following amounts: On 113 bridges over public roads, railways, rivers, or canals, \$826,878; on accommodation works, \$1,281,524

on viaducts, \$664,934; on tunnels, \$3,771,381; on retaining walls, \$582,929; on covered way, \$162,478; on electrical equipment, \$42,275; and on stations, \$1,109,635. On widening, lengthening, or reconstruction of bridges, \$326,639 is proposed to be spent by the Great Western Co., \$53,531 by the Great Eastern Co., \$4,818 by the Great Central Co., and \$3,163 by the Caledonian Co. The Great Eastern Co. proposed also to spend \$73,172 on river walls and \$13,845 on pier works; and new subways will cost the London Electric Co. \$205,366.

Two railway proposals by new companies seeking incorporation are the Canvey Island Deepwater Wharf and Railway, with a proposed expenditure of \$2,458,653, and the Lothian Railways with \$1,456,855. The Canvey Island expenditure includes \$1,672,713 on the construction of a new wharf, and the remainder on constructing 4½ miles of single line, involving \$136,262 for a public road and railway bridge, \$10,920 for culverts and drains, and \$14,137 for stations. The 14½ miles of single line and three-eighths mile double line of the Lothian Railways are estimated to involve expenditures of \$239,870 for 33 public road and railway bridges, \$58,130 for accommodation works, \$194,660 for viaducts, and \$37,082 for culverts and drains.

### INDIA.

[From Consul Edwin S. Cunningham, Bombay.]

#### Supplies for Waterworks.

This is a particularly opportune moment to bring to the attention of the municipal authorities of Bombay supplies which are required in the construction of waterworks or for the increase of an existing water supply. The necessity for the increase of the water supply in Bombay has long been recognized, but nothing has been done since the completion of the Tansa Reservoir in 1892.

Recently the water engineer was requested to submit a report concerning certain proposals which had been made for the increase of the city's water supply. This report is now before the Bombay Corporation and will be considered very shortly. One of the plans advanced, to develop the supply from Tansa Lake, which is 55 miles from Bombay, proposes the duplication of the syphon by 48-inch conduits, which will bring into the city another 18,000,000 gallons per day, increasing the total supply to 49,500,000 gallons. This will necessitate considerable expense and the raising of the height of the dam. It is proposed to construct certain storage and terminal reservoirs. To carry out the suggestions of the engineer for the improvements and increase of the water supply would require 9,232,000 rupees (\$2,994,245).

While there is considerable agitation at present and the requirements of the city will soon demand that an increase be made in the water supply, it must be understood that the foregoing statements are but notes taken from a report and such as have been discussed in local newspapers. Nothing definite has been authorized, but it is safe to say that the demands of the city are such that the municipality will soon take definite steps for the increase of the water supply either along the lines of the report or some other directions.

### BURMA.

[From Consul M. K. Moorhead, Rangoon.]

#### Comprehensive Plans for Road Construction.

The intention of the Government is to spend approximately \$1,000,000 per year over a period of 10 years in improvements of roads in the Province. The existing roads will be properly metaled, permanent steel and masonry bridges will be substituted for the

present timber bridges, feeder roads along the railway and river will be constructed, and the present roads will be linked up. In Tenasserim, from Moulmein to Victoria Point, a trunk road will be constructed, supplemented by feeder roads.

With the carrying out of this program Burma would possess, in addition to the 1,673 miles of metaled roads already existing which would be brought up to a first-class standard, about 1,100 miles of main routes extending northward from Rangoon to Shwebo and southward from Moulmein to Victoria Point. There would also be an additional 2,000 miles of feeder roads. When completed the Province would possess a total of 2,800 miles of first-class roads, bridged and metaled and 8,000 miles of cart road and bridle paths. This work will probably be performed by the Public Works Department. The average cost for the construction of a first-class road, bridged and metaled, is estimated at \$6,000 to \$7,000 per mile.

This proposal must first be passed by the Burma Legislative Council and then approved by the Government of India and the Secretary of State.

#### **Stimulation to Machinery Trade.**

The construction of these roads will induce a great expansion in the mining industry of Tavoy, Tenasserim division, and there should be increased demands for American mining machinery. The Public Works Department will also need a considerable amount of road-building machinery and supplies, but preference will be given to Indian and British made goods, as this is a Government undertaking. With the linking up of existing roads and construction of new roads there should be an increased demand for automobiles and commercial and large passenger cars.

#### **Present Roads of Burma.**

According to the revenue secretary to the Government of Burma there are in Burma 1,527 miles of railway, 1,673 miles of metaled roads and 5,497 miles of unmetaled roads, for the most part mere village cart roads and bridle paths, over an area of 168,573 square miles and for a population of 10,500,000, excluding the Shan States. In the Federated Malay States, with an area of one-sixth that of Burma and a population of less than one-tenth as large, there are more miles of metaled roads than in Burma. In all of Burma there are only a little over 100 miles of roads which are capable of bearing the strain of motor traffic. With a few exceptions the metal of the roads consists mainly of burnt clay, pebbles, laterite, and local stone and deteriorates rapidly under even moderately heavy traffic. None of these metaled roads are over 10 feet wide and 90 per cent of the bridges are constructed of wood.

On account of the lack of funds no new metaled roads have been constructed in the Province during the past two years, and the appropriations available for maintenance have been so small that many roads have fallen into bad repair. The existing roads are mostly scattered all over the country without any connection with each other, each road apparently having been built to meet local demands without consideration of the requirements of the Province as a whole. The utility of the railroad is impaired by the lack of feeder roads connecting the various villages. There are large sections

of the country which have no outlet for their produce either to the railway or rivers on account of lack of roads.

#### **Procuring Funds for Good Roads.**

In the Tenasserim division there is said to be good land suitable for rubber cultivation and the existence of rich deposits of tin and wolfram (tungsten) has been confirmed by the geological survey. The development of rubber plantations and of the mining industry is retarded by lack of communications. The Government of Burma has long been considering means of improving the roads, but the lack of provincial funds has made any large expenditure impossible. In 1910 the Government of India was asked to appropriate out of imperial funds 40 lakhs of rupees (\$1,297,320) annually for five years in order to enable the Province to make up these deficiencies in means of communication in Burma. This request having been definitely refused, it is now proposed to raise the necessary funds by a special tax on the exportation of rice for 10 years, the rate proposed being 4 annas (8 cents) per bag of 224 pounds on rice exported to India and 1 anna (2 cents) on rice to foreign countries. This tax would be in addition to the existing export duty of 3 annas (6 cents) per maund (82½ pounds) on rice exported to foreign countries. This tax, it is estimated, would produce annually an average amount of \$1,031,208, of which \$735,887 would be contributed by exports to India and \$295,321 by exports to foreign countries.

---

#### **PHILIPPINE ISLANDS.**

##### **Large Sum for Public Improvements.**

The following statement from the Manila Free Press is corroborated by the Bureau of Insular Affairs, War Department, Washington, D. C.:

Various Provinces of the Philippine Islands will be benefited by the determination of the Government to withdraw from deposit in banks of the United States low interest-bearing funds amounting to ₱4,500,000 (\$2,250,200 gold) for the purpose of lending this money to provincial and municipal governments for works of public improvement. The funds now in American banks draw 2½ per cent interest and will be loaned in the islands at 4 per cent.

---

#### **ASPHALT FOR BRITISH STREETS.**

[From Consul General John L. Griffiths, London.]

The United Kingdom imports about 65,000 tons of rock asphalt annually. In 1910 the quantities bought from various countries, with their values per long ton, were as follows: From Germany 24,960 tons (\$11.33), France 11,985 tons (\$10.27), Italy 10,308 tons (\$9), British West Africa 15,421 tons (\$14), United States 3,697 tons (\$20).

In London asphalt paving is practically in the hands of two firms, one French and one Italian, which are constantly employed in relaying and repairing streets and footways. Outside the city area the maintenance of roads and walks is controlled by the various municipal boroughs, and the work is done by contractors who are the successful bidders. Except in the city itself, wood blocks and macadam are more generally used than asphalt, but there is, notwithstanding, a considerable part laid with the latter.

**RAILWAY DEVELOPMENT IN MOZAMBIQUE.**

[From Consul George A. Chamberlain, Lourenço Marquez, Portuguese East Africa.]

The importance of the two principal railways of the Province of Mozambique, Portuguese East Africa, is out of all proportion to their mileage. The main line from Lourenço Marquez to the Transvaal border is only 55 miles long, but it does an enormous carrying trade in both goods and passengers, for this port is not only the gateway to the Transvaal but is also the source from which the mines draw annually 60,000 "boys." ("Boy" in Africa is used to designate a working native irrespective of his age.) It should be noted that an equal number of "boys" return each year and that they pay a full rate of passage. Branching off from this main road is the Swaziland line, 35 miles in length. It connects Lourenço Marquez with Mailana and is being extended to the Swaziland border. Its completion will effect a saving not only in cartage costs but also in railway mileage.

The Swaziland Railway was started with the idea of opening a shorter route from Lourenço Marquez to Johannesburg, and the Portuguese portion was finished years ago, but a hitch occurred as to the British section. As a result an economic anomaly exists. Johannesburg, with its annual importation of approximately \$30,000,000 worth of goods via Lourenço Marquez, is nine hours farther by rail from that port than it need be. The yearly waste is tremendous, but it is offset in a measure by the advantage that accrues to another section of the South African Union, which sees in the completion of the Swaziland Railway the decline of Durban's career as a port of entry for the Rand. Durban has for years been the rival of the Delagoa Bay (Lourenço Marquez) and has tried, with great effect, to do artificially for its harbor what nature has done for the latter; but eventually the Rand must cease paying this extra freight on its machinery and supplies, and in that day the Swaziland Railway will be an economic factor big enough to change the channel of trade, and Durban will become what it logically is—a splendid port for its own rapidly developing hinterland.

**Routes to the Northeast.**

Starting 32 miles from Lourenço Marquez on the main line a branch running northeast and paralleling the coast for 50 miles is to be laid to the settlement of Xinavane, and also to Magude on the Incomati River. The Incomati Estates (Ltd.), a sugar concern that is beginning operations on a large scale, has secured the contract for this line. A request has been made for tenders for the extension of this branch 125 miles in the same general northeasterly direction to Manjacaze, where it is to connect with the railway at present under construction from the port of Chai-Chai on the Limpopo River, which enters the Indian Ocean about 90 miles up the coast from Lourenço Marquez.

This latter road, starting from Chai-Chai, is known as the Gaza Railway, and 20 of the 33 miles to Manjacaze are already completed and in operation. It is a narrow-gauge road intended to open a fertile region hitherto inaccessible to commerce. Its usefulness is seriously handicapped by the dangerous shoal bar in the Limpopo River that makes Chai-Chai a most difficult port to enter. The materials for this railway, as well as the rolling stock, were furnished by a German firm that secured the contract through public tender. [For an article pertinent to public tenders for Portuguese East African

contracts see Daily Consular and Trade Reports dated Jan. 22, 1912.] From it three branches are planned, the most important of which is the line continuing northeast parallel to the coast to Inharrime, shortly to be the terminus of the line now being built south from the port of Inhambane. The Inhambane Railway starts from a point two hours by river above the town of Inhambane, and is under construction to Inharrime, as stated, a distance of 40 miles, 25 miles of which are already completed.

**Beira and Quelimane as Railway Centers.**

The railways and branches so far mentioned form a distinct part of the system which has Lourenço Marquez, the capital of Mozambique Province, as its center of radiation. Directly north of the district of Inhambane, however, come the territories of the big charter organization known as the Mozambique Co. Beira, the port and capital of the Mozambique Co., bears the same relation to Rhodesia that Lourenço Marquez does to the Transvaal, and it has been connected with Salisbury, Bulawayo, and practically all South Africa, including the newly opened Belgian Kongo hinterland, by the Beira & Mashonaland Railway, which forms the shortest link between the highlands of Rhodesia and the sea. This railway is owned and operated by British capital, but the Mozambique Co. retains an inalienable right to a certain number of votes whether it disposes of its shares or not.

Proceeding northward, the next beginnings of a railway are found at Quelimane, one of the ports for the Zambesi delta, with which river it is connected by a devious inland channel scarcely navigable at present. Quelimane is without question the outlet for the richest and most productive section of Portuguese East Africa. The Zambezia Co., holding a large land grant from the Portuguese Government, owns an 18-mile railway starting from the port of Quelimane. Besides this private enterprise the provincial government has called for tenders for 15 miles of the Nhamacurra Railway, which is to connect Nhamacurra with Villa Durão, the total distance being 50 miles. This railway will tap a most fertile region.

**Construction of New Railway.**

Authority has been vested in the British Nyasaland Protectorate Government to contract with the British Central Africa Co. for public lands to which the Shire Railway is at present entitled, and to guarantee interest on the capital required to extend the Port Herald Railway to the Zambezi River [mention of which was made in Daily Consular and Trade Reports on Mar. 15]. The Portuguese Government has been asked to consent to the passage of the railway through its African territory, and arrangements have been concluded with the Mozambique Co. to build a section of the line from the Zambezi to the port of Beira. It is announced that the Portuguese Government has given the consent requested and that arrangements for the construction of the whole railway are about concluded.

There is no doubt that Quelimane would be a much nearer exit to the sea for British Nyasaland, but against this factor the Mozambique Co. presents in Beira an established harbor open to vessels of any draft at present plying on the East Coast and whose port works are already in process of construction. There has as yet [Mar. 7] been no call for tenders for construction or material for the projected railway, and it is advisable that American firms wishing to compete

should at once get in touch with the Mozambique Co., either at its home office in Lisbon, Portugal, or at its headquarters at Beira, Portuguese East Africa. [The name of a firm in Beira which might be approached by Americans desiring an agent in that port may be obtained from the Bureau of Manufactures.]

The standard gauge for Portuguese East Africa is the South African gauge of 3 feet 6 inches. This gauge obtains in most of the beginnings of railways undertaken by the Government as it utilizes the material and rolling stock discarded by the main Lourenço Marquez-Johannesburg line. This main line is now introducing American locomotives of the Mallet type. English and German locomotives are also in use as well as coaches and rolling stock from the same sources. Many of the trucks are of Portuguese manufacture.

American manufacturers interested in the railways and port works of Mozambique Province should address communications and literature to A Direcção do Porto e dos Caminhos de Ferro, Lourenço Marquez, Portuguese East Africa.

### AMERICAN-JAMAICAN TRADE EXTENSION.

[From Consul Nicholas R. Snyder, Kingston.]

With a possible "commercial exposition" in view, at which American manufactures might be displayed and thus brought to the attention of Jamaican tradespeople, I began interviewing leading Kingston merchants and one in particular, a wholesale hardware dealer who, I believed, imported little, if any, hardware from the United States. Inquiry developed that his warehouse was stocked with thousands of dollars' worth of American goods, such as carpenter's tools, ready-mixed paints, whips, harness, and nails. He said that he has recently begun to import corrugated iron roofing and wire fencing also, and stated that while American imports are not increasing by "leaps and bounds," they are steadily driving both British and German manufacturers to greater efforts to maintain the trade they have hitherto enjoyed.

The same may be said of the larger dry goods houses, to which were submitted samples (with prices) of a child's jumper suit made in one of the New England States. Notwithstanding many of them maintain a buyer in London, they have placed large orders with this New England manufacturer. Continuing my investigations, I found similar conditions existing among others of the leading merchants, and therefore concluded that a commercial exposition such as I had contemplated would not justify the expense it would entail.

If American manufacturers will (and some of them do) send out competent salesmen, their trade in the West Indies should develop greatly. During my residence as consul in this island I have seen a rapid growth in imports of American goods, regardless of the fact that freight rates from American seaports are the same as those from Europe, where the distance is two or three times as great. The United States supplies more than 45 per cent of Jamaica's imports and absorbs about 53 per cent of the island's exports. In my opinion the completion of the Panama Canal will materially increase the amount of Jamaica's imports from the United States.

[A review of Jamaica's foreign commerce was published in Daily Consular and Trade Reports on Aug. 24, 1911.]

**SIAMESE RICE CULTURE AND EXPORT.**

[From Vice Consul General Carl C. Hansen, Bangkok.]

More than 40 varieties of rice are cultivated in Siam. The "hill" rice is a peculiar variety planted on the hillsides in northern Siam, and is said to be marvelously productive. When ripe, the ears of this rice are black, but when husked and boiled the grains are of a reddish color and have a peculiar fragrance.

The "glutinous" rice is another variety grown in the mountain valleys of northern Siam, and forms the main food for the people of these regions, while white rice only is raised and used by the people on the plain of Lower Siam. A common kind of rice cultivated on land liable to floods during the rains is said to grow as much as a foot in 12 hours, so that the plant often attains a height of 10 feet in its efforts to keep its leaves above water.

**Crops and Varieties.**

The rice commonly raised in Siam consists of the so-called light crop, which is planted on irrigated land, often as early as February, and reaped in May or June; and the heavy crop, which is planted between July and September and harvested in December and January.

A prominent Siamese rice grower gives the following description of the rice supplied for export:

Rice that is exported can be roughly divided into three classes—Na Muang, Pasak, and garden rice. Na Muang is the cheapest quality and is grown chiefly in the district of Ayuthia. The grains are short and have a great deal of red rice mixed with them, and they are also very much cracked, therefore liable to be broken in milling. Pasak rice, which is of better quality than Na Muang, comes from the Pasak River district and is a variety of garden rice. It is only due to the soil of this district that it is of poorer quality than the ordinary garden rice. The so-called garden rice forms the main bulk of rice that is exported and is the best quality. Na Muang and Pasak rice is used for mixing with it. This rice was formerly grown in the ditches of vegetable gardens, but is now raised on vast tracts of land, both by broadcast sowing and transplanting processes, so that the name garden has lost its original meaning.

**Rice Exhibitions—Declared Exports.**

On account of the exhibitions of rice during the last three years, very fine varieties have been brought to the notice of cultivators. Many of the varieties exhibited are considered by experts to be among the best in the world.

The declared exports from Bangkok to the United States and Manila during the calendar year 1911 amounted to \$8,619 worth of white and \$25,095 worth of broken rice.

**OIL-BURNING PLANT AT IRISH SHIPYARD.**

[From the Belfast Evening Telegraph, forwarded by Consul Hunter Sharp, Belfast.]

In order to be independent of coal as a fuel, four large boilers at Harland & Wolff's Shipbuilding Works on Queens Island have been adapted for oil fuel. Using coal for fuel, one of these boilers evaporates 16,000 pounds of water an hour and the other three 12,000 pounds each, and with liquid fuel they will generate 4,000 horsepower per hour. The work of installation is so simple that it can be carried on without letting the steam out of the boilers.

The steam-jet system is used, which it is claimed will recover 68 to 74 per cent of the calorific value of the fuel used. The oil enters the boiler through a branch pipe and is given a whirling motion by the prolonged spiral stem of the valve spindle, the amount of oil being governed by a handwheel at the end of the spindle. The steam enters at another valve and passes through slots in the cylindrical part of the cone. All the oil passing through the burner is thus steam jacketed. One or two men can attend to a dozen boilers burning liquid fuel.

**BELGIAN KONGO RUBBER.**

[From Consul General Henry W. Diederich, Antwerp, Belgium.]

As the Belgian Kongo has become, almost overnight, one of the chief rubber-producing countries, Antwerp has naturally also become one of the rubber markets of the world. The importations of rubber into Antwerp amounted to 4,336 tons in 1911, as against 4,058 tons in 1910. Of these imports, 3,176 tons came from the Belgian Kongo in 1911 and 3,105 tons in 1910.

The Belgian Government is making a special effort to encourage to the utmost the cultivation of rubber in Kongo Free State. Three expeditions went out in 1911 to the district of the Equator and discovered several tracts which seemed to fulfill all the requirements necessary to the cultivation of the *Hevea brasiliensis* (Para rubber). At the same time, the planting of *Hevea* had already been tried in the five stations of the Bangala and in two stations of Stanleyville. Some of these plants, 10 years old, have now reached the period of seed bearing. Last year a large number of seeds were harvested and used immediately; the surplus seeds were held at the disposal of the natives and private individuals who solicited them. Experiments in tapping, recently made at the Botanical Gardens of Eala, on *Hevea* trees 6½ years old, gave 515 grams of dry rubber per tree. Other experiments in tapping made elsewhere also gave satisfactory results, for instance at Boma, Kitobola, Coquilhatville, Bambili, and Niangara. It was found that coagulating the rubber sap by plunging it in hot water still gave the best results and is much more effective than the slow process of allowing it to settle.

The cultivation of several other species of rubber trees is being experimented with, but none equals the *Hevea brasiliensis* in point of production, growth, and quality. It may therefore be taken as settled that the *Hevea brasiliensis* is the best adapted for cultivation wherever the rainfall is sufficient for its growth.

**High-Grade Kongo in Demand.**

With regard to Kongo rubber, there is a constant demand for the highest grades, which, however, are becoming very rare, and one of the first effects of free competition would seem to be a notable lessening in the care given to harvesting and coagulating the rubber. The greater part of the Kongo rubber imported into the Antwerp market comes from districts given up to private cultivation.

It is feared by rubber men here that incessant harvesting of rubber in the Kongo forests will impoverish the growth. Rubber experts therefore strongly advocate the systematic and well-organized planting of rubber trees, not only by the public authorities, but also by private individuals.

As yet the trade has not decided upon the best form in which the crude plantation rubber should be presented for sale. It comes now in sheets, disks, "crepes," blocks, etc., either smoked or natural. During 1911 the forms preferred were smoked sheets and light, thick crepes. However, the most difficult problem remains still to be solved, namely, the method of coagulation. It is agreed that adding the slightest quantity of acid deteriorates the mass and thus renders the quality of the rubber inferior to that of Para.

**World Output—Plantation Rubber.**

The subjoined table will show the approximate estimate recently made of the world's output of rubber for 1911:

Countries.	Tons.	Countries.	Tons.
Brazil, 1910 (Peru and Venezuela included).....	38,000	Liberia.....	38
Ceylon, 1911 (estimated).....	2,000	Malaysia.....	18,000
Kongo and Angola.....	10,800	Mexico.....	12,700
Costa Rica.....	90	British Nigeria.....	630
British East Africa.....	180	German Togoland.....	450
German East Africa.....	250	Sum.....	450
French Indo-China.....	5,500	British Sierra Leone.....	90
British Gold Coast.....	1,450	British Uganda.....	900
Gambia (British, French, and Dutch).....	900		
British India and Burma.....	250	Total.....	92,821
Borneo and Papua.....	45		

At present the trees on most of the new plantations in the East are too young to show fully what they can do, but it is expected that in a few years the plantations will produce an annual harvest of at least 50,000 tons. The conditions for work on plantations in the Malay States and the East are very different from those prevailing in the forests of South America, and are attended with no such danger to health. The rubber gathered from these new plantations can not yet replace the Para—for one thing, it lacks resiliency—but it is confidently hoped that with older trees and more scientific methods of gathering and coagulating the sap more perfect results will be obtained. In fact, it is expected that in the near future the new plantation rubber will equal the Para in every respect, and even now it comes into the market in a purer and better condition than does its rival from the virgin forests of South America.

[A pertinent review of the rubber industry appears in the article on the International Rubber Exhibition published in Daily Consular and Trade Reports on Aug. 10, 1911, and among numerous other reports on the subject were those published on Jan. 16 and Mar. 13, 1912.]

**PROTECTION OF SHEFFIELD'S TRADE NAME.**

[From Consul Charles N. Daniels, Sheffield, England.]

A committee of the Cutlers Co., manufacturers and workmen, formed with the object of preventing the improper use of the trade name of "Sheffield" has received the assistance of the board of trade in making its object known all over the world. It has arranged that a circular be sent out through the foreign office to the various British embassies and consulates abroad. The circular points out that, while the committee does not desire to embark upon a policy of fussy interference, it is most concerned to suppress fraud.

It is suggested that the British Government's commercial representatives abroad should make inquiries on the spot in all suspicious cases and report, if possible, direct to the Cutlers Co. the result of any action which they may take. Such action, it would appear to the company, would be usefully confined to inquiries into suspicious cases and to the purchase of samples which could be sent home to be examined by the experts of the Cutlers Co. to determine whether or not they were genuine or fraudulent.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8709. Tenders for steel pipe.**—The American consul general at Vancouver, British Columbia, reports that tenders will be received by the city purchasing agent, Vancouver, until May 15, 1912, for 2,000 lineal feet of 18-inch lap-welded wrought-steel water pipe and 13 double gate valves with flange ends. Specifications and blank tender forms may be obtained from the city purchasing agent.
- No. 8710. Marine insurance agency.**—A business organization in the Levant writes that several British and German marine insurance companies have been established in that region for some years, and they are doing a good business. At present not an American company is represented there, and it is believed by this organization that a good business can be done if satisfactory arrangements can be made with some reliable American marine insurance company.
- No. 8711. Representation in western Canada.**—An American consular officer reports that a business man in his district contemplates opening a general commission business in a certain city, and he desires to be put in touch with American manufacturers who desire representation in western Canada.
- No. 8712. Blades for safety razors.**—There seems to be an excellent opportunity in a certain foreign country for the sale of American safety razor blades if direct connections can be made, thus obviating certain unsatisfactory conditions at present existing. An American consul reports that the sale of this line of goods has fallen off considerably in his district because of the conditions above referred to. Copy of the complete report, containing further detailed information, can be obtained upon application to the Bureau of Manufactures.
- No. 8713. Power sheep-shearing machines.**—A report from an American consular officer in South Africa states that a prominent and enterprising engineering firm in his district wishes sole agency for power sheep-shearing machines. Correspondence regarding this matter should be addressed to the consular officer submitting the report.
- No. 8714. Canary whitewood lumber.**—An American consul in the United Kingdom reports that a large firm of lumber dealers in his district, which acts as agent for Norwegian, Swedish, and Russian shippers of various kinds of lumber, is desirous of obtaining the names of first-class reliable shippers of canary whitewood lumber from the United States. This firm states that it often receives inquiries from its customers for this class of lumber, which is said to be shipped in large quantities by American firms.
- No. 8715. Silk hosiery.**—A business man in Canada informs an American consular officer that he desires to communicate with American manufacturers of high-grade hosiery, especially silk hosiery.
- No. 8716. Frozen turtle.**—An inquiry has been received by an American consulate in a South American country for the names of firms in the United States dealing in frozen turtle. The firm making this request desires to export frozen turtle to the United States.
- No. 8717. Woodenware and hardware.**—An American consul in the United Kingdom reports that a local merchant who handles American and Canadian woodenware is open to buy on his own account wooden handles, all other kinds of woodenware and hardware lines, or to represent American firms producing such goods. He states that he can command a good trade in competitive lines among the leading jobbers and manufacturers of the United Kingdom, as he has business connections of many years' standing with all the important houses in this line throughout the country over which he travels regularly. He also looks after the presentation and collection of drafts, documents, etc., if desired, and is willing to take care of and distribute carloads of goods arriving at British ports at low forwarding rates.
- No. 8718. Men's furnishings.**—A commission firm informs an American consular officer that it desires to be put in touch with American manufacturers of men's furnishings who desire a representative in western Canada.

## FOREIGN TARIFFS.

### ARGENTINA.

#### Rates of Duty on Sugar.

Consul General R. M. Bartleman, Buenos Aires, has transmitted a copy with translation of a law of February 21, 1912, which establishes new rates of duty on sugar, in effect from June 1, 1912. The law provides for the imposition of specific rates of duty, which are to be gradually reduced from 1912 to 1921. The duty applicable from June 1, 1912, on sugar of not less than 96° of polarization is 0.088 peso per kilo (about 4 cents per pound); on unrefined sugar, or sugar of less than 96° of polarization, 0.068 peso per kilo (about 3 cents per pound). After that year until 1921 the annual reduction on both the refined and the unrefined is to be 0.002 peso per kilo (peso = 96.5 cents; kilo = 2.2046 pounds). The present rates on the grades of sugar mentioned above are 0.09 and 0.07 peso per kilo, respectively.

### AUSTRALIA.

[From Consul General John P. Bray, Sydney, Feb. 16, 1912.]

#### Proposed Reciprocity with Canada.

The following letter, addressed to the Prime Minister of Australia by the Minister of Customs of the Dominion of Canada, has been made public:

Since 1898 our two countries have been endeavoring from time to time to arrive at an agreement for better mutual trade relations between our countries, but so far without success. In the meantime Canada has admitted the British colonies, including the West Indies, as also the Dominions of South Africa and New Zealand, to the advantages of her British preferential reduction over nonpreference countries and which amount to about 30 per cent of duty. A return has been accorded by South Africa and New Zealand and negotiations are now going on for a preferential return from the West Indies with fair prospects of success. It seems to me too bad that with our great sister Dominion in the Pacific we have not been long since able to arrange our trade on a preferential basis, and I can assure you that Canada is very desirous, both on sentimental grounds and for reasons of mutual advantage, that this anomaly shall be removed as speedily as possible. We give you already a considerable free list for some of your staple products, although we get no very great return from you

in that respect for any of our great staples. We stand ready to give you a substantial preference upon all articles of export in return for a substantial preference to our exports to your country, and a free entrance for some of our natural products. Proposals have been made to exchange your limited preference for a limited preference of entry into our country, but it scarcely seems adequate that we should proceed on such a restricted basis. Can we not at least approach the matter with a clear desire and a determination to come to some fair agreement, and thus bind our two countries closer together on the lines of commercial intercourse and exchange? If your Government will make a proposition, I shall be very pleased to take it up with my colleagues and to pursue the negotiations with you to a finish, and I don't see why we should not come to conclusions which would be mutually advantageous.

Once preferential inducements are added, our steamship communications can be bettered, and by this means our two kindred people will become more intimately acquainted with and interested in each other. If, on the other hand, you wish Canada to make a proposition to you with the assurance that you desire to follow it to a completion, I shall be glad to place a proposal before you for consideration. May I hope to hear from you in good time. Our Mr. Ross will give you any desired information as to our products, our exports, and imports.

The matter referred to in the above letter has been considered by the Commonwealth Cabinet and a reply has been sent to the Canadian minister to the effect that the Commonwealth Government is prepared to enter into negotiations for a reciprocity agreement, and to that end, if it was considered necessary, Australia would send a representative to Canada. The terms proposed by the Commonwealth have not been made available.

[From report by Consul General Bray, Mar. 4, 1912.]

After representations by firms engaged in the exportation of butter and frozen meats to Canada, the Minister for Trade and Customs of the Commonwealth has expressed a willingness to expedite an agreement for better trade relations between the Commonwealth and Canada. It was pointed out that since the New Zealand-Canadian subsidy to the Union Steamship Co. had been entered into (July 1, 1911), whereby New Zealand had first claim on refrigerator space, not a single case of butter had been shipped to Canada from Australia.

The duty on Australian meat in Canada is at the rate of the general tariff, 3 cents per pound, while meat from New Zealand is entitled to the British preferential rate of 2 cents per pound; Australian butter is subject to a duty of 4 cents per pound, while New Zealand butter pays only 3 cents per pound. Negotiations have been opened with Canada, and it is thought probable that an early agreement of reciprocity will result.

#### AUSTRIA-HUNGARY.

##### Commercial Treaty with Montenegro.

The commercial treaty between Austria-Hungary and Montenegro, signed in 1911, was ratified in February of 1912, and March 4, 1912, ratifications were exchanged between the two powers. The treaty came into effect eight days after the exchange of ratifications, and is to remain in force through the calendar year 1917, or, if not denounced previously, until 12 months after the date of denunciation.

The treaty guarantees mutual most-favored-nation treatment, and provides for the free admission from Montenegro, for consumption in the district of Cattaro, of 6,000 head of bovine cattle, 20,000 head of sheep, goats, etc., and 100 metric tons of smoked meat, known as "castradina," per annum.

## CANADA.

[From Consul General John E. Jones, Winnipeg.]

**Invoice Requirements.**

This office has been called upon recently in several instances to smooth out difficulties between the Canadian customs authorities and American shippers. In each instance, after investigation of the facts, it was found that the American manufacturer had not strictly complied with the Canadian regulations governing invoices of goods from foreign countries. It therefore seems important to me at this time to call the attention of American manufacturers to the requirements of the Canadian customs law. To this end, I beg to call attention to the following form, with special reference to the column headed "Fair market value as sold for home consumption at time shipped." Evidently this clause is not distinctly understood. It means that in this column the American manufacturer must place the price at which similar goods are sold in like quantities in the markets of the United States. This is intended as a safeguard in connection with the dumping clause, which is also given below.

The following is a specimen form of invoice approved by Canadian customs, January, 1910, for goods sold by exporter prior to shipment:

(Place and date) —, —.

Invoice of —, purchased by —, of —, of —, from —, of —, to be shipped per —.

Marks and numbers on packages.	Quantities and description of goods.	Fair market value as sold for home consumption at time shipped.	Selling price to purchaser in Canada.	
			@.	Amount.

**The dumping clause in part reads as follows:**

In the case of articles exported to Canada of a class or kind made or produced in Canada, if the export or actual selling price to an importer in Canada be less than the fair market value of the same article when sold for home consumption, in the usual and ordinary course in the country whence exported to Canada at the time of its exportation to Canada, there shall, in addition to the duties otherwise established, be levied; collected, and paid on such article, on its importation into Canada, a special duty (or dumping duty) equal to the difference between the said selling price of the article for export and the said fair market value thereof for home consumption; and such special duty (or dumping duty) shall be levied, collected, and paid on such article, though it is not otherwise dutiable: *Provided*, That the said special duty shall not exceed 15 per cent ad valorem in any case.

When an American shipper—or, in fact, any other foreign shipper—fails to include the price charged for similar goods for home consumption, the customs authorities raise the total value of the invoice 25 per cent, and upon this added valuation assess the duty. This does not mean that the shipper will lose the added duty; for if he is able to prove to the satisfaction of the department of customs that an error has been made in the compilation of his invoice and then furnishes the information required, the additional duty is refunded. While this omission looks, upon the face of it, like a small matter, it has resulted in serious inconvenience to the buyers of American-made goods in Canada; and the attention of manufacturers and ship-

pers generally is respectfully called to the importance of supplying all the information required by the Canadian customs.

American manufacturers who are not conversant with the Canadian customs requirements are further referred to Tariff Series No. 24, "Consular Regulations of Foreign Countries," issued by the Bureau of Manufactures.

---

#### CHILE.

[From Diario Oficial, Chile, Feb. 12, 1912.]

##### Classification of Lubricating Oil.

By a decree of the Government of Chile it is determined that mineral lubricating oil, even when it contains some addition of other substances, such as vegetable oil or animal oil, shall be dutiable under tariff No. 1792, at the rate of about 50 cents per 100 pounds, which is imposed on fixed oils, not refined, for lubricating machinery.

This decree settles a question which had arisen in the administration of the customs, as to whether or not the addition of vegetable or animal material would serve to change the classification of oil which would otherwise fall under the provisions applicable to paraffin, petroleum, and kerosene oils.

---

#### COLOMBIA.

[From Diario Oficial, Colombia, Jan. 22, 1912.]

##### Importation by Parcel Post.

The Government of Colombia has recently decided in the negative the question which arose as to whether articles for which a special exemption from duty had been granted should be entitled to such exemption if the importation took place through the mail. The particular occasion was in connection with the importation of supplies, implements, and sundries for use in a match factory, special exemption from customs duties having been granted for such articles. The Ministry of the Treasury decided that they should be entitled to free importation only when imported through the customhouse, owing to the fact that the post offices are not under the same department of the Government as the customhouses, and can not be made subject to the same regulations. This ruling has bearing on the importation of material by railroad, navigation, or manufacturing companies on which special exemptions from duty have been accorded, and duty will accordingly be payable when importation is made through any office other than the customhouse.

---

#### ITALY.

[From report of Consul General James W. Smith, Genoa.]

##### Duty on Dredges and Tugboats.

By a decree of February 25, 1912, dredges and decked tugboats are made free of duty on importation into Italy. Dredges were formerly dutiable at 37.50 lire or 17.50 lire per gross ton (in addition to duty charged on motive machinery) depending on the material of the hull. Decked tugboats were not previously mentioned in the customs tariff. [Lira = \$0.193.]

**SWEDEN.**

[From a report of the Danish consular general in Stockholm, reprinted in Meddelelser Fra Oplysningskontoret, Christiania, Mar. 9, 1912.]

**Proposed Reduction of Duties.**

A number of private bills have been introduced in the lower house of the Swedish legislature calling for tariff revision downward. One bill introduced by 10 members of the house contemplates general reduction or abolition of the customs duties on food products. Another proposal is the abolition of the duty on bacon (bacon is imported chiefly from America). In yet another bill the reduction of the duties on oatmeal and groats is proposed.

In the proposal to abolish the duty of 0.60 crown per 100 kilos (7 cents per 100 pounds) on cement, it is asserted that the present duty allows the Swedish cement manufacturers to charge abnormally high prices for their product, and that protection is unnecessary for the industry, which has become firmly established.

It is proposed to abolish the duty on chloride of lime, at present 1 crown per 100 kilos (12.2 cents per 100 pounds). This duty was originally imposed to protect the chemical industry, but has proved a serious hindrance to a greater industry, namely the manufacture of paper and wood pulp, in which chloride of lime is an important bleaching agent. An alternative proposal is that, instead of abolishing the duty, provision be made for the payment of drawback on the exportation of wood pulp bleached with imported chloride of lime.

It is also proposed to abolish the duty on iron plates coated with pure or mixed lead of a thickness of less than one-fourth of a millimeter. Such plates were duty free before the last revision of the tariff, when they were subjected to a duty of 7 crowns per 100 kilos (85 cents per 100 pounds), the rate applicable to other iron plates. These plates are used especially in packing matches for exportation. This proposal was discussed and was further recommended by the committee to which it had been referred.

---

**BRUSSELS SUGAR CONVENTION.**

[Documents transmitted by American Minister Larz Anderson, Brussels.]

The Governments of Germany, Austria-Hungary, Belgium, France, Luxemburg, Netherlands, Peru, Russia, Sweden, and Switzerland, having decided to maintain in force after August 31, 1913, the international union constituted by the Brussels sugar convention of March 5, 1902, signed on March 17, 1912, a protocol giving stability to the organization until August 31, 1918. The main point at issue in the recent conference was the amount of sugar which Russia should be allowed to export annually. In 1907, when Russia first became a party to the convention, it was agreed that during the following campaign year Russia should be allowed to export 300,000 tons of sugar to countries where such sugar would come into competition with the sugar produced by the other signatory countries, and for each of the following four campaign years the exportation of Russian sugar to such countries was limited to 200,000 tons. At the present conference Russia has succeeded in having its annual export quotas increased as follows:

In accordance with article 2 of the protocol, the export quota of 200,000 tons accorded Russia by article 3 of the protocol of December 19, 1907, for each of the four years

from September 1, 1909, to August 31, 1913, is maintained for each of the five years from September 1, 1913, to August 31, 1918.

Taking into consideration the fact that in consequence of exceptional circumstances in 1911-12 a scarcity of sugar and at the same time a considerable increase in the price of sugar in the world market are to be observed, the contracting States give their consent that Russia shall be allowed to export a special extra quota, to be divided as follows: For the campaign year 1911-12, 150,000 tons; for the campaign year 1912-13, 50,000 tons; for the campaign year 1913-14, 50,000 tons.

The distribution of the extra quotas of 50,000 tons each for the campaign years 1912-13 and 1913-14 is further limited, so that during each of the four six-months periods included the exportation of Russian sugar shall not exceed 25,000 tons.

Article 4 of the protocol makes provision for the possible continuance of the convention after 1918 as follows:

In the session which precedes September 1, 1917, the permanent commission will enact by unanimous vote the course to be followed by Russia in case she should be disposed to continue her participation in the convention after September 1, 1918. In case the commission can not agree, Russia will be considered to have denounced the convention, as from September 1, 1918.

This protocol, signed by the representatives of the various Governments, was to be ratified before April 1, 1912, and was to take effect on that date upon ratification by at least the following European sugar-exporting countries: Germany, Austria-Hungary, Belgium, France, the Netherlands, and Russia.

---

### CORPORATION LAW OF ARGENTINA.

[Transmitted by Chargé d'Affaires Robert Woods Bliss, Buenos Aires.]

The following law, promulgated February 6, 1912, fixes requirements to be fulfilled by corporations doing business in Argentina:

The corporations referred to in article 287 of the Commercial Code [i. e., foreign corporations] may do business in Argentina without the previous authorization of the Government, provided that they establish before competent judicial authorities the fact that they are constituted in accordance with the laws of the nation in which they are organized, and file in the Public Commercial Register copies of their charters and other fundamental documents.

The above provisions shall be in effect from the date of the promulgation of this law for corporations organized in countries extending reciprocal advantages to corporations of Argentina.

---

### Consular Trade Conferences.

Consul General Thomas Sammons, at Yokohama, Japan, who has been granted 60 days' leave of absence, reports that he expects to arrive on the steamship *Manchuria*, at Honolulu, Hawaii, on May 21, 1912, and at San Francisco about May 27. The consul general states that he will be glad to confer with commercial bodies and business houses in the cities mentioned, as well as at other points, so far as practicable.

---

### New Sawmills in British Columbia.

Consul General D. F. Wilber, of Vancouver, calls attention to the many notes on the proposed construction of new sawmills in British Columbia, as published by the *Western Lumberman*, a journal edited in Vancouver, but published in Winnipeg. Mr. Wilber has collated lists of these enterprises, copies of which may be secured from the Bureau of Manufactures at Washington, D. C.

**INTERNATIONAL CONGRESSES IN UNITED STATES.**

Three international congresses have accepted invitations to hold their meetings in the United States in 1912 and one in 1914. These are: 1912—Eighth International Congress of Applied Chemistry, September 4 in Washington, September 6 to 13 in New York, extensive arrangements having also been made for touring the country and visiting factories and works where chemistry is applied to production; Fifteenth International Congress on Hygiene and Demography, September 23 to 28, to which delegates have been appointed by 23 foreign nations and 29 American States; 1914—Second Pan American Scientific Congress, whose transactions are not restricted to any special branch, but range over the whole field of scientific inquiry; the date has not as yet been definitely fixed.

Other international congresses to be held in the United States this year, and mention of which has already been made in Daily Consular and Trade Reports, are the Waterways Congress, Philadelphia, May 23 to 28, the International Congress of Chambers of Commerce, Boston, September 24 to 28, and the conference of rubber producers and manufacturers in connection with the Third International Rubber and Allied Trades Exposition in New York September 23 to October 3, 1912.

---

**BURMA RUBBER EXHIBIT IN NEW YORK.**

[From Consul General William H. Michael, Calcutta.]

The Lower Burma Rubber Planters' Association has decided to place an exhibit in the forthcoming New York Rubber Exposition. The expenses of the exhibition and of sending a representative to New York would amount to \$2,330, of which the local government will probably contribute \$1,330, for which the sanction of the Government of India is required. The balance is to be raised by private subscriptions. It is suggested that the stall should be a typical Burmese exhibit, carved teakwood posts and canopy, a pagoda hung with rubber, and a pamphlet about Burma as a rubber-growing country with photographs of the different estates, etc.

The present conditions of land tenure for rubber in Burma are eight years' free tenure, afterwards a rent per acre of any amount up to a maximum of \$8.30. The Lower Burma Rubber Planters' Association will ask the Government to fix the rent at a definite rate, as a possibility of the maximum being imposed, it is claimed, has seriously handicapped the rubber industry by frightening away capital. There is an alternative suggestion of an ad valorem duty being imposed. This, it is feared, would affect the producing estates considerably, and from their point of view the maximum rent would be preferable. At present there is no guaranty from the Government that an ad valorem duty will not be imposed in connection with the rent of \$8.30 per acre.

---

A press notice from Consul General John P. Bray, of Sydney, states that the Government of New South Wales has sent Mr. Nielsen to attend the National Irrigation Congress at Chicago, and to investigate the suggested establishment of a New South Wales commercial agency on the Pacific coast.

**FORWARDING AGENT A FACTOR IN TRADE.**

[From Consul William F. Doty, Riga, Russia.]

During 1911 exports from the port of Riga, according to a provisional estimate of the local chamber of commerce, had a gross value of \$97,279,843, or \$1,482,026 less than in 1910. The value of goods shipped by the 10 leading forwarding houses in the city was \$54,698,391; but this amount does not represent the entire share taken by these firms in the outward trade from this and other Russian ports, as many even of those exporters who ship in their own name employ a forwarding agent to take charge of the transportation of their goods.

**Exports to the United States.**

The large exports to the United States declared by local dealers at the Riga consulate during the last few years are likewise to be accounted for by the action of this forwarding trade, which has financially assisted Riga firms to extend their transactions much beyond the former limits. Proof of this statement is furnished by the annexed table showing the shares taken by local firms and by concerns outside this consular district, but whose wares were sent hither for shipment, in the cargoes of hides and skins declared for export to the United States in the calendar year 1911:

Hides and skins.	Moscow.	Warsaw.	St. Petersburg.	Riga.	Foreign countries.	Total.
Calf.....	\$461,461	\$52,287	\$26,888	\$4,826,657	\$1,271,251	\$6,337,544
Colt.....	75,012			175,704	316,208	566,919
Cow.....	1,551		11,539	59,001	76,017	172,908
Goat.....	439,179			84,642	148,000	671,821
Horse.....	356,608			207,111	148,766	712,485
Sheep and lamb.....	402,450			72,932	266,161	741,539
Total.....	1,736,267	52,287	37,427	5,150,847	2,226,388	9,203,216

Similar results would be shown by tables giving the values of the other leading articles of Russian export, such as flax, hemp, etc.

**Favorable Terms—Banks.**

The terms offered to the export trade by the forwarding houses are considered as being more favorable than the loans granted by the Riga banks, which vary from 50 per cent of the current market value on hides and skins to 75 per cent on flax and similar fibers. A pro forma list of charges incurred by exporters in shipping through forwarding firms accompanies this report [and will be loaned by the Bureau of Manufactures].

Most of the forwarding houses established at Riga are branches of well-known Russian transportation companies, but work with their own capital. The smaller houses are dependent upon the local banks for advances to clients.

Banking facilities at Riga have largely increased during the last five years, as in addition to the original three establishments founded by the city and local merchants to assist foreign commerce, four large Russian banks have opened branches here, and others are reported to be considering the expediency of a similar step.

In explanation of the conditions governing in the foreign commerce of Riga it may be added that the port is more favorably situated for the export trade to the United States than points farther inland, as

the consular invoice can be obtained the day the merchandise is loaded aboard the vessel and the other shipping documents procured therewith and the draft likewise immediately drawn without the delay and loss of interest to the exporter, such as would be incurred by requiring the invoice to be consulated at other cities.

### SULPHUR MINED BY PUMPING.

[Announcement of United States Geological Survey.]

Seven or eight years ago the imports of Sicilian sulphur amounted to more than 100,000 long tons. With the growth of the sulphur industry in Louisiana the imports of Sicilian sulphur in the United States have become almost a negligible quantity, the entire imports from Italy for 1910 being but 10,704 tons. The production of sulphur in the United States for 1910 was 255,534 tons, valued at \$4,605,112, the great bulk of which came from Louisiana.

The mining of sulphur in Louisiana is an interesting process. The sulphur deposit, situated near Lake Charles, lies about 440 feet beneath the surface and is about 100 feet thick. Beds of quicksand overlying the sulphur render the sinking of shafts impossible, and the sulphur is therefore pumped to the surface. A well is driven through the numerous strata to the sulphur-impregnated beds in much the same manner as is usual in sinking wells for oil and gas. In each well there are placed concentrically four lines of pipe, having diameters ranging from 10 inches to 1 inch. Superheated water and hot air are forced down the pipes and the spaces between them to melt the sulphur and to bring it to the surface. The hot water flows down between the two outer pipes, which are respectively 10 inches and 6 inches in diameter, and passes into the sulphur-bearing mass, melting the sulphur. The quantity of sulphur melted and the range of action of the water depend on the temperature of the water and on the pressure at which it is supplied. The heavy melted sulphur runs back into the sump around the bottom of the well pipe, which it enters through holes provided for this purpose. Hot compressed air is forced down through the smallest or 1-inch pipe, and at the bottom of the well mixes with the melted sulphur and forms an aerated mass sufficiently low in specific gravity to allow the water pressure to elevate the melted sulphur to the surface, where it is discharged into large rectangular vats, constructed of rough planking. The dimensions of the vats vary somewhat, but they are made as large as 350 by 250 by 40 feet, and some of them are so arranged that railroad trains can pass between them. After the sulphur has cooled and solidified it is regularly mined the same as if it were a natural deposit.

### PERMISSIBLE EXPLOSIVES FOR COAL MINES.

[Announcement of Bureau of Mines, Department of Interior.]

Encouraging progress in the use of permissible explosives in the coal mines of the United States is noted in Bulletin 10. Many of the fatal accidents in coal mines have resulted from the use of explosives for breaking down coal. These accidents have resulted both from the use of explosives that were not suitable and from the careless or improper use of suitable explosives. Investigation has shown that one of the commonest causes of disastrous explosions in the coal mines in this country has been a blown-out shot of black blasting powder or dynamite. The dangers that attend the use of these explosives were perceived several years ago, and in consequence the attention of powder manufacturers was directed to the production of explosives that would be less liable to ignite inflammable gas or dust. The manufacturers have been so successful in their efforts that it is now possible to obtain explosives which yield much shorter and quicker flames than black blasting powder or dynamite, and hence are much less dangerous to use in fiery or dusty coal mines. These explosives are termed permissible explosives. An explosive is termed a permissible explosive when it is similar in all respects to the sample that passed certain tests by the Federal Bureau of Mines and when it is used in accordance with the conditions prescribed by the bureau.

The permissible explosives are cleaner and much more convenient to use and handle than black powder. Moreover, they can be prepared and fired much more quickly.

Copies of this bulletin and also Miners' Circular No. 6, Permissible Explosives Tested Prior to January 1, 1912, and Precautions to be Taken in Their Use, are now ready for distribution and may be obtained free by applying to the Director of the Bureau of Mines, Washington, D. C.

## TELEGRAPH SYSTEMS OF THE WORLD.

[From Consul General Robert P. Skinner, Hamburg, Germany.]

It is impossible to separate the figures relating to the Government ownership and operation of telegraphs, posts, and railways in Germany in such manner as to make a satisfactory comparison with the results of the privately owned telegraph lines in the United States. The published statistics of the German Empire show that the cost of operation, maintenance, and extension of the German system of posts and telegraphs was as follows during the fiscal years named: 1911, \$153,202,218; 1910, \$148,157,180; 1909, \$146,086,089.

It must be recalled, however, that the offices in which telegrams are received and forwarded are also post offices, that the system of wires follows publicly owned railway lines as a rule, and that the railways are enabled to transmit and receive service messages over wires which cost nothing to the land transportation system.

The number of telegrams received for transmission in Germany in 1909 was 46,802,000 and the number delivered in the same year was 44,800,000. The number of messages received and delivered increases in a fair degree of uniformity. The number of messages received in 1905 was 42,647,000 and the number delivered in that year was 41,479,000.

Statistics in regard to the operation of publicly owned telegraph systems are prepared at Berne, Switzerland. Unfortunately figures relating to the privately owned systems in the United States are not received by the Berne bureau and accurate comparisons therefore can not be made. In the preparation of the following table, to the details of 1910 supplied by the international bureau at Berne are added certain figures relating to the operation of the Western Union and the Postal companies in the United States, taken from page 272 of the World Almanac:

## TELEGRAPH SYSTEMS.

Countries.	Number of offices.	Length of lines.	Length of wires.

## BUSINESS NOTES FROM FINLAND.

[From the Mercator, Helsingfors.]

*A new bobbin factory* has been established at Tavastehus.

*A new biscuit works* at Abo, Finland, is equipped for a daily production of 1,000 kilos.

*A steel-pen factory* just started at Helsingfors is the first enterprise of the kind in Finland.

*A shoe factory* is starting in Finland with modern machinery, with a daily output of 500 pairs. Workmen largely subscribed the \$20,000 capital.

*Finnish customs'* receipts in 1911 aggregated \$10,238,000, against \$9,798,600 in 1910. State railway receipts reached \$9,558,000, having been \$8,494,000 in 1910.

*Harbor works.*—The senate has approved the decision of the Kotka town council as to a new loan for \$500,000, for enlarging the harbor and to convert some earlier loans.

*Sawmill combine.*—We understand there are plans on foot for joining all the Ulleaborg sawmills, viz, Toppila, Korkeasaari, Varjakka, and Pateniemi, under one management. The management will be entrusted to Th. Sohlberg and R. Weckman.

*Banking profits.*—Last year's banking operations were very favorable, the net profit being larger than for any previous year. The profits of Finland's Bank for the last five years were: 1907, \$1,098,574; 1908, \$1,524,006; 1909, \$1,229,318; 1910, \$1,567,042; 1911, \$1,644,690.

*New industrial bank.*—The Lansi Suomen Osake Pankki, capital \$200,000, is being established at Abo, its chief aim to procure credit for small landholders and for small trade and industrial enterprises. The shareholders' dividends are to be restricted to 8 per cent. Part of the profits will be used for promotion of trade.

*Private-bank dividends* for 1911 are as follows: Kansallis-Osake-Pankki, 15 per cent; Nylands Bank, 11 per cent; Wasa Aktie Bank, 8 per cent, all these being the same as for 1910. Privatbankern is paying 13 per cent, against 12 per cent in 1909 and 1910. Abo Aktiebank is paying 6 per cent, against 8 per cent for 1910; Tammerfors Aktiebank, 7 per cent, against 6½ per cent in 1910; Foreningsbanken 11 per cent, against 10 per cent in 1910; and Suomen Kauppapankki 4½ per cent, against 4 per cent in 1910, 3½ per cent in 1909, and 3 per cent in 1908.

### POPULATION OF BARODA.

[From Consul General William H. Michael, Calcutta, India.]

The Gaekwar of Baroda has just issued a report covering the industrial and commercial progress of his dominions, which is of interest to Americans because of the fact that the Gaekwar and his wife have visited the United States, and the further fact that the most important department of the State is under the administrative direction of an American and the highest Barodan institution of learning has an American at its head.

Baroda is a native State of British India, in Gujerat, whose area in round figures is 8,000 square miles and whose population numbers more than 2,000,000. Over four-fifths of this population, or 1,697,146 are Hindus; the Mussulmans number 160,887, or less than one-tenth of the population; tribes or castes, low in civilization and returned as "Animistic," embrace 115,411, and there are 43,462 Jains, 7,955 Parsis or Zoroastrians, and 7,203 Christians. According to the census of 1911, the population may be further classed thus, according to occupation: Agriculture, etc., 65.6 per cent; industry, 12.3 per cent; transport, 0.8 per cent; trade, 6.4 per cent; force, 1.3 per cent; public administration, 1.9 per cent; professions and liberal arts, 3.7 per cent; persons living on their income, 0.4 per cent; domestic service, 0.2 per cent; insufficiently described occupations, 0.7 per cent; unproductive, 0.4 per cent.

In the matter of education Baroda is one of the most forward and enlightened States in India. Education is compulsory; yet, in spite of this, only 10 per cent of the population are literate. It is quite evident from the report that any illiteracy that may exist is not the fault of the Gaekwar's Government, for that administration is so anxious for education that it has actually provided boarding schools where children from the forest tribes can be housed and educated. In fact, the Gaekwar is educating the depressed classes alongside of the "high-caste" children, promising reward to those who stand highest in their studies and in efficiency.

---

### AERIAL ROPEWAYS FOR TIMBER HAULAGE.

[From British and South African Export Gazette.]

Aerial cableways have been used for many purposes and with varying success in different parts of the world, but probably unique in its way is the installation for timber transport at the New Hornow mills, in the Usambara Mountains of German East Africa, and its success during the last 18 months is likely to encourage the provision of similar devices in other colonial timber regions where transport difficulties exist. The distance covered by the installation mentioned is upwards of 5 miles, that is, from the sawmills on the edge of the forest, situated at an altitude of 5,220 feet, and the nearest railway station, between 70 and 80 feet above the sea level. A log road or other surface line was out of the question in such a descent, especially as the rock is of a treacherous character. How steep the cableway is in parts may be gathered from the fact that between the two angle stations the gradient is actually 41°, which has been rarely exceeded anywhere in the world. Along this cable rough or sawn logs up to 46 feet in length, and weighing 1 ton, make their way down the mountain side to the railway station, and rails and other loads are hauled up to the sawmills.

The construction of the cableway was an engineering feat of no ordinary kind, and necessitated the erection not only of two angle stations mentioned but also of two tension towers, and it is to be noted that some of the supporting towers are of considerable height, one actually being as high as 100 feet. Steel had to be used throughout owing to the danger of wood-destroying ants, but it is interesting in view of similar installations which may be put up that the whole work was carried out by unskilled native labor under the direction of the European engineers.

**KOREAN COMMERCIAL NOTES.**

[From Consul General Geo. H. Seidmore, Seoul, Chosen.]

**Clocks and Watches.**

Imports of clocks and parts thereof amounted, according to the advance customs statement, to \$22,717 in 1911; the importations of watches for the same period totaled \$5,274. The industry presents many possibilities in Chosen, and there is a steady increase in the sales of these articles. The great majority of the clocks imported are of Japanese manufacture. The type usually sold is a small wall clock, which can be obtained for \$1 to \$3. American-made clocks are in small demand here. The watch trade, however, is largely American, though some Swiss watches are also sold. The market seems about equally divided between the Elgin and Waltham companies, whose watches sell for about \$5 to \$10 each.

**Government Encouragement of Sericulture.**

Since the Japanese annexation of Chosen, special attention has been given by the Government General to fostering sericulture [see Daily Consular and Trade Reports for July 1, 1911]; 116 sericultural training institutes have been established and a large staff of itinerant lecturers maintained. While official returns place the cocoon production of the Korean peninsula at about 70,000 bushels, it is estimated that the real production would possibly be somewhere near 150,000 bushels. The Korean cocoon is said to be inferior to the Japanese, and 13,000 sheets of Japanese eggs have been distributed to the Provinces, while large numbers were imported by private firms to improve the quality of the Korean output, the total number possibly reaching 30,000. The authorities have decided to build a stock manufactory in Chosen, which will be able to supply 3,000 sheets during the coming fiscal year and 10,000 sheets in the following year. In south Hamkyong Province a warehouse with accommodations for 15,000 sheets of eggs has been erected. The mulberry trees of Chosen are mostly of wild growth, and seedling nurseries have been created to supply improved trees.

**Peculiar Agricultural Economics.**

In a lecture upon agriculture in Chosen (Korea) the president of the model agricultural and industrial station at Suwon is reported to have said:

Chosen is a country which is peculiar in its agricultural economics. In other countries farmers living near a large city usually make it their business to supply its demands for vegetables and other agricultural products. For this reason lands and labor in suburban districts are dear. In Chosen, however, this is not the case. Lands and labor in the districts lying around a city—Seoul, for instance—are not dearer than those in other parts of the country. This is due to the fact that Korean farmers have been in the habit of raising all the necessities of life on their own lands. For instance, they will raise as much as they are likely to require of rice, barley, beans, cotton, hemp, tobacco, vegetables, etc., and will not cultivate more than they need. In this way commerce practically did not exist in Chosen in former times. One chief cause of this was the entire lack of goods roads, by which farmers could send their surplus products to other places in exchange for articles they wanted. Another cause is that in Chosen there are not many cities having a large population.

The lecturer estimated that the present area of arable land in Chosen might be increased 20 or 30 per cent, but not more; and gave it as his opinion that the needs of the growing population must be met by intensive rather than extensive farming and the introduction of improved seeds and implements.

### FAR EASTERN NEWS.

[From London and China Telegraph.]

**Dockyard expansion.**—A proposal is made by the board of directors of the Kawasaki Dockyard Co., Kobe, to increase the capital by \$5,000,000.

**A fire insurance company** (Toyo Kwassai Hoken Kwaisha) has been established in Tokyo with \$500,000 capital. Kabayama Sukehide is president.

**Yarn-mill enlargement.**—The Japan Spinning Co., which has \$1,375,000 paid-up capital, contemplates an increase of some \$750,000 for installation of 20,000 more spindles.

**Automobile factory.**—Steps are being taken in Tokyo to form a \$1,000,000 company for manufacturing motor cars and bicycles. Over 70 leading business men of Tokyo and Nagoya are interested.

**Tokyo's population**, according to the latest official figures, is 1,907,272, an increase of 151,452 persons since the previous census. The number of males is 1,025,917, and females 881,355. The number of houses is 488,025.

**Steel factory.**—Baron Shibusawa, Messrs. Kihachiro Okura, Motojiro Shiraishi, and others are organizing the Nippon Kokan Kaisha (Japan Steel Tube Manufacturing Co.), capital, \$1,000,000, to manufacture steel ingots and steel tubes.

**Japanese capital city improvements.**—The Tokyo Municipal Alderman's Council has decided to raise another loan amounting to \$22,500,000 for expansion of the municipal electric business, improvement of streets, and the entrance to the Sumida River.

**Railway survey.**—The survey of the Royal Siamese Northern Railway is being commenced, with Mr. Eisenhofer in charge of the work. Additional engineers are being engaged from England. Tenders will shortly be invited for rails and small accessories.

**Banking expansion.**—It is announced that, in order to meet the ever-increasing requirements of clients, due to the general economic development of Japan, it has been decided to transform the Sumitomo Bank into a joint-stock company with limited liability, under the title of the Sumitomo Ginko Kabushiki Kaisha (Sumitomo Bank, Ltd.), with an authorized capital of \$7,500,000, of which one-half is paid up.

**Manila gas plant.**—With regard to the gas plant for Manila (award of contract being announced in Daily Consular and Trade Reports for Jan. 18, 1912), the promoters are expected to arrive in Manila in June, together with experts to put up the plant, etc., and immediately articles will be filed making a Philippine corporation of the present association of bankers, and a capital stock of about \$5,000,000 floated, part of which will be offered to the local investing public.

**Tramway extensions.**—The British consul at Osaka reports that the appropriations for the financial year 1912-13 for the Osaka municipal electric tramways permit the extension of the system about 6 miles, and to carry out this work it will be necessary to place abroad orders for \$2,000,000 worth of materials. Some of the principal items will be rails, electric motors, brakes, and other car stock (bodies are made in Japan), other machinery, insulated copper wire and insulating fabric, bridge-work material, etc.

**Electrical enterprise.**—The Malacca Electric Lighting Co. (Ltd.) has acquired a 30 years' license from the Municipal Commissioners to lay the necessary wires, cables, etc., through the streets of Malacca, Straits Settlements. Riley, Hargreaves & Co. have secured the contract and will at once proceed with the installation. The syndicate expects before the end of the year to supply electric energy for general lighting and fans, etc. C. E. F. Sanderson, of Riley, Hargreaves & Co., is on the directorate, together with Tan Chay Yan and Tan Jiak Hoe. The capital, which has been subscribed locally, is nominally \$85,000, but the amount called up is \$56,700.

[From North China Daily Herald.]

**China's first trial by jury** was held in Shanghai on March 25, on the basis of a code of laws prepared by Dr. Wu Ting Fang.

**A third labor exchange** has been opened in Tokyo. The Japanese Home Office has attempted to persuade six big cities in Japan to establish such exchanges by offering a fair subsidy, but Tokyo alone has so far done so. Applicants to the Tokyo exchanges have been fairly educated as a rule, only few of them being uneducated laborers.

**Gas profits.**—The Shanghai (China) Gas Co. is paying a 13 per cent dividend for 1911 after writing off \$75,000 gold for depreciation and carrying forward about \$8,000. While municipal trading gives electric power at a very cheap rate, it has been also responsible for the gas supply being equally cheap. We have noted the increase in the consumption of electricity, and according to the report of the gas company there has also been an increase in the consumption of gas.

**BRAZILIAN BUSINESS NOTES.**

[Condensed from the Review, Rio de Janeiro; all sums being stated in United States currency.]

*Freight rates* from New York to Rio de Janeiro and Santos for cement shipments are stated to have been increased 61 cents from the beginning of April.

*Electrical enterprise.*—Decree 9440 authorizes the Ceara Tramway, Light & Power Co. (Ltd.), of England, capital \$1,000,000, to operate in the Republic.

*Railway material.*—The Minister of Public Works has authorized the South American Railway Construction Co. (Ltd.) to import \$487,000 worth of material for its line.

*Colonization.*—Decree 9384 authorizes the Amazon Land & Colonization Co., capital \$5,000,000, and domicile Portland, Me., U. S. A., to operate in Brazil. Dr. Carlos Sampaio holds the procuracion in Rio de Janeiro.

*Ore mining.*—Decree 9413 authorizes the Gongo Soco Syndicate (Ltd.), of England, capital \$37,500, to operate in the Republic. The concern plans to handle the iron-ore deposits at Gongo Soco in the State of Minas Geraes.

*The internal-revenue tax on tobacco* during 1911 totaled \$608,000, against \$540,000 during 1910. The tax on perfumery gave \$55,600, against \$52,000 in 1910. The tax on boots and shoes gave \$204,000, against \$184,000 in 1910.

*Cotton entries* at Pernambuco during January, 1912, amounted to 30,062 bales, against 41,804 bales for the same month last year. Exports from Pernambuco during January, 1912, were 1,926 tons, of which 1,460 went to the south and 466 abroad.

*Police barracks.*—In accordance with the proposal of Col. Silva Pessoa, commandant of the police brigade, the Minister of the Interior has made a contract with Engineer Leopoldo da Cunha Filho for completing work on the mounted police barracks for \$560,000.

*Transportation enterprise.*—The Empresa Brasileira Auto-Viacao, domicile Rio de Janeiro, has issued \$320,000 in debentures at 8 per cent. The company proposes to transport passengers and merchandise by motor cars and wagons, and establish an automobile repair shop therefor.

*Gas profits.*—The directors of the Sao Paulo Gas Co. (Ltd.) have decided, after transferring \$50,000 to reserve and setting aside \$25,000 for improving existing public lamps, to recommend a final dividend of 6 per cent free of tax, making 12 per cent for 1911 free of tax and to carry forward \$56,000.

*Railway extension.*—A contract has been made between the Sorocabana Railway and the government of the State of Sao Paulo for the construction of the company's extension from Salto Grande to the port of Tibirica. Government will supply the capital for the said construction on a basis of \$16,000 per kilometer (0.62 mile) plus \$440,000 for the purchase of rolling stock. In addition to this the company transfers to Government all its rights in the concession for the line from Sao Joao to Santos.

*Electric company operations.*—The report of the Para Electric Railways & Lighting Co. for the year ended November 30, 1911, states that the revenue was \$600,000 after providing for all expenses in Para. A final dividend of 5 per cent was paid in London, making 10 per cent for the year. A new 600-kilowatt generating unit has been installed in the power station, also a new condensing plant. The Sao Paulo Tramway, Light & Power Co. (Ltd.) has declared a quarterly dividend at the rate of 10 per cent per annum.

---

**Diesel Engines for America.**

The London Times states that on the recommendation of a commission of American engineers sent especially to Europe to visit the leading firms of Diesel-engine makers in England and on the Continent an English firm has made arrangements whereby the General Electric Co. will build Diesel engines to their design.

---

**Rubber Exports from Malay Peninsula.**

The export of plantation rubber from the Federated Malay States for the first three months of the present year reached 8,535,926 pounds, against 4,736,238 pounds for the corresponding period last year and 2,396,584 pounds in 1910.

### PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

- No. 621. Concrete structures and bridges.**—Sealed proposals will be received at the offices of the United States Reclamation Service, Provo, Utah, until May 16, 1912, for the construction of concrete canal intake structures and concrete bridges on Indian Creek and Train Hollow Diversion Canal, located in Wasatch County, Utah, about 35 miles northeast of Thistle, Utah. The work involves the excavation of about 2,650 cubic yards of earth and rock and placing 500 cubic yards of concrete, 260 cubic yards of paving, a set of sluice gates, and miscellaneous steel. For particulars apply to the United States Reclamation Service, Provo, Utah, or Washington, D. C.
- No. 622. Laterals, water ditches, and structures.**—Sealed proposals will be received at the office of the United States Reclamation Service, Malta, Mont., until May 21, 1912, for constructing laterals, waste-water ditches, and structures on the first unit, Dodson South Canal, Milk River project, Mont. The work involves excavating approximately 67,000 cubic yards of material and the erection of six small structures. For particulars address the United States Reclamation Service, Washington, D. C., Helena, Mont., or Malta, Mont.
- No. 623. Water piping.**—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until May 25, 1912, for renewal of water piping in Barracks A, at the Naval Training Station, Newport, R. I. Plans and specifications can be obtained on application to the bureau or to the commandant of the naval station named.
- No. 624. Cast-iron pipe and tunnel linings.**—Sealed proposals will be received at the office of the United States Reclamation Service, 605 Federal Building, Los Angeles, Cal., until May 16, 1912, for furnishing cast-iron pipe and tunnel linings for the North Platte project, Nebraska-Wyoming. For particulars address the United States Reclamation Service, Los Angeles, Cal., or Washington, D. C.
- No. 625. Earthwork and structures.**—Sealed proposals will be received at the office of the United States Reclamation Service, Malta, Mont., until May 21, 1912, for earthwork and structures on the first 11 miles of Dodson North Canal, laterals and waste-water ditches. The work involves approximately 277,000 cubic yards of excavation, 1,500 cubic yards of reinforced concrete, and the placing in structures of 86,000 feet b. m. of lumber. For particulars address the United States Reclamation Service, Washington, D. C., Helena, Mont., or Malta, Mont.
- No. 626. Concrete drop, chute, and abutments.**—Sealed proposals will be received at the office of the United States Reclamation Service at Provo, Utah, until May 16, 1912, for the construction of a reinforced concrete drop, chute, and abutments for two bridges on Indian Creek and Trail Hollow Diversion Canal, in Wasatch County, Utah. The work involves the excavation of about 4,500 cubic yards of earth and rock and the placing of 875 cubic yards of concrete and 225 square yards of paving. For particulars address the United States Reclamation Service, Provo, Utah, or Washington, D. C.

### FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8719. Technical articles.**—An American consular officer in a Mediterranean country reports that a local business man desires to represent American manufacturers of technical articles and those especially adapted for shipping, including leather belting, steam trucks, locomobiles built for agricultural purposes, lubricating oils, hand and power saws, etc. He states that satisfactory references will be furnished. Correspondence may be in French or Italian.
- No. 8720. Electric heating and cooking appliances.**—A business firm in the United Kingdom writes an American consulate that there is a demand for electric heating and cooking appliances, and it desires to get in direct touch with manufacturers only. It is of vital importance that those sending offers should give full particulars as to prices, measurements, descriptions, etc.

## NEW NATIONAL COMMERCIAL ORGANIZATION SUCCESSFULLY ESTABLISHED.

The National Commercial Conference of April 22 and 23 in Washington was attended by between 600 and 700 delegates, representing practically every commercial interest and every portion of the country. The spirit of the meeting was shown in the promptness and unanimity with which an agreement was reached in regard to a plan of organization. This plan follows broadly the preliminary suggestions which had already met the approval of the Department of Commerce and Labor, and its details are printed herewith. It is suggested that they receive the careful consideration of all commercial associations.

### Organization of the National Chamber of Commerce.

ARTICLE I. *Name.*—The name of this association shall be the Chamber of Commerce of the United States of America.

ART. II. *Object.*—The object of this association shall be to provide a national clearing house for the development and consideration of business opinion and to secure united action upon questions affecting the commercial interests of the United States. Only questions of national importance shall be considered.

ART. III. *Membership.*—Every commercial or manufacturers' association not organized for private purposes shall be eligible for constituent membership in the chamber. Such associations shall be of two classes: (1) Local or State commercial or manufacturers' organizations, such as boards of trade or chambers of commerce whose activities are confined to a single State, city, or locality, and (2) State, interstate, or national, commercial or manufacturers' organizations whose membership is confined to one trade or class of trades.

ART. IV. *Representation.*—Associations having twenty-five members shall be entitled to one delegate and one vote, and for each one hundred additional members in excess of fifty, one additional delegate and one vote, but no association shall be entitled to more than ten delegates and ten votes.

ART. V. *Dues.*—Each association shall pay annually in advance dues of \$25 for each delegate to which it is entitled. Members from cities of less than 50,000 population may be admitted by vote of the board of directors upon the payment of such dues as the board of directors shall fix.

ART. VI. *Officers.*—There shall be an advisory council made up of one representative selected by each constituent member. There shall be elected by this conference a board of directors of 25 to serve until the next meeting, which board shall elect a president, three vice presidents, and a treasurer.

**ART. VII. Duties of board of directors.**—Sec. 1. It shall meet and organize immediately upon adjournment of this conference.

Sec. 2. It shall elect a secretary and prescribe his duties.

Sec. 3. It shall provide permanent headquarters in the city of Washington and the necessary clerical force for the transaction of the business of the association.

Sec. 4. It shall designate the place of meeting of each annual convention at least 90 days in advance thereof and make the necessary arrangements therefor.

Sec. 5. It may, by three-fourths vote of the total membership of the board of directors, call special conventions of the association, giving to all members notice in writing at least 60 days in advance thereof.

Sec. 6. It shall prepare a program of subjects to be discussed at each annual or special convention, copies of which program shall be mailed to each delegate at least 60 days in advance of such convention. Each member may from time to time submit to the board of directors such questions for discussion at the annual or special conventions as it may deem desirable. Suggestions when approved by the board of directors shall be placed upon the programs in the order in which they are received. The board of directors may include in the program such questions of national importance as it may deem desirable for consideration and action.

Sec. 7. During the interim between conventions the board of directors shall submit to the members of the chamber such questions of national importance as it may deem wise for consideration and action. Upon receipt of same it shall be the duty of the members to furnish, within 60 days, an expression of opinion upon same. Any member may also during such interim submit to the board of directors such subjects as it desires to have discussed by other members, which questions, if deemed to be of national importance, shall in turn be referred to the various members for discussion and report.

Sec. 8. It shall also publish from time to time reports indicating the results of the discussion of the various questions which shall have been submitted to the members and distribute such reports among the members at such intervals as it shall deem wise and necessary. It shall also transmit these reports to such public officers or bodies as the convention may order or the board of directors may deem proper.

Sec. 9. It shall be the judge of the qualifications of all applicants for membership, and no applicant shall be admitted to membership except by vote of said board of directors; nor shall any applicant be eligible for membership until it has presented to the board of directors a written statement setting forth, first, its purposes; second, its total membership; third, the date of its organization and such other information as the board of directors may require.

Sec. 10. It shall prepare such rules as may be necessary for the orderly conduct and procedure of the national and special conventions, which rules shall not conflict with the provisions of these articles of association.

Sec. 11. The rules herein set forth and such other standing or special rules as the board of directors may adopt affecting convention procedure may at any time be suspended by a three-fourths vote of all the delegates present at any convention.

#### **Supplementary Resolutions.**

*Resolved*, That the board of directors be instructed to formulate a constitution and by-laws for the Chamber of Commerce of the United States of America in general conformity with the outline plan of organization adopted by this conference and apply for Federal incorporation of the same.

*Resolved*, That as representatives of various organizations from widely separated points we hereby pledge our efforts to make the Chamber of Commerce of the United States of America a success and to recommend to the organizations we represent that they adopt the tentative plans suggested at the conference and thus become members of this organization.

A central office has been established in Washington, and the development of the work of the Chamber of Commerce of the United States of America begins at once.

---

#### **Consular Trade Conferences.**

Consul Abraham E. Smith, of Victoria, British Columbia, Canada, advises that he intended leaving his post on April 17, 1912, to spend 30 days' leave of absence in the United States. Communications in regard to conferences on trade matters concerning Consul Smith's district should be addressed to him in care of Mr. A. Philip Smith, city attorney, Rockford, Ill.

**CONSTRUCTION WORK ABROAD.****ARGENTINA.**

[From Consul General R. M. Bartleman, Buenos Aires.]

**Progress in Construction of Underground Tram Line.**

Work has been progressing on the new underground line in Buenos Aires of the Anglo-Argentine Tramway Co. About 1,000 men are employed on the excavations. At four different points the tunneling is being done by a powerful excavator, especially constructed in Hamburg, which, with 150 horsepower, takes out 2 cubic meters of earth at one time and deposits it in electric trucks standing alongside. The excavator is mounted on a gyratory crane on rails which move in the direction of the work.

Between the terminal points there will be 11 stations, all on the same plan. The two platforms will be completely independent of each other, one for passengers entering, the other for passengers leaving.

The terminal stations will be larger and each will have three platforms. The trains will be worked on the block system, train B not being allowed to leave the station in which it is standing until train A has passed the next station and "line clear" signaled. The mean velocity of the trains will be 10 kilometers (6.2 miles) an hour. The cars are to be of the most up-to-date type and in the busy hours of the day the trams will start from the termini every minute. The 10-cent (\$0.0426 United States gold) fare will obtain throughout.

---

**URUGUAY.**

[From Consul Frederic W. Geding, Montevideo.]

**Project for Deepening the Port.**

Immediately after the passage of the Montevideo port superstructure act, last May, the Executive initiated a series of studies and surveys, in order to furnish the data necessary for further improvements to the port, as its capacity was found to be too limited to cope with the ever-increasing demands of its commerce. On the basis of such data a plan has been prepared, a portion being embodied in a project of law now before the Chambers.

The project provides for the deepening of the entrance channel and the two new dársenas (basins) to 40 feet, the other parts of the harbor to such depths as may be required, ranging from 16½ to 33 feet. Fortunately, wise foresight planned the existing wall for a depth of at least 33 feet.

The act of May, 1909, authorized the extension of the anteport to 300 meters (meter=3.28 feet) beyond its original 1,000 meters, which has been found to be insufficient, the requirements of the port demanding an increase in its area by 400 meters, or 60 per cent.

Reclamation of 425 acres is to be effected by utilizing the material brought up by the dredges, where shallows exist, one-half of which is to be sold. At \$5 per square yard, the sales would cover nearly the entire cost of the work.

The other features of the plan have not as yet been made public, but are nearly ready to be presented to the Chambers for consideration. As calls for tenders will be published in the course of time,

opportunities will be presented for American contractors to present bids for portions of this work, should they desire to do so.

[Other recent reports on the improvement of Uruguayan harbors appeared in Daily Consular and Trade Reports for Sept. 9, 1911, and Apr. 20, 1912.]

#### **Increasing the Electric-Light Plants of Uruguay.**

From reliable sources interesting details have been obtained bearing upon the improvements made and being planned in the electric-light service of Uruguay.

At the Montevideo plant a 6,000-horsepower turbine engine is being installed, which will greatly reenforce the present vast power that, in spite of abundant foresight, is insufficient to supply the daily increasing demand for more power and light. It will be ready for service May 1, 1912. A cable has been laid to Sayago for public and private supply, but more especially to provide the necessary power to the new cement works there with 500 horsepower, which is soon to be doubled.

Two stations are nearly ready for service at El Cerro, and plans have been submitted for installing the street lights. It has been decided that persons requesting light and power prior to March 31, 1912, will be exempt from line taxes, all others being required to pay a special tax per lamp and another for each horsepower of energy.

An engineer has been commissioned to visit the principal cities and towns of the Republic in order to draw plans for future stations. He has visited Punta del Este, Maldonado, San Carlos, and Pando, which, including those already existing, will reach a total of 32 Government-owned stations. On the completion of his labors, tenders will be called for the machinery, all to be of uniform type and installation.

Soon the cities and towns of Uruguay will be not only lighted with electricity, but also will be connected with an up-to-date telephone system, equal to any in existence, and all Government owned.

[For previous reports on plans for the extension of electric lighting in Uruguay, see Daily Consular and Trade Reports for Jan. 5, Jan. 22, and Feb. 8, 1912.]

---

#### **PERU.**

[From Consul George H. Pickarrell, Para, Brazil.]

#### **Sewerage System Proposed for Iquitos.**

The President of the Commercial Association of Iquitos, Peru, has written to this consulate that the Peruvian Government has authorized the issue of a £200,000 (\$973,300) loan, the proceeds of which will be employed in providing the city of Iquitos with a new and modern system of sewerage. Iquitos is estimated to have about 7,000 population. It is situated at the head of the Amazon River navigation for large vessels, being some 2,100 miles from Para, Brazil. It occupies an important traffic position, being the base of supplies for an immense surrounding territory; the inhabitants of which depend upon outside sources for a large proportion of their supplies. With other Amazon River cities, Iquitos has suffered during the past year from the fall in the price of rubber, but it is the general belief that the experience will in the end have a good effect, of which this desire for improvement of the sanitary condition of the city is not the least important.

Mr. E. Strassburger, president of the Iquitos Association referred to, states that the loan is to be issued at 92, to be amortized at 8 per cent annually, while the customs duties will be rescinded on all material imported for the project. He adds that the association has contributed \$15,000 with which to make the preliminary studies for the improvement, and suggests that American firms interested in such enterprises write for more detailed information to the Minister of Finance and Public Works, Lima, Peru. Mr. Strassburger also sends the following data of the commerce of Iquitos for last year:

Rubber shipments, 2,081,887 kilos of 2.2 pounds each, compared with 2,362,197 kilos in 1910.

Duties collected on imported goods, \$1,225,540, compared with \$1,341,587 in 1910.

Shipping tonnage, 43,687 entered and 42,336 cleared; over 100 of the vessels entering were large steamers engaged in foreign trade.

[It may be added that the American consulate at Iquitos has been closed for several years, but is now being reopened, Consul Stuart J. Fuller, formerly at Gothenburg, Sweden, having just arrived at Iquitos for this purpose.—B. of M.]

#### CANADA.

[From Consul G. Willich, Quebec.]

##### **New Freight Sheds and Immigration Building.**

Important improvements are made by the harbor commission by erecting a large new freight shed and temporary sheds for accommodation of immigrants during the coming season.

A substantial modern and roomy new immigration building will also be erected this year on the site of the present structure, which has been found inadequate and out of keeping with modern requirements. Parts of the old building have already been demolished, and the foundation work for the new one has begun. This work is being done by the McArthur Concrete Pile & Foundation Co., of New York, and is progressing rapidly under charge of a young American engineer. This company employs the new method of making foundations by sinking a hollow steel cylinder containing a ramming rod, which later on is withdrawn. The hole is then filled with cement, after which the outer cylinder is also withdrawn, leaving a round cement column, a far better foundation than piles of wood, even the most durable.

There probably will be much work of this kind in Canada at various places where firm and lasting foundation work will be required.

The new immigration building will be 800 feet long by 85 feet wide, two stories high, and of reinforced concrete construction, and it will cost \$350,000. C. E. Deacon & Co., of Montreal, Quebec, are the contractors.

##### **New Railroad Terminals and Harbor Works.**

There has been much uncertainty regarding the location of railroad terminals and elevators at this port, and from present indications it would seem that radical changes are contemplated in that respect. The sites selected by the former Federal Government, it is rumored, will be abandoned in favor of other locations, for some of the most important harbor improvements about to be undertaken in this harbor.

Parliament has voted \$1,000,000 for improvements, aside from the subsidy which will be paid to the company that will undertake to

build the dry dock (details for which appeared in Daily Consular and Trade Reports for Apr. 20 and May 2, 1912), but such amount will be but a small part of the total expenditures required for the contemplated improvements in the way of large grain elevators, new steamship piers, railroad slips, railway stations, and railway ferries, pending the completion of the new bridge. The cost of these various terminals is estimated to amount to about \$9,000,000.

A final decision regarding the location and the extent of these various undertakings, it is claimed, will be made by the end of April, after which it is hoped that more definite information can be furnished for the benefit of American contractors that may be interested in harbor construction work.

[From Consul Charles M. Freeman, Sydney, Nova Scotia.]

#### **Schools, Business Blocks, and Dwellings.**

The city of Sydney is to build two new schoolhouses. Estimated cost of each, with accommodations for 400 pupils, \$20,000. They are to be of pressed brick and cement, of two stories; architect, J. Spencer, of this city. Contracts have not been made. Parties having in view the furnishings should apply for information to the mayor of the city, A. D. Gunn, Esq., chairman of the school commissioners, or to Mr. A. W. Woodill, supervisor of schools.

D. J. Buckley is to build a \$15,000 business block, two stories, brick and cement, for stores and offices.

The following building permits have been issued by the city of Sydney:

For the new Unique Theater, to cost \$20,000, two stories of brick and cement; owner, George Wambolt; contractor, W. A. Moorehouse. Chairs, fixtures, and stage fittings will be needed. Theater first floor, offices second floor.

To B. Green for a two-story \$20,000 block of brick and concrete; builders, Sydney Paving & Construction Co. (Ltd.).

To M. Lubchansky for a 2-story \$15,000 brick and concrete structure; builders, Sydney Paving & Construction Co. (Ltd.).

To John Turnbull for a 2-story \$16,000 concrete structure; builders, Sydney Paving & Construction Co. (Ltd.).

The last three buildings are for mercantile establishments on ground floor, offices above.

Frame dwellings—Dan Gillimore, \$3,500; Sully McDonald, \$2,500; John McDonald, \$3,000; J. P. Martin, \$2,000; H. J. Dangall, \$2,600; brick dwelling, E. W. Johnston, \$6,000.

#### **FRANCE.**

[From Consul Carl Bailey Hurst, Lyon.]

#### **Interior Restoration of the Grand Theater.**

The large municipal Grand Theater of Lyon is about to undergo important repairs at a cost of about \$40,000. Built in the early part of last century and at the time of its construction a thoroughly up-to-date opera house, it is in need of certain interior alteration to meet modern requirements. Among the changes contemplated are widening the aisles, enlarging the cloakrooms, new parquet floorings, restoring paintings on stairways, corridors, and foyer, new decorations for the theater proper, and modern mechanical scene-shifting devices, repairs of seats and stalls, and remodeling of the players' dressing rooms. A complete new stage-lighting system will be added, for which \$16,000 has been set aside. There is some doubt as to what the best lighting arrangement may be, and a commission will

study the systems in representative French theaters in other cities. All communications in reference to the matter should be in French and addressed to the mayor of Lyon, writing Monsieur le Maire de Lyon, Rhone.

#### Proposed New Central Station.

The question of a central railroad station in Lyon has been discussed for a long time, and more recently, in view of increasing passenger and freight traffic, the matter is now being studied to find an early solution. Mention has been made of a credit of about \$12,000,000 being devoted to this construction. It has been proposed instead of building a new central station in another part of the town to rebuild the local Perrache station on its present site to accommodate a larger number of tracks, which would require a smaller expenditure. It remains reasonably certain that one or the other of these vast building projects, involving the expenditure of a number of millions of dollars, will be undertaken in the near future with the cooperation of the municipality. Correspondence should be in French and addressed to the director of the P. L. M. Railway at Lyon, as follows: Monsieur le Directeur de la Compagnie Paris, Lyon, Mediterranee, Lyon, Rhone.

### MIXTURE OF BRITISH AND FOREIGN WINES.

[From the London Times.]

New regulations came into force in the United Kingdom on April 1, 1912, restricting the mixing of British and foreign wines. The object of the regulations, which are made under section 10 of the finance act, 1911, is to prevent the selling of British wines, on which no duty is paid, in the place of duty-paid foreign wines.

Manufacturers are prohibited by the new regulations from mixing any British wine with any foreign wine in a quantity exceeding the proportion of 15 gallons of foreign wine to 100 gallons of British wines, and from mixing any spirits with any British wine except for the sole purpose of fortifying the wine. Manufacturers will be compelled to register all sales of British wines and dealers are prohibited from selling wines which do not comply with the above regulations. The regulations also provide that a rectifier or compounder of spirits must not mix any British wine with any spirits either for the manufacture of British compounds or for any other purpose; that a dealer in or retailer of spirits must not mix any British wine with any spirits except for the sole purpose of coloring or fining the spirits; and that British wine manufactured in conformity with these regulations must not, by reason of the admixture therewith of foreign wine, be sent out or sold or exposed for sale otherwise than under the designation of a British wine.

It is understood that the Board of Customs and Excise will not during the first three months interfere with the sale of existing stocks of mixed wines, but the regulations as to mixing came into force on April 1.

The imports of wines and spirits into the United Kingdom last year were as follows:

Classification.	Gallons.	Value.	Classification.	Gallons.	Value.
Foreign spirits:			Wine—Continued.		
Brandy.....	1,452,245	\$3,901,538	In bottles, sparkling		
Rum (including imitation rum).....	4,839,043	1,162,548	Champagne.....	1,131,451	\$8,465,691
Genera.....	411,032	281,523	Saumur.....	109,936	358,555

**MINING AND QUARRYING MACHINERY.**

[From Consul Augustus E. Ingram, Bradford, England.]

One of the important industries of this district is the engineering trade, and in the vicinity of Bradford there are a number of iron-works and firms engaged in the manufacture of machinery and machine tools. Some of these firms, such as the Low Moor Iron Works, the Bowling Iron Works, Thwaites Bros. (Ltd.), and several others, have a big business in steam engines or general colliery plant, deep well pumps, drilling machines, etc. It has recently been stated that the output has been steadily growing in volume during the past 12 months both for the home and foreign markets. It is therefore extremely probable that American manufacturers would find in the firms in this district very strong competitors. I note in the press the statement that impending legislation regarding the use of electricity in mines has somewhat held back the demand of the mining industries.

There are a number of quarries in and around this city; indeed, Bradford is built of stone and is the center of an important stone trade. The output is a coal-measure sandstone, principally a fine sandstone or freestone. Most of the beds lie near the surface and are of great thickness. The stone is quarried in the open, and is used mainly for building, flagging sidewalks, and street paving; the oblong blocks used for street paving being known as "setts" or "Yorkshire setts." Large quantities of thin flag rock are also used for fences throughout this district, as practically all dividing lines, even of agricultural land, are made with thin stone walls. It is said, however, that quarrying is a diminishing trade, owing to the competition of cement and to the fact that the stone is becoming more difficult of access.

**Machinery for Polishing Stone.**

Inquiry develops that the machinery in use for quarrying and preparing the stone is practically all of either local or, at any rate, British manufacture, and consists of power cranes, saws, saw frames, planing machines, and rubbing or polishing machines. Some 12 or 15 years ago an American company arranged with one of the quarry owners in this district to have a sawing plant fixed up for exhibition, with a view to introducing its machinery. A considerable sum was spent in connection with this demonstration, but I am informed that it failed to bring about any sales beyond that of the machinery so installed. It therefore seems very doubtful if any business can be obtained here, especially as most of the quarriers are in a small way of business and hence are not disposed or able to make any considerable outlay. One firm [whose name is obtainable from the Bureau of Manufactures] informed me, however, that it is interested in improved machinery for rubbing or polishing stone.

[From Vice Consul Frederic W. Cauldwell, Batum, Russia.]

**Batum Not a Mining Center.**

Inquiries concerning machinery for mines seldom reach this consulate. Batum is rather a port of shipment than a commercial city. Caucasia is more than five times the size of New York State, and the large cities of Tiflis and Baku are 14 to 36 hours distant from Batum by rail. In Batum there is no demand for mining and quarrying

machinery; at Tiflis and Baku there is undoubtedly a market, but the sale will be in the hands of small merchants.

I have given considerable attention to the matter of how American manufacturers of machinery could best market their product in the Caucasus, and am persuaded that dealings with the retailers in the interior cities would not be the most satisfactory way. Collections would be intricate, and all correspondence would have to be in the Russian language. The merchants are accustomed to three to nine months' credit. It is to be doubted whether under the most favorable conditions a satisfactory working agreement could be reached by correspondence. Because of these conditions I believe the best plan for the American manufacturer would be to establish connections with some of the larger wholesale machinery houses at Rostof on Don. It is a large and progressive city and the headquarters for machinery of all kinds for this part of the world. The wholesale houses are in touch with the local dealers throughout a wide territory. They are familiar with the business usages of other countries and have convenient banking facilities. Correspondence can be conducted with the Rostof firms in French or German; by many firms English would be understood.

One of the largest users of mining machinery in this part of the world is the Caucasus Copper Co., whose mines are located about 50 miles from Batum. The general manager of the company is an American formerly connected with the Anaconda works. His address is obtainable from the Bureau of Manufactures. The Caucasus Copper Co. is planning extensions and in the near future will be in need of considerable equipment. The company buys machinery direct from the United States or other countries.

[From Consul Thomas W. Voetter, La Guaira, Venezuela.]

#### **Mine Development in Eastern Venezuela.**

The greatest need for mining machinery in La Guaira consular district is in its eastern part. A Canadian company is about to develop iron mines in the Imataca Mountains; there are other mines in the same general region, at Callao and elsewhere.

Communication is rather poor between La Guaira and eastern Venezuela, as vessels of deep draft can not enter the Orinoco River. The customhouse for eastern Venezuela was formerly at Ciudad Bolivar, but an additional one has recently been established at Imataca, or rather at Nueva Angostura, which is the official name of the new port.

As there is a probability of some increase in mining and road construction in the future, it might be well for American machinery exporters to pay attention to this field.

[Lists of names accompanying several of the foregoing reports may be had from the Bureau of Manufactures.]

---

*Postage stamps in rolls.*—Consular Assistant Louis G. Dreyfus, jr., of Berlin, has prepared a description of the new machine used by the Imperial German Post Office to print stamps in rolls (for use in automatic "slot" selling devices), mention of which was made in Daily Consular and Trade Reports on May 18, 1911. Consular Assistant Dreyfus's report will be loaned, upon request, by the Bureau of Manufactures.

**VALENCIA MELON INDUSTRY.**

[From Consul Robert Frazer, jr., Valencia, Spain.]

The fame of the fine winter melons grown in the Valencia district, of which 12,000 to 15,000 tons are exported annually, has extended over the greater part of Europe. Small shipments have even been made in recent years to New York and Boston, but the total absence of cold-storage facilities in ships visiting this coast and the consequent large percentage of deterioration in transportation have generally rendered such experiments unprofitable.

**Varieties of Melons.**

Classified in the order of harvesting season of each variety, the following are the principal species of melons cultivated here:

Pudents are the earliest in season, but have little else to recommend them, as they are insipid and, as their name indicates (*pudrir*, to rot), decay quickly in handling and transportation.

Chincholats or escrits, so called from the fanciful resemblance of the lines on the surface of the skin to Arabic writing, are small in size and of spherical shape. They are shipped in small quantities to Great Britain, where they bring fair prices because of their early appearance on the market (from the end of May to the end of June), but their flavor is inferior, and trade in them is said to be precarious, as, if picked when too nearly ripe, they are very likely to decay in transportation.

Canarios, so named from their bright canary color, are a hardy variety, which form the basis of Valencia melon exports to northern Europe in July and August. They are oval in shape with tough rind and firm pulp, the layer of which, however, is not thick, as the seed cavity is disproportionately large. They withstand the sea voyage remarkably well, but are not distinguished by fine flavor.

Negros and bronceados (black and bronze colored), the genuine winter melons of this zone, are by far the best varieties and receive the greatest care in selection and cultivation. The former are of a dark unchanging green color, of an elongated oval or cylindrical shape, and unusually large, weighing 9 to 16 pounds. The bronceados are oval or slightly conical in shape, with thick pulp and small seed cavity. Both these varieties at their best are very fine, and probably nothing superior of their kind can be produced in any part of the world.

**Methods of Planting.**

The Valencia system of melon raising requires seed beds and transplanting. The seeds are planted in the beds in clusters of five or six on a layer of animal manure wrought into a thick paste by the addition of water, each cluster being deposited in slight depressions in the surface about 8 or 9 inches apart. The bed is then covered with a light sprinkling of dry pulverized manure, which is kept moist by occasional spraying with water. Transplanting takes place when the two lateral branches of the plant are thrown out and the tip of the central growth is just appearing. The more delicate plants are discarded and only the healthiest and most vigorous utilized.

In preparing the soil for transplanting, the desired porousness is attained by mixing with it the sea sand used as hog bedding, to which is added fertilizer in the proportion of 1 sack of ammonium sulphate, the favorite nitrogenous fertilizer in this region, to 10 sacks of the sand bedding. The rows are 6 to 7 feet apart, and the distance between each 2 plants is 30 to 36 inches. Irrigation, in the absence of rain, is given at 8-day intervals.

In the Alicante district, a little south of Valencia, seed is planted definitely in the open, in pits about a yard apart, in which organic manure has been mixed with the soil.

**Seed Selection.**

It is difficult to obtain selected melon seed true to variety on the open market in this country. Each farmer reserves his own seed by a very practical method of selection, as only the seeds of fruit distinguished at the family table by sweetness, flavor, and thickness of pulp are set apart for future planting or exchange with neighboring farmers. This process of selection continued through a succession of years appears to be remarkably successful, attaining such uniformity and high quality of product that it is not unusual to find a whole plantation without a single flavorless specimen in the crop. The smallness of Valencia farms, however, occasionally proves an obstacle in selecting and preserving the purity of varieties, as the proximity of inferior stock may easily nullify the care and labor of the most intelligent farmer in melon raising.

Winter melons are harvested in the early fall and are suspended in loops of esparto cordage from nails in the beams of roofs and lofts, where they keep with but little deterioration for six months or more.

**Spanish Watermelons.**

The watermelon of this district, and indeed of all Spain, appears to be a fixed species that has undergone little modification for centuries. The varying degrees of color and different percentages of sugar that distinguish the pulp of fruit grown in different localities in Spain appear to depend almost entirely on soil conditions rather than varieties, and the Valencia watermelon differs little from similar fruit grown in northern Africa. It does not attain very great size, but has a remarkably thin rind and highly colored meat and is of superior quality.

The principal pests from which melons of all kinds suffer here are mildew, scale, and snails. The scale, which is said to belong to the family of the rose scale, is the most difficult to combat successfully, especially when dull, foggy, warm weather conditions favor its rapid propagation. The dry parching winds that blow at irregular intervals during the summer from the semiarid interior of the country effectively arrest the progress of this scale and if continued two or three days will exterminate it altogether. Snails are dealt with in a practical and economical way by turning flocks of ducklings into the melon plantations affected.

---

**NEW ATLANTIC LINES.**

[From Consul G. Wilfrich, Quebec, Canada.]

The Compagnie Générale Transatlantique has determined to establish a monthly service between Quebec and Havre. In case the service demands it the sailings will be increased.

It is also learned that Bowring & Co., of New York City, will have a cruising service this summer between the ports of Quebec and New York. There will be five trips in the months of July, August, and September. This new line will compete for business with the Quebec Steamship Co., which has had a monopoly of this route for some years and has built up quite a prosperous tourist business.

---

*Swiss imports of oxen* last year numbered 51,592, having an average value of \$140. About this same number is imported annually.

**INDIAN INDUSTRIAL ITEMS.**

[From Consul General William H. Michael, Calcutta.]

**Alluvial Gold—Lucerne Cultivation.**

Gow & Co., of Calcutta, who have obtained from the Madras Government a lease for exploiting alluvial gold in some rivers in Malabar, have deputed two mining engineers to conduct operations in the Dilambur River.

David Fairweather, a Kegalla planter, has acquired 300 acres, of which 200 acres are opened and planted with lucerne and other fodder and stocked with cattle, pigs, goats, sheep, and poultry. This is the first stock farm of its kind in the northwestern Province of Ceylon and has been named Blinkbonnie (stock) farm.

**Radio System—Decline of Art Work.**

Steady progress has been made with the formation of wireless telegraph stations in India. In the financial year 1910-11, \$13,330 was spent in starting work at Calcutta, Allahabad, Delhi, and Jutogh (Simla). In 1911-12 this work was continued and a beginning also made at Bombay, Karachi, Nagpur, and Lahore, the expenditure being \$200,000. For 1912-13 the provision is only \$66,660. There will later be a heavy outlay on account of payments to the Marconi company. The equipment of each of the eight stations with the necessary apparatus has been provided for, and India should soon have an inland radio system, while stations at the ports of Calcutta, Bombay, and Karachi will be powerful enough to communicate with ships at sea at long distances.

A report by the Public Works Minister, Jammu and Kashmir State, on the arts and industries of Kashmir says:

The use of imported European wool threatens the extinction of what remains of the shawl industry, and it is impossible for it to regain its lost position. Dealing with the present day Kashmiris one notices how, with the arts and the trade which Kashmir had in olden days, the businesslike and commercial qualities of the people have also deteriorated. A shawl trade of \$1,000,000 could not have been carried on with foreign countries if the men were not industrious, honest, and businesslike.

**Adulteration of Cutch.**

A Rangoon correspondent writes:

It will be remembered that the chamber of commerce some time ago was much exercised over adulteration of cutch. The position was fully explained to the local government by the cutch exporters. The question of appointing a Government inspector was not raised, in view of the opposition of the Chinese dealers. The lieutenant governor sympathized with the chamber of commerce in its desire to check adulteration while the cutch was in process of manufacture in the forests. There is no provision of law by which adulterated cutch can be confiscated; and even if legislation be introduced, it is difficult to see, apart from the general objections which may be taken to such legislation, how it can be effectively enforced in view of the admitted difficulty of detecting adulteration and of the further difficulty that will arise in most cases of proving satisfactorily that the person in whose possession adulterated cutch is found is responsible for the adulteration. The only feasible solution of this problem is that exporters should take such measures as may be practicable to check the adulteration of manufactured cutch which reaches the market.

**Fish Culture in India.**

Previous reference has been made to the important work done by Sir Frederick Nicholson, who is in charge of the Government fish husbandry of Madras Presidency. A bulletin recently issued from the Madras Fisheries Bureau says that Mr. James Hornell, assistant to Sir Frederick, has been investigating the methods of fish farming at

Arcachon, France, and at Comacchie, Italy, and that he has brought back to India some valuable information on the subject.

The French fish farm is situated on the side of former salt pans and marshes, and consists of a series of large ponds separated from a general basin by a bund of height and strength sufficient to prevent flooding during high tides and storms. The fresh sea water, with its well-oxygenated properties and quantities of minute life necessary for the small creatures within the ponds, is let in through sluices at intervals and a proportionate amount of pond water is expelled.

On the Italian farm the same basic principles are followed, and in both the aim is to utilize the natural instincts of certain species of fish in such a manner as both to stock the inclosed ponds automatically with an ample supply of fry at one season of the year and at another to trap in quantity such fish as have attained maturity and which instinct leads to attempt to pass to the sea for spawning purposes.

Mr. Hornell is of opinion that similar methods of farming could be introduced almost everywhere in the Madras Presidency, but he fixes upon the Dugarazapattanam backwater as being particularly favorable for the site of a lagoon fish farm. He adds that the initiation of such an industry would come as a boon to a population living under conditions of marked poverty.

### AEROPLANE ENTHUSIASM IN ITALY.

[From Consul General James A. Smith, Genoa; see also Daily Consular and Trade Reports for Apr. 23, 1912, on an "Italian Military Aeroplane Competition."]

A National Aero League has been formed in Italy, and the raising of funds by public subscription has been started to build a fleet of 100 aeroplanes for the Italian Government.

Although this movement has been on foot only since April 1, in less than one week \$120,000 was raised by public subscription, and the entire nation is donating funds for the purpose. A central committee composed of the mayors of Milan, Naples, Palermo, Florence, Turin, and Venice, and several senators and presidents of aero and touring clubs, has been formed, and is directing the progress of the league, with Rome as its center.

One newspaper of Milan donated \$10,000 for the acquisition of aeroplanes for military use and \$4,000 for the National Aero League. The city of Venice has promised to raise funds sufficient to build three aeroplanes; Genoa, Milan, Turin, Rome, Florence, Padova, Palermo, Bergamo, and other cities, have each agreed to donate one aeroplane each, and other cities, as well as aviating and touring clubs and newspapers, are following the example. Each community donating an airship has the privilege of naming it.

Popular sentiment has also spread to the Italians in Argentina, Brazil, and in the United States, who, it is said, will give liberal aid. Students of universities have promised an aeroplane to the league, as have the railway employees of Italy, and permission has been given by the Government to raise subscriptions in the schools.

The league has named \$4,000 as the amount necessary to build one aeroplane. The type of airship is to be decided by the Minister of War. The primary scope of the aeroplanes is to be military. This move is the greatest impulse aviation and airship construction have had in Italy.

**AIR COMPRESSORS IN TRANSVAAL MINES.**

(From Consul Edwin N. Gunsaulus, Johannesburg, South Africa.)

American firms wish to know the number of air compressors in South Africa. There were on June 30, 1910, in the mines of the Transvaal, according to the acting Government mining engineer, 257 compressors, with a total horsepower of 100,291, while only 400 horsepower of compressed air was purchased. The engineer further states that no separate returns of the value of air compressors were rendered to the mines department, but that the value can be readily assessed by any manufacturer from a knowledge of the horsepower. A copy of Table No. 27, showing power used, from the annual report of the Government mining engineer for the year ended June 30, 1910, is forwarded, from which American manufacturers can probably make their deductions. [The table in question will be loaned to those applying to the Bureau of Manufactures.]

I am informed that the gold mines in the Johannesburg consular district employ on an average three 50-drill compressors on each mine for the driving of drills. The latest statistics relative to the value of compressors shipped into the Transvaal are for the year 1910, but these are given under the head of "Steam engines for compressors, including compressors." The value of the total imports under this head for both gold and coal mines for the Transvaal for the period mentioned was \$543,402. As drills have been increasing in use the value of imports for 1911 is undoubtedly considerably greater than that shown for 1910.

Up to about two years ago the air compressors were almost entirely driven by steam, but since that date electric power has been furnished to nearly all of the mines, and steam power for air compressors has been superseded by electricity.

**Electricity Superseding Steam—German Machinery.**

The Victoria Falls and Transvaal Power Co. (Ltd.) head office, P. O. Box 2671, Johannesburg, has been supplying compressed air since June 1, 1911, from its power stations at Rosherville, Brakpan, and Germiston to all of the mines—about 30 in number—controlled by the Central Mining & Investment Corporation and Rand Mines (Ltd.), as well as to the Brakpan mine. While it is not known exactly to what extent the use of compressed air supplied by the Victoria Falls & Transvaal Power Co. has eliminated the employment of individual air compressors, it is known that four air compressor sets of 4,000 kilowatts each are being steam driven at Rosherville, and six sets of 4,000 kilowatts each are electrically driven at one of the other stations.

The big compressors used by the Victoria Falls & Transvaal Power Co. were imported from Germany (this company being a German organization with German capital). It was understood when this company was financed by the German bankers that all, or practically all, of the equipment necessary for operating the plant should be imported from Germany. A majority of the air compressors now used in the mines in this district are of British manufacture. There are also two or three makes of American compressors sold here. I am informed that after an air compressor is installed in the mine it is seldom changed for that of another make, as the question of spare parts which must be carried militates against change.

**SAFFRON EXPORTS FROM SPAIN.**

[From Consul Robert Fraser, Jr., Valencia; see also Daily Consular and Trade Reports for Oct. 15, 1910, and Oct. 24, 1911.]

While Valencia is probably the most important center of saffron production and trade in the world, the direct export business with the United States is comparatively unimportant, and its development is said by local shippers to be affected by the sales terms made necessary by American entry requirements under the provisions of the Pure Food and Drugs Act.

American importers naturally decline to contract or pay for saffron except on the guaranteed condition that the product will pass the Department of Agriculture's tests as to purity on arrival, and Valencia merchants in the saffron trade are, as a rule, small capitalists who are financially unable to accept the condition of deferred payment until the arrival and entry of shipments one or two months after date of export. I do not know of any local dealers who would be willing to grant 60 days' credit. The small amount of saffron shipped direct from Valencia to the United States is usually sold on firm orders from American importers, who open credits on London to be drawn against at sight with shipping documents attached to draft. The declared value of shipments of saffron invoiced at this consulate in 1911 was \$11,090, a decrease of \$3,212 from the declared value in the preceding year.

Spanish official statistics give the Kingdom's total exports of saffron for the last three years as: 1909—107,125 kilos; value, \$1,928,250; 1910—95,014 kilos; value, \$1,710,250; 1911—110,048 kilos, value \$1,871,020. (A kilo is equivalent to 2.2046 pounds.) What proportion of these shipments went to the United States does not appear from available data. American import records show that in the fiscal year 1910-11, \$88,215 worth of saffron, safflower, and extract, and saffron cake was entered for consumption, the countries of origin not being stated.

[A list of Spanish exporters of saffron may be had from the Bureau of Manufactures.]

---

**ITALIAN-TUNISIAN TELEGRAPH LINES.**

[From Consul John Q. Wood, Tripoli-in-Barbary, North Africa.]

An agreement has been reached between the Italian Government and the Eastern Telegraph Co. in regard to the vested interest held by said company, covered by its contract with the Turkish Government, for operating the cable between Tripoli and Malta. The Italian Government, in consequence, is commencing to lay a cable between Sicily (presumably Syracuse or Catania) and the port of Tripoli, to be followed by a cable between Sicily and Benghazi, and I am credibly informed that the Italian Government intends to connect Benghazi and Tripoli by a cable within several months.

[From Consul General James A. Smith, Genoa, Italy.]

The Italian Government has authorized the construction of a submarine cable between Sicily and Tripoli. The contract for this will be undertaken by Pirelli & Co., of Milan, large rubber manufacturers.

Direct wireless communication between Rome and Tripoli was to be open to service from April 15, 1912.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8721. Construction of public buildings.**—The American consulate general at Ottawa, Canada, reports that the Department of Public Works has advertised for tenders, to be received until May 13, 1912, for a public building to be erected at Wallaceburg, Ontario. Plans, specifications, and form of contract can be seen and forms of tender obtained at the office of Mr. H. J. Lamb, district engineer, London, Ontario, and at the Department of Public Works, Ottawa, Canada.
- No. 8722. Electric utensils.**—An American consular officer in a European country reports that an official in a local electric light company is about to open a store on one of the principal streets of the city in which he is located for the display and sale of all kinds of electric utensils and devices adapted for domestic use. Illustrated catalogues, prices, terms, and discounts are desired. Satisfactory references can be furnished. Correspondence should be in French or Italian.
- No. 8723. Household furniture.**—One of the prominent furniture dealers in the West Indies has requested an American consulate to procure for him catalogues of American household furniture. Good, strong, cheap, light-weight chairs, rocking chairs, sofas, etc., with seats and backs of cane or open wood are wanted. The tropical climate precludes the use of upholstered furniture. Catalogues in French with prices quoted in francs and dimensions in the metric system are preferred, but catalogues in English can be used, if necessary. Dimensions of goods packed ready for shipment should be given. The buyer should be given the benefit of any trade discounts, and prices f. o. b. New York or Mobile should be quoted.
- No. 8724. Italian marble and statuary.**—An American consul in Italy reports that a business man in his district desires to represent American importers of Italian marble and statuary. He has been a shipper of these products to European countries for 16 years, and it is said he stands well in the city in which he is located.
- No. 8725. Hospital equipment.**—An American consular officer reports that arrangements are being made to erect a new hospital in a city of his district. This will cost approximately \$80,000, and funds have been provided and the preliminary arrangements completed. It is the intention to build a modern hospital having a capacity of about 66 rooms and to be fitted with modern appliances throughout. The consular officer is informed that American manufacturers of this line of goods, by corresponding with an official named, will be given due consideration. American firms interested in this proposition should take up the matter as soon as possible.
- No. 8726. Fire hall and fire apparatus.**—A report from an American consular officer in Canada states that a municipality in his district is to build a new modern fire hall the coming summer, and manufacturers of appliances for this purpose should correspond with the city clerk. It is quite likely that in connection with the new fire station a further supply of hose, ladder trucks, etc., might be required.
- No. 8727. Material and machinery for making Portland cement.**—An American consul in a European country reports that a company in his district is about to build an up-to-date modern plant for the manufacture of Portland cement, and would like to receive, as soon as possible, from American firms, catalogues, plans, specifications, and any other particulars that will assist in starting this industry. The firm is especially anxious to communicate with concerns furnishing cement works with rotary furnaces heated by gas from generators. A previous notice of this character elicited responses from dealers and agents only, but the firm desires offers from manufacturers, and the members state that if interesting proposals are made they are prepared to visit the United States to make purchases. Correspondence should be in French.
- No. 8728. Iron tubing for gas, water, etc.**—A business firm informs an American consular officer that it desires to represent manufacturers of iron tubing for gas, water, and steam purposes. References can be furnished, and correspondence may be in English, French, or Italian.

## SALES ORGANIZATION FOR AUSTRALASIA.

[From Consul Henry D. Baker, Hobart, Tasmania.]

One of the most serious drawbacks to the sale of American goods in Australia, Tasmania, and New Zealand at present is the lack of suitable representation and proper advertising, selling, and distributing facilities. Exceptions to this condition are certain large American corporations which have been able, through effective local sales organizations, to reach influential positions and prestige in these countries. The greater part of the present export business of the United States with Australasia is carried on by companies of large capitalization, especially in such lines as kerosene, agricultural machinery, steel products, tobacco goods, cash registers, and sewing machines, for the sale of which powerful companies have established direct and efficient agencies and have steadily strengthened their position here.

### Need of Direct Representation.

Possible purchasers of American goods in these countries prefer to deal with American companies directly represented here, which advertise locally and take part in the exhibitions which are so popular here, and whose representatives become well known to the community and probably members of clubs, chambers of commerce, and other commercial and social organizations. Moreover, more attention is given to new articles promoted by American companies with international reputations than to those introduced by companies of unknown reputation here, which perhaps hope to secure business merely by sending out letters and catalogues. Valuable orders occasionally result from such efforts, but much more can be accomplished by effective sales organization in the territory where business is sought. This applies especially to countries as remote from the United States as Australia, Tasmania, and New Zealand, with which correspondence is slow and tedious and to which the delivery of goods ordered by mail requires many months. Moreover, the people here are usually very conservative and somewhat prejudiced in favor of English goods, so that it is difficult to interest them in

American products made by firms not well known to them. The question of repairs or the renewal of broken or worn-out parts often proves a serious handicap to trade, unless the American manufacturer has representatives in this part of the world who employ competent workmen and keep needed parts in stock.

Many American firms are represented by indent agents doing business on commissions and frequently handling a large number of other lines, instead of by persons directly in their employ and giving them their entire time and attention. There is much complaint that many important American articles are offered by such agents at prices altogether too high when compared with the cost in America, and that an undue portion of these prices represents the excessive profits of the local agents. This feeling has become so general as to create a prejudice against many American articles. Occasionally persons try to obtain needed articles direct from the United States, but find that, owing to the agreements between the manufacturers and the agents, no article can be sold in an agent's territory without the agent receiving a commission, which must be added to the selling price.

#### **Views of an Australian Consumer.**

The following letter from the owner of about 400 square miles of land in the interior of New South Wales, who uses much of this area for sheep and dairy farming, indicates the handicap suffered by American goods from the excessive profits taken by agents:

The question of agents' profits affects not only the sale of American-made machinery, etc., in Australia, but also, as far as I can judge, all imported machinery. These excessive agents' charges cause the prices of the imported articles to be almost prohibitive. Take, for instance, one American motor car which is sold at \$924 in England and costs in Australia, I believe, \$1,216. I am informed that the existing system of payment by colonial agents to all manufacturers or exporters of goods imported into Australia is most objectionable, owing to the length of credit demanded by the agents, who are apparently paid cash by the purchasers of the goods but do not remit the money to the manufacturer or exporter until some 12 months after the sale, thus presumably living on the interest of the money received in payment of the goods sold on behalf of some outside manufacturer or exporter. I am only told this and do not know if it is true, but I think it should be looked into. If there were some depot in Sydney or Melbourne where American machinery, etc., could be stored, exhibited, sold, and distributed, the excessive profits of the colonial agents would be abolished, the payments for the goods would be made punctually, and the advantages gained by the manufacturers or exporters in the United States, as well as by the purchasers in Australia, would be very great. It would further be conducive to greatly increased sales when the purchasers would know that they were getting good value for their money and were not mulcted in heavy agents' commissions, etc.

I am told that there are many inventions in the United States which are suited to colonial conditions, but that, owing to agents' charges and other difficulties, they are not introduced into Australia and we are therefore the greater losers. Among other things, I believe there are some specially insulated cream carts and cans in the United States which are unheard of here and which if introduced into Australia and sold at anything like reasonable prices would revolutionize dairying in outlying places where distances are great, the climate semitropical, and roads too rough for motor traffic.

#### **Cooperative American Sales Organization Would Aid Trade.**

If different reputable and representative commercial organizations of the United States should ever find themselves in a position to effectively cooperate for the establishment of a sales organization in this territory, there seems but little doubt that a great number of American manufacturers who at present are either inadequately represented here or are not represented at all might be given an

opportunity of greatly increasing their sales and their prestige in this market. The manufacturers, including chiefly large corporations which are already directly represented here and doing a good business, could doubtless successfully continue their present plan of business without the necessity of any participation in the cooperative selling organization suggested. But smaller manufacturing companies which do not think it would pay them to have direct representation in this market might obtain a great advantage and be able to secure a much larger share of export trade at much fairer profits than is now possible. At present in numbers of instances the Australian local agent rather than the American manufacturer derives the largest benefit from efforts of manufacturers and of the Department of State and the Department of Commerce and Labor to work up American trade in these countries.

#### **Short Time Allowed for Bids on Public Works—Exhibitions.**

American consular officers often find it difficult to effectively assist American manufacturers who have no representatives in this country and who are not in easy communication with this market. In Australia and New Zealand more than 30 days' time is seldom allowed for answering advertisements for tenders for public works, so that by the time such trade opportunities could be communicated to the United States for publication for the benefit of manufacturers the time for receiving bids would have closed. By means of a cooperative agency every American manufacturer interested might have an opportunity to take prompt advantage of such openings as arise.

In Australia and New Zealand agricultural and industrial exhibitions are held with great frequency and are attended by large numbers of people. Such exhibitions furnish especially effective means of advertising and selling goods to residents of country districts. Through the medium of a local sales cooperative agency for American goods it might be possible to arrange for sections at these exhibitions to be exclusively devoted to the demonstration of many lines which may be now quite unknown here. It might even be found feasible to occasionally have exhibitions solely for American goods and possibly to arrange permanent commercial exhibitions in museums and perhaps floating exhibits on boats.

It would seem likely that any cooperative sales agency which had the support of representative trade organizations at home would furnish the means of giving to a great number of small but reputable American firms a much greater credit and standing in these markets than they could otherwise hope to possess.

#### **Difficulty of Obtaining Indent Agents.**

The foregoing remarks are made with no wish to disparage the excellent results which in some instances are now accomplished by local indent agents of American manufacturers, not to suggest that in all instances excessive and unfair profits are taken. Frequently the interest of American trade could not be better handled than they are now by such agents, and in such cases a "let-well-enough-alone" policy might prove the best. The suggestion of a cooperative sales agency is intended rather for those American manufacturers who may think it too expensive to be directly represented in this country and who can not find local agents with sufficient loyalty, zeal, and ability to represent them without exacting undue profits. Consular officers,

especially in the smaller centers of trade, on receiving letters from American manufacturers asking for lists of local firms which might act as agents for them, often find it difficult to make satisfactory reply, when they may know that every firm doing business in the line in which representation is desired is already acting as agent for foreign firms. In such instances American firms may not be able to secure any local business firm of standing to represent them, except perhaps by offering such superior inducements as to shake the loyalty of that firm to some American firm in the same line which it may already be representing. A cooperative sales agency would enable American manufacturers to sell goods here even if unable to find suitable local agents.

### GOVERNMENT INSURANCE BANK.

[From American Minister Nicolay A. Grevstad, Montevideo, Uruguay; supplementing reports published Dec. 16, 1911, and Mar. 12, 1912.]

The State Insurance Bank opened its doors for business on March 1 under favorable auspices. Numerous applications for policies have been received, and the business is expected to increase rapidly as the policies of private insurance companies lapse. The bank has no official solicitors (*corredores*). One of the important problems the bank has to face is that of reinsurance, concerning which negotiations have been entered into with large companies with prospects of success.

The bank is now organizing its department for labor accident insurance. It has already received many applications and inquiries concerning this form of insurance from workmen as well as from large employers of labor. The purpose of the bank is to carry this class of insurance at cost or even at a limited sacrifice.

In an article commenting upon the start and public reception of the bank, *El Dia* says: "In spite of all that has been said, the State Insurance Bank has been excellently received in commercial circles generally. Even the insurance companies, from which some hostility might have been expected, have given evidences of good will."

### COMBATING MINERS' DISEASES.

[From the forthcoming annual report of Director of United States Bureau of Mines.]

An arrangement has been made with the Public Health and Marine-Hospital Service by which one or more surgeons connected with that service will carry on jointly for that service and for the Bureau of Mines investigations looking to the improvement of mine conditions. These inquiries and investigations have already shown the prevalence of tuberculosis and hookworm as miners' diseases in a number of different localities in the United States. It is important that this work should be extended more rapidly, because of the fact that the health conditions, as well as the risk of accidents, may be influenced by conditions susceptible of easy improvement. Furthermore, the large and continuous influx of foreigners into the mining regions of the United States will bring to an increasing extent the hookworm and other diseases that abound in mines in parts of certain European countries.

Various questions that concern the health of workers in mines, quarries, and metallurgical plants can not be answered finally without investigations and inquiries that are national in scope. Among such questions are the most efficient methods of preventing the diseases peculiar to certain industries, the most effective sanitary precautions to be observed in and about coal mines and metal mines, and the relative healthfulness of occupations pertaining to mining and metallurgical industries. The investigations and inquiries that are essential to the gathering of reliable information on these questions can be undertaken by the Bureau of Mines, in connection with its collection of accident statistics, in a prompt and efficient manner and at minimum expense.

**DRAFT HORSES IN EUROPE.****DENMARK.**

[From Consul General E. D. Winslow, Copenhagen.]

The draft horses in this Kingdom are put to work between the ages of 2 to 2½ years, but as a rule they begin in the country districts and are only used in the large cities when they are at least 5 years of age. There are in Denmark at present about 550,000 horses.

The majority of the draft horses belong to what is called the Jutland breed, and are foaled in Jutland, although there are many breeding establishments on other islands comprising the Kingdom. The Jutland breed has been and is being constantly crossed with breeds of other foreign lands, especially Belgium. There is also much crossing with the horses from the south and central parts of Sweden.

The length of the usefulness of the city horse may be said to be from four to five years as a "coachman," five years at an omnibus, six years at a street railway, and from six to nine years on trucking work.

The price at which horses sell is difficult to give. Sound coachers can be obtained for about \$170, but the same horse after a few years' work would probably sell for only \$100. A good "bus" horse will cost \$200, but after service will bring about \$75. A car horse represents an outlay of about \$190, and when resold after service will bring about \$75. Brewery horses, which are usually very heavy, cost about \$275 to \$300, but when sold after being worked out bring only \$50. This low price is explained by the fact that the agricultural sections do not want such heavy beasts and the majority of these animals are slaughtered. An ordinary working horse, fresh, young, and sound can be had for \$200; what he will bring when sold is problematical.

The mortality of horses is about 2 or 3 per cent in well-kept stables. Injuries received seem to be the main cause of mortality. Diseases brought on by a bad digestion or disarrangement of the bowels or colds also add to the causes of mortality. The death rate among the loosely kept animals is about 5 to 6 per cent.

The daily allowance of forage is approximately 16 pounds of oats, 5 pounds of corn, 2 pounds of molasses, 6 pounds of hay, and 3 pounds of straw. No bran of any consequence is fed. For bedding, straw and coarse hay are used as a rule, and no account is taken of what the animal may eat. The teams used by the city are bedded with peat dust. The value of a horse's droppings may be placed at about 25 cents per month.

**GERMANY.**

[From Consul General A. M. Thackara, Berlin.]

The city of Berlin proper has few horses in its service, and those which it has are employed principally in connection with the agricultural operations which are carried on at the several sewage-disposal farms which the city maintains outside its limits. The largest public employer of horses within the city is the fire department, which is a police and therefore a State, as distinguished from a municipal, institution. The fire department at present employs 130 horses, the number having been recently reduced from 156. Owing to the increasing use of motor vehicles, it is expected that within four or five years the department will have dispensed altogether with the use of horses. Of the horses now in service, the greater number are

Mecklenburg half-breeds. The remainder are Hanoverians and Prussians. The half-breeds are considered the most serviceable.

Purchases are made through a purchase commission which subjects the animals offered to a most thorough examination before selection. If accepted, the animals are kept on trial for four weeks at owner's risk. The average price paid for select horses, aged from 5 to 7 years, is 1,400 marks (\$333.20). Seven years is the maximum age limit.

The daily ration of each horse consists of 6 kilos (13.23 pounds) of oats, which is mixed with 2 kilos (4.4 pounds) of "hacksel," and fed at 6 a. m., 12 m., and 6 p. m. Hacksel is a chopped straw, and when mixed with the oats in the crib it is slightly moistened. Each horse is also given 2 kilos of hay each evening. Under especially hard work, rations are increased to demand. No difference in the feeding is made on Sundays.

Horses which are considered no longer fit for use in the fire department are sold at public auction, when still workable as draft horses. When totally unfit for service, they are sold for slaughter and human consumption. The loss by disease and accident amounts to from 3 to 5 horses annually. The most frequently occurring fatal diseases are colic and obstruction of the bowels.

Peat cakes are used for bedding. The manure from this yields a return of 25 pfennigs (5.9 cents) per horse per month. It is used for fertilizing pasture land only. Straw manure, which is used for field fertilization, would yield a return of 1 mark (23.8 cents) per horse per month.

Copies of the following three pertinent books may be secured from the Bureau of Manufactures: (1) Bericht über die Verwaltung der Feuerwehr; (2) Dienstanweisung; der Pferdepark; (3) Dienstanweisung; Stalldienst und Pferdepflege.

---

#### RUSSIA.

[From Consul Jacob E. Conner, St. Petersburg.]

##### **The Feeding and Management of Municipal Work Horses.**

On January 14, 1912, St. Petersburg owned 1,319 work horses. The cost per head averaged 215 rubles (\$110). They are of mixed breed, artillery type, and were purchased when between the ages of 4 and 8. Their daily feed is 15 pounds of hay and 23 pounds of oats. Straw is used for bedding and there is no fixed price for the manure. Old, worn-out horses are sold at auction. The diseases most feared are the colic and influenza. Last year the losses from all causes were 23, against 26 in 1910.

---

#### THE NETHERLANDS.

[From Consul General S. Listoe, Rotterdam.]

The municipality of Rotterdam owns no horses, the number required for various purposes being leased from private stables. The Rotterdam Tramway Co., which owns about 430 draft horses, has furnished the following information regarding the breed, feeding, etc., of its horses:

Daily rations vary from 7 kilos (15.4 pounds) to 10 kilos (22 pounds) of oats, according to the weight of the horse, and to that is added from 7 to 8 kilos of hay.

The heavier horses are of Belgian origin and the lighter of inland or "Gelderland" race. The prices paid for horses vary from \$200 to \$400, and the average age of a horse, when bought for service, is 4 to 6 years, while the average length of time in which a horse is fit for service is 8 years. There is no special disease prevalent among the horses in the Netherlands.

The rate of mortality in the stables of the Rotterdam Tramway Co. varies from 2 to 4 per cent. When horses become unfit for work they are sold, generally to the slaughterhouses, and bring \$32 to \$60. Straw or moss litter is used for bedding, and the manure is sold for \$1.20 per 1,000 kilos (2,204 pounds).

On account of the prevailing high prices of oats, experiments are now being made to substitute a mixture of moss litter and molasses for part of the oats ration, each horse to be fed  $1\frac{1}{2}$  kilos of this mixture, thus saving about 1 kilo of oats.

---

### STATISTICAL ABSTRACT OF THE UNITED STATES.

The 1911 issue of the Statistical Abstract of the United States has just been published by the Bureau of Statistics. It contains the usual statistical statements of Government activities and general information brought down to date, and shows a considerable growth in size and number of subjects covered as compared with last year, the number of pages in the present issue being 803, as against 488 a decade ago. This growth in the number of pages illustrates the enlargement of the scope of the abstract from year to year, which now includes in its statistical statements the following general subjects: Area, natural resources, and population of the United States; agriculture, forestry, and fisheries; manufacturing and mining industries and patents; occupations, labor, and wages; internal communication and transportation; merchant marine and shipping; foreign commerce; internal commerce; commerce of noncontiguous territories; consumption estimates; prices; money, banking, and insurance; commercial failures; wealth and public finance; civil service; statistical record of the progress of the United States; and commercial, financial, and monetary statistics of the principal countries of the world.

---

### PRODUCTION OF OLIVES AND OLIVE OIL IN SPAIN.

[From Consul Edward J. Norton, Malaga.]

Reports received by the Spanish Agricultural Department give the total production of olives for the Kingdom at 17,398,964 metric quintals (3,835,816,500 pounds), and it is estimated that the total production of oil for 1912 will aggregate 2,066,655 metric quintals (455,584,900 pounds). This crop was produced on an area containing approximately 1,435,177 hectares (3,546,515 acres).

The eight Andalusian Provinces, with Seville and Cordova leading, produce nearly 61.39 per cent of the entire olive-oil output of Spain. The production of oil for 1912 in a number of important Provinces is given as follows: Malaga, 5,511,500 pounds; Jaen, 3,968,280 pounds; Lerida, 3,130,532 pounds; Valencia, 2,935,050 pounds; Tarragona, 2,380,968 pounds.

**URUGUAYAN WOOL CLIP.**

[From Consul Frederic W. Goding, Montevideo, Mar. 21.]

The wool clip of Uruguay is one of the largest items of public wealth and constitutes one of the country's most important industries; hence, fluctuations in prices of textiles in foreign markets are keenly felt here.

The present clip has been characterized by a serious trade paralysis, due to refusal by the sellers to accept prices offered by buyers who, through their knowledge of conditions, were not keenly interested. Various causes have combined to influence the present conditions, the chief being the strikes in foreign countries, as men out of employment must curtail expenses.

Another important factor is fashion as regards ladies' cloths. Formerly 10 to 12 yards of cloth were required for a dress, whereas now the narrow skirts contain not more than half that quantity. Previous fashions called for long cloaks, those now being worn scarcely extending below the waist. Another point to be recognized is the excess of fat which increases the weight of wool, thereby causing a reduction in the prices offered.

**Price Variations.**

Comparisons as to prices have been made covering the month of March for the years 1911 and 1912, which show an appreciable difference in favor of those for 1911, as follows: In the season of 1910-11, superfine wool brought \$4.10 to \$4.15 per 10 kilos (22.046 pounds), the present prices being \$3.60 to \$3.65; the better class, light and clean, brought \$3.90 to \$4, which now commands but \$3.45 to \$3.50, and good conditioned stock that sold at \$3.85 to \$3.90, as against \$3.45 to \$3.50 now.

For second-cut wools, long, clean, and in good condition, \$3.70 to \$3.80 were obtained, while this year the highest was \$3.30.

Second goods in 1910-11 were quoted at \$3.55 to \$3.60; fair, from \$3.40 to \$3.50; cheapest, \$3 to \$3.20. The same grades of wool at present bring prices ranging from \$3.15 to \$3.20, \$3.05 to \$3.10, and \$2.80 to \$2.90, respectively.

Loose, superior, long, clean, and light wools were sold at prices varying between \$3.60 and \$3.65; good, \$3.40 to \$3.50; fair, \$3.20 to \$3.30. The same classes of wools this year bring \$3.10 to \$3.15, \$3 to \$3.15, and \$2.80 to \$2.90.

In crossbred wools there has also been a depreciation. In 1910-11 fine, superior, light, and seed-free wools sold from \$4 to \$4.10; good, from \$3.90 to \$3.95; fairly good, from \$3.70 to \$3.80; with seed, from \$3.20 to \$3.50; from superior fat animals, \$3.20 to \$3.30; Lincolns, \$3 to \$3.10; wethers, \$2.30 to \$2.40; from lambs, clean and long, \$3.20 to \$3.30; from unborn lambs, \$1.90. In the present season the following prices were obtained: \$3.60 to \$3.65, \$3.50 to \$3.55, \$3.40 to \$3.45, \$3.10 to \$3.20, \$2.90 to \$3, \$2.10 to \$2.20, \$3 to \$3.10, \$2 to \$2.20, and from unborns \$1.70.

**Production and Shipments.**

As regards the wool production, while the exact figures for the season of 1911-12 are not at present known, it is certain that the clip will surpass that of the previous year. The following figures are a

more or less accurate estimate of the production of wool during the present season, as compared with the clip for the two previous seasons:

	Kilos
Exported to date.....	15,750,000
En route for export.....	4,500,000
In markets for sale.....	26,750,000
In the interior.....	7,650,000
Exported from the littoral.....	6,750,000
On hand in the littoral.....	4,500,000
Total production, season 1911-12.....	65,900,000
Total production, season 1910-11.....	62,510,000
Total production, season 1909-10.....	51,700,000

The average clip throughout the Republic was 27 kilos (59½ pounds) for each 100 sheep. As the increase in production this year has been considerable, to a certain extent it has overcome some of the evil effects of lower prices, and, while a shrinkage in the profits was looked for, it has been less than anticipated.

### MANUFACTURE OF ENAMELED WARE.

[From Consul General A. M. Thackara, Berlin, Germany.]

Enameled ware was produced for the first time in Germany during the thirties of the last century. Its production seems to have been started in Belgium during the opening years of the century. From there it was soon introduced into France, and later into this country. In the earlier years of its German manufacture the utensils were of a dead color, blue outside and white inside, or gray both inside and out. Utensils of the latter coloring were made by Jopy Frères, in Lefeschotte. Another variety of ware manufactured during this early period was white inside with the exterior varnished. This is still used in large quantities, especially in the case of cast-iron utensils.

[Census returns show that in 1909 there were 108 enameling and japanning factories in the United States with 2,125 wage earners who were paid \$922,000. The cost of materials is given as \$1,496,000 and the value of the product as \$3,316,000. The capital employed was \$2,880,000. The imports of enameled ware in the fiscal year 1907 amounted to \$952,980, and in the fiscal year 1911 to \$764,957. The rate of duty (40 per cent ad valorem) remained the same.—B. of M.]

### Cotton Manufacturing in Japan.

The following figures from Cotton Facts show the progress made by the Japanese cotton mills in the last five years (1911 cotton consumption being estimated):

Year.	Spindles.	Cotton consumed.
1907.....	1,421,785	920,228
1908.....	1,650,450	844,814
1909.....	1,695,879	978,800
1910.....	2,004,988	1,087,183
1911.....	2,009,764	1,141,000

### SILOXYD GLASS.

[From Consul General R. E. Mansfield, Zurich, Switzerland.]

An important achievement in modern scientific research is the discovery by a Zurich inventor of a method of producing suitable apparatus for the chemical industry from electrically melted quartz.

The product is an improvement on quartz gut, or quartz glass, and is especially suited to the manufacture of pipes, tubes, receptacles, flasks, muffles, and other articles used in the production of chemicals, required to withstand a very high temperature and at the same time the effect of concentrated acids. Most of the articles used for such purposes have, until recently, been made of platinum, for the reason that a quality of glass that would meet the requirements had not been produced.

Articles made by the new process from electrically fused quartz because of the low coefficient of expansion, can be subjected to extreme changes of temperature without damage. It is now possible to make articles of large dimensions of this glass, such as socket pipes, acid bottles, and other vessels that will hold as much as 25 gallons. This new material has been placed upon the market as "siloxyd" glass, and the process of manufacture has been patented in most of the European countries and in the United States.

#### Discovery and Special Qualities of Quartz Glass.

Quartz glass, which has long been recognized as an important material in the manufacture of various articles employed in the chemical industry, and for which "siloxyd" is now being substituted where a severe test of temperature is required, was first discovered in 1839 by Prof. Gaudin, who later produced from the same material some tubes and elastic threads which were exhibited at the Paris Exposition in 1878.

In 1889, Boys, who saw the possibilities of this remarkable substance, succeeded in making from quartz small tubes and other articles. Although there were many subsequent experiments, little progress was made in the development of the quartz-glass industry until 1900, when Hereaus and Achendstone succeeded in making clear rock-crystal objects of sufficient size for scientific and mechanical purposes.

The raw material from which the glass is produced is washed quartz sand containing 95 per cent silicic acid, which is melted in an electric furnace in which the temperature rises to 2,000° F. All the agencies known to the glass-working industry, including compressed air, steam, gases, etc., can be applied, and it is now possible to melt and to mold into almost any desired form as much as 50 pounds of quartz. A remarkable quality of the quartz produced by the thermoelectric process is its resistance to acids. Even boiling acid, with the possible exception of hydrofluoric or phosphoric, will not corrode it. Quartz has the advantage of a coefficient of expansion about one-seventeenth that of the best glass suitable for chemical utensils and apparatus.

#### Process of Manufacture—Uses.

The chief objection to pure quartz glass as a material for apparatus used in the chemical industry is that it becomes brittle at high temperature, passing from the amorphous to the crystalline state with a diminution of strength. Until the discovery of Dr. Wolf-Burckhardt,

authorities on the subject claimed that the addition of any other ingredient to the raw material would injuriously affect the quality of the melted quartz.

The new process consists in adding to the raw quartz solutions of oxides of zircon, titanium, and other metals difficult to fuse (or silicates of same to silicic acid), the resulting mixture giving on fusion a transparent glassy substance which fuses at a temperature of 1,750°. The advantages claimed for this material over ordinary quartz glass are that its strength is 30 to 50 per cent greater than "quartz gut," tested by bending, and 10 to 30 per cent more tested by pressure, and that it is less brittle, because the devitrification is only about half that of quartz glass. It is also more resistant to basic metallic oxides.

The superior advantages claimed for "siloxyd" glass give to this new material a wide range of usefulness, especially for apparatus used in the acid industry and for laboratory purposes where socket pipes, tee pipes for acid conduits, evaporating basins, concentrating dishes, cooling vessels, special boxes, conical pipes, condensation utensils, balls for acid towers, etc., are required.

#### **Color and Finish—Factory in Operation.**

The color of zircon glass varies from white to a pale yellow; that of titanium glass from pale to dark blue. They can be given a finish resembling mother-of-pearl or like dull silver. These finishes are natural, and therefore practically permanent, and will not change after a few years of service, as is the case with so many composite materials. In addition to the uses already mentioned, siloxyd glass can be utilized for jewel plates, knife and fork handles, umbrella handles, bonbon boxes, hatpin ornaments, cigar and cigarette holders, napkin rings, doorplates, paper weights, etc.

The inventor, Dr. Franz Wolf-Burekhardt, now has a plant for the production of siloxyd glass in successful operation at Seebach, near Zurich, and there has recently been on exhibition in this city fine specimens of the output of the factory which have attracted much attention.

---

### **LABELING OF CANDIED CITRON.**

#### **Government Food Inspection Decision 148.**

The Board of Food and Drug Inspection has given consideration to the question of what is the correct use of the term "Candied citron," when applied to the preserved peel of fruits.

The evidence gathered by the board shows distinctly that the term "Candied citron" is generally recognized in the trade, and by the consumer, to be applicable only to the candied peel of fruit of the citron tree, *Citrus medica* L., variety *genuina* Engl., a citrus fruit similar to the lemon, but larger and possessing a thick rind of characteristic flavor.

The rind of the citrus melon, *Citrullus vulgaris* Schrad., is often used in a similar manner to true candied citron. The board is of the opinion that the candied rind of this variety of watermelon, when sold in interstate commerce, must not be designated as "Candied citron." It should be labeled "Candied citron melon," "Candied watermelon," or some similar designation.

It is also considered that such terms as "American citron," "Candied domestic citron," or the like, are not correct designations for the candied citron melon and when used will be deemed misbranding, except when applied to the American product of the citrus fruit "citron," described above.

---

*Condensed milk* was exported from Switzerland to the value of \$5,700,000 in 1909, \$6,000,000 in 1910, and \$7,500,000 in 1911.

## NORWAY'S INCREASING USE OF COTTONSEED OIL.

[From Consul P. Emerson Taylor, Stavanger.]

The imports of cottonseed oil into the Stavanger consular district have been growing from year to year, largely due to the increasing use of this oil in the oleomargarine factories of the district.

While the 1911 statistics for the entire district and for the Kingdom are not yet available, the imports for the city of Stavanger last year show, in contrast to a loss of 56,933 pounds in olive oil, a gain of 500,905 pounds in "all other oils," most of which was cotton seed.

The following figures give the total direct importations of these two classes of oil for the entire Kingdom and for the Stavanger consular district in 1909 and 1910:

Imported into—	Olive oil.		Cottonseed and other oils.	
	1909	1910	1909	1910
	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>
Kingdom of Sweden.....	2,476,980	3,478,112	11,163,944	10,798,128
Stavanger consular district.....	2,023,802	2,970,110	498,660	777,282

### Used in Oleomargarine Factories—Prices and Sources.

While large quantities of peanut oil and bouillon are now consumed by the Stavanger sardine factories, the amount of cottonseed oil used is still small. Very much the larger portion of the above imports of cottonseed oil was taken by the oleomargarine factories of the district. Because of the high prices of butter, which sells at 35 cents per pound, probably 90 per cent of the population of this district employ oleomargarine both for cooking and for table use. It is this rather than the action of the canning factories in resuming the use of the cheaper oils in packing sardines that accounts for the increase in the importations of cottonseed oil. [An article relative to the Norwegian packers' action as to bouillon appeared in *Daily Consular and Trade Reports* on March 22, 1911.]

The cottonseed oil imported into this district from the United States is shipped chiefly via the Norwegian-Mexican Gulf Line. It is purchased direct from the American exporters by Stavanger firms and agencies and is sold c. i. f. Stavanger at \$7.32 to \$7.68 per 100 pounds.

Nearly all the cottonseed oil imported here is American, though considerable quantities are purchased from Great Britain, Germany, Netherlands, and Denmark. The following are the countries from which the "cottonseed and other oils" imported into Norway in 1910 were received: United States, 8,410,138 pounds; Germany, 936,840 pounds; Netherlands, 815,518 pounds; Denmark, 325,468 pounds; Great Britain, 177,890 pounds; Mexico, 48,114 pounds; France, 32,538 pounds; all others, 51,822 pounds.

*Compulsory wireless installation.*—Supplementing the report published in *Daily Consular and Trade Reports* on March 7, Consul Frederic W. Goding, of Montevideo, states that the date for the compulsory equipment with wireless-telegraph apparatus of all vessels landing passengers at Uruguayan ports has been advanced to June 15.

## ITALIAN BUSINESS NOTES.

(From Consul General James A. Smith, Genoa.)

**Locomotives—Wireless Stations.**

The Italian State Railways have recently placed orders with Italian manufacturers for 209 locomotives. The prices paid are from \$0.145 to \$0.1545 per pound for the locomotive and a uniform price of \$0.0794 per pound for the tenders.

The Italian Government is about to commence the construction of another ultrapowerful wireless station at Brindisi to correspond with those of Corfu, Alexandria in Egypt, and Tobruk in Tripoli.

**Traffic through the Simplon.**

From the opening of the Simplon Tunnel the traffic between Italy and Switzerland by that route has steadily increased. Last year 410,030 passengers and over 130,000 tons of merchandise were carried. It is expected that the opening of the Lotschberg Tunnel in 1913 will give an added impulse to the Simplon traffic.

**Agricultural Consulting Commission.**

The Italian Government has instituted a Consulting Commission for the Agricultural Industry of the country, and its members have been named. This commission is to have as its scope "the study and suggestion of means more apt to intensify the production of the agricultural industry and the defense against frauds in the commerce of agricultural products." To this commission will also be given all the functions now vested in the Oenologic Consulting Commission for the wine industry and those vested in the commissions for egg culture and the olive-oil industry. The commission is composed of 16 members, 14 named by royal decree, to serve three years. The other two members are the Director General of Agriculture and of the Forests.

**First International Technical Congress for Prevention of Accidents to Laborers.**

There will be held in Milan from May 27 to 31 the first International Technical Congress for the prevention of accidents and injury to laborers and for industrial hygiene. This congress will be under the patronage of the King of Italy and will consider technical means and safety devices tending to protect the life and limb of the laborer, as well as the hygiene of the industry. Legal regulations, insurance, and medicines are not to be considered. Countries to be represented are: France, Germany, Holland, Switzerland, and the United States.

**Artillery for the Italian Government.**

It is reported in the French paper, the *Petit Provençal*, that the Italian Government has recently placed an order with the French company, the *Société Chatillon-Commentry et Neuves-Maisons*, for 93 batteries of 6 pieces each of rapid-fire artillery of 75 millimeters caliber. The cannons are the invention of a Col. Deport and were selected after exhaustive tests of other French and German makes. The order is stated to amount to \$1,600,000.

**Dardanelles closed.**—Under date of April 18 the Turkish Ambassador at Washington informed the Department of State of the closing of the Dardanelles to navigation.

**SOAP FROM SOYA BEANS.**

[From Consul Albert W. Pontius, Dalny, Manchuria.]

A good portion of the many thousand tons of Manchurian beans exported to Europe returns to the Far East in various forms of manufactures, such as soap (bean oil constituting an important ingredient), refined oil, soya biscuits, etc.

The merits and economy of bean oil as a substitute for coconut oil and tallow have been scientifically established. For this purpose, however, the crude bean oil, as produced by the crushing mills here, must undergo a refining process. This is still a technical experiment at the local central laboratory, which seeks to provide a process commercially feasible and available to those with small capital. The few soap factories in Dalny and elsewhere in Manchuria must now mix other fats, such as coconut oil, to the bean oil to secure the proper solidity.

About one and one-half years ago Lever and other large British soap makers became interested in Manchurian beans as a desirable material. It is understood that Lever will establish a soap factory at Kobe for utilizing Manchurian bean oil, notwithstanding that soda, another important soap ingredient, is not yet produced in Japan, the annual imports of which for all branches of industry reaches about \$1,000,000. There are good prospects, however, of soda being procurable in Kwantung Leased Territory, which has immense resources for salt making.

In South Manchuria laundry soap sales are largest from June to October. The Mukden market and the country northward are supplied by Shanghai, chiefly with German and Russian products. A factory at Vladivostok makes a laundry soap which withstands the intense cold of Manchurian winters, and could extend its sale as far south as Kungchuling. However, a Mukden factory (Niao Ho), with a daily capacity of 5,000 pieces of bar soap and 400 pieces of toilet soap, makes such low competitive prices that the imports of the Russian product are affected.

The three factories in Dalny are Bangyoku Yoko on Oyamadori (which hopes to double its \$6,500 sales of last year), Hatanaka Soap Factory in Noto-machi (which may be reorganized into a \$10,000 stock company), and a factory in Kaga-cho. Their combined annual output is about \$15,000, mostly of laundry soap, a small amount of toilet soap being made in winter. The local industry has a promising future, but it must wait for large expansion until the refining process for bean oil and the extraction of soda from Kwantung salt are brought to a commercially workable basis.

[American soap factories imported \$2,685,596 worth of bean oil last year.—B. of M.]

---

*Handling the Canadian customer.*—Consul Fred C. Slater, of Sarnia, Ontario, writes: "With the average Canadian customer who buys only occasionally in the United States, it is best to quote prices f. o. b. his home town, if possible. He may not be advised as to the duty and method of clearing at customs, and is apt to conclude that the matter is worse than it really is and decline to deal with a foreign firm."

**KOREAN INDUSTRIAL AND TRADE NOTES.**

[From the Yokohama Chamber of Commerce Journal, Japan.]

**Discovery of Rich Gold Mine.**

A Korean discovered a rich gold and copper mine, 600 acres, in Chilposan, Fyongnam district, Whanghaido, Korea, and obtained official permission to work the mine. Mining work is now being inaugurated.

**Coal Mining in North Chosen.**

A coal mining company named Kanko Tanko Kabushiki Kaisha has been organized by Japanese capitalists in Tokyo with a capital of \$150,000 to work a coal mine covering 560 acres at Kapyong, in Hamheung district, north Chosen; main office in Tokyo and a branch at Hamheung and detached offices at Wonsan, Chongjin, and Vladivostok. The company has also applied to the authorities for permission to work an adjoining mine covering 250 acres and another covering 1,200 acres.

**New Railways in Chosen.**

According to the original plan the construction of the Seoul-Wonsan line (136 miles in length) and the Honam line (174 miles), which was commenced in 1909, is to be completed by 1914. As a result, however, of the great efforts put forth by the railway authorities since last year the work is making remarkable progress. The section between Taichon and Kunsan on the latter line has just been opened, while the section between Yongman and Chotwon (60 miles) on the former line will be opened by October next. The entire Seoul-Wonsan line is open, and the Honam line will be ready by the end of 1913.

**Exports of Cattle in Chosen.**

Korean cattle exported to Japan proper through Fusan has remarkably increased in number of late. The total number of animals exported to Japan proper through Fusan in 1903 was 278, 1,781 in 1904, 5,060 in 1905, 4,945 in 1906, 18,356 in 1907, 19,303 in 1908, 3,180 in 1909, 1,312 in 1910, and 2,224 in 1911. The increase in the number of exported cattle during 1905, 1906, 1907, and 1908 was due to the great demand for cattle after the Japan-Russia war. During 1909 and 1910 the exportation showed a great decrease on account of the cattle plague which prevailed in Chosen the preceding year. Chongjin, North Hamkyong-do, reports that the total number of Korean cattle exported through the port to Russian territory during last year was 12,160 head, valued at \$239,000, an increase of 2,488 head, valued at \$76,000, over 1910.

**Projected Iron Foundry at Chinnampo.**

Some wealthy Japanese living at Chinnampo plan to establish an iron foundry there. Iron ores now taken from iron mines in South and North Pyongan and Whanghae Provinces are all exported to Japan through Chinnampo. The three Provinces contain many rich mines, the most famous being at Chailiyong, Eunyu, Changyon, and Anak. Hitherto these mines have produced 11,000 tons of ores a year between them, but the work having been enlarged it is estimated that 150,000 tons will be taken in 1912. Whether the project for establishing a foundry at Chinnampo materializes or not, it is safe to predict that the iron mining business in Chosen will make remarkable progress in a few years.

---

**Graded Wages for Brass Workers.**

Consul Albert Halstead, of Birmingham, England, forwards a list of wages paid to various grades of brass workers and metal mechanics in that consular district, together with a document giving the rules governing the payment of sick and unemployment benefits to members of the National Society of Brass Workers and Metal Mechanics. Both will be loaned by the Bureau of Manufactures upon application. The system in vogue in these trades provides a novel means of grading workmen according to their capacity, and providing a certain wage for each grade. This system was described in Daily Consular and Trade Reports for November 12, 1910, and May 13, 1911.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8729. Hydraulic traveling cranes.**—An American consular officer in a European country reports that a company in his district will soon open a competition for the construction of 16 hydraulic traveling cranes. The company will consider only the plans and proposals submitted in its offices by the local representatives of the builders. The cranes should have a lifting capacity of 1½ metric tons, with adjustable range. American firms interested in this matter are advised to instruct at once, by cable, their representatives to get in touch with this concern. References and a list of similar machines constructed and installed by them during the past 10 years will be required, and should accompany the application to submit designs and prices.
- No. 8730. Dredging in Canada.**—The American consulate general at Ottawa, Canada, reports that the Department of Public Works has advertised for tenders, to be received until May 13, 1912, for dredging required at the following places in the Province of Ontario: South Lancaster, Gananoque, Kingsville, Blind River, Cobourg, Honey Harbor, Port Hope, Trenton, and Deseronto. Forms on which tenders must be made can be obtained from the Secretary of the Department of Public Works at Ottawa.
- No. 8731. Pitch for crossties and boilers for locomotives.**—The American consul at Valparaiso, Chile, reports that the director general of the Chilean Government railways has asked for bids for 105,670 gallons of pitch for crossties, and 22 boilers for locomotives. The former are to be opened in the office of the Director General de Ferrocarriles del Estado on June 1, 1912, and the latter at the same place on June 8, 1912.
- No. 8732. Cold-storage plant.**—The American representative of a foreign Government informs the Bureau of Manufactures that he desires to get in touch with firms able to put up a cold-storage plant and furnish equipment for the same. Fruit was mentioned as being one of the products to be handled.

## PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

- No. 627. Construction of post offices.**—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., for the construction (including plumbing, gas piping, heating apparatus, electric conduits and wiring, and lighting fixtures) of the following buildings: (1) Until May 31 for post office at Charleroi, Pa. This building is to have two stories and basement of approximately 4,156 square feet ground area; stone faced, slate roof, and fireproof construction except the roof. (2) Until June 4, 1912, for post office at Santa Barbara, Cal. This will be a two-story and basement building of approximately 6,560 square feet ground area; stucco faced with stone and terra-cotta trimming. (3) Until June 5 for post office and courthouse at Muskogee, Okla. The building will be of fireproof construction, four stories in height, stone faced, and copper roof, with a ground area of approximately 20,400 square feet. Drawings and specifications for these buildings may be obtained from the custodians of the various sites or at the office of the Supervising Architect.
- No. 628. Panama Canal supplies.**—Sealed proposals, in triplicate, will be received at the office of the General Purchasing Officer of the Isthmian Canal Commission, Washington, D. C., until May 22, 1912, for furnishing transformer room equipment for all Panama Canal locks. (Circular No. 705.)
- No. 629. Ordnance supplies.**—Sealed proposals, in triplicate, will be received at the Watervliet Arsenal, Watervliet, N. Y., until May 25, 1912, for furnishing steel, hardware, forage, fuel, oils, etc., during the year ending June 30, 1913. Information furnished on application to the commanding officer at the arsenal.
- No. 630. Hydraulic elevator plant.**—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until May 11, 1912, for a hydraulic elevator plant, etc., in the United States post office at St. Louis, Mo., in accordance with drawing and specification, copies of which may be obtained at the office of the Supervising Architect, or at the office of the superintendent, St. Louis, Mo.

## MANGANESE ORE IN THE CAUCASUS.

[From Vice Consul Frederic W. Cauldwell, Batum, Russia.]

The manganese deposits of the Caucasus are among the richest in the world. The principal mines are situated at Tchiatouri, in the Government of Kotais, about 190 versts (126 miles) from the Black Sea ports of Batum and Poti. The exploitation of the Tchiatouri mines began in 1878, but remained on a very limited scale until 1885, when the Trans-Caucasian Railway was constructed.

The ore is shipped to England, Germany, the United States, France, and Belgium, and in smaller quantities to other countries. England, Germany, and the United States are the best customers. The total export of the ore from Batum and Poti during the past four years has been as follows:

Pests.	1908	1909	1910	1911
	Tons.	Tons.	Tons.	Tons.
Poti .....	366,600	544,000	364,500	442,400
Batum .....	8,160	25,500	36,215	129,233
Total .....	374,760	569,500	400,715	571,633

The increase of the shipments from Batum during 1911 is attributed to the heavier cost of loading ore at Poti owing to the levying, in 1910, of a duty of one-half kopeck per pood (0.2575 cent per 36.112 pounds) on ore exported from that port. Manganese shippers at Batum loaded several steamers with full cargoes during the first two months of the current year and there is every reason to assume that the exports from Batum in 1912 will equal, if not surpass, those of 1911. About 15 or 20 per cent of the manganese exported is washed ore.

### Declared Exports—Shipments to Other Countries.

Manganese ore declared for export to the United States through the consulate at Batum amounted in 1910 to 28,490 tons of a value of \$259,898. In 1911 the export amounted to 19,685 tons, with a declared value of \$197,737. These figures represent but a part of the ore from the Caucasus that was imported into the United States. Much of the ore sent to European countries is eventually trans-

shipped and finds its way to the United States. Three full shiploads are sent, on an average, each year direct from Batum and Poti to the United States in chartered vessels.

Until the beginning of 1911, no statistics were kept at the custom-houses of Batum and Poti that would show to what countries the shipments of manganese ore from these ports went. The statistics now available for 1911 give the following destinations of exports:

Exported to—	From Poti.	From Batum.	Exported to—	From Poti.	From Batum.
	<i>Tons.</i>	<i>Tons.</i>		<i>Tons.</i>	<i>Tons.</i>
Austria.....	8,928	4,256	Spain.....	21,291	
Belgium.....	53,315	12,994	United States (by direct boat).....	5,450	10,694
France.....	29,925	15,885			
Germany.....	4,345	25,536	Total.....	442,460	129,230
Great Britain.....	105,943	31,869			
Netherlands.....	204,164	27,999			

The ore credited to the Netherlands is in reality destined for Germany. From Rotterdam the ore is sent up the Rhine to the iron districts of Germany.

#### Rich Ore—World Output.

The ore exported through the ports of Batum and Poti generally contains 48 to 52 per cent of manganese metal (Mn), while concentrates obtained from washing the granular ore and used for chemical purposes (glass making) are shipped containing 81 to 90 per cent of manganese dioxide (MnO<sub>2</sub>).

The following table gives figures reproduced from statistical information relating to manganese shipments from all countries producing this metallic chemical element during the past three years:

Producing regions.	1909	1910	1911	Producing regions.	1909	1910	1911

These figures give the movement of ore from the mines at Tchiatouri to other parts of Russia as well as into stocks and to foreign countries.

#### Geologic Formation—Extent of Deposits.

The mines at Tchiatouri lie in a region of horizontal sedimentary formations, divided into two principal parts by the Kvirili River. These are again crossed by numerous branches of the river, and the whole region is thus divided into seven plateaus: On the right side of the Kvirili River—Rgani, Sedergani, Mguemevi, Darkveti; on the left side—Perevissi, Choucrouti, Itkhrvisi. The total area covered by these mines is about 126 square versts (about 55 square miles), of which 100 square versts (44 square miles) contain good ore.

The outcroppings of the ore are about 1,000 feet higher than the Kvirili River. The ore lies in a horizontal bed between limestone below and sandstone above. Besides solid benches, the ore also occurs in granules (oolitic form) mixed with sandstone. The richest

ore has been found in the plateaus of Mguemevi, Sedergani, and Choucrouiti; Rgani plateau yields rich wash ore.

According to calculations of Russian geologists the Tchiatouri mines contain about 1,070,000,000 tons of ore, estimated to be sufficient to supply Europe and the United States for at least half a century, especially as the Tchiatouri ore is of high quality. As already mentioned, the ore lies in horizontal layers, and consequently the mines can be worked easily and at the same time over great areas by means of tunnels (galleries) and by using picks and shovels.

#### Mining and Transportation Methods.

The mines are owned by a large number of Georgian peasants, who are without capital or knowledge of mining. Until recently, with few exceptions, the mines have been worked in a most primitive way, and as a result only about two-thirds of the ore has been recovered. Within the last six years various foreign firms bought up some of the larger plots and have started mining by more modern methods. The lump ore is separated by hand from the sandstone; only the ore occurring in granules is separated by water concentration in washing plants. In washing, the granular ore can be concentrated up to 60 per cent of metal or 90 per cent of peroxide of manganese ( $MnO_2$ ), but these percentages are above the averages for the district.

The ore is transported to the railroad at Tchiatouri in two-wheeled oxcarts or by pack horses, and over bad roads, for distances varying from 2 to 5 versts (1.324 to 3.31 miles), at a cost of 2 to 3 kopecks per pood (1.03 to 1.545 cents per 36.112 pounds). The position of the mines is favorable for mechanical transportation of ore, especially by wire ropeways, but on account of lack of capital such methods have begun to be employed only lately and by a few firms.

From Tchiatouri the ore is carried on the Tchiatouri Railway, a 25-mile narrow-gauge branch of the main line, to Sharopan. At Sharopan it is transferred into the cars of the Trans-Caucasian Railway and shipped to either Batum or Poti.

#### Freight Rates—Foreign Capital—Storage Platforms.

The freight rate from Tchiatouri to these ports is 70.23 rubles (\$36.17) per car of 750 poods (about 12.1 long tons) of ore, which is 9.37 kopecks per pood (4.826 cents per 36.112 pounds). This rate includes all expenses of transshipment at Sharopan and three-fourths kopeck to the Manganese Producers' Association. The greater part of this freight rate is for the distance from Tchiatouri to Sharopan, viz, 5½ kopecks (2.8325 cents) for a distance of 38 versts (25 miles). The remainder of the freight rate, amounting to 3.87 kopecks, is paid for the distance of 162 versts (107 miles) from Sharopan to Batum or Poti. The best business in manganese would therefore seem to be done by the Tchiatouri branch of the State railway. The cost of building this short line was 1,500,000 rubles (\$772,500).

As most of the mine owners are Georgian peasants with little capital, the trade in the ore has been principally in the hands of commissionaires working with the assistance of banks, which charge 8 to 9 per cent interest. Of late considerable German capital has been invested in the mines and much of the unworked land is now in the hands of foreign capitalists.

A very important part of the manganese business for the exporter is to have at his disposal a number of well-situated platforms at

Tchiatouri, connected with a siding of the railroad, where stock for shipment can be stored. The Tchiatouri Railroad can furnish 400 cars per day at the utmost, and these are divided among the proprietors of platforms at a ratio of 1 car for every 20,000 poods of ore kept in stock. Therefore, the greater the quantity of ore in stock the larger is the number of cars allotted the shipper. At times of heavy shipments from Tchiatouri these rules are strictly followed by the railroad, while in slack times owners of small stocks can obtain as many cars as are free.

**Advantages of Heavy Stocks—Loading.**

The advantage of keeping heavy stocks and having good platforms at Tchiatouri are: (1) The owner of these stocks can always obtain a correspondingly large number of cars. (2) When he is expecting to load a steamer at Batum or Poti it is not necessary to accumulate beforehand a large stock of ore on the docks at these ports, but he can hold his shipments at Tchiatouri and forward in time to load directly on board ship from constantly arriving cars. The shipper can thus reduce expense of interest on the railway freight; and the ore being handled but once at the docks, loading on board ship is cheaper. It needs but a glance, therefore, to see that next to the possession of mines the control at Tchiatouri of suitable platforms of great capacity is one of the most important questions with which the trade has to deal.

The ore is put aboard steamers at Batum and Poti by laborers, who carry it in small baskets holding about 4 poods (144 pounds) over wooden runways erected from the dock to the steamer. In this way, and with a sufficient number of laborers, 400 to 800 tons of ore are loaded per day. If the ore is handled direct from arriving railroad cars, the cost of loading into the hold of the steamer is  $\frac{1}{2}$  kopeck (about  $\frac{1}{2}$  cent) per pood; but if the ore is loaded from the docks, onto which it has previously been discharged from railroad cars, the cost is  $\frac{3}{4}$  kopeck. About six years ago there was constructed at Poti an elaborate elevator for loading the ore on board ship mechanically, but up to the present time this elevator has not come into general use. To pay for this improvement a charge of  $\frac{1}{2}$  kopeck per pood has been recently placed by Poti on all ore going from that port. The result has been to divert shipments to Batum.

**Manganese Producers' Association.**

The Manganese Producers' Association, of which mention has been made, levies a tax of  $\frac{3}{4}$  kopeck per pood on all ore sent by rail from Tchiatouri. It is given the right by the Government to levy up to 2 kopecks per pood. The income derived from this tax is set apart for bettering conditions about the mines.

The managing council of the association is elected at an annual meeting of manganese producers and exporters, at which apparently the voting regulations are such as to give the small dealers an overwhelming majority. As capital becomes more and more necessary to carry on deeper mining, the tendency is for the small producers to disappear, but they are still sufficiently numerous to be able to elect a council in sympathy with their views, and are urging the council to expend the proceeds of the tax to assist them to compete with the larger capitalists.

They point out that some of the larger capitalists, having installed mechanical transportation of ore from the mines to the railway platforms, have an advantage over those who are still obliged to use bullock carts. The small producers are urging the council to expend 1,000,000 rubles (\$515,000) for mechanical means of transport which shall be at the disposal of all producers. The council has also under consideration plans for the supply of water to the mines, for housing workingmen, and other improvements which are to be carried on from the funds procured from the tax.

Altering the present branch line between Sharopan and Tchiatouri to a broad gauge has been under recent consideration by the State railway engineers. Such improvement would eliminate the necessity for transshipping the ore from the trucks of the narrow-gauge line to the trucks of the main line at Sharopan. Exporters are urging a reduction of the railway rates that will bring the rate on the Tchiatouri branch line down to something like the normal rate for such service.

#### **Stream Pollution by Washing Plants.**

A feature of the manganese industry during 1911 was the marked increase in the quantity of ore washed at and about the mines, to the great discomfort of the population using the waters of the Kvirili River for domestic purposes. Most of the washing installations have been erected on the banks of the Kvirili or its tributaries, and the refuse from these plants has polluted its waters to such an extent that complaint was made to the viceroy.

The Manganese Producers' Association has devised a plan which seems likely to meet the exigencies of the case. It is proposed to construct a large basin in the valley of the Kvirili River below Tchiatouri at which slimes from the washing installations will be arrested. The water would there be purified and the overflow from the dam would be utilized for generating the electric current required for lighting the village of Tchiatouri, for electrifying the Sharopan-Tchiatouri branch railway, and for converting manganese waste sediment into ferromanganese in electric furnaces.

It is estimated that the washing installations now in course of construction when completed will have a daily capacity of about 2,613 tons of ore averaging approximately 53 per cent metallic manganese in the dry state; 1,460 tons of refuse, containing 30 per cent mineral to waste in washing the first-named quantity of ore.

[A list of the principal exporters of manganese ore at Batum and Poti may be secured from the Bureau of Manufactures.]

#### **Improved Labor Conditions in Danish Shoe Factories.**

Consul General E. D. Winslow, Copenhagen, reports that the shoe manufacturers of Denmark have closed an agreement with their workmen, the most important item of which is the change in working hours. A day's work in summer will be 9½ hours and in winter 9 hours, a reduction of one-half hour per day for the whole year as compared with former regulations. Another important item is the fixing of a minimum wage, which is set at 10½ cents per hour, with the promise of an increase to 10¾ cents after April 14, 1914.

## AMERICAN MANGANESE INDUSTRY.

[Compiled from publications of the United States Geological Survey.]

Manganese is obtained commercially from manganese ores, manganiferous iron and silver ores, and manganiferous residuum from zinc roasting.

Manganese ores are found in many parts of the United States, but at only a few places do they occur in sufficient quantity to be of high commercial value. They have been mined in the New England, Appalachian, and Piedmont regions in the eastern United States, in northern Arkansas, and to a small extent in central-western California.

According to reports received by the United States Geological Survey, the manganese-ore industry showed slightly greater activity in 1910 than in 1909. In 1910 the quantity marketed amounted to 2,258 long tons, valued at \$22,892, the price per ton averaging \$10.14, as compared with 1,544 long tons, valued at \$19,675, an average price of \$12.74, in 1909. In addition to the quantity shipped, a small tonnage was mined and remained in stock at the mines at the end of the year.

**Imports and Uses.**

The importations of manganese ore greatly exceed the quantities mined in this country—a condition likely to continue so long as the principal sources of foreign supply are large and cheaply worked and ocean freights are low. There was a decrease in both the quantity and the value of the American imports of manganese oxide and ore in the fiscal year 1911, when compared with 1910, but an increase over those of 1909, as is shown by the following table, the quantities being long tons:

Countries.	1909		1910		1911	
	Tons.	Value.	Tons.	Value.	Tons.	Value.

The principal use of manganese ores is in the manufacture of iron-manganese alloys, such as spiegeleisen, ferromanganese, silverspiegel, and silicomanganese. The first two of these contain principally iron and manganese; the last two contain considerable silicon in addition. Ferromanganese and spiegeleisen are used in steel manufacture as reducers of iron oxide during the final melting, as recarburizers, and in the manufacture of special steels alone or in combination with chromium, nickel, tungsten, and other steel-hardening metals. Manganese is also used in the formation of alloys with copper, aluminum, zinc, tin, and other metals. Manganese ores or manganiferous iron ores are used to a slight extent as fluxes in the reduction of silver, lead, and copper ores. Manganese peroxide is used as an oxidizer in the manufacture of chlorine, bromine, and oxygen, and of potassium ferromanganate; as a drier in paints and varnishes; as a decolorizer of glass; and in the manufacture of dry and Leclanché cells. As a coloring material manganese is used in coloring glass, bricks, and pottery. Several manganese salts are used in dyeing cloth and as paints.

**Prices—World Production.**

The prices of manganese ores used in the steel industry vary from \$5 to \$15 per long ton, according to the grade of the ore. The manganese ores for oxidizing and coloring purposes are valued according to the quantity of manganese peroxide present. Their consistency, etc., and prices range up to \$35 per ton for the better grades of ore. Manganiferous ores used in iron and steel manufacture and for fluxing range in price from \$2 per ton upward.

The following table gives the latest available statistics with regard to American and foreign production of manganese ore. The unit is the metric ton (2,204.6 pounds) for

all countries except the United States, whose production is given in long tons (2,240 pounds):

Countries.	Year.	Tons.	Countries.	Year.	Tons.
United States.....	1910	2,258	United Kingdom.....	1909	2,763
Brazil (exports).....	1908	163,506	Russia.....	1907	987,724

<sup>1</sup> Year ending March, 1908.

### Deposits in North and South America.

Considerable quantities of manganese ore have been mined in New Brunswick and Nova Scotia and small amounts in Quebec and Ontario. In Newfoundland manganese carbonate of brownish color occurs. There are manganese deposits of importance in the Province of Santiago de Cuba, where the ore is chiefly pyrolusite, but other oxides of manganese occur. A bed of manganese ore of superior quality is reported from the island of St. Martin in the West Indies and another deposit has recently been discovered in Haiti.

Manganese ore has not been mined to any extent in Mexico. Few, if any, of the iron-ore deposits have associated manganese, though veins containing pure manganese ore are found at various localities. The Nombre de Dios manganese-bearing region of Panama covers an area of nearly 300 square miles along the Caribbean Sea. The ores occur as oxides, principally psilomelane, but also pyrolusite and braunite. The first shipments from the region were made in 1871.

Manganese ores are widely distributed in Brazil; large deposits occur in the State of Minas Geraes and smaller ones in the State of Bahia. Ores are also reported from the States of Matto Grosso, Parana, and Santa Catharina, and from the region of the Amazon River. In Chile, the manganese deposits are all on the west slope of the Andes Mountains, in the Provinces of Santiago, Coquimbo, and Atacama.

### European Fields.

Manganese occurs in Spain in the following associations and localities: (1) As carbonate and silicate in the Province of Huelva; (2) as oxide in the Provinces of Oviedo, Teruel, and Ciudad Real; and (3) in manganiferous iron ore in the Province of Murcia. There are 8 or 10 large mines in the district of Beja, Province of Alemtejo, Portugal, of which some produce manganese carbonate, yielding 34 to 50 per cent manganese, and others produce oxides. The principal manganese mines of France are in the Departments of Saone-et-Loire and Ariège. The Saone-et-Loire mines ship binoxide and the mines of Las Cabesses in Ariège ship calcined and assorted carbonates. Smaller deposits occur in the Department of Indre, Aude, and Allier, Hautes-Pyrenees, and Lozere.

Belgium does not produce manganese ores proper, but a considerable amount of manganiferous iron ores. The center of production for these is the Province of Liege. They are also found elsewhere in Belgium associated with hematite. The chief occurrence of manganese in Germany is along the Rhine in the districts of Wiesbaden and Koblenz, in Hesse-Nassau. Smaller deposits are found in the Harz Mountains, in Saxony, in the Bonn district, and in Coburg-Gotha, in Thuringia. Manganese ores of three types occur in Sweden: (1) Pyrolusite with manganite, (2) hausmannite with braunite, and (3) carbonate and silicate of manganese accompanying iron ores.

No pure manganese ores are mined in Great Britain, but small amounts of manganiferous iron ore are produced. The localities where most of the ore has been mined are Barmouth and Harleck, in Merionethshire, North Wales; Carnarvonshire, North Wales; Tavistock in Devonshire and Launceston in Cornwall, southwest England; and in Derbyshire and adjacent territory in the Midlands of England. The ore of North Wales consists mainly of carbonate with some silicate and oxide in Cambrian rocks; that of England is psilomelane and pyrolusite in lower Silurian strata.

### Other Continental Sources.

Manganese ore is found in different parts of Austria-Hungary, namely, in Bukowina, Carniola, Moravia, Bosnia, Herzegovina, Transylvania, and Bohemia. At Roffna,

in Overhalbstein, in the Swiss Canton of Graubunden, manganese ore occurs as beds in slates of Jurassic or Tertiary age. The ores are pyrolusite, polianite, and psilomelane penetrated by quartz veins and grading into quartz slate and red jasper.

The chief manganese deposits in Italy are on Monte Argentario, at Carrara, at Rapollano, and on the island of Elba, in Tuscany; at Turin and Pralognan, in Piedmont; and at Gambatesa, in eastern Liguria. There are small mines at Iglesias, on San Pietro Island, off the west coast of Sardinia. Manganiferous iron ore occurs in Tuscany in the Apennines, near Florence. Manganese ore averaging 73 to 75 per cent oxide and manganiferous iron ore have been reported from Salerno, in Campania, on the coast south of Naples. Manganiferous iron ore containing 18 to 19 per cent manganese and 34 to 35 per cent iron occurs at Laurium, in Greece. Manganese ore is found in small amounts in several localities, among which are Cape Vani, on the island of Melos, and Fourkovuni Point, also in the Cyclades.

Manganese ores occur both in European and in Asiatic Turkey. In the former they are found in southern Macedonia, the shipping port being Straton, on the *Ægean* Sea. In the latter they are reported from Aptal in Trebizond, in northern Asia Minor, near the Black Sea, and also from Flatza, in the same region. On the island of Cyprus, off the south coast of Asia Minor, manganese ores occur at Strullos, near Larnaka.

Russia has been for many years the leading producer of manganese in the world. By far the largest part of the ore has come from the Sharopan district in the Province of Kutais, Transcaucasia, on the Asiatic slope of the Caucasus Mountains. Smaller amounts of ore have been produced in the Nikopol district in the Province of Ekaterinoslav in south Russia, and in the Provinces of Perm and Orenburg in the Ural Mountains.

#### **Africa, Asia, and Oceania.**

Large deposits of manganese ore occur in Tunis near Ain-Mulares. The quantity available is said to reach 1,000,000 tons. An important discovery of manganese has recently been made at Caledon, Cape Colony. The deposit is said to contain 30,000 tons of ore with a manganese content of 42 per cent. Manganese ores, manganiferous iron ores, and iron ores occur together in deposits in carboniferous rocks on the Sinai Peninsula east of the Gulf of Suez. Manganese ore is found in the Madras and Bombay Presidencies, in Central India, in the Central Provinces, in Bengal, and in Lower Burma. Small deposits of manganese ore, containing 1.61 per cent of cobalt, occur at Ampituja, Ceylon. Moderate quantities of manganese oxide are mined yearly in Japan, but the deposits are not extensive.

Manganese deposits are found in the Philippine Islands in the Provinces of Ilocos Norte and Tarlac, on Luzon Island, and on Masbate Island. They have also been exploited in the regencies of Pegasin and Mongolaen in Java, and a small amount of ore has been shipped from the island. Beds of manganese ore were recently discovered at Taritipan, in Maruda Bay, British North Borneo. The manganese ores of New Zealand consist mainly of braunite and wad, with pyrolusite here and there in small quantities. The principal work has been done near Russell and at Waiheki. The ore contains 75 per cent oxide of manganese. At the Bay of Islands, Napier, an ore with 45 per cent manganese is found. In Australia there are manganese deposits in New South Wales, South Australia, and Queensland.

---

#### **A Further Advance in Australian Shoe Prices.**

The higher prices for shoes in Australia noted in Daily Consular and Trade Reports on February 28 and April 1, 1911, are to be still further advanced, according to the published views of the president of the Boot, Shoe, and Slipper Manufacturers' Association of New South Wales, a newspaper report of which has been transmitted by Consul General John P. Bray, of Sydney. A 10 per cent advance in the price of leather by the Tanners' Association of Victoria, heavy duties on materials (practically all of which must be imported), a scarcity of female labor, and high wages are said to have made this increase inevitable.

---

Walnut timbers, sales of which are being held at Batum, Russia, are said to result in prices of \$535 per ton.

**SWISS GOVERNMENT AID TO COMMERCIAL SCHOOLS.**

(From Vice Consul Eugene Nabel, St. Gall.)

The total grants for commercial education made by the Swiss Government in 1911 amounted to \$185,565, against \$165,311 in 1910. The various grades and number of schools, attendance, and Government grants received last year were as follows:

Commercial high schools, 4; located at St. Gall, Zurich, Fribourg, and Neuchatel; total operating expenses, \$35,542; 326 male and 12 female pupils; school fees collected, \$3,582; Government grant, \$10,172.

Commercial schools, 31; total operating expenditures, \$347,373; 2,592 male and 1,394 female pupils; school fees collected, \$57,287; Government grant, \$93,660.

Mercantile secondary schools: To this class belong (a) 80 schools of the Swiss Commercial Union; total operating expenditures, \$140,728; 8,726 male and 2,240 female pupils; school fees collected, \$31,235; grants from Government, \$53,387; from Cantons, \$24,188; from districts, \$19,416; from corporations, \$11,413; (b) 35 other single associations and district secondary schools; total operating expenditures, \$23,702; 2,716 male and 1,897 female pupils; school fees collected, \$5,426; grants from Government, \$8,115; from Cantons, \$5,085; from districts, \$3,491; from corporations, \$1,008.

Administration schools, which especially prepare young men for the Federal post, telegraph, telephone, and customs service, located at St. Gall, Zurich, Bienne, and Geneva; total operating expenditures, \$29,815; pupils, male only, 360; school fees collected, \$1,558; Government grants, \$9,346. These schools received their first Government grant in 1911.

For miscellaneous purposes \$10,885 was expended, including \$4,689 for scholarships, \$2,064 for apprenticeship examinations, and \$1,786 for libraries and lectures.

A new commercial high school was opened at Lausanne in 1911, which has not yet received a Government grant, but has been assured of it during the present year.

The Federal Department of Commerce has been making persistent efforts to induce the Cantons and districts to increase their subsidies to mercantile secondary schools.

[Extensive reports, describing the entire Swiss school system, with special reference to commercial education, were published in Daily Consular and Trade Reports for Mar. 10, 1909, and Aug. 11, 1911.]

---

**AMERICAN STAGE COACHES IN HONDURAS.**

(From Consul A. T. Haebler, Tegucigalpa.)

As a result of a request for catalogues published in Foreign Trade Opportunities, two American coaches have been ordered by Dr. Guilbert of this city, with whom the Government of Honduras has entered into a four-year contract for carrying the mails between San Lorenzo (on the south coast) and Tegucigalpa. The new service will start August 1. The coaches, which will also carry passengers, will make the trip in two and one half days, connecting with the Amapala mail boat.

**ECONOMIC EFFECTS OF BRITISH COAL STRIKE.**

[From Consul General John L. Griffiths, London.]

Numerous estimates have been made of what the six-weeks' coal strike has cost the United Kingdom. The estimates have varied from \$72,997,500 to \$243,325,000.

The estimate of the London Daily Mirror of \$122,635,800 is probably not excessive when the almost infinite ramifications of such a gigantic strike are borne in mind. This estimate was made up as follows:

Railway traffic losses to Apr. 6, 1912.....	\$15,572,800
Miners' wages during the strike.....	29,199,000
Wages lost by other trades.....	9,733,000
Strike and out-of-work allowance paid by miners' and other unions and withdrawal of savings.....	7,299,750
For various forms of relief, feeding children, etc.....	2,433,250
Losses sustained by various industries and businesses other than mining.....	58,398,000
<b>Total.....</b>	<b>122,635,800</b>

**Increase Cost of Living—Lost Working Time.**

In the foregoing figures the increased cost of living is not taken into consideration. This was a very large item, as almost everything that went on the table cost more after the strike was inaugurated than it did before, and the difference in practically every instance was directly attributable to the strike itself. It may be, therefore, that the estimate of the London Daily Telegraph placing the loss at \$243,325,000 will prove to be not an exaggeration.

In the first week of the strike over 2,000,000 working days were lost in the coal-mining industry alone, while in the second week the miners, together with the carters, contractors, and others, lost approximately 6,700,000 days. It is thought that the strike will entail a loss of at least 25,000,000 working days to the coal miners. It is impossible to state with any accuracy the time lost by workers in other industries which were shut down or run on greatly reduced time in consequence of the strike. Many of the trade unions, by reason of the drain upon their resources, suffered greatly. This was especially true of the metals, engineering, shipbuilding, railways, building, glassworkers, paper makers, seamen, dockers, sweetmeat makers, pottery workers, carters, dye workers, and textile unions.

The present losses do not, of course, embrace all that can be attributed to the strike, because it will be some time before all the collieries are at work again and a considerable period before the industries which have been most seriously affected resume their normal condition.

**Suggested Remedies.**

Many suggestions have been made, such as the nationalization of the mines, compulsory arbitration, making the funds of trade unions liable for the acts of individual members when associated together for strike purposes, etc., for the prevention of future strikes.

The suggestion which seems to meet with the greatest favor, however, is that of the extension of the principle of cooperation which has worked so successfully in many instances. It is felt that if the wage earner, upon some proper basis, can be taken into partnership with the employer, so that a real community of interest may be established, this will accomplish more than can be secured by any artificial and arbitrary legislation.

Wage earners have had a very substantial grievance in many industries through the enhanced prices of the general commodities of life without any corresponding increase in their wages. This cause of complaint and resentment, developing often into active antagonism, would largely disappear, it is urged, if the principle of cooperation could be generally introduced into the industrial world, so that in times of prosperity the employee would feel that he is receiving his fair proportion of the profit.

#### **Opportunities for American Coal.**

The effect of the British strike will be to widen markets for the coal of other countries. At least, this will be the temporary effect; and if the feeling should prevail that the present settlement lacks finality or that industrial disturbances will probably be frequent and prolonged in the United Kingdom, there is no reason why the American exporter of coal should not find for his product an outlet abroad which has hitherto been difficult to secure.

It is possible that the maximum British production has been reached since it is intimated that a number of the smaller collieries will remain closed, and the economy that has been practiced in the use of coal for the past few weeks will, to a considerable extent, long continue. The strike has also directed attention to substitutes for coal which will, it is thought, ultimately greatly restrict its use.

[Previous reports on the effects of the British coal strike were published on Apr. 17.]

---

#### **NEW ENGLISH BOTTLE MACHINE.**

[From Consul Frederick I. Bright, Huddersfield.]

One of the most important nontextile industries in the district about Dewsbury, a town of 75,000 inhabitants midway between Huddersfield and Leeds, is the manufacture of glass bottles. American bottle and jar machinery is already represented at Dewsbury and in other Yorkshire towns where glass products are made.

A recent invention for glass-bottle manufacture, the following particulars of which were furnished by a director of a Yorkshire company, permits of the use of 20 to 24 molds at one end of an ordinary Siemens furnace. With this new machine the bottle ring is made and removed from the ring mold first, the ring and body of the bottle maintaining an even heat and perfect regularity in cooling. There are special molds for making small rings, such as crown-cork rings, which overcome the tendency to crack. Special slides or grooves on which the ring molds work permit of a good joint at the top of the ring, and there is also a device whereby the tops of crown-cork rings, sure-seal bottles, etc., can be made in one complete ring without a joint and yet leave the bottle in the mold to cool.

There are many other labor and time saving features of the new machine. [Consul Bright's complete report will be loaned by the Bureau of Manufactures to interested firms.]

---

Immigration into Canada for the month of March showed a gain of 7 per cent over March last year. The total arrivals for the fiscal year ended March 31, 1912, were 354,237, of whom 133,710 came from the United States. Arrivals from the United States for the previous fiscal year were 121,451.

## AMERICAN PURCHASES IN LONDON.

[From Consul General John L. Griffiths.]

The declared exports through the London consulate general to the United States for the three months ended March 31, 1912, aggregated \$41,777,327, as compared with \$28,885,267 for the three months ended March 31, 1911. Aggregate amounts of leading items for the first quarter of this year with the increase or decrease compared with the same period last year follow:

Articles.	Value.	Increase or decrease.	Articles.	Value.	Increase or decrease.
Automobiles and parts of..	\$107,138	+ 240,433	Mustard.....	\$140,153	- \$10,042

Other metals.....	296,597	- 269,669			

The large increase in the last item is greatly due to the shipment to the United States of a portion of J. Pierpont Morgan's collection.

## Olive-Oil Production in Italy.

Consul General James A. Smith, of Genoa, reports that, according to figures furnished by the Ministry of Agriculture, the production of olive oil in Italy was 67,601,230 gallons in the season of 1909-10, 37,142,372 gallons in 1910-11, and 65,170,862 gallons in 1911-12. Dealers usually make their estimates of oil production upon a uniform average of 20 per cent of oil to the weight of the olives, but the percentage of oil produced during the last three years actually works out at 16.73 per cent in 1909-10, 15.03 per cent in 1910-11, and 17.5 per cent in 1911-12.

## Rail Prices for Egyptian Lines.

The firm of J. Hug & Co., of Cairo, writes to the Bureau of Manufactures that the adjudication of March 15, 1912, for the supply of Vignole rails for the Egyptian State Railways, resulted in the tender of the Stahlwerks Verband, Aktien-Gesellschaft, at \$33.12 per metric ton, being accepted. The order is for 6,000 tons of 47-kilo (103.62 pounds) per meter rails, and 2,700 tons of 30-kilo (66.14 pounds) per meter rails. The rails are to be made by Fried. Krupp, and delivered at Gabbary.

**RETAIL SHOP COMPANIES IN ENGLAND.***[From the Economist, London.]*

From the stock exchange point of view the large shopkeeping companies, doing business through a number of shops controlled from one center, are well worth following, especially for one who has a good knowledge of retail trade. Such a company depends for its success almost entirely on the quality of its organization and management.

Statistics regarding 12 such large companies show that the profit returns for some of them have increased steadily during the past three years, some have stayed at about the same level, and one or two have decreased heavily. Most of the decreases are attributed by the directors to the increased cost of raw materials, and it is a fact often overlooked in the talk of increased cost of living for the poor that the middleman does not always recover the full wholesale raise in prices from his customers.

It is commonly assumed that joint stock companies can beat their small competitors out of the field merely by their size. In fact, however, the big companies have not invariably been successful since they were turned into joint stock concerns, and it is clear that the managers of these businesses are scarcely less liable than the small capitalist to give way to the temptation of loose control and overstrained capital. One company which was floated as a public joint stock company in 1898 and soundly financed, gave a profit of \$320,000 the first year after the publication of its prospectus, and its profits have now grown to \$2,355,000 a year. This company has paid an ordinary dividend of 6 to 10 per cent a year and the deferred dividends have run from 21 to 200 per cent.

On the other hand a firm which did an enormous business when first floated, but which, partly on account of overcapitalization and partly owing to more recent causes, has not met with much success as a joint stock company, is doing worse now than before its flotation. The first prospectus of this company was issued in 1898 and showed a profit (before deduction of interest) of over \$860,000 for the preceding year, while in 1911 its net profits were \$614,000. In the meantime large sums of new capital have been raised and a new source tapped through the opening of a savings bank paying interest at 3½ per cent. A fresh argument against this last undesirable combination of the grocery business and banking is found in the present industrial situation, when the working classes must draw on their savings, such a drain tending to leave the business short of working capital.

A firm of boot and balata manufacturers and retail shopkeepers has done badly since its stock was floated in 1908, profits dropping from over \$290,000 in that year to about \$28,000 in 1911. As this company manufactures on a large scale, it is difficult to say where the decline in profits has occurred, the directors attributing it to the increased cost of balata.

**BRITISH ENGINEERING AND SHIPBUILDING AGREEMENT.***[From the London Times.]*

In the hope of preventing stoppages of work in shipyards and engineering establishments owing to disputes between workmen arising from claims to do certain classes of work, an agreement to be known as the demarcation agreement, 1912, has been drawn up between the Shipbuilding Employers' Federation, the Engineering Employers' Federation, and the Shipbuilding and Engineering Trades Federation, to which 20 of the trade unions in the engineering industry are affiliated. Both employers and employed have been recommended by their representatives at the joint central conference to accept the agreement, and a ballot is now being taken.

The agreement, which is to come into force on July 1, in the districts of Aberdeen, Dundee, East of Scotland, Clyde, Tyne, Wear, Tees, and Hartlepool, Barrow, Liverpool, Birkenhead, and Hull, provides that there shall be no stoppage of work nor shall men be paid off in consequence of disputes on demarcation questions. Failing mutual settlement the local management will give a temporary decision, which will be accepted by all parties pending a decision from a local joint committee, which when given "shall be final and binding on all parties for at least twelve months," after which it may again be brought to the joint committee for review after three months' notice has been given.

**Concrete contract.**—One London company has a contract for 110 miles of 1.7 by 1.2 and 1.5 by 1 meter concrete pipes for the Baku (Russia) waterworks conduit.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8733. Hollow brassware.**—An American consul in a Latin-American country reports that a new vehicle and furniture manufacturing establishment in his district is about to install a department for the manufacture of iron and brass bedsteads. The manager of this concern has requested the consul to put him in touch with American firms manufacturing hollow brassware suitable for use in the manufacture of bedsteads. He desires to obtain at once catalogues and lowest export prices from American firms handling these goods.
- No. 8734. Steel office furniture.**—A business firm in a Mediterranean country informs an American consular officer that it desires to be placed in communication with American manufacturers of steel office furniture. A member of this firm has inspected several articles of this kind in the office of the consulate and is of the opinion that a large demand could be created for similar furniture. References can be furnished, and correspondence should be in French or Italian.
- No. 8735. Material and equipment for tramways.**—A wholesale firm in electrical supplies in a European country desires to receive catalogues, price lists, and particulars from American manufacturers of material and equipment for electrical tramways (cars excepted), such as trolleys, switches, novelties, etc. Correspondence may be conducted in English, and the consul submitting the report states that it should be addressed direct to the firm in question.
- No. 8736. Chemical products, pharmacy, arts, and industry.**—An American consul in a European country reports that a firm in his district, manufacturing and dealing in chemical products for chemistry, pharmacy, arts, and industry, desires to become agent of an American factory of similar products. Correspondence should be addressed direct to the firm and should be in French.
- No. 8737. Extract of Virginia tobacco.**—An American consular officer in India has received an inquiry from a business firm in his district for information regarding the sources of extract of Virginia tobacco recently put on the market for flavoring purposes. Correspondence is desired with such firms as soon as possible.
- No. 8738. Drugs, medicines, and chemicals.**—The manager of a firm in a European country has called upon an American consulate to state that he desires to secure the agency for such medicines, drugs, and chemicals as it might be possible to sell there, and he wishes to consider offers from American manufacturers of these lines. He states that he has studied the market carefully, and he will be able to inform manufacturers whether or not their products can be sold there. There appears to be a good market for this class of goods, and a few American specialties of this nature are now found on sale, these goods reaching the market through English agencies.
- No. 8739. Tenders for dredging.**—The American consulate general at Ottawa, Canada, reports that the Department of Public Works has advertised for tenders, to be received until May 15, 1912, for dredging required at the following places in the Province of Quebec: Woodland, Vercheres, Varennes, and Lavaltrie. Combined specifications and form of tender can be obtained on application to the Secretary, Department of Public Works, Ottawa. Dredges and tugs owned and registered in Canada must be employed in the performance of the work contracted for.
- No. 8740. Cotton goods.**—One of the commercial agents of the Department of Commerce and Labor reports that a firm in a foreign country which represents one line of American goods is very anxious to get in touch with manufacturers of cotton goods such as sheetings, drills, denims, gingham, and flannels. The firm is reputed to be strong financially and is prepared to do a good business. All the members of the firm speak English, and correspondence may be in that language.
- No. 8741. Construction of port railway.**—The American consul at Montevideo, Uruguay, reports that tenders are called for the materials for the construction of the port railway of Montevideo by the Minister of Public Works. Plans and specifications cost \$5.17. Tenders will be opened June 4, 1912.

- No. 8742. Expanded metal and other fittings for buildings.**—An American consular officer reports that about 10,000 square yards of expanded metal for concrete roofing were recently imported into his district and created an immediate demand. It is estimated that about 500,000 square yards of this material can be disposed of annually in his district. He also states that most of the locks, bolts, hinges, and other iron and steel fixtures for buildings, which have been imported have proved unsatisfactory. There is a demand for a better make at slightly higher prices. A local firm desires catalogues and price lists of these articles.
- No. 8743. Tenders for engine.**—Sealed tenders will be received at the office of the city clerk, Moncton, New Brunswick, until May 15, 1912, for one combination pumping engine and hose cart as follows: 700 gallons capacity, 90 to 100 horsepower, 6-cylinder motor, speed 50 to 60 miles an hour, hose capacity 1,200 feet 2½-inch hose, gasoline capacity 25 to 30 gallons, wheel base at least 150 inches, wheel artillery type, locomotive bell; also one pumping engine as above without hose cart, and one steam fire engine of above capacity, to be hauled by horses. Detail specification with list of equipment to accompany each tender. Prices quoted to be f. o. b. Moncton, New Brunswick.
- No. 8744. Red-pine boards and pitch-pine beams.**—A business firm in Germany informs an American consulate that it would like to represent as agent for a section of that country an American exporter who can furnish red-pine boards and pitch-pine beams.
- No. 8745. Ordnance supplies.**—An American minister in a foreign country has submitted a report regarding the manufacture and purchase of projectiles and ordnance supplies in the country in which he is located. Copy of this report, giving detailed information, can be obtained by interested manufacturers upon application to the Bureau of Manufactures.
- No. 8746. Panama and straw hats.**—An American consul in a Mediterranean country reports that there is a good sale in his district for Panama and common straw hats. As the weather is warm, straw hats are worn a good part of the year. The consul writes that in his opinion this market can be increased, if American hat dealers will correspond with local merchants, a list of whom accompanied the report.
- No. 8747. Galvanized sheet iron.**—A foreign business firm has written to an American consular officer in the United Kingdom that it desires quotations for galvanized sheet iron, the quantities required being in lots of 100 tons, there would be repeat orders in increased quantities. The size of sheets should be 6 feet 3 inches by 2 feet 2 inches, or 9 feet 4 inches by 3 feet 3 inches. Separate quotations are required for 24 and 26 gauge. In quoting terms should be given c. i. f. net cash for the following ports: Adelaide, Melbourne, Sydney, Brisbane, Auckland, Wellington, and Buenos Aires.
- No. 8748. Hickory handles or hickory wood split for making handles.**—An American consul in a European country reports that a business man in his district wishes to purchase hickory handles for tools or hickory wood split in shapes suitable for making tool handles. He wishes prices quoted to include freight and also the local import duties. In other words he wishes the timber or handles delivered at a certain city freight and duty paid. The duty on tool handles by special decision is \$3.05 for 220 pounds, dyed or polished \$4.87.
- No. 8749. Sirup.**—In response to inquiries from the United States, an American consul in the United Kingdom reports that several firms in his district were interviewed regarding the matter of placing American sirup on that market, and it appears that there is no chance of an order resulting unless a sample is first submitted. Color, flavor, and density all points to be considered, and it is desirable that samples sent should contain two or three pounds and that the samples should represent the quality of the whole of the proposed shipments. Copy of the complete report, containing the names of local firms that have been interviewed and have expressed a desire to correspond with American sirup merchants, as well as the name of a merchant who is now visiting the United States and who is interested in the purchase of this article, can be obtained from the Bureau of Manufactures.
- No. 8750. Ivory-nut buttons.**—A foreign merchant informs an American consular officer that he is in the market for ivory-nut buttons of all sizes up to 55 and 60 millimeters (1.35 to 1.52 inches) in diameter. Offers should be in German. References are furnished.

**CARRIAGE STYLES IN BURMA.**

[From Consul M. K. Moorhead, Rangoon.]

The only carriages imported into Burma for sale come from Calcutta and Madras. No English or foreign made vehicles are imported, except by individual users. The majority of horse-driven vehicles in use in Burma are manufactured locally or in India; those imported from England or the United States are purchased direct by the users and not through local dealers. The value of carriages and carts imported into Burma during the fiscal year ended March 31, 1911, by countries, was \$109,665, divided as follows: United Kingdom, \$34,580; Ceylon, \$3,000; Belgium, \$2,855; United States, \$1,574; Germany, \$632; other countries, \$78; India, \$66,946.

The styles mostly used in Burma are 2-wheeled dog carts and buggies with syce's seat or step behind. The tops to the buggies must have closed sides (hood shaped) and be capable of being turned back. All vehicles have rubber tires and are fitted with foot bells. Local made buggies sell on the average for \$165, while those imported from India sell as high as \$400. Phaetons or victorias are also used to a considerable extent. In these vehicles the coachman's seat is usually raised up above the level of the floor and the cover is hood shaped.

[A list of coach works which manufacture locally and import from India all classes of vehicles is obtainable from the Bureau of Manufactures.]

---

**SALE OF SHEET METAL IN NORWAY.**

[From Vice Consul General Haakon E. Dahr, Christiania.]

One thousand five hundred tons of galvanized sheets and 25,000 tons of black sheets are imported annually into Norway, the former coming from Germany, England, and America and the latter mainly from Germany. The thinner galvanized sheets are mostly of American origin, but are purchased through British agents; those sold under the name "Apollo" are best known here. The thicker galvanized sheets are imported from Germany and Belgium.

Prices vary greatly, but at present (Mar. 23, 1912) German ship sheets 5 millimeters (0.197 inch) thick cost about 130 marks per 1,000 kilos (\$28 per short ton), f. o. b. shipping ports, net 30 days. Galvanized sheets from Germany sell at present as follows: No. 10, \$41 per short ton; No. 12, \$43; No. 14, \$45; No. 16, \$48; all prices f. o. b. Rotterdam or Antwerp. The American "Apollo" sheets, No. 22, cost about \$57 per ton.

[A list of persons who might act as agents may be had upon application to the Bureau of Manufactures.]

---

**Cotton Goods Investigations in Levant.**

Commercial Agent Ralph M. Odell has concluded his investigations of the cotton goods trade and industry in the Balkan States and Turkey. He is now proceeding to Egypt, Aden in Arabia, Abyssinia, and other East African countries to continue his work. The Bureau of Manufactures invites inquiries and correspondence relating thereto, covering textiles and affiliated products.

## FOREIGN TARIFFS.

### AUSTRALIA.

[From Consul General John P. Bray, Sydney.]

#### Decision Against Export Duty on Ores.

A bulletin has been issued by the Minister for Trade and Customs announcing that after an exhaustive inquiry the Government of Australia has decided not to place an export duty on ores. While some temporary advantage might be obtained by such a duty, it was decided that it would not benefit the mining industry. It was considered that such a check on the marketing of Australian ores would prove a dangerous experiment, and detrimental to the best interests of mining development. Some ores can be treated with distinctly greater advantage abroad, where they meet more suitable ores for mixing, and operations are cheaper.

"Mining is one of our greatest primary industries and one in which an army of workers is vitally interested," adds the official bulletin. Australian mining has to face world competition, and to be successful it needs every advantage possible.

### CANADA.

[From Consul General John G. Foster, Ottawa.]

#### Reciprocity Agreement with British West Indies.

The representatives of the British West Indies met with the representatives of Canada in numerous conferences, beginning March 27, 1912, and on April 9, 1912, a reciprocity agreement was signed. While the statement given out to the press does not indicate definitely the scope of the agreement, it is assumed that the draft agreement formulated by the Canada-West Indies trade commission has to some extent been followed. It is to be observed that in the

Ottawa conference Grenada, the Bahamas, Bermuda, Jamaica, and British Honduras were not included.

The following authorized statement relative to the agreement was given out to the press (from Ottawa Citizen, Apr. 10, 1912):

An agreement was signed in duplicate to-day by the representatives of the West Indian colonies and the Government of Canada. It was the result of five days' sitting in conference and a deal of steady work done outside the conference by subcommittees.

The agreement is made for a term of years and revocable at the end of the period named therein on one year's notice. It includes exchanges of products on a wide and generous scale and is based on a preference to the products of each country in the markets of the other.

The agreement goes to the Governments of the colonies included for consideration, and comes into effect when approved by both the Dominion and the colonial legislatures, and His Majesty's Secretary of State for the Colonies. It will be possible for all these to consider and decide, and for the agreement to go into effect before the beginning of the year 1913. Judging by the instructions given to the various delegates by their respective Governments, and the evident good will and harmonious cooperation shown by them in the sessions of the conference, it is anticipated that no objection will be made to the speedy ratification of the agreement.

The agreement is between Canada and the interested colonies alone, and leaves both with complete liberty to adjust their tariffs as respects all other countries. Grenada, the Bahamas, Bermuda, Jamaica, and British Honduras are the only British West Indian colonies that are not included, and for these the latch string is left on the outside of the door, and the lamp kept burning in the window, with a warm welcome certain for them when they come.

The questions of improved steamship communications between Canada and the West Indies were carefully considered, and the views of the conference were embodied in resolutions unanimously passed. The objective of these resolutions is to effect an up-to-date and adequate cable and steamship connection, based upon the cooperation of the West Indian colonies and the Dominion of Canada and the Government of Great Britain. Inasmuch as the agreement is to be submitted to the various Governments concerned for their consideration and approval, it is not advisable to give the details thereof at present to the public.

#### **Proposed Increase in Ship Subsidy.**

The Dominion estimates for the fiscal year 1913 contain provision for an increase in the subsidy for steamship service between Canada and the West Indies from \$60,000 to \$150,000.

[In Daily Consular and Trade Reports for Mar. 9, 1912, was given a brief summary of the preliminary draft of the proposals for reciprocity, to which, in a general way, it is suggested the agreement corresponds.]

---

#### **CUBA.**

[From Cuban Customs Circular No. 12, Mar. 26, 1912.]

#### **Duty on Lubricating Oils.**

A decision has been rendered by the Cuban customs officials to the effect that 30 days after the publication of the present circular all lubricating oils, whether derived from shale or from petroleum, excepting crude oils (as defined in the tariff) mixed with vegetable or animal oils, shall be dutiable under tariff No. 7.

It appears that under the accepted interpretation of a previous decree shale or petroleum lubricating oils have been treated as dutiable under tariff No. 6 (crude oils), even when not mixed with other oils. In the tariff "crude oils" has been defined as covering, in the case of shale oils, only those obtained from first distillation, with a density of 0.9 to 0.92°; and in the case of petroleum oils, those in the state in which extracted from the well, having undergone no operation whatever whereby the chemical composition has been altered or modified.

In the present circular it is held that there can be no such thing as a crude shale lubricating oil, because if a shale oil be a lubricant it can not conform with the requirement of density given in the definition of crude oils; and if the lubricating oil be derived from petroleum, it can not be in the natural state in which it was extracted from the well. Hence shale and petroleum lubricating oils are to be dutiable as refined lubricating oils under tariff No. 7 at a general rate of \$3.50 per 100 kilos (220.46 pounds) and at the rate of \$2.80 per 100 kilos if imported from the United States.

Crude shale oil and crude petroleum oil, as included under the definition of those products given in the tariff, if mixed with animal and vegetable oils, for lubricating purposes, remain dutiable under tariff No. 6 at \$1.40 per 100 kilos, general rate, and \$1.12 per 100 kilos, preferential rate to United States.

#### NEW ZEALAND.

[From Official Gazette, Feb. 15, 1912.]

#### Customs Declaration for Baggage and Personal Effects.

When it becomes necessary to require any passenger to New Zealand to make a declaration to satisfy the collector of customs that the baggage and effects of the said passenger are exempt from customs duty, it is ordered that the form given below shall be made out and signed in the presence either of a customs officer, a postmaster, or a solicitor:

Port of —, —, 191—.

In the ship —, from —.

Marks, numbers, or address.	Number and description of packages.	Examination account.

—, Examining Officer.

I, — [name in full], do hereby declare that the packages above described contain only passengers' baggage and effects, including only wearing apparel and other personal effects that have been worn or in use by —; also — implements, instruments, and tools of trade, occupation, or employment not exceeding fifty pounds sterling in value, and — household effects not exceeding one hundred pounds sterling in value, used by — abroad for more than a year; that — entitled by law, as passenger to this Dominion by the — [name of the ship], arrived — [date of her arrival in the Dominion]; and I further declare that none of the above goods is intended for any other person or persons, or for sale.

(Signature.) —.

#### PORTUGAL.

[From American Minister Cyrus E. Woods, Lisbon.]

#### Proposed Payment of Customs Duties in Gold.

A bill has been introduced in the Portuguese Congress requiring that all customs duties be paid in gold, instead of in paper money, as at present. Its purpose is to increase the revenues of the country, as gold is at a considerable premium. The bill has not yet been discussed, and I am advised that it will not be taken up before the reassembling of the Congress in November, 1912. There is reason to believe that the bill will be passed, as it is an administrative measure.

[From *L'Economiste Européen*, Apr. 5, 1912.]

On March 22, 1912, the Minister of Finance of Portugal laid before the Chamber of Deputies a bill proposing that the customs duties shall be paid in gold. Portuguese gold money will be accepted at its nominal value, as will sovereigns and gold coins of the Latin Union, and substantially guaranteed drafts on London, Paris, Brussels, Berlin, and Amsterdam, in terms of pounds, francs, marks, and florins, will be accepted at their par value. The Government proposal has already given rise to considerable criticism, especially on the part of the importers, and to a protest by the Chamber of Commerce of Oporto. The premium on gold has varied from 8 to 10 per cent during the past few months. The adoption of payment of customs duties in gold would, accordingly, be equivalent to an increase in the customs duties to that amount.

#### **Effect of Proposed Change on German Treaty.**

The Handelsmuseum of April 11, 1912, calls attention, in connection with the proposed change in the method of paying duties, to the clause in the German-Portuguese treaty of November 30, 1908, which provides that the treaty can be abrogated on six months' notice, in case of a change in the method of paying duty.

---

### **ST. LUCIA.**

#### **New Customs Tariff.**

The Bureau of Manufactures is in receipt of a copy of a new customs tariff for the island of St. Lucia, British West Indies, enacted March 25, 1912, and in effect April 1, 1912. The customs ordinance of 1907 is repealed.

---

### **SALVADOR.**

[From *Diario Oficial*, Salvador, Mar. 9, 1912.]

#### **Proposed Tariff Revision.**

The Minister of the Treasury and of Public Credit of Salvador, in a report reviewing the activities of his department during the year 1911, makes mention that the tariff of the country is undergoing careful study, preparatory to the presentation to Congress of a draft of a new tariff. The report is, in part, substantially as follows:

For some time there has been felt a growing need of a revision of the present tariff, not only because of the many additions and changes which have already been made with regard to rates, but also because of obscurity in the nomenclature which gives rise to all sorts of uncertainties, thereby working injury to business and unnecessarily consuming the time of the officials of the Treasury Department.

Therefore, the ministry is at the present time engaged in study preparatory to the publication of a third edition of the tariff, containing the necessary emendations and additions; and to assure greater accuracy, recommendations have been solicited from the experienced merchants of the capital of the Republic in regard to the precise modifications advisable in the distinct divisions of the tariff. To this end a circular was addressed to the business men of the capital.

If possible, the proposed new tariff is to be submitted to the Congress at the present session.

#### **Reduction on Automobiles.**

The same report of the Minister of the Treasury and of Public Credit, in a review of the tariff changes during the year 1911, records a reduction in the "aforo" on automobiles from 10 centavos to 5 centavos per kilo. The duty, calculated on that figure, including surtaxes, amounts to about 5 cents per pound.

**Duty on Lumber.**

In order to avoid the too rapid depletion of the forests within the country, a decree of December 7 provides that the duty on imported lumber, in planks or in other pieces, whether rough, planed, or dove-tailed, shall be reduced to 3 centavos silver per kilo, and that lumber shall be exempt from all surtaxes. [The silver peso of Salvador, consisting of 100 centavos, = \$0.423, Apr. 1, 1912.]

---

**SWITZERLAND.**

[From Consul George Helmrod, Berne.]

**Prohibition of Artificial Wine and Cider.**

The Federal Assembly of Switzerland has issued a decree prohibiting, from January 1, 1913, the importation, manufacture, keeping in store, exposing for sale, and the sale of artificial wine and artificial cider. The only exception made to the prohibition is that such wine and cider may be kept for family use, under certain regulations provided for the purpose. Artificial wine, as embraced in the present prohibition, is any beverage resembling wine, made either from raisins, grape skins, wine lees, residues from the distillation of wine, or of tamarind fruits, figs, malt, by mixing with wine or by any other process; wine made by the Gall process, contrary to the rules laid down by the Government; watered wines; mixture of any of the products described above with wine or must; mixture of cider or the juice of berries, whether or not fermented, with wine or must. Under the definition of artificial cider is included any beverage resembling cider, manufactured entirely or in part from fruits other than the apple and similar fruits, and cider watered to such an extent that it does not fulfill the requirements laid down by the Government. For the importation of artificial wine or artificial cider the penalty will be fine, or imprisonment, or both. [This decree is subject to the referendum.]

---

**TRIPOLI.****Customs Duties.**

Consul John Q. Wood reported that in December, 1911, the Italian Governor General announced that the rate of customs duty on goods imported into Tripoli would remain at 11 per cent ad valorem (the rate in force under the Turkish tariff), with the exception that the duty on barley, wheat, flour, macaroni, rice, dried fish, sugar, coffee, tea, and petroleum would be 4 per cent ad valorem. The importation of arms and ammunition, salt, and tobacco was prohibited.

Under date of March 28, 1912, Consul Wood reported that the tariff law had been changed to allow the free admission of tanned goatskins, and crude ostrich feathers, on condition that they shall be exported within six months. In the words of the Governor General's decree, "the object of this concession is to assist these industries which give employment to many poor workingmen in Tripoli. The military operations conducted in this country have cut off all the commerce between Tripoli and the Sudan, from where caravans brought ostrich feathers and tanned goatskins. The exporters of these articles are ordering all shipments to be made via Lagos to Liverpool and other English ports, with instructions to forward to Tripoli.

Because of the cheapness of labor in Tripoli, exporters find that it will pay them to have the goods shipped here to be prepared for foreign markets. Practically all the Sudan goatskins are shipped to Boston, and the ostrich feathers to Paris and London."

### UNION OF SOUTH AFRICA.

[From Board of Trade Journal, Mar. 21, 1912.]

#### Bill Containing New Customs Regulations.

The text of a bill to amend the customs regulations of the Customs Union of South Africa was published in the official Government publication of the Union February 24, 1912. Among the regulations included in the bill is a list of the articles the importation of which shall be prohibited; prison-made goods are in the list.

It is also proposed to impose a dumping duty, over and above the customs duty, equal to the difference between the selling price of the goods for export and the current value of the goods for home consumption, in the case of articles imported into the Union of a class or kind made or produced in the Union, if the export price or the actual selling price to the importer be, at the time of exportation to the Union, less than the current value of the same articles when sold for home consumption in the usual and ordinary course in the country whence they are exported to the Union.

The bill further specifies that when a bounty is granted in the country of origin of an article, an additional duty equal in amount to the bounty on the article shall be collected on importation into the Union.

### WEST AFRICAN COLONIES.

[From report of Consul W. J. Yerby, Sierra Leone.]

#### Customs Regulations.

The attention of American exporters is called to a circular issued by the supervisor of customs at Burutu, Southern Nigeria, containing certain customs regulations applicable to shipments to all West African colonies—French, German, Spanish, and Portuguese, as well as British.

Owing to difficulty experienced in dealing with packages which bear the same marks and numbers, though having come in different consignments, it is suggested that shippers should in the future number consecutively all packages exported to this colony. This would insure that different packages consigned to the same firm but belonging to different shipments would not bear the same number, and there would be no difficulty in distinguishing them immediately. Invoices should be sent along with the goods by the same ship, otherwise the importer may be subject to great inconvenience in complying with the local customs regulations. Where the invoices are made out in terms of foreign money, the equivalent value of the goods in terms of coin current in the colony should also be inserted in the invoice.

The above are the main points in the circular, which also contains some general recommendations about meeting the customs requirements of the West African colonies. [The full report of the consul on the subject is on file in the Bureau of Manufactures.]

**CONSTRUCTION WORK ABROAD.****PERU.**

[From American Minister H. Clay Howard, Lima; see also Daily Consular and Trade Reports for Sept. 29, 1911.]

**New Line Across the Andes to Amazon Valley.**

The Peruvian Congress has passed a bill for construction of the Ucayali Railroad, which will connect the most easterly railway head in Peru with Amazon River navigation. The line will extend 270 miles from Goyllarisquisca, terminus of the Cerro de Pasco Railroad, to the port of Pucallpa, on the Ucayali River. The route will follow the Huallaga River, crossing the mountains which separate it from the Ucayali River, and will cross the extensive Sacramento pampa.

It is planned to run 2,000-ton steamers from Pucallpa to Iquitos, where connection will be made with ocean-going vessels. Steamboats are now operating from Pucallpa 300 miles south on the Ucayali River. Huanuco, 6,000 feet above sea level and with 10,000 population, is the largest city en route.

By the concession, which needs only the signature of the President to become effective, the Peruvian Government will issue \$10,000,000 in bonds, payable in installments with the completion of each 25 miles of the road, to the Amazon & Pacific Railway Co., a corporation organized in New Jersey. The bonds will bear 6 per cent interest, with 1 per cent for a sinking fund, and are to be secured by the tobacco tax. The concession includes the right to extend the railroad 190 miles from Cerro de Pasco to the Pacific coast, and upon its completion a further payment of \$2,500,000 in Peruvian bonds is to be made. Five years are allowed for construction of both branches, which are to become Government property after the concessionaire has operated them for 25 years. In addition to the bonds mentioned Peru is to convey 5,000,000 acres of land, the title to which becomes accomplished when the President approves the bill, the concessionaire, A. W. McCune, having already deposited \$150,000 as security for the execution of the contract.

Speaking of the country through which the road would pass, Mr. McCune said that the Sacramento pampa contains 80,000 square miles and is the largest in the world. The engineers who surveyed the road, he said, were the first of the white race known to have crossed the vast plain, which they found inhabited by about 250,000 people.

The West Coast Leader, a weekly paper of Lima, considers that this railway will be of great strategic and commercial importance, and will open up a vast productive area of eastern Peru, and give direct communication between the capital and the Atlantic navigation system.

---

**ARGENTINA.**

[From Consul General R. M. Bartleman, Buenos Aires; figures are in United States currency.]

**New Deep-Water Port—Buenos Aires Port Works.**

Construction of the deep-water port at Arroyo Parejas, in Bahia Blanca district is proceeding. It will probably be available within two and a half years and will accommodate the largest class of Atlantic steamers. The Régie Générale des Travaux Publiques et

Chemin de Fer, with offices at Talcahuano No. 612, Buenos Aires, has the work in hand. The capital available amounts to \$5,840,000.

Extending the port of Buenos Aires has begun. Offices, warehouses, etc., are being constructed; and there will be three docks, each 550 meters in length and 140 meters wide, provided with cranes, warehouses, railway lines, etc., all to be finished in five years. The total estimate for the work is \$24,500,000. The company undertaking it is the C. H. Walker Co., with head offices at 15 George Street, London, England. The local representative is E. Marsh Simpson, at Alsina No. 339, Buenos Aires.

#### **Estimates for State Railways—An Industrial Zone.**

The estimates for the State lines of railways in 1912 have been approved: Administration, \$158,053; management, \$323,723; traffic department, \$4,073,255; technical department, \$2,195,777; total, \$6,750,808.

The legislature of Buenos Aires Province has approved the Government bill reserving 1,000 acres of fiscal land at Ensenada for creating an industrial zone. Limited taxation will be imposed during the first 15 years, and special facilities are to be granted in other forms.

---

### **MEXICO.**

[From the Daily Herald, Mexico City, Apr. 25, 1912; supplementing reports in Daily Consular and Trade Reports for Apr. 8, 1912.]

#### **Awarding Contracts for Railway Construction.**

Bids for constructing the Mexico-Tampico short line and the road between Vera Cruz and Matamoros have been received and contracts will be awarded within the next few days according to information given out at the offices of the National Lines.

The short line from Mexico City to Tampico, which is the more important of the lines which it is proposed to construct, will be an extension of the present National line from Honey, State of Puebla, to a point on the line to be constructed between Vera Cruz and Tamos, 5 kilometers west of Tampico. The Rio Panuco will be crossed at Tamos by a steel bridge, 1,700 feet long, which will be one of the largest in the Republic.

The line to be built between Vera Cruz and Matamoros will follow the Gulf coast for its entire distance, connecting at Tampico with the Monterey-Tampico railroad.

---

### **CANADA.**

[From Consul General John G. Foster, Ottawa.]

#### **Construction of Wharf at Upper Maugerville.**

The Department of Public Works has advertised for tenders, to be received until May 23, 1912, for constructing a wharf at Upper Maugerville, Sunbury County, New Brunswick. Plans and specifications may be seen and form of tender obtained on application to the Department of Public Works at Ottawa.

---

### **NETHERLANDS.**

[From Consul Frank W. Mahin, Amsterdam.]

#### **The New Stock Exchange.**

Construction of the new special stock exchange (announced in Daily Consular and Trade Reports for Jan. 3 and Dec. 12, 1911) is proceeding. The new edifice will be of four stories, about 150 by 250 feet. Brick and granite of various colors will be used in the walls. The main room will be a great exchange hall, reaching from the

first floor to a glass roof and surrounded by visitors' galleries. Smaller rooms will be provided for post, telegraph, and other offices, a restaurant, assembly hall, etc. The ground floor will have several shop rooms on the streets with storage space in the interior. The building will have two elevators and four stairways and be otherwise equipped with all modern conveniences.

### GERMANY.

[From Consul H. J. Dunlap, Cologne.]

#### New Bridge Over the Rhine.

The city of Cologne has decided to build a new steel bridge over the River Rhine in place of the pontoon bridge which has been in use from time immemorial. It has not yet been determined whether the new bridge shall be built on pillars of stone or whether it shall take the suspension form as in Budapest, Hungary. A commission has returned from Budapest with a favorable impression, but objections are made that the river front will be disarranged by putting in the new construction, both the steel bridges now in existence being built upon stone abutments. The bridge will provide for double street car tracks, general wagon traffic, and foot passengers. Foreign firms can not well compete for the bridge contract, but those interested in the matter should write to the Oberbürgermeister, Koeln a/Rhein. The specifications will be ready shortly.

### RUSSIA.

[From Consul General John H. Snodgrass, Moscow; supplementing report from Riga to Daily Consular and Trade Reports for Jan. 13, 1912.]

#### Improvement and Development of Commercial Seaports.

The Russian Government has decided to make some costly improvements at all its important seaports, and, in line with this general policy, the Minister for Trade and Industry has submitted to the Duma's consideration its primary program. The initial cost is fixed at \$52,330,871, of which \$46,345,412 will be charged to extraordinary expenses and the remaining \$5,985,459 will come under the head of ordinary expenses. The suggested appropriation for each port is given as follows:

*Archangel.*—\$705,550 is asked, including \$188,490 for deepening harbor, \$25,750 for light signals and buoys, \$180,250 for ice-cutting steamer, \$72,100 for strengthening the Solombalsky coast, and \$238,960 for expropriation of land.

*St. Petersburg.*—\$6,729,763 is asked, \$215,013 for continuance of building a coal harbor, for enlarging and deepening of harbor for export of timber and grain, and for building wharves in Morskoi Canal; \$6,514,750 for enlarging and improving port of St. Petersburg, to wit: Widening grain and timber harbor and deepening to 28 feet; lengthening left dam of Morskoi Canal to 700 feet; building a pier for export cargoes, the pier to be with massive bank sides; building a pier for timber storehouses; for enlarging the island Volni; filling in the stream Podbatareinaya; and for building a canal 22 feet deep to the River Ekateringofka with a reservoir at mouth of canal.

*Revel.*—\$607,700 for rebuilding western pier.

*Riga.*—\$2,672,234 asked: For extending the quay of Muehlgraben by 2,450 feet, \$233,810; extending pier of export harbor by 3,500 feet, \$656,625; improving western Dvina River and rendering tributaries navigable for barges, \$569,075; building a wall along Andreiev Island, \$123,600; building a bank side on Andreiev Island, \$849,750; building a road from second Vigonnaya jetty to Muehlgraben Basin, and a permanent bridge over River Red Dvina, \$108,150; continuing sea wall on Lutsausholm Island, \$84,975; other expenses, \$45,835.

*Windau.*—\$355,350 for following improvements: Deepening entrance sea canal, \$257,500, and for constructing quays for exports and imports, \$97,850.

*Libau.*—\$2,358,700 for rebuilding new pier in roadstead to north of present quays; lengthening roadstead quays by 924 feet; building a quay to north of the new pier; building a sea wall (1,715 feet) from end of above quays to Razdelitelny Pier; and deepening entrance canal into port to 31 and 32 feet.

*Pernau.*—\$61,800 to build quays and dredge harbor to 22 feet.

*Narva.*—\$272,950 is for deepening sea canal to 24 feet and dredging and widening mouth of river.

*Baltic Sea.*—It is planned to establish a number of "refuge ports" in this sea, for which \$468,135 is allowed. The refuge ports are as follows: Asseeriv, in Gulf of Finland between Port Kunda and mouth of River Narova; Verder, at entrance into Munsund from Gulf of Riga; port of Pevlov, at mouth of River Sakkey; Oriak, in Gulf of Jaousta, formed by southeastern coasts of island Dago and island Kaasar; Tserel, on island Oesel; and bay of Kielkond, on western coast of same island.

*Danube River.*—\$3,203,815 is required for improving navigation at mouth of Danube, building a canal with locks and a sheltered roadstead in bay of Zebriansk, and improving port of Reni.

*Odessa.*—\$4,975,415 for constructing a grain harbor.

*Eupatoria.*—\$1,133,000 for reconstruction of port.

*Nikolaiet.*—\$2,623,925 for improvements: For deepening entrance to 30 feet, \$1,789,625, and for development of mooring blocks, \$834,300.

*Kherson.*—\$136,475 is asked, \$59,225 for continuing work in building quays, and \$77,250 for other necessary work.

*Crimean Peninsula.*—For building "refuge ports," \$386,250, \$257,500 for building refuge port in Soudak, \$20,600 in Ak-Mechet, and \$108,150 in Usular.

*Anapa.*—\$87,550 for extension of 700 feet of present port.

*Novorossiisk.*—\$103,000 for lengthening mooring line.

*Tuapsey.*—\$174,070 for widening the pier, deepening harbor, etc.

*Batum.*—\$439,295 for improving harbor.

*Caucasus.*—\$1,287,500 for building "refuge ports" along Caucasian Black Sea coast, to wit: \$515,000 at Sukhum, \$515,000 at Sochi, and \$257,500 for building wharves at Gelendjik, Gagry, Host, Gudaout, Adler, and Djoubda.

*Berdiansk.*—\$566,500 for improvements.

*Mariupol.*—\$6,196,480; for coal-loading machinery, \$824,000; enlarging harbor, \$5,211,285; rebuilding wharves, \$161,195.

*Kertch-Enikalsk.*—\$1,699,500 for deepening Kertch-Enikalsky Canal; \$231,750 for adjusting basin for loading grain.

*Rostov-on-Don.*—\$1,123,777 for extension of embankments.

*Port of Azov.*—\$87,555 for lengthening quay.

*Eyak and Temriuk.*—\$1,596,500 for widening and deepening port of Eyak, and \$303,593 for port of Temriuk.

*Sea of Azov.*—\$233,810 for building quays and deepening entrances to harbors of several small loading places on Azov Sea.

*Volga River.*—\$4,120,000 for improving navigation at mouth of Volga, building a canal 14 feet deep and 280 feet wide from Astrakhan to "natural depth of the sea," from 14 to 16 feet.

*Petrovsk.*—\$16,738 for protective walls to prevent sand drifts at harbor entrance.

*Baku.*—\$515,000 for building a quay for general use and for erecting a breakwater.

*Krasnovodsk.*—\$360,500 for improvements in the port and on the Urja.

*Caspian "ports of refuge."*—\$206,000 for building such ports in Derbent, at mouths of Rivers Kura, Terek, in Artara, and in other places on Caspian.

*Vladivostok.*—\$3,038,500 for enlarging the port.

*Nikolaiefsk on the Amur.*—\$739,025 for deepening sea entrance into that port and \$2,328,701 for dredging machines are required.

It is expected that the above works will be completed in five years. The sum of \$46,345,412 to be charged to extraordinary expenses is divided into five parts, one of which will be apportioned for each year.

## TURKEY.

[From the Near East.]

### The Boyana Project.

The Ministry of Public Works and the Régie Générale des Chemins de Fer signed the convention for this enterprise on April 2. Besides the preparation of plans for the whole project at a cost not to exceed \$30,000, the company undertakes, for the account of the Government, certain work of urgent necessity on the River Kiri, including the

construction of a barrage and a canal altering the course of the river toward the Lake of Scutari. For this work the company will be paid monthly the actual cost plus 15 per cent for general working expenses in connection with the same.

#### **The Hedjaz Railway.**

The construction of the branch line, Afouleh-Naplouse-Jerusalem, of a length of 140 kilometers, has been decided upon, and work is to be started shortly. Another branch of 33 kilometers, from Deraa to Bars Eski Cham, is well in hand.

#### **Road Construction.**

M. Loucheur, of the Société des Routes d'Etat, is expected here shortly to sign the convention with the Ministry of Public Works (Constantinople) for a further section of 10,000 kilometers of roads to be constructed.

#### **Electric Tramways Concession.**

The Ministry of Public Works has invited tenders for a chain of electric tramways for the Asiatic portion of the city, Scutari, Kadikeui, and their environs. The projected lines are the following: (a) From Scutari to Tchamlidja and Alemdagh; (b) from Scutari to Kadikeui, with a branch line to Haidar Pasha; (c) from Kadikeui to Moda; (d) a branch of the previous line to Fenerbaghtche.

The concession is for a period of 60 years, and the concessionaire must form an Ottoman company. The company will have the option of itself producing the motive power or of purchasing the same from third parties. The surveys are to be completed within a period of two years, and the plans submitted by the company must be accepted or modified by the Ministry of Public Works in a delay not to exceed four months; work to be started in six months from the date of the acceptance of the plans, and to be completed within a period of three years from the same date, with the exception of that portion of the chain between Tchamlidja and Alemdagh, for which a period of 10 years is allowed for completion.

The adjudication bears further on (a) the methods of working and profits; (b) the share of profits to be allowed to the prefecture of the city, after deducting working expenses, interest, and redemption of capital for first outlay and supplementary works; (c) on the rate of interest on capital for first outlay and supplementary works; (d) the participation of concessionaire in the cost of acquiring ground for the widening of streets where the tramway is to pass; (e) on the quantity of rolling stock and the number of runs per diem. Those tendering must furnish a guarantee of \$25,000, a certificate of technical capacity, and produce evidence of the partaking of financial establishments or well-known capitalists in the undertaking. The adjudication closes on June 15.

---

### **FOREIGN TRADE IN DENATURED ALCOHOL.**

The Bureau of Manufactures has issued a monograph entitled Foreign Trade in Denatured Alcohol that should prove of interest to American manufacturers and consumers of wood alcohol and methylated spirit. The monograph includes consular reports from 24 countries, most of which were written in response to inquiries as to the possibility of increasing the foreign sales of American wood alcohol. The aim has been in each case to indicate the demand for denatured alcohol, the possibility of increasing the demand, and the amount of ordinary alcohol produced. The regulations governing denaturation are given in detail for some countries, including Germany. Copies of the monograph may be secured upon application to the Bureau of Manufactures.

---

### **SCOTTISH STEEL PRICES ADVANCED.**

[From the London Times.]

The steel makers of Scotland have advanced prices by \$1.22 per ton, making the minimum quotations for ship plates \$37.10, angles \$35.28, and boiler plates \$40.75, all less 5 per cent for Clyde delivery. This follows upon an advance of \$2.43 per ton in ship plates and angles and \$1.82 per ton in boiler plates in the northeast of England, and coincides with advances of from \$1.22 to \$2.43 per ton in Staffordshire iron.

## AUSTRALIA'S INDUSTRIAL PROGRESS.

[From Consul General John P. Bray, Sydney.]

Official statistics of Australia's industries for 1910 disclose, on comparison with the corresponding figures for 1909, a satisfactory advance throughout.

Taking the Commonwealth as a whole, the number of factories increased by 625, or 4.7 per cent, while the number of employees rose 20,413, or 7.7 per cent. The amount paid in wages exhibits a larger percentage of increase than does the number of workmen, the figures showing that 13.1 per cent more was paid in wages during 1910 than in the previous year.

Reviewing the progress in each State, the increase in the output of New South Wales was \$32,386,334, or 15.49 per cent; Victoria, \$18,310,785, or 11.44 per cent; South Australia, \$6,115,195, or 12.66 per cent; Western Australia, \$2,554,947, or 13.10 per cent; Queensland, approximately 21 per cent. Tasmanian figures are not available for comparison, the output returns as collected for 1909 being unreliable.

## Details by States.

The figures for 1910 are summarized as follows:

	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.
	<i>Number.</i>	<i>Number.</i>	<i>Number.</i>	<i>Number.</i>	<i>Number.</i>	<i>Number.</i>
Factories.....	4,833	4,673	1,563	1,278	550	605
Employees.....	99,746	102,176	33,944	27,010	14,107	9,848
	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>
Wages paid.....	42,240,136	36,940,530	13,797,221	11,391,714	9,182,573	3,619,835

Materials used.....	152,683,574	106,634,460	46,057,340	32,538,939	8,796,401	6,720,287
Value added in process of manufacture.....	88,447,451	71,537,340	30,692,309	21,818,678	13,226,949	7,780,797
Output.....	241,132,025	178,171,750	76,743,650	54,356,818	22,033,349	14,501,063
Land and buildings.....	58,948,651	43,799,598	14,903,434	12,872,478	8,140,272	4,962,133
Plant and machinery.....	56,272,093	36,941,030	22,509,182	10,816,999	9,202,906	4,957,858

The proportion which the various items bore in 1910 to the value of the output in each State is shown below:

	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.
	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>
Wages.....	17.52	20.73	17.93	20.77	37.14	24.96	19.77
Fuel.....	2.32	1.74	1.37	2.81	3.33	4.37	2.18
Materials used.....	63.32	59.85	60.01	59.86	39.92	46.35	60.22
Margin for profits and miscellaneous expenses and charges.....	16.77	17.68	20.69	16.56	19.62	24.32	17.83

## Data as to Employees.

The preponderance of male over female employees in 1910 appears from the following table, which also gives the average yearly earnings of the factory workers of both sexes:

	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.
Male employees.....	75,419	66,309	27,165	21,864	11,654	8,145	210,556
Female employees.....	24,327	35,967	6,779	5,146	2,453	1,703	76,275
Number of males per 100 females.....	310	184	401	425	478	478	276
Average amount of salaries and wages paid per employee.....	\$441	\$380	\$422	\$439	\$602	\$390	\$423

The low "masculinity" of employees in Victoria is the result of the large number of females working in clothing and textile factories—more especially tailoring and dressmaking establishments, 27,878 females being so engaged in Victoria out of a total of 35,867 females employed. New South Wales had 17,272 females engaged in the clothing and textile fabrics mills, while the total number of females employed in that State was 24,327.

#### Production in New South Wales.

The following tabular statement is a record of production in the State of New South Wales during 1900 and 1910:

Articles.	1900	1910
Wool, greasy.....pounds..	237,606,000	415,338,080
Tallow.....hundredweight..	444,429	756,100
Butter.....pounds..	41,479,794	76,694,830
Cheese.....do..	3,558,833	5,191,089
Bacon and ham.....do..	10,863,125	12,620,067
Wheat.....bushels..	16,173,771	27,913,547
Corn.....do..	6,292,745	7,594,130
Oats.....do..	593,548	1,702,793
Hay.....tons..	826,280	843,080
Potatoes.....do..	63,253	121,033
Minerals.....value..	\$30,919,699	\$41,082,126
Primary industries.....do..	\$147,442,680	\$228,317,940
Manufactures, net.....do..	\$46,928,160	\$81,616,837
All industries.....do..	\$194,370,840	\$309,936,780

The number of workers in various lines during certain years of the same decade was as follows:

Years.	Rural.	Mining.	Factories.	Railways and trams.
1900.....	132,324	43,745	60,779	14,067
1905.....	128,130	38,932	73,175	17,668
1909.....	142,153	36,405	91,702	25,345
1910.....	146,342	37,413	99,746	26,604

#### Equipment for Canadian Railways.

Lord Strathcona, high commissioner for Canada, in London, was informed by cablegram from the Minister of the Interior at Ottawa that by July 1 all the Canadian Pacific Railway trains on the Field-Kamloops Division will be drawn by oil-burning engines. This is the heaviest piece of road in the Rockies, and the use of oil will provide an absolute safeguard from forest fires. The Dominion Government has placed the largest order ever given for rolling stock for the Intercolonial Railway. It aggregates \$1,250,000. Nine freight locomotives have been ordered from the Canadian Locomotive Works at Kingston, Ontario, 500 steel box cars from the Nova Scotia Car Co., 2 sleeping and 2 dining cars from the Canada Foundry Co., and 6 first-class coaches from the Preston Car Co. Four entirely new trains are to be placed on the "Ocean Limited" service. This service will cost \$150,000.

Automobile chassis were exported by Germany in January, 1912, to the value of \$1,164,534 (representing 566 in number), against \$694,008 in January, 1911, and \$456,960 worth in January, 1910.

**URUGUAYAN LEGISLATIVE MEASURES.**

[From American Minister Nicolay A. Grevstad, Montevideo.]

**Sales by Weight—Fencing Public Roads.**

The Montevideo Association of Bakeries presented a petition to the municipality requesting that the ordinance requiring bread and meat to be sold by weight be declared without effect. The municipal authorities, after consideration, denied the application of the bread makers and issued special instructions to the Bureau of Weights and Measures with reference to carrying into full effect the provision requiring the sale of meat by weight.

There is pending before the Uruguayan Legislature a bill providing for the more effective fencing of public roads as a means of preventing infection of live stock. The measure is a complement to the campaign against scab and has been framed in accordance with the demands of the stock farmers as expressed by the Rural Congress and various rural societies and prominent ranchmen (*estancieros*). Under this bill, which is expected to pass as framed, outside fences must be provided with seven wires instead of six, as now, and the wires must be strung so closely together that sheep can not go through the fence. [A copy of this bill is on file in the Bureau of Manufactures.]

**New System of Live-Stock Brands and Marks.**

A new system of brands and marks for live stock is to be established in this country. The Government has presented to the General Assembly two bills concerning this matter, which undoubtedly will be adopted without essential modifications.

Under the first [a copy of which is on file in the Bureau of Manufactures] of these two bills the system of progressive numeration is made obligatory. Rules are prescribed for marks and brands. An alphabetic register of live stock is established for the entire Republic, and also official stock books for the stock farmers. The second bill authorizes the Executive to expropriate patented systems of brands of progressive numeration for a consideration not to exceed \$50,000; to invite competition for marks of progressive numeration; and to purchase for the exclusive use of the State the successful system at a remuneration not to exceed \$20,000. An appropriation of \$50,000 is provided for the establishment and publication of departmental alphabetic registers, for printing the stock books for the ranchmen, and for incidental expenses.

The presidential message transmitting these bills states that they have been framed in compliance with the wishes of the Permanent Rural Congress and to meet a pressing need of the stock farmers of the country. The system of progressive numeration, which is now to be made compulsory, already prevails as regards major stock, but as regards minor live stock there is great confusion and uncertainty concerning marks, and to obviate this the Executive proposes to adopt an official system and to invite competition for the best plan of marks and brands.

**Size and Place of Brands—Revenue.**

Taking note of frequent protests from foreign markets against injury caused by brands on the better part of the hide, a maximum size for the brand has been fixed in the bill, and the parts where the brands may be applied are defined. The formation of alphabetic

departmental registers of marks and brands is intended as an aid to the public authorities and to increase the safety of and the respect for rural property. The farmer's official pass book will serve the double purpose of furnishing a stock census always up to date by means of a numeration of stock made by the farmer himself and of guaranteeing ownership by furnishing exact knowledge of the stock in each establishment.

In order to meet the cost of the expropriations and the competition, it is proposed to levy a uniform fee of 10 pesos (Uruguayan peso is equivalent to \$1.034 United States) for each mark or brand of the official system. It is assumed that 50,000 of these will be required the first two years. This will yield 500,000 pesos, of which the national treasury will receive 400,000 pesos, while 100,000 pesos will be applied for purposes of the departmental registers. The yearly revenue from new marks, transfers, etc., is estimated at 35,000 to 45,000 pesos.

[From Consul Frederic W. Goding, Montevideo.]

#### Government Encouragement of Immigration.

The Uruguayan immigration law provides that persons needing foreign labor may submit a request in writing to the director of lodgings for immigrants, stating the number and nationality of the laborers desired, class of work, hours, pay, and conditions and form of payment. The communication must also state that a guaranty is given for any sum advanced by the Government for the immigrants' passage, or shall propose a guarantor who shall also sign the petition. If the petition is favorably acted upon by the Ministry of Industries, the proper consulate is asked for immigrants, the navigation company by which they shall be carried being specified.

Out of the sum of \$100,000 which the law appropriates for the encouragement of immigration, \$10,000 is deposited to the order of the Minister of Industries for the payment of passages in advance and expenses of transporting the immigrants. Reimbursement to the State of any moneys so advanced is made by the employer of such immigrant labor in monthly installments of 20 per cent.

---

#### POSSIBLE MARKET FOR WATERPROOFING COMPOUNDS.

[From Consul Homer Brett, Maskat, Oman.]

In the Maskat consular district, as throughout the East, all houses are built with flat roofs. These are made of concrete (sometimes entirely of native materials and sometimes of Portland cement), and are surfaced with a plaster which is fairly waterproof but is thin and easily broken. When so broken the roof is no protection whatever against the rain, but rather a disadvantage, as the concrete soaks full of water and continues to drip for days after the rain has ceased.

In Maskat at least there is no house, not even the most expensive, that has a water-tight roof, those designed and built by Europeans being equally as bad in this respect as those constructed by the natives. If the waterproofing compounds advertised in American engineering periodicals will really, as is claimed, render an entire concrete mass impermeable to water, they in all probability would, upon proper efforts being made, meet with a ready sale in this consular district.

**PROPOSALS FOR GOVERNMENT SUPPLIES.**

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

**No. 631. Navy Department supplies.**—The Bureau of Supplies and Accounts, Navy Department, Washington, D. C., will receive bids until May 21, 1912, for the following supplies. Firms interested therein should make application to the Bureau of Supplies and Accounts, giving the schedules desired by number: Schedule 4526, window, door, and ventilator screens; schedule 4527, furnishing and installing storage tank for alcohol. Bids will be received until May 28, 1912, for the following: Schedule 4536, leather belting, mattress binding, hand fire grenades, pump leather, rigging leather, plain ash cars, cotton twine, baled cork wood; schedule 4532, chain bolts, nickel-plated extension hacksaw frames, ditty box hinges and locks, hydraulic jacks, taper reamers, folding platform scales, painters' gasoline torches, flat round steel washers, pipe wrenches, screw wrenches; schedule 4539, terry cloth, steel bolts and nuts, brass nuts, scoop shovels, steam traps; schedule 4531, transformers; schedule 4540, duplex telephone wire, white-oak fender piles, yellow pine; schedule 4534, white ash, cypress, yellow pine; schedule 4537, rod brass, sheet brass, manganese bronze in ingots, monel metal, seamless brass pipe, evaporator tubes; schedule 4535, medium rod rolled bronze, medium flat steel for miscellaneous forgings, medium steel, galvanized sheet steel, lead pipe; schedule 4538, pig iron, round nickel steel, steel or wrought-iron pipe; schedule 4533, paint drier, mineral lubricating grease, chrome green in oil, red lead, white lead in oil, white basic sulphate lead, petroleum; schedule 4541, green coffee, macaroni, mustard, pickles in kegs, salt. Tenders are invited until June 4, 1912, for the following: Schedule 4530, carpets and rugs; schedule 4528, electric jib cranes; schedule 4529, neckerchiefs, Turkish cotton bath towels.

**No. 632. Concrete and brick construction.**—Sealed proposals for constructing concrete sidewalk, brick pavement, concrete curbing, and drains at Fort Travis Reservation, Port Bolivar, Galveston, Tex., will be received at the United States Engineer Office, Galveston, Tex., until May 31, 1912. Information on application to Earl I. Brown, Major, Engineers.

**No. 633. Columbia dry cells.**—Sealed proposals, in triplicate, will be received at the office of the Chief Signal Officer, War Department, Washington, D. C., until May 10, 1912, for furnishing the Signal Corps with 20,000 Columbia dry cells, in accordance with specification 221-D and drawings 99-7 and 410c-3, or such part thereof as may be required from May 1, 1912, to April 30, 1913, in standard packages; to be ordered from time to time as the necessities of the service may require. (Proposal No. 582.)

**FOREIGN TRADE OPPORTUNITIES.**

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

**No. 8751. Cotton cloths, etc.**—An American consul in a South American country reports that a business man in his district wishes to act as manufacturers' agent for cotton cloth, flannels, clothing, etc. He is prepared to give bank references, and to satisfy his principals that he can sell goods for them, if prices and terms are right. Interested persons may correspond in English or Spanish, giving terms and prices.

**No. 8752. Concession for new electric lines.**—A municipal council in a Latin-American city has ordered a commission to present a project for a concession for new electric car lines within the city. The concession will be for the construction of the road and its operation for 75 years, after which the property will pass to the city. Copy of the report, containing further details as furnished by an American consulate, will be mailed to interested firms by the Bureau of Manufactures.

**No. 8753. Electric lighting for cities in West Indies.**—The American consul at Guadeloupe, French West Indies, has submitted a report on the possibilities for electric-light plants in various cities of the West Indies; also translations of the Government concessions for Guadeloupe, Basse Terre, and Pointe à Pitre. The concessionaires are not able to work some of these and are willing to transfer them under certain conditions. The Bureau of Manufactures will forward the above papers to any firms interested in the propositions.

## INCREASED DANISH TRADE.

[By Consul General E. D. Winslow, Copenhagen.]

The steady increase which has characterized the foreign trade of Denmark for some years continued during 1911. The value of the goods imported for consumption was \$167,044,400, a gain of \$12,354,800 over 1910 and \$15,142,000 over 1909. The exports of the products and manufactures of the country amounted to \$142,736,800, against \$131,427,200 for 1910 and \$118,938,400 for 1909.

Of the total exports last year, agricultural products accounted for \$127,943,200, while the imports in this line amounted to but \$58,879,600. There was an increase of \$9,674,800 over the record year of 1910 in the value of Danish agricultural products exported.

The weather conditions were remarkably favorable to the crops, and the yields of grain and hay were good; the potatoes and beets were of excellent quality and exceptionally high prices were obtained for most agricultural products. The dry summer, however, shortened the period of grazing, and the farmers were obliged to feed their cattle with artificial feeding stuffs to a much larger extent than in most years. The money market was easier than for 1910 and the shipping trade materially improved.

### Imports and Exports.

The following table shows the value of the principal imports into and exports from Denmark during 1910 and 1911:

Articles.	1910	1911	Articles.	1910	1911
<b>IMPORTS.</b>			<b>IMPORTS—continued.</b>		
Barley, unground.....	\$2,762,000	\$2,224,400	Wheat:		
Coal, coke, etc.....	12,105,823	12,619,048	Unground.....	\$2,780,500	\$3,247,356
Coffee.....etc.....	3,738,868	4,824,000	Ground.....	2,705,728	3,051,716
Corn.....	5,011,332	7,763,692	<b>EXPORTS.</b>		
Cotton.....	1,644,448	1,770,944	Bacon.....	30,800,972	32,352,424
Lumber.....	7,014,090	7,437,000	Butter.....	48,432,150	51,605,308
Metals and metal goods.....	14,954,400	16,754,824	Cattle.....	9,029,992	11,089,572
Oats, unground.....	2,385,468	1,799,352	Eggs.....	7,149,168	7,905,404
Oil cakes.....	13,631,820	15,270,196	Hide and skins.....	3,912,000	3,277,040
Petroleum.....	1,287,740	1,365,192	Horses.....	4,744,404	5,478,992
Eye:			Meat, fresh.....	2,910,748	2,485,432
Unground.....	5,200,540	5,182,882			
Ground.....	691,976	581,292			

Of the 1,122,393,951 pounds of oil cakes, valued at \$15,276,196, imported last year, cottonseed cake represented 387,989,595 pounds. The other imports of oil cakes were as follows, in pounds: Sunflower, 328,102,236; soya bean, 154,425,852; hemp seed, 150,932,250; ground nut, 58,428,090; flax seed, 27,763,155; rape seed, 12,975,102; and palm nut, 1,777,671. The imports of oil cakes increased about 196,000,000 pounds over 1910 notwithstanding a considerable larger output in the home product.

**Shipments of Butter, Bacon, Eggs, etc.—Sugar and Casein Output.**

The quantity of butter shipped last year was 197,045,860 pounds, and the price was about 58 cents per kilo (2.2 pounds). The exports of bacon were larger than in any previous year, amounting to 248,842,220 pounds, but the prices decreased about 12 per cent compared with 1910. The imports of American bacon increased 40 to 50 per cent. The export of eggs, amounting to 35,851,768 dozen, was the largest since 1903, and the prices increased somewhat over the previous year. The increase in the shipments of live cattle over 1910 was about 12,000 head, but there was a decline in the exports of beef of about 8,800,000 pounds. The prices of both cattle and beef increased 10 to 15 per cent. The shipments of horses from Denmark have been increasing during the last three years and there has been a continued advance in their prices.

The output of beet sugar, which has been a prosperous industry in Denmark for a number of years, shows a large gain over 1910, but the statistics are not yet available. The output in 1910 amounted to over 220,500,000 pounds, compared with an average of 136,400,000 pounds for the years 1906–1909. There are eight beet-sugar factories in Denmark, and the establishment of two new factories is under consideration.

Casein is a new article of export from the country, and the production of this commodity, which commenced in the spring of 1910, amounted to 1,102,500 pounds for that year. The output for last year is estimated at 5,500,000 pounds.

**Import Trade with the United States.**

There was a gain in practically all the principal items of import from the United States last year compared with the previous one. The following table shows the principal articles and the quantity:

Articles.	1910	1911	Articles.	1910	1911
	<i>Pounds.</i>	<i>Pounds.</i>		<i>Pounds.</i>	<i>Pounds.</i>
Corn (maize).....	133,195,021	219,612,665	Sirup.....	4,026,976	3,541,802
Cottonseed cakes.....	196,859,754	322,207,830	Wheat:		
Lard.....	4,693,783	6,870,780	Unground.....	50,990,184	53,620,088
Oleomargarine.....	4,758,610	5,383,871	Ground.....	40,388,685	49,577,000
Petroleum.....	178,215,817	212,379,060			

The American trade in the Kingdom compares favorably with that of its competitors. The market in Denmark is not a large one; but Copenhagen is the clearing house for all of Scandinavia, and about 12,000,000 people buy through the metropolis. There is no favoritism shown by buyers; but the best goods and terms always capture the trade. It is well to have an exclusive agent stationed here, and, if possible, allow him a small salary with commission on sales. When goods are addressed direct to purchaser the bill of lading may be sent to one of the banks with instructions for delivery on payment of purchase price.

The line of goods that can be sold here includes everything that sells in the United States, and the consulate general invites correspondence with all firms desiring to enter this market.

**Shipments to the United States and Possessions.**

There was an increase of \$861,234 in the value of the articles invoiced through the American consulate general at Copenhagen to the United States compared with 1910. This gain was due principally to the larger shipments of dry and salted calfskins, salted cowhides, wool, and casein. The principal articles exported to the United States and their value for 1910 and 1911 were as follows:

Articles.	1910	1911	Articles.	1910	1911
Books, Danish.....	\$13,403	\$19,541	Liquors.....	\$8,075	\$5,406
Butter.....	729	2,761	Machinery.....	4,161	4,842
Cabbages.....	10,509		Manes, horse.....	5,915	
Casein.....	12,028	72,476	Marble.....	12,176	2,334
Feathers.....	6,121	395	Porcelain.....	17,144	13,930
Fertilizers.....	10,777	1,499	Rags.....	33,071	17,248
Films.....	66,099	73,883	Rennet.....	105,279	98,309
Flint pebbles.....	97,456	61,376	Rope, old manila.....	11,285	9,764
Fusel oil.....	19,511	10,364	Rubber, old.....	36,402	14,700
Glycerin, crude.....		4,228	Sausages.....	4,506	7,617
Hides and skins:			Sausage skins.....	29,517	11,951
Cowhides, salted.....	106,796	367,809	Seed.....	35,312	109,621
Calfskins—			Wool, Icelandic.....	178,049	246,263
Dry.....	142,995	177,444	All other articles.....	22,601	29,489
Salted.....	457,777	993,747			
Hosiery.....	25,735	29,569	Total.....	1,532,766	2,394,000
Household effects.....	10,337	7,340			

The shipments to Porto Rico amounted to \$93,168, a gain of \$5,904 over 1910. Of the total last year, butter represented \$81,692, beer \$7,349, and potatoes \$2,407. Of the total exports to the Philippine Islands, amounting to \$51,099, in 1911, \$50,838 represented butter.

**Shipping Service—Emigration—Duties and Internal Revenue.**

A new steamship line to South America and with San Francisco as its terminal has been established by the East Asiatic Co. of Copenhagen, in anticipation of the increased trade after the opening of the Panama Canal. The Scandinavian-American Line, which has a regular service with its four large steamers of about 10,000 tons each to New York, is building another steamer in order to keep up a weekly connection between New York and Copenhagen.

The total number of emigration tickets viséed by the Copenhagen police department during 1911 was 14,463, against 15,836 for 1910, of which 7,933 were for Danish, 2,637 for Swedish, and 3,893 for other nationalities. Twelve thousand three hundred and thirty-seven (of which 7,249 were men, 3,685 women, and 1,403 children) emigrated to the United States, 1,146 to Canada, 690 to South America, 135 to Africa and Asia, and 155 to Australia.

The amount of customs duties collected in Denmark last year was \$8,500,000, a gain of \$100,000 over 1910. Receipts from the internal revenue were \$4,450,000, as follows: From sugar, \$1,200,000; distillation of spirits, \$1,150,000; beer, \$1,700,000; and from other sources, \$400,000. The expenses connected with the collection of these taxes were \$500,000.

**The Free Port of Copenhagen—Street Railways.**

The commerce of the Copenhagen free port is increasing each year, due to its up-to-date loading and discharging facilities, its low rates

of dues and fees, and the fact that the territory of the free port is outside the customs boundaries so that the goods can be handled and warehoused without any interference on the part of the customs authorities. The industries in the free port enjoy the advantage of receiving the necessary machinery, raw materials, coal, etc., free of duty, and the customs officials have no supervision of the goods manufactured there until they pass the customs boundaries.

The principal industries at present in the free port are the manufacture of coffee, paints and colors, rifles, rennet extracts, films, polishes, chocolates, liqueurs, casein, chemicals, furs and garments, feather cleansing, cooper's works, silver plating, and the grinding of grain and feed stuffs.

The Copenhagen street railways, heretofore operated by a private corporation, were taken over by the municipality last August.

#### **Fisheries—Scandinavian Banks in London and Paris.**

The output of the Danish fisheries, which at one time was of considerable importance, has steadily declined, and large quantities of dried and salted fish are annually imported.

A Scandinavian bank, under the name of "Banque des Pays du Nord," has been established in Paris, and another, under the name "The British Bank of Northern Commerce (Ltd.)," in London, and these institutions have connections in Denmark, Sweden, Norway, France, and England. The capital of the Paris bank is 25,000,000 francs (\$4,825,000) fully paid, and that of the London bank £2,000,000 (\$9,733,000), of which 50 per cent has been paid in.

#### **Regulations Regarding Sale of Butter.**

A new law relative to the trade in butter and foreign agricultural products, etc., passed last year, provides that butter offered for sale or for export shall not contain more than 16 per cent of water. Butter containing 16 to 20 per cent of water shall only be offered for sale when it is distinctly marked "water butter," and butter containing more than 20 per cent of water is not allowed to be sold.

It appears that the requirements of England caused the enactment of this law in Denmark, as England now requires that all butter offered for sale in the English market shall not be allowed to contain more than 16 per cent of water.

#### **Harbor Improvements in the Danish West Indies.**

A syndicate consisting of five members [whose names are on file in the Bureau of Manufactures] has applied to the Danish Rigsdag for a concession covering a period of 99 years with a view to making extensive harbor improvements at St. Thomas, Danish West Indies. It is stated that the harbor of St. Thomas has a splendid natural position and is easy of navigation, even in rough weather. It is considered important that the port be enlarged and equipped with modern loading and discharging facilities so as to take advantage of the opening of the Panama Canal, where the largest steamers can go in and have their freight transferred into smaller vessels or from the smaller vessels into the larger ones in the trade to and from Central and South America.

The cost of excavating, filling in, construction of the harbor, and repairing of dock will amount to about \$5,360,000. The syndicate also applies for the sole rights of building tanks there for oil fuel,

electric-light and power plants, cold storages, water-supply works, railroads, lighthouses, and wireless telegraph stations.

**Improvements on the South Coast of Iceland.**

A French syndicate with a capital of 600,000 francs (\$115,800), and financed by the Banque Francaise pour la Commerce et l'Industrie of Paris, has purchased property on the south coast of Iceland for the purpose of building a new harbor there. The syndicate has also secured control of large waterfalls which are situated a few miles inland, and engineers have investigated the possibility of utilizing this power, which is estimated at about 200,000 horsepower, to generate electricity for operating factories which will be built near the harbor. One of these industries will be the reclaiming of nitrogen from the air.

Iceland suffered from a drought last spring, causing a shortage in the hay crop. The output of potatoes and beet roots, however, was satisfactory.

---

**NOTES FROM FORMOSA.**

[From Consul Samuel C. Reat, Tamsui.]

**Increased Trade for 1911—Camphor Refining.**

The total trade of Formosa for 1911 amounted to \$58,988,865, an increase over 1910 of nearly \$4,000,000. The trade with Japan was \$42,623,026 and with foreign countries \$16,260,328. America gains in the exports to Formosa over 1910, and the principal increase is in machinery.

For the last few years the Camphor Monopoly Bureau has shipped all crude camphor to private refineries in Japan. Now it will resume camphor refining at the Monopoly Bureau in Taihoku. The experimental refining that has been carried on for several months has proved much more successful than the doubtful process attempted several years ago. New evaporators and other machinery are to be installed soon in order to increase the limited output. The amount of camphor refined since last September was 1,000,000 pounds, but by the contemplated improvements the Monopoly Bureau estimates the production for the fiscal year, March, 1912, to March, 1913, at 5,000,000 pounds.

**Green Tea Enterprise—Sericulture.**

A Japanese tea merchant will grow green tea in Formosa. He has engaged two experts from Uji, Japan, where green tea is largely grown, and has erected a factory in Shinko-sho, Koroton, Taichu. New tea-manufacturing machines have been imported from Japan, and the factory will begin soon on a small scale. The total production this year will probably be 50,000 pounds. As the annual production of Formosa Oolong tea is between 22,000,000 and 25,000,000 pounds, the green-tea production will scarcely be noticed.

Sericulture in Formosa has been carried on for some time by the Formosan Government with such encouraging results that the Taiwan Yozan Shorei Kai (Formosa Silk Worm Culture Encouraging Association) is being organized by leading industrial men of Japan. The company is purchasing from the Government 4,800 acres near Kagi for mulberry cultivation, and 250 farmers will be brought down from Japan. It will erect a silk factory in the capital city of Taihoku.

**FOREIGN MERCANTILE EXPOSITIONS.**

[From Consul Maddin Summers, Belgrade, Servia.]

**Traveling Display of Hungarian Commercial Museum.**

At the invitation of the directors of the Royal Hungarian Commercial Museum, of Budapest, I attended the official opening on April 16 of an exhibition of arts and industries in Belgrade. The entire diplomatic and consular corps was present, as also many men prominent in banking and commercial centers.

The rooms of a local club had been rented for the purpose and the display was large and interesting. After remaining here a short time the exhibition will be removed to Sofia, Bulgaria.

The articles exhibited embraced agricultural machinery, all sorts of ceramic and silver ware, pumps, rifles and military munitions, wines, kitchen utensils, cotton and linen goods, etc., all of Hungarian make. Regret was expressed by some of the local commercial firms that the catalogues of the articles on exhibition were written in Hungarian only. This language, as also English, French, and Spanish are little understood here, German being the one best known and generally spoken.

The general opinion here is that a similar exposition of American products would result in great good. The population, commercial importance, and consequent needs of the people are growing at a rapid rate, not only here but in the other Balkan States. On every side one sees a market for agricultural machinery, building materials, sanitary articles, office furniture, and many other manufactured articles. It is useless, however, to try to extend the trade by writing the merchants in English and sending them catalogues in the same language. This is especially true in the case of articles which are as yet not well known in the country, such as certain makes of agricultural machinery, cash registers, typewriters, etc.

[From Consul Thomas E. Heenan, Warsaw.]

**International Sporting Exposition in Russia.**

The Warsaw Society of Sports has secured a postponement of time for holding the International Sporting and Industrial Exposition in Warsaw, which was to have been held for two months beginning May 7 [announcement of which appeared in Daily Consular and Trade Reports for Mar. 13, 1912]. In a communication to this consulate Stanislas Lilpop, president, and Felix Laskowski, director, of the exhibition, state:

As we have now obtained an extension of time for holding this exhibition, we would ask you, as far as you are able to do so and consider it fruitful, to take the necessary steps to interest American industries in our exhibition, regarding which we are ready to supply you with all information.

At the same time we take this opportunity to inform you that the participation of American industries in our exhibition would be a great honor for us and would possess an important meaning for our own industry.

Firms interested should send a supply of illustrated catalogues of their manufactures to the committee, addressing them as follows: The Secretary, Sports Exhibition, Kolo Sportowe, Krolewska No. 10, Warsaw, Russia. An obstacle to getting American manufactured articles into the exposition is that no American firm in the sporting line has an agent here, without which not much could be done, and time hardly permits of arrangements being made for such.

Sport in Russia, with the exception of shooting, skating, cycling, and rowing, is entirely in its infancy, and it is only during the last year or two that schoolboys have taken to such games as football, running, hockey, etc. The people on the whole are slow in taking to these pastimes, and much propaganda is necessary to interest them, but as time goes on there is no doubt that a large field will open for introducing various games, for which naturally the necessary accessories will be required. It was with the object of making people more familiar with sports and pastimes that the forthcoming exposition was proposed. A circular (in French) of the exposition is forwarded [and will be loaned on application to the Bureau of Manufactures].

[From Consul General John L. Griffiths, London.]

#### **September Exhibitions in British Capital.**

Two practical exhibitions to be held in London are:

The Confectioners', Bakers', and Allied Trades' Twentieth Annual International Exhibition and Market, September 7 to 14, 1912, inclusive.

The Grocery, Provision, Oil, and Italian Warehouse and Allied Trades' Twentieth Annual International Exhibition and Market, September 21 to 26, 1912, inclusive.

Prospectuses of these are forwarded [and may be had from the Bureau of Manufactures at Washington]. In his letter transmitting the prospectuses the manager calls attention to the fact that these exhibitions are practically huge markets, the chief object of which is to bring the buyer and the producer into contact with each other.

[From London Chamber of Commerce Journal.]

#### **Modern Business and Advertising Exhibition at Manchester.**

A Modern Business and Advertising Exhibition is announced to be held at the City Exhibition Hall, Manchester, from October 29 to November 9 next. Particulars may be obtained from the offices of the exhibition, 312 Deansgate, Manchester, England.

#### **Jewelers' Exhibition in London.**

A Jewelers', Silversmiths', and Allied Trades' Exhibition will be held at the Royal Agricultural Hall, London, N., from July 6 to 13 next. Particulars may be obtained from the International Trades Exhibitions (Ltd.), Broad Street House, London, E. C.

[Report of British commercial attaché for Italy to Board of Trade at London.]

#### **Showrooms for British Goods at Genoa.**

The Harbor Board of Genoa proposes to open showrooms for the exhibition of British and other foreign goods suitable for the Italian market. For this purpose two large buildings have been set aside, which, by arrangement with the customs authorities, will be treated as bonded warehouses (porto franco). One of these buildings is already finished. Both are in a central position in the port, are built of concrete, and consist of ground floor and two floors above. The president of the board has offered the free use for 10 years of the upper floor of the second building, which will measure about 40 by 24 meters (equal to about 10,000 square feet), to the British Chamber of Commerce for Italy. This floor will be adapted and fitted with steam radiators for heating and with electric-light appliances, at the cost of the "Consorzio," on condition that the British Chamber of Commerce makes its headquarters in the premises and assists the "Consorzio" in carrying out the scheme. The chamber has accepted this offer, and will in due course organize temporary shows of different classes of British goods likely to attract Italian importers. Entrance to the rooms will be free, and firms invited to exhibit goods will have no expenses beyond the carriage of goods to Genoa, and a nom-

inal charge for the cleaning of show cases and attendance. The chamber will arrange, free of any charge, to take delivery of the goods on arrival, c. i. f. Genoa, unpack and set up in show cases, insure while in the above premises against all risks of fire, and provide an attendant to furnish such information about the goods as may be supplied to the chamber by the exhibitors. The chamber will further undertake that the show-rooms shall be properly advertised in the Italian press, and will send to the Board of Trade and to the British and colonial trade journals periodical reports regarding the classes of goods most likely to interest Italian importers. It must be clearly understood that the proposal is not to establish sample rooms, but special temporary shows of goods required on the Italian market, e. g., sanitary appliances, requirements for chemical industries, boots and leather goods, china and glass ware, etc.

#### **Sample Exhibition at Smyrna.**

The British Chamber of Commerce in Smyrna, Turkey, has decided to take more active steps to develop its project for a permanent sample exhibition of British goods in Smyrna, and has set aside a sum for sending a delegate to the United Kingdom this summer to interview firms interested in the Smyrna market. A selling agency will be combined with the exhibition.

#### **Exhibition of Agricultural Machinery at Rostov-on-Don.**

The Imperial Don-Kuban-Ter Agricultural Society announces the establishment at Rostov, Russia, of an exhibition of agricultural machinery and implements, to last nearly a year, excluding the period from September 14 to October 28, when the usual annual exhibition is held, for which special rules are laid down. The cost of space at the former exhibition will be 5 rubles per square arshin (about 50 cents per square foot). Applications for space should be addressed to the Council of the Imperial Don-Kuban-Ter Agricultural Society, Taganrog Prospect Vystavka, Rostov-on-Don.

[From Consul General Thomas Sammons, Yokohama, Japan.]

#### **Exhibition under Auspices of Municipal Assembly at Yokohama.**

Japanese business men and manufacturers of Yokohama are preparing to hold an exhibition, probably from April 1 to June 30, 1913. This undertaking will be under the auspices of the Yokohama Municipal Assembly and the various articles manufactured in or exported from this part of Japan will be placed on exhibition.

[From Consul Samuel C. Reat, Tamsui.]

#### **Industrial Exhibition Planned in Formosa.**

Tentative plans are being formed for holding an industrial exhibition in Formosa in May, 1913. The Crown Prince will come down from Japan to open the exposition.

#### **Exhibition of American Plows.**

The Taihoku Seito Kaisha, which celebrated the completion of its American-built sugar factory December 17, 1911, has just given an entertainment for the benefit of its farmers. The practical features of the occasion were demonstration in soil preparation and fertilization, exhibition of specimens of cultivated cane, and display of American plows and cultivators. If such exhibitions were followed by an aggressive sale campaign by American exporters of agricultural implements, American plows would soon displace the crude plow so familiar throughout the Orient.

[From London Commercial Intelligence.]

**International Exhibition Project in Australia.**

A. E. Morgens, a well-known mine proprietor of Perth, Western Australia, is the chairman of a committee which has been formed in that city to promote the holding of an international exhibition at Perth in 1915, when the Kalgoorlie & Port Augusta Railway is expected to be complete. Meantime, the details of the Victorian Government's project for an Empire Exhibition, to be held in Australia in 1913 or 1914, are being considered by the Commonwealth and the various State governments, and the Victorian treasurer has expressed a hope that the Government of Western Australia will not commit itself to supporting the local project until the Empire Exhibition scheme has been dealt with.

**WEALTH OF NATIONS.**

[From M. Neymarck's report.]

At present Great Britain, Germany, and France hold more than 330 milliard francs (franc=19.3 cents; hence this sum=\$63,690,000,000) of paper securities out of the 570 to 600 milliards (\$110,010,000,000 to \$115,800,000,000) which belong to the various nations inhabiting the various countries of the globe. These 330 milliards taken at 4 per cent bring them in a minimum interest of 13,200,000,000 francs (\$2,509,000,000). On their markets more than 600 milliards are negotiable of the 815 milliards of the negotiable securities quoted in the different markets of the world.

The following table shows the holdings of the Stock Exchange securities held by the peoples of the leading countries of the world:

Countries.	End of 1908.	End of 1910.
United Kingdom.....	\$25,080,000,000 to \$26,055,000,000	\$27,020,000,000 to \$27,405,000,000
United States.....	22,195,000,000 to 23,190,000,000	25,080,000,000 to 25,475,000,000
France.....	19,879,000,000 to 20,265,000,000	20,458,000,000 to 21,230,000,000
Germany.....	18,449,000,000 to 16,405,000,000	17,370,000,000 to 18,335,000,000
Russia.....	4,825,000,000 to 5,211,000,000	5,587,000,000 to 5,983,000,000
Austria-Hungary.....	4,053,000,000 to 4,246,000,000	4,439,000,000 to 4,632,000,000
Italy.....	1,930,000,000 to 2,116,000,000	2,509,000,000 to 2,702,000,000
Japan.....	1,158,000,000 to 1,351,000,000	1,737,000,000 to 2,316,000,000
Other countries.....	5,369,000,000 to 7,334,000,000	6,755,000,000 to 7,720,000,000
Total.....	100,839,000,000 to 106,343,000,000	110,975,000,000 to 115,800,000,000

Taking the highest figures, the wealth of the world expressed in Stock Exchange securities alone would thus amount to the huge figure of \$115,800,000,000, in which the share of the United States would be \$25,476,000,000.

The Archiv für Eisenbahnwesen has latest reliable statistics concerning the development of the railway systems of the world. This German statistical organ sets down the lengths of railway line as follows in kilometers (kilometer=0.62 mile) for the end of the year 1909: Europe, 329,691; America, 513,824; Asia, 99,436; Africa, 33,481; Australia, 30,316; total, 1,006,748 kilometers. The average cost of construction per kilometer of line it sets down as \$76,718 for Europe and \$41,785 in other parts of the world. On this basis the European railways at the end of 1909 would have cost \$25,293,000,000—a little less than the assigned value of American-held paper securities; while the railways in the other parts of the world would have cost \$28,291,000,000—a little more. Together, the cost price of all the railway lines in the world at the end of 1909 would thus work out at \$53,551,000,000.

**Cotton Growing in Chihuahua.**

Consul Marion Letcher, of Chihuahua City, states that not much cotton is produced in the Mexican State of Chihuahua. The latest statistics—those for 1908—show only 499,400 pounds, of which 455,400 pounds were produced in the district of Camargo, of which Santa Rosalia is the principal city. However, the consul is informed that with the completion of the irrigation dam on the Conchos River at La Boquilla, a few miles from Santa Rosalia, cotton planting in the irrigated territory will be begun on a considerable scale.

## HONGKONG SHIPPING RECORD.

[From Consul General George E. Anderson.]

Entrances and clearances in the port of Hongkong decreased in 1911, not only in number but also in tonnage, when compared with 1910, but exceeded in tonnage the record of 1909 and previous years. The total entrances and clearances in the year were 543,570 vessels with an aggregate tonnage of 36,179,152, in contrast to 547,164 vessels of 36,534,361 tons in 1910. Of the totals given, 44,978 vessels with a tonnage of 23,063,103 were engaged in foreign trade as compared with 40,714 vessels of 23,160,256 tons the year before.

Of the vessels engaged in foreign trade in 1911 above noted, 32.9 per cent were British ocean-going ships, 34.3 per cent foreign ocean-going ships, 17.8 per cent British river steamers, 3.2 per cent foreign river steamers, 0.6 per cent launches (under 60 tons), and 11.2 per cent trading junks. The proportionate share in 1910 was: British ocean-going ships, 35 per cent; foreign ocean-going ships, 35 per cent; British river steamers, 17.3 per cent; foreign river steamers, 3 per cent; launches, 0.6 per cent; and junks, 9.1 per cent. In other words, the chief loss for the year was in British shipping.

The United States had a larger share of the shipping entered and cleared in Hongkong in 1911 than it has had for years, but this was due to the retrogression of entrances from other countries, to the stability of American shipping, and to no development of American shipping other than the addition of two vessels of British construction to the American list under Philippine ownership.

## Over-Sea Shipping.

The proportionate share of the various nations in Hongkong's over-sea shipping concerns foreign interests most, and this appears from the following table of entrances of individual ocean vessels of European type of construction by nations for the past two years:

Flag.	Vessels.		Number of times entered.		Total tonnage.	
	1910	1911	1910	1911	1910	1911
British.....	105	348	2,131	1,958	4,059,220	3,798,156
German.....	113	111	722	657	1,206,757	1,133,786
Japanese.....	102	108	508	509	1,341,221	1,354,362
Norwegian.....	34	30	223	210	238,334	221,039
Austrian.....	7	6	24	24	95,062	95,380
Chinese.....	21	20	250	192	314,879	241,362
Danish.....	6	8	20	20	33,165	45,925
Dutch.....	16	16	100	100	214,737	235,881
French.....	35	27	144	132	262,670	242,469
Italian.....	8	2	13	12	34,496	31,188
Portuguese.....	3	4	66	79	29,478	32,842
Russian.....	7	11	10	20	28,803	53,080
Swedish.....	5	6	27	14	45,398	25,778
American.....	15	10	17	72	210,466	243,782
No flag.....	1		1		299	
Total.....	731	720	4,284	4,049	8,112,985	7,756,033

It will be noted that the loss of business in British shipping was quite material. The loss in Chinese shipping reflects the revolutionary troubles rather than any actual change in trade, while the decline in German, Norwegian, French, Italian, and Swedish services can be attributed to the general commercial depression. The increase in the Austrian, Dutch, and Russian services represents special efforts

on the part of these respective countries toward developing their trade in the Far East.

**Satisfactory State of Trade:**

While the close of the year found shipping dull, in harmony with prevailing conditions of business, and while there has been a reduction in the tonnage, the general state of the shipping trade of the port, particularly coastwise, was much improved, and local companies paid dividends the past year which have experienced losses on their operations for several years past. The trans-Pacific lines and the lines to Europe also showed improvement. As a rule, all companies but the American are making fair returns on their investments and are developing their services rapidly in all directions—results in which Government aid of one sort or another has an important if not a controlling part.

[Previous reports from Consul General Anderson on the shipping situation of the Far East have appeared in Daily Consular and Trade Reports on Dec. 5, 1910, Mar. 15, May 15, June 24, Aug. 12, and Oct. 28, 1911, and Apr. 2, 1912.]

---

**ARGENTINE TRADE NOTES.**

[From Consul General R. M. Bartleman, Buenos Aires; monetary figures in American currency.]

**Cold-Storage Profits—Cotton Growing.**

The La Plata Cold-Storage Co. shows profits for the calendar year 1911 of \$636,687.

The Argentine consul at Barcelona, Spain, reports the formation of a \$3,860,000 company for growing cotton in Argentina.

**Grain Crops—Railway Maps.**

The official final estimates of the maize (corn) crop show 8,455,910 acres sown, from which 7,515,000 metric tons are expected. Of this 5,000,000 tons will be available for export, which at present prices would bring about \$175,000,000. The second estimate for wheat is 4,610,000 metric tons, for oats 877,300 tons, and for linseed 595,000 tons. [The first estimate appeared in Daily Consular and Trade Reports for Mar. 21.]

Argentina has 3,330 miles of State-owned and 16,300 miles of private-owned railways. Maps are forwarded of the Central Cordoba Railway and of the Buenos Aires-Pacific Railway; these show the lines working and those under construction or for which concessions have been granted. [The maps have been filed for public inspection at the Bureau of Manufactures in Washington.]

---

**Billion Dollars in Exports of Manufactures.**

The estimate that a billion dollars' worth of manufactures will be exported in the current fiscal year, made by the Bureau of Statistics, Department of Commerce and Labor, seems likely to be justified. The official figures show for the nine months ending with March 730 million dollars' worth of manufactures exported, these figures being 74 million dollars in excess of those for the corresponding period of the preceding year; and as the exports of manufactures in the year ending June 30, 1911, were valued at 907 million dollars, the figures at hand seem to clearly indicate that the total for the current year will pass the billion dollar line.

**SILTING IN HONGKONG HARBOR.**

[From Consul General George E. Anderson.]

The matter of deepening some portions of the harbor of Hongkong is receiving serious attention. The topic has been discussed during the past year, and at the annual meeting of the Hongkong General Chamber of Commerce its executive committee reported upon the subject, expressing the opinion that while the matter did not require action at the present time there was need of watching the situation.

**Subject One of Interest to United States.**

The subject is one of particular interest to the United States, for the deep-draft vessels now visiting Hongkong are almost entirely American. There is still a large area with plenty of water for the largest craft, but the enormous quantity of shipping in the harbor practically all the time and the continual activity of all lines render it necessary that present limits of deep water shall be maintained if not extended.

The larger ships generally anchor at the north of the harbor in the direction of the Pearl River entrances; the buoys of the Pacific Mail Co., the Great Northern Steamship Co. (the two American lines), and of the Toyo Kisen Kaisha, with its vessels in the American service, are located in that section. For several years silt from the Pearl River has been coming into this portion of the harbor in increasing amounts. The moorings of the three companies named have been moved several times, but their larger ships still find the water rather shallow at times for putting about, and it is only occasionally that they can leave port by the northern or Green Island Pass. When the Great Northern liner *Minnesota* arrived, in January, with its record-breaking cargo it was compelled to anchor at the south end of the harbor near what is known as Lai-yee-mun entrance until a portion of its freight had been unloaded. Under the circumstances, therefore, the matter is a pressing one; and with the probable increase in tonnage in this part of the world which will follow the opening of the Panama Canal the issue will not be postponed much longer.

**No Port Works or Public Docks.**

It is a rather peculiar fact that while Hongkong is one of the great ports of the world in tonnage and activity, in no harbor with anything like equal shipping is there less artificial aid to navigation. There are no public docks or warehouses, the only wharves being owned by a private company in connection with privately owned warehouses and furnishing berths for four vessels. It is a splendid natural harbor, and until the silting now noted was felt, there seemed to be no occasion for port works. With the present danger and with the increasing force of the movement among the Chinese to establish a port at Whampoa or some other locality in the Pearl River it seems quite likely that a change in Hongkong's time-honored policy of favoring shipping by low harbor dues but offering no special harbor facilities will of necessity be changed.

---

*Germany's butter and lard purchases last year were 122,088,903 and 212,443,000 pounds, respectively, against 91,331,000 and 128,703,000 pounds, respectively, in 1910.*

## OCEAN TRANSPORTATION.

[From Consul General W. Henry Robertson, Callao, Peru.]

**Additional Callao and Panama Steamship Connections.**

From May 23 the large steamers of the Pacific Steam Navigation Co., now plying between Liverpool and Callao fortnightly, will continue their journey from this port to Panama with passengers, mails, and cargo. From Panama they will make the return journey to Liverpool via Callao, Valparaiso, and the Straits of Magellan. In order to compensate for the additional two weeks thus required for the extended itinerary from Liverpool to Panama and return, the company expects to soon add to its fleet its new 18-knot 17,500-ton vessels. These ships, as well as the present ones of the same line, will be larger than any others now running to Panama from this coast.

[From Consul General R. M. Bartleman, Buenos Aires.]

**New River Plate Steamship Line.**

It is stated that the Messageries Maritimes Co., not having obtained from the French Government the desired subsidy, has decided to suspend the service of its line to the River Plate. To offset any inconveniences caused by this change, the Générale Transatlantique, Société Générale de Transports Maritimes, and Chargeurs Réunis will undertake to work the line on their own account. Six steamers well fitted for all classes of passengers will sail under the French flag in the name of the Compagnie Sudaméricaine de Navigation.

**New Steamer for the South American Service.**

The announcement is made that the Hamburg-American Line has decided to place on the South American route the *Blucher*, a vessel of 12,500 tons, dimensions 525 by 62 feet, speed 17 knots per hour, which enables it to make the voyage from Buenos Aires to Lisbon in 14 days. As regards speed, size, and shortened trips, it will be one of the finest boats that comes to the River Plate. This steamer sails from Hamburg on June 25 next and will make its first return journey from Buenos Aires on July 26. With the *Blucher* the Hamburg-American Line will have eight steamers doing a regular service every eight days at this port.

[From Consul P. Emerson Taylor, Stavanger, Norway.]

**New Copenhagen and Stettin Steamship Connection.**

The United Steamship Co., which operates the Scandinavian-American Line, has placed two new steamships on the route from western Norway, including Stavanger, to Copenhagen and Stettin. The first ship, the *Bergenhus*, began its sailings early in April, the other starting the last of April.

Both ships are of 1,050 tons, with a speed of 10½ knots. They are modern in construction, with accommodations for 26 first-class passengers, besides second-class and steerage accommodations. The sailings are weekly from Stavanger to Copenhagen and Stettin. A weekly service was formerly maintained with practically no passenger accommodations. The new boats are a great advantage for both passenger and freight traffic.

**GOVERNMENT PLANS IN INDIA.**

[From Consul General William H. Michael, Calcutta.]

The newspapers of Calcutta give considerable space to the last speech of the Viceroy of India before the legislative council here, in which the Viceroy, after reviewing the political and economical history of India for the last 12 years, declared the session closed. In reviewing the economic situation the Viceroy said that he saw in the budget a gratifying picture of India's economic strength.

**Preparations for Building Delhi.**

The Viceroy then took up the question of the transfer of the capital of India to Delhi and the preparations for rebuilding that city. He said he realized fully the heavy responsibility entailed in the creation of a new imperial city that shall be worthy of the Empire and which shall meet the requirements of a great capital with careful, but not too parsimonious, supervision of the expenditure required to achieve a really satisfactory result. Arrangements have been made by the Viceroy for employing a sanitary engineer, a town planner, an architect, and a landscape gardener to draw up plans for the new city. When acceptable plans have been prepared, architects will be called in to provide suitable designs and estimates for the new Government buildings.

The cost of building the city is estimated by the Government at \$20,000,000. This is considered entirely too low by some critics, who estimate the cost at \$50,000,000 to \$70,000,000, but the Viceroy thinks that a little thought as to what land, Government buildings, roads, drainage, water supply, etc., will at the outset be required for the new city would convince any unbiased person that the cost will approximate far more nearly the Government estimate. He said that he had seen in Delhi what appeared to him a suitable site, had made inquiry into the cost of acquiring a space of 30 square miles embracing this area, and had found that it would cost approximately \$1,000,000 to \$1,166,000. He said that it was a well-known fact that land was very cheap in Delhi and that lime, bricks, and splendid stone, the same as that used by the Mogul Emperors, are to be found on the spot, while the Mekrana marble quarries are only 200 miles distant, on a direct line of railway. These facts, he thinks, naturally conduce to reduce expenditure.

"The Government has, of course, no intention," he says, "of building private residences, shops, business premises, etc. On the other hand, it hopes to obtain a good return for land sold to private individuals on reasonable terms for building leases."

In concluding his speech the Viceroy said it would take some years before the new city could be completed, but that in the meantime arrangements were being made for the temporary accommodation of the Government of India at Delhi during the next cold weather and for the meeting there of the legislative council.

---

Consul H. A. Conant, of Windsor, reports that a Detroit concern has organized a \$150,000 branch Canadian enterprise and will build a factory at Walkerville, Ontario, for making automobile bodies of aluminum, steel, and wood. It will be in operation by July 15, turning out upward of 100 bodies daily.

## CUBAN NEWS NOTES.

[From the Cuba Review.]

**Railroad to Bay of Nuevitas.**—The Cuban Central Railway plans to construct a standard-gauge road from Kilometer 4 on the line from Caibarien to Placetas, to the Pinta del Pastelillo in the Bay of Nuevitas.

**More money required for roads.**—According to President Gomez's message, there has been spent between November, 1911, and March, 1912, \$318,619 in repairs and other work on 1,702 kilometers of roads and its complementary buildings. He asks Congress to vote more money, and thinks \$350 per kilometer sufficient.

**The coast to coast railroad** from Guantanamo to Baracoa, which opens up to sugar planting a new district in Oriente Province, is soon to be inaugurated according to Sr. José Marimon, head of the company organized for the construction of this road, which will open up a rich section now practically inaccessible, as the region is mountainous.

**Sugar mill.**—Deeds have been signed in Habana conveying 67,000 acres in Oriente Province, municipality of Victoria de las Tunas, to unnamed buyers, who will build a sugar mill to be called the Manati. Its initial capacity will be 150,000 bags, though this will be increased to 300,000 bags. Attention is especially directed to the fact that the new mill will be capitalized with Cuban money.

**Customs collections** throughout Cuba in 1911 aggregated \$25,972,350, the amounts received at the various ports being as follows: Habana, \$18,380,393; Matanzas, \$859,749; Cardenas, \$519,286; Sagua, \$520,637; Caibarien, \$601,797; Nuevitas, \$209,271; Gibara, \$140,985; Banes, \$68,537; Baracoa, \$6,345; Guantanamo, \$293,547; Santiago, \$1,580,948; Manzanillo, \$480,090; Santa Cruz, \$24,243; Tunas, \$2,054; Trinidad, \$1,504; Cienfuegos, \$1,500,082; Batabano, \$2,942; Nueva Gerona (Isle of Pines), \$14,779; Puerto Padre, \$263,371; Nipe, \$495,648; Jucaro, \$6,142.

**Motor boats.**—A New Jersey motor construction company has shipped to Santa Cruz, Cuba, a motor boat 30 feet long and 8 feet beam, which will tow lighters carrying sugar during the harvesting season and rafts of mahogany at other times. Much of this trip is in the exposed waters of the Gulf of Guacarmabo, and as the boat will also be used in carrying light freight and passengers from Manzanillo and Santa Cruz and return, power, seaworthiness, and speed combined are demanded. Where there are shallow harbors and freight and passengers have to be lightered to the shore, a reliable fast little motor boat will be found indispensable.

**Car line and gas works.**—The Habana Electric Railway & Power Co., authorized capital \$30,000,000, was incorporated at Trenton, N. J., as a holding concern to effect the merger of the Habana Electric Railway Co. and the Compania de Gas y Electricidad de la Habana. Habana advices are that the new company proposes to expend at once nearly \$4,000,000 in improving its street car lines and its generating plant and will place modern gas-making machinery in its gas plant, thereby reducing the cost of gas materially, encouraging the use of gas ranges in place of the small charcoal stoves now universally used throughout Cuba and which are imported from Germany.

**The new station** of the Habana Terminal Co. on the arsenal grounds will be ready August 1, from which date all trains of the United Railways, the Western Railways, and the Habana Central will have their terminus there; 78 trains will leave and enter every day. The old Cristina Station of the Western Railways will then be used as a warehouse for local freight. Offices of the several lines will be in the upper rooms of the new station. Officers of the company have approved of General Manager Orr's proposal to extend the railroad 2 miles in Pinar del Rio from Guane Station to the town of Guane, and also 5 miles in Santa Clara Province between Esles and Cienfuegos. This work will be pushed at once and the company expects to have a daily train direct from Habana to Cienfuegos by the end of the present year.

## HOLLAND-AMERICAN MORTGAGE BANKS.

[From Consul Frank W. Mahin, Amsterdam.]

Four Holland-American mortgage banks have been founded in this district since January 1. The development of newer sections of the United States where interest rates are high is the cause of this. However, doubts are entertained if they will meet with success, owing to the keen competition here for loanable funds.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8764. Electric cars and material for light and power company.**—An American consular officer in a Latin American country has been requested by the board of directors of a light and power company in his district to forward the information that the company would be willing to accept a reasonable proposition from any manufacturers in the United States of electric street cars, and from any manufacturers of supplies for electric tramways, for about 20 electric street cars and such supplies as are required for an electric tramway or an electric-light plant. Copy of the complete report, containing the names of persons to be addressed regarding this matter, as well as further particulars regarding the proposition, can be obtained from the Bureau of Manufactures.
- No. 8765. Store fixtures and fittings.**—An American manufacturing company has written to the Bureau of Manufactures that one of its representatives in the West Indies is in the market for some up-to-date store fixtures, fittings, etc., and desires catalogues with illustrations, descriptions, and prices from reliable manufacturers in the United States.
- No. 8766. Meat-cutting machines and sausage casings.**—An American consul in a European country reports that a business man in his district desires to be placed in correspondence with manufacturers of meat-cutting machines for butchers and sausage makers and also for household use. He also wishes business connections with manufacturers of all kinds of casings for sausages.
- No. 8767. Toothpick machinery.**—A resident of a foreign country informs an American consular officer that he is anxious to secure the names of American manufacturers of toothpick machinery with a view to making purchases from such firms. All communications should be sent to the consular officer in question for transmission to the inquirer.
- No. 8768. Waterproof clothing.**—An American consul in a South American country reports that a merchant in his district is desirous of purchasing American waterproof (not rubber) clothing. This merchant, it is stated, enjoys an excellent reputation.
- No. 8769. Machinery for the manufacture of crosshead bale ties.**—The Bureau of Manufactures is in receipt of a communication from a business firm in Canada asking to be put in touch with American firms producing machinery for the manufacture of crosshead bale ties.
- No. 8760. Information concerning commercial education.**—An American consular officer in a European country reports that a resident of the country in which he is located desires to be furnished with full information concerning commercial education in the United States. He would like to receive from commercial schools and colleges catalogues with courses of study, statistical information, etc. Such printed matter should be sent direct to the inquirer.
- No. 8761. Glass-blowing machines for window glass.**—A business man in a European country informs an American consular officer that he desires to communicate with American manufacturers of glass-blowing machines for window glass. He is of the opinion that such machines are manufactured in the United States and have been exported to several European countries. He is anxious to purchase these machines for a glass factory owned by him. Correspondence may be in English.
- No. 8762. Bottling and bottle-cleaning machinery.**—A general merchant and bottler of soft drinks in an Asiatic country contemplates the purchase of new bottling and bottle-cleaning machinery to replace the old machinery now used by his firm. His present plant has an output of 200 dozen bottles daily, but permits the bottling of only one bottle at a time and is in constant need of repairs. He informs an American consulate that he prefers to bottle three at a time; a cheap and simple machine is desired. Copy of the complete report, containing further details, will be sent to interested firms by the Bureau of Manufactures.
- No. 8763. Food products.**—A firm in Portugal desires to communicate with American houses purchasing green chestnuts, peppers, anise and cummin seed, olive oil, garlic, onions, etc. Correspondence in Spanish or Portuguese.

## MINERAL WATERS AND SOFT DRINKS.

### AUSTRIA.

[From Vice Consul Robert C. Boesel, Carlsbad.]

The principal towns in this consular district are the cure resorts, Carlsbad, Marienbad, Teplitz, and Franzensbad. These are visited by over 200,000 people annually, who come solely to "take the cure." Besides drinking the medicinal waters, the visiting "cure guests" are the principal consumers of mineral table waters in this consular district.

This part of Bohemia produces many brands of table waters, and five or six of them, coming from this immediate vicinity, are used so extensively in Carlsbad that foreign waters would stand little chance of entering this market. The "cure" physicians are in the habit of recommending certain brands of table water for use by their patients. This indicates the nature of the competition American firms would have to meet here.

As for the brands of mineral water sold in Carlsbad, the leading ones are Giesshübler, Krondorfer, Biliner, Neudorfer, and Klösterle. Such a well-known European brand as Apollinaris, which can be found almost anywhere on the Continent, can not be sold in Carlsbad, owing to the domination of these brands.

During 1910 Austria exported more than seven times as much mineral water as it imported, and the greater part of these shipments originated in the Carlsbad consular district. The only possible demand for an American mineral water in this vicinity would have to come from the Americans, who congregate here in large numbers during the "season."

[From Consul Ralph J. Totten, Trieste.]

### Brands and Prices in Trieste.

During 1910 the total imports of mineral waters into the city of Trieste were 542,454 short tons, valued at \$260,279, and the total exports 372,537 tons, valued at \$178,750.

Mineral waters came into Trieste from other parts of Austria and from Hungary, Germany, Italy, France, Belgium, and Great Britain; and were shipped to points in Austria, Italy, Turkey, Russia, England, China, Japan, Brazil, the Balkans, and the United States. No mineral waters of any kind were received from the United States, and, generally speaking, American mineral and table waters are unknown in this district.

The table waters most used locally are Radein, fonte Gisella, which sells wholesale at \$8.53 per 100 bottles of 1 liter (1.057 quarts) each, and Rohitsch Sauerbrunnen, at \$8 per 100 liters. The laxative waters are Hunyadi Janos, at \$9.54 and Loser-Janos, Rakoczy, at \$9.14. For export the most popular table water is Giesshübler Mattoni, at \$9.34 per 100 liters, and laxative is Carlsbad Muhlbrunnen, at \$13. The retail prices are 10 to 15 per cent above the wholesale prices. Mineral waters are jobbed locally at 30 days net cash.

#### **Duty and Credit—Unfavorable Outlook.**

The conventional rate of duty on mineral waters coming into Austria amounts to 1.20 crowns per 100 kilos (11.04 cents per 100 pounds; 24.36 cents per 220.46 pounds).

The credit terms received on this class of merchandise are 3 to 12 months, 3 months being the usual time asked.

The general opinion of local dealers is that it would be somewhat difficult to introduce a new mineral water into the Trieste district, as this section of Europe is especially rich in natural springs; but several have expressed a willingness to consider any proposition submitted. It is feared that the freight from America would make the prices too high for successful competition.

#### **FRANCE.**

(From Consul General A. Gaulin, Marseille.)

Mineral waters consumed in the Marseille district are almost exclusively of French origin. The St. Galmier, Coizan, and St. Alban brands, retailing at 30 centimes (5.79 cents) per liter (1.057 quarts), are sold in largest quantities, but the higher-priced Evian, Vichy, Vittel, and Contrexeville waters have also a steady sale. The only foreign waters sold here to any extent are Apollinaris and Giesshübler, which retail at 80 and 85 centimes (15.4 cents and 16.4 cents), respectively.

A limited market exists for American mineral waters, which would probably find customers among the hotels in Marseille and the Riviera resorts frequented by American tourists. This would require, however, a central depot from which supplies could be readily obtained. Direct importation by the consumers is out of the question.

It should be noted that natural mineral waters can be imported into France only when upon the official list of authorized mineral waters. Every shipment must also be accompanied by a certificate of origin issued by the local authorities and legalized by the French consular officer of the district.

#### **Procedure for Authorization—Artificial Waters—Duty.**

To obtain the necessary authorization, application must be made to the Minister of the Interior, and samples furnished, a certain num-

ber of bottles having been filled in the presence of a French consular officer and by him sealed, the case also bearing the consular seal. These samples are analyzed by the chemists of the National Academy of Medicine. The only natural mineral water of American origin, the sale of which has been authorized thus far in France, is from a Massachusetts lithia spring.

Artificial mineral waters may be sold in France without previous authorization, but these can be imported only in bottles or jars bearing, in indelible type, the words "eau artificielle" (artificial water). The importation in casks or receptacles other than those mentioned is prohibited. Samples of each shipment are analyzed by official chemists. Siphons must be in perfect condition.

American mineral waters of every description are subject to an import duty of 20 francs per 100 kilos (\$1.84 per 100 pounds) net weight. The importation of mineral waters from countries entitled to the minimum tariff is duty free.

### GERMANY.

[From Consul General Robert P. Skinner, Hamburg.]

Although fashionable hotels and restaurants in Germany keep in stock a few cases of American mineral waters, the present demand for them is of no commercial importance, and it may be doubted whether it would be profitable to attempt to create one by advertising and otherwise. Waters of medicinal value might, perhaps, be urged into favor because of their special merits, but of mere table waters there are so many of domestic origin, available at low prices, as to render competition difficult after payment of freight and other charges.

Mineral waters, including the container (provided the container, if empty, would be subject to a duty of no more than 74 cents per 220 pounds), are free of duty. That is to say, the bottle must be of ordinary type, and without mechanical closing apparatus, if, with contents, it is to be entered free of duty; otherwise the duty is calculated according to the character of the bottle. The duty is virtually prohibitory on mineral water in other than simply corked plain glass bottles.

The one American water for which there exists a certain demand in German hotels patronized by Americans costs at retail \$4.28 per 20 bottles, or 24 cents per bottle, containing three-quarters of a liter (liter = 1.057 quarts). The importer who quotes this price quotes also well-known European waters at the following figures: Apollinaris,  $\frac{3}{4}$  liter, 8.3 cents; Apentawasser,  $\frac{3}{4}$  liter, 14 cents; Hunyadi Janos,  $\frac{3}{4}$  liter, 14 cents; Contrexeville, 1 liter, 24 cents; Evian, 1 liter, 24 cents; Fachinger,  $\frac{3}{4}$  liter, 10.7 cents; Giesshübler, 9.9 cents; Sprudel (Carlsbad), 1 liter, 19 cents; St. Galmier, 1 liter, 13 cents; Vichy, 1 liter, 22 cents; Wiesbaden,  $\frac{3}{4}$  liter, 20 cents.

#### Low Price Necessary—Imports and Exports.

An ordinary table water such as the managers of popular cafés and restaurants might take up, should be sold at wholesale at not over 5 cents per bottle. The American water now on sale here brings 35 cents at hotel bars and 60 cents in the restaurants of the same hotels. Naturally, the quantity sold is trifling, and importers keep only a few cases on hand to maintain their assortments.

Germany's foreign trade in mineral waters, including weight of containers, for 1909 and 1910, was as follows:

Imports and exports.	1909	1910	Imports and exports.	1909	1910
	<i>Tons.</i>	<i>Tons.</i>		<i>Tons.</i>	<i>Tons.</i>
Total importations.....	9,780.8	11,226.2	Total exportations—Con.		
From France.....	1,048.3	1,014.7	To Austria-Hungary.....	2,316.7	2,497.6
Austria - Hun-			Russia.....	2,879.3	2,803.9
gary.....	8,636.6	10,095.8	Switzerland.....	2,323.9	2,322.4
Total exportations.....	40,635.5	45,466.9	United States.....	2,618.2	1,332.1
To Netherlands.....	11,440.2	15,568.9	France.....	904.8	896.2
Belgium.....	10,117.7	11,168.5	British West		
Great Britain.....	3,912.6	4,635	Africa.....	602.7	679.7

[From Consul Herman L. Spahr, Breslau.]

#### Bohemian and Rhenish Brands at Breslau.

There has been a remarkable increase in the consumption of table waters in Germany, the sale now amounting to over 100,000,000 bottles a year.

Owing to the numerous mineral springs in Germany and the proximity of Bohemia, there are many established brands on the Silesian market, and a dealer will not accept an agency at any risk to himself. The freight to Breslau would probably make it almost impossible for an American water to compete successfully with the well-known Bohemian and Rhenish brands.

The tariff does not provide a duty on foreign mineral waters, but bottles of unusual design or with unusual devices are dutiable. Advertising matter is subject to a duty of 6 marks per 100 kilos (\$0.648 per 100 pounds).

Of the more expensive brands on this market the Biliner and the Fachinger are the most popular, while the Grafenorter, Altheider, and Zentnerbrunnen (all Silesian spring waters) lead among the cheaper.

#### RUSSIA.

[From Consul General John H. Snodgrass, Moscow.]

A large amount of bottled water, both domestic and imported, is used in Moscow. Narzan, Essentuki, No. 20, and Borjom are the principal Russian brands, while of the imported, Apollinaris and Vichy are the most often seen. Kissingen and Emser are popular German waters.

The value of the imports of mineral (natural and artificial) waters for the past three years was: In 1908, \$11,000; in 1909, \$14,000; in 1910, \$10,500. As duty is levied on the water by weight of the entire package, the statistics do not show the importations in gallons.

Under the Russian tariff, mineral waters, both natural and artificial, pay an import duty of 2.30 rubles per pood (3.28 cents per pound), weight of receptacles included, except those medicinal mineral waters enumerated in special lists drawn up by the Medical Council of the Ministry of the Interior in concurrence with the Ministries of Finance and of Agriculture and State Domains. The latter pay duty at the rate of 1 ruble per pood (1.43 cents per pound). The treaties concluded by Russia with Germany, France, and Austria-Hungary contain lists of mineral waters admitted at the rate of 1 ruble per pood.

## NORWAY.

[From Consul General Henry Bordewich, Christiania.]

There are 16 mineral-water plants in Christiania that manufacture, besides the more common kinds of such beverages, also some very fair imitations of the waters known as Emser, Apollinaris, Carlsbad, and Vichy. The genuine waters of the same names are imported to some extent. The terms on the imported waters are 90 days with a discount for cash. In my opinion, the outlook for the sale of American goods of this character is not promising.

Soft drinks are not so commonly used in Sweden as in the United States, by reason of the short, cool summer, and it is doubtful if a market could be found here for fruit sirups, as juices of different kinds of both cultivated and wild berries are sold at very low prices. The bottlers of soft drinks in Christiania manufacture the soda and sirups in their own laboratories.

[From Consul P. Emerson Taylor, Stavanger.]

**All-Year-Round Demand in Stavanger.**

It is estimated that in a normal season, or rather a moderately warm season, there are used in the Stavanger district about 500,000 bottles of soft drinks. The quantity varies greatly from year to year. In a cold, rainy summer the amount is much less than this, while if the weather is unusually warm nearly a million bottles are consumed.

The soft drinks most used here are Selters, "Saft"—which is fruit juice made from oranges, lemons, apples, pears, and several other kinds of fruit—the ordinary American pop, and similar temperance drinks. There are no soda fountains in the district. Ice-cold drinks are practically not used at all. Ice cream and ices are likewise almost unknown and are never kept in stock even in the summer, but are made on order for special occasions.

While a smaller quantity of soft drinks is used during the summer than in communities of similar size in the United States, yet a larger amount is consumed throughout the remainder of the year. During those years in which the summer is very cool perhaps the greatest quantity of soft drinks is used in midwinter when most of the dinner parties, banquets, and balls are held. Fruit juices are also used very generally in cooking, in making puddings and desserts.

---

SPAIN.

[From Consul Charles L. Hoover, Madrid.]

The consumption of mineral waters in Spain is large, but those used are almost exclusively of Spanish origin. The two table waters having the widest sale are the Insalus and the Solares. A certain amount of the French Evian water is sold, but its use is limited to the hotels, where it is sometimes called for by foreigners.

Credit terms here are governed by much the same considerations as in the United States. Theoretically all business is done on a cash basis; in practice all sorts of terms are arranged, but where credit is allowed it is usually for 60 or 90 days. Several dealers in mineral waters have stated that they do not pay for the water they receive from the bottling companies until after they sell the goods. Where sales are brisk, accounts are presented monthly and may cover any number of consignments.

## SWITZERLAND.

(From Consul General R. E. Mansfield, Zurich.)

The hundreds of hotels, restaurants, bathing establishments, and "cures" throughout Switzerland and the thousands of tourists annually visiting the country cause an unusually large consumption of mineral waters. Estimates made by wholesale dealers place the annual consumption at somewhat over 5,000,000 bottles.

Including the domestic waters, there are about 60 brands on the market, offering a varied selection in price and quality. The sale of the Swiss waters is the greatest, followed by the German, French, and Austrian. The following are the principal waters used:

Brands.	Countries of origin.	Approximate annual sale, in bottles.	Retail price.	
			Per bottle.	Per half bottle.
Vichy.....	France.....	400,000	\$0.18	.....
Eggen.....	Switzerland.....	380,000	.10	\$0.08
Pranegg.....	do.....	360,000	.12	.08
Glenahubler.....	Austria.....	250,000	.14	.09

## Brands and Prices.

About three-fifths of the Vichy water is consumed in the French sections of Switzerland and the remainder in the German Cantons. The German and Austrian waters are popular chiefly in the German and Italian sections.

Other well-known mineral waters on the Swiss market are: French—Evian, St. Galmier, Vittel; German—Apollinaris, Selters, Ems; Austrian—Carlsbad, Marienbad, Hunyadi; Swiss—Tarasp, St. Moritz, Val Sinestra, Brimenstorf, Wildegg, Pilatus. The prices per bottle range from 10 cents for Pilatus to 23 cents for Vittel and Val Sinestra, but are subject to a discount of 1 cent per bottle on orders of 12 whole or 20 half bottles. Two cents less per bottle is asked when 30 whole or 50 half bottles are taken. Wholesale prices are subject to much larger discounts.

A bottle customarily holds about three-fourths of a quart, but Vichy, Ems, Wildegg, and a few others are sold in liter bottles (liter=1.057 quarts). Many brands are equipped with patent stoppers and sealing devices. The Ems and Selters waters are sold also in liter and half-liter jugs. Mineral waters are usually shipped open in the cars, packed in straw and corrugated paper. Vichy, Evian, and some other brands are also shipped in cases of 50 bottles, but the former method is preferred, as breakage is less.

## Imports—No Prejudice Against American Waters.

The magnitude of the mineral-water trade of Switzerland is further evidenced by the large imports. During 1910 approximately 3,000,000 bottles were imported, their value being \$219,458. Of these imports Germany supplied \$93,596 worth, France \$93,728, Austria \$25,266, and Italy \$4,416. Small quantities come from England, but no American mineral waters are imported into Switzerland. The imports are practically all natural waters, as very little artificial water is used in the country. Exports in 1910 amounted to 1,254,220 pounds, valued at \$38,186, chiefly the better grade of Swiss waters, sent to France, Germany, Austria, and Belgium.

The successful introduction of American mineral waters into this market would be met with many difficulties. Hotels are by far the greatest consumers, and as Swiss hotels are very conservative it is doubtful if they could be induced to keep the American product in stock, unless demanded by their patrons. The principal Zurich importers and dealers seem ready to consider any proposition submitted by firms in the United States, as there is no prejudice against American waters, but state that the distance from the market and the difficulty of handling and transshipping this class of merchandise, together with high freight rates and the strong competition now existing between the various imported and domestic mineral waters, make it appear that the American product could not compete with the brands already popular in Switzerland.

#### TURKEY.

[From Consul General G. Ble Ryndal, Constantinople.]

Soft drinks are popular in Turkey, and the amount of ordinary soda water consumed is considerable. Likewise the quantity of mineral water for table purposes sold in Turkey, and more especially in Constantinople, has greatly increased of late. The German brands have a good sale here, particularly Giesshübler; Apollinaris and Vichy are also in demand.

In seeking an opening for American goods it would be well to get in communication with a reliable agent in Turkey, who could handle such mineral water in a way to control the general trade. This is preferable to selling direct to dealers, as the agent knows the field and his customers. The general discount is 2½ to 5 per cent for cash and three to six months' credit. All quotations should be c. i. f. Constantinople or other Turkish port, and never f. o. b. in the United States. Correspondence should, in general, be in French. The import duty is 11 per cent ad valorem.

There is no reason why an American mineral water should not compete successfully with the European brands now on the market, if handled and presented to the trade properly by a suitable agent.

[From Consul William Coffin, Jerusalem, Syria.]

There is a considerable consumption of bottled waters in Jerusalem and Jaffa on the part of tourists (approximately 5,000 annually), as they fear the local water. All hotels keep such waters in stock, the chief brands being Vichy and Apollinaris, with some others from Austria.

Quotations per 50 bottles of Vichy range from \$3 for St. Galmier to \$7.45 for Carlsbad. Evian sells at \$6.40 for 60 bottles. These prices are c. i. f. Jaffa, with four months from date of bill of lading. The local commission agents receive 5 per cent. Apollinaris is quoted: Large bottles, \$5.60 per case of 50; small bottles, \$4.40 per case of 48; f. o. b. London, net cash against bill of lading; 5 per cent discount for purchase of 20 boxes at one time; 5 per cent to local commission agent.

The chief opportunity for the sale in Syria of mineral waters from the United States would be the demand of the 1,500 to 2,000 Americans who visit Palestine yearly. They would naturally welcome a familiar product and use it in preference to other brands. It is probable that for an initial order it would be advisable to extend

some credit. If, notwithstanding higher freight costs, European prices can be met, there should be an opportunity for some business here. In any attempt to enter this market, a little sign advertising to catch the American traveler's eye would be of great advantage.

---

#### JAPAN.

[From Consul General Thomas Sammons, Yokohama.]

The springs whose waters are now being bottled in Japan may be divided into two groups, the foreign and the native owned and operated.

The foreign companies put up their entire production as plain table water, but the Japanese companies do not bottle over 10 per cent of their output as plain water, the remainder being sweetened, flavored, and sold as "soda pop," which the Japanese prefer. These native companies supply the native demand, but at most the business is small. The foreign companies supply practically the entire foreign resident and hotel trade, but the bulk of their product is exported.

Aerated waters can be marketed at very moderate prices because labor and transportation costs are low and bottles are made by hand as cheaply as by machinery in the United States. Pint bottles are the standard size, and are sold at 1.3 cents each. Packing crates, which cost 17 cents each, hold 4 dozen bottles. The price per case of 4 dozen pints is \$2.60 by the foreign companies and 25 or 30 cents cheaper by Japanese companies.

Apollinaris is practically the only foreign water imported, but its sale is small, as not more than 250 cases are brought into the whole Empire per year. The foreign companies produce about 400,000 dozen pints per year and export most of it, owing to the slight call from the resident and transient foreign population. The Japanese do not demand table waters, and from present prospects there are no signs for future development of the trade in such goods.

---

#### SIAM.

[From Vice Consul General Carl C. Hansen, Bangkok.]

The mineral waters consumed in Siam come from abroad, as the natural mineral springs which are said to be found in various parts of the country have not been exploited up to the present time and there are no manufactories of artificial mineral waters.

Mineral water is used in Siam both for medicinal purposes and as a beverage. The value of the total imports of aerated and mineral waters during 1911 was \$4,476, the United Kingdom and dependencies contributing \$2,294 worth, Germany \$1,020, France \$685, Japan \$351, and all other countries \$126. Among the various mineral waters sold in Bangkok are the Apenta, Hunyadi Janos, Vichy, Tansan, Apollinaris, and Franz Joseph. The sale of mineral waters in Siam appears not to have been pushed to any extent, and perhaps this is the reason for their comparatively small importation, yet there is no doubt that a well-advertised, low-priced table mineral water would in time find a ready market in Bangkok.

Large quantities of soda water were imported into Bangkok from Singapore up to the year 1910, when the importing firm opened a factory in Bangkok. There are at present two aerated-water manu-

factories in this city conducted by Europeans, besides smaller native factories. The retail price per dozen "cods" of soda is 37 cents, and for sweetened water 46 cents, but the bottles are charged for at the rate of 74 cents per dozen, being returnable at the same rate. Soda-water fountains are entirely unknown in Bangkok, and there are no places where "soft" drinks are obtainable except hotels.

---

#### SOUTH AFRICA.

[From Consul Edwin N. Gunseulus, Johannesburg.]

During the past five or six years the importations of mineral waters have steadily decreased, owing to the marketing of South African mineral waters, such as Van Riebeeck, Vasco, and others produced in Cape Colony and other parts of the Union.

The brands of foreign mineral waters imported into the Johannesburg consular district may be taken in the order of their importance as follows: Teplitz, an Austrian water supplied to private houses, hotels, and clubs; Schweppes, a German water which is almost entirely sold in bars and hotels for mixing with spirits, also supplied to some extent for household use; Apollinaris, which is extensively sold here, as it is in most parts of the world, and is largely found in private houses, hotels, and clubs; Perrier, a French mineral water for table use for private houses, clubs, and hotels. The customs duty on all mineral waters imported from foreign countries into the Union of South Africa is 25 per cent ad valorem.

Importers of mineral waters as a rule pay cash against documents. Inquiry made of firms here now representing foreign mineral waters discloses the fact that none of them at present cares to take any further agencies, as there is such a small demand for imported mineral water.

---

#### FRENCH WEST INDIES.

[From Consul T. R. Wallace, Fort-de-France, Martinique.]

The quantity of table and medicinal mineral waters consumed annually in Martinique is large, the greater part of which is procured from natural springs located on the island and sold very cheap. The springs are not far from the city, and the water, supplied in bottles that preserve the natural gases, is named after the localities where procured, Didier and Moutte. The price per liter (1.057 quarts) is 5 cents, if the empty bottle is returned.

The other mineral waters offered are Vittel, Contrexeville, Vichy, and Vals. The best quality of these brands retails at 20 cents per liter, and 10 cents per liter is asked for the cheaper grades of the same waters. Seltzer water is used at the restaurants and hotels to a large extent.

The general rate of customs duty, applicable to mineral water from the United States, is \$3.86 per 100 liters; mineral water is admitted free from countries entitled to the minimum tariff. There are also the following additional charges: Lighterage per case, 5 cents; statistics per package, 3 cents; wharfage per 110 pounds or fraction thereof, 1 cent; octroi on bottles, per 1,000, 20 cents. Freight from New York is 15 cents per cubic foot plus 5 per cent, or 30 cents per 100 pounds plus 5 per cent. The steamship company has the option to choose

which of the charges to accept. Heavy freight is \$5 per ton of 2,240 pounds.

With respect to grape and other fruit sirups, there would seem to be no present opening to introduce such goods to the trade of Martinique. There is but one bottler of soft drinks on the island. No soda fountains are in use in the district. The only soft drink used to any extent is bottled lemonade. It can be made very cheaply from the limes and oranges which grow plentifully here. It is mostly drunk mixed with rum and often with beer.

---

Records of the Bureau of Statistics show the imports of natural and artificial mineral waters into the United States to have aggregated in value \$1,128,814 in 1909, \$961,686 in 1910, and \$1,067,502 in 1911. For previous articles on mineral waters see Daily Consular and Trade Reports for April 29, October 30 and 31, and December 30, 1911.

Lists of names of bottlers, soda-fountain users, mineral-water dealers, etc., furnished by American consular officers in many foreign countries, will be supplied, upon application, by the Bureau of Manufactures.

A very complete review of the mineral-water industry abroad was issued in 1901 as Special Consular Reports, Volume XXII, part 2, which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., at 10 cents a copy.

---

### FIRST MESSAGE OF PRESIDENT YUAN SHI KAI.

[From a press dispatch from Peking.]

On April 29 Yuan Shi Kai, President of the Chinese Republic, delivered his first presidential message in the form of a speech at the opening of the session of the Advisory Council, which is practically a provisional senate. The President proclaimed that the principles of the new Chinese Government must be the maintenance of order in the interior, the achievement of progress, and the retention of external friendships, which are necessary to the existence of China.

Yuan Shi Kai emphasized the necessity of forming a firm foundation on which to base the policy of progress. The most important matter at present, he said, was finance. Foreign capital being essential to China, the Government is drafting the principles of a financial reform. It is negotiating with the powers for an increase of the customs duties and the abolition of the likin or transit taxes, and the reduction of the export taxes, by which means the income from the maritime and native taxes will be increased to 60,000,000 taels (approximately \$42,000,000), from the present total of 44,000,000 taels (approximately \$30,800,000). This increase would suffice to pay for the amortization of the foreign loans. Railroad and other loans will probably pay for themselves. Pending the big loan the Government will issue short-term Treasury bonds.

Yuan Shi Kai recommended plans for lightening the burden of the people, for proper surveys of lands, for a new scale of taxation, for a unified system of currency, and for standard weights and measures. He pointed out that with the establishment of a Republic industrial development had become of the first importance. Ministries of forestry, industry, and commerce are to be established to encourage and subsidize industries and to educate students. The mining laws are to be reformed, and commercial laws adopted and enforced. Religious liberty will be guaranteed. The Ministry of War has been instructed to reduce the number of the troops in China.

---

Consul P. Emerson Taylor reports an increase of \$43,000 in declared exports to the United States from Stavanger, Norway, during the first quarter of 1912 over the 1911 quarter. Sardines composed \$246,029 of the \$403,315 total. Herrings in oil, tomatoes, and bouillon increased by \$74,500, and aggregated \$102,899.

## NEAR EASTERN BUSINESS NOTES.

[From the Levant Trade Review, Constantinople, published by the American Chamber of Commerce for the Levant.]

*Organization membership.*—The membership of the American Chamber of Commerce in the Levant has grown from 75 at the outset to 425 and is still growing.

*Industries at Jerusalem.*—At Jerusalem the Bezalel school is producing carpets of the finest designs, and working in gold, silver, copper, and other metals. There are many factories of olive-wood articles and mother-of-pearl goods in Bethlehem. [An article descriptive of the mother-of-pearl industry in Palestine will appear in the May 14 issue of Daily Consular and Trade Reports.]

*Emigration from Constantinople to the United States continues,* those of Russian origin being about 175,000; from Roumania about 2,000; from Bulgaria, Servia, and Montenegro about 5,000; from Turkey about 35,000; and from Greece about 2,500. These emigrants send back money and information regarding America's natural resources and industries, and help to build up trade between the two countries.

*Progress in Cyprus.*—Like other agricultural countries, Cyprus is importing everything from abroad. Should a depot be established in Larnaca for different agricultural implements and other machinery, a good business might result. Although the island is an agricultural country, great quantities of flour are imported from abroad, chiefly from France, Italy, and Turkey. The value of the imports in 1912 was \$2,863,544, the principal articles being flour, cotton goods, lumber, sugar, and leather goods. An American school has been established in Larnaca by the American mission of the Reformed Presbyterian Church, and a fine new building has been constructed on a beautiful site. There is a plan under consideration for connecting Larnaca, the chief port of the island, with the capital by a railway. All other towns and villages are well connected by carriage roads, and there is every facility for travel by automobile. The passenger connection between Larnaca-Nicosia and Larnaca-Lamassol is maintained by a daily motor bus.

[From the Near East.]

*Nail works.*—Turkish capitalists have asked their Government for a concession for the erection of a wire-nail works.

*The express delivery service* has been extended to Constantinople, and is available for correspondence posted at the British post office, Constantinople, for Great Britain.

*Navigation.*—The Turkish navigation company Mahroussa is to be turned into a private company, in which the Ottoman Government is to take a 50 per cent interest.

*The taxicab companies* of Bucharest have amalgamated with one or two factories, including the "Fiat," with the object of creating a powerful monopoly in this particular line of the motor trade for Roumania. The initial capital is of \$140,000, and the name of the company is the Société Roumaine des Taximètres.

*Public-road building.*—The Entreprise Générale des Routes Ottomanes has finished the preliminary study for the building of the 205-mile highway between Trebizond and Erzerum and the definite plans of the same for about 87 miles. Of these, plans for 37 miles submitted to the Government have been approved, and the building of the road has started. Besides the above, the same company has under study the roads between Erzerum and Harput and Trebizond and Rizeh.

## FOREIGN TARIFFS.

## RUSSIA.

[From Board of Trade Journal, Apr. 18, 1912.]

## Increased Rates on Agricultural Machinery and Parts.

Owing to the failure of the Duma to adopt some legislation with regard to the customs treatment of agricultural machinery and parts, the temporary exemptions and reduced rates on the articles enumerated in the appended schedule went out of effect on April 14, such articles now being subject to the rates given in the last column of the schedule. A Government bill for the reenactment of the lapsed tariff provisions is to be introduced on the reassembling of the Duma. It is understood that instructions have been issued to the customs authorities to permit agricultural machinery arriving in Russia on or after April 14 to remain in bond for one month from the date of arrival.

(Ruble=51.5 cents; pood=36.1128 pounds; funt=0.90282 pound.)

Tariff No.	Articles.	Rate of duty.	
		Prior to Apr. 14, 1912.	Present.
187	Machines and apparatus, complete or incomplete, fitted together or in parts:		
	5. Traction engines connected with complex thrashing machines and ploods.....pood.....	Rubles. 0.75	Rubles. 3.20
	6. Reaping and sheaf-binding machines; reaping machines with automatic ejectors; steam plows, complicated clover-thrashing machines with two drums, complicated steam thrashers with beater drums in which the length of the beaters is not less than 4 feet 3 inches, and with spike drums having a length of not less than 40 inches; hay-tossing machines; raking machines (horse drawn); machines for sorting grass seed; sorting machines with spiral wire cylinders; potato-sorting machines; machines for scattering powdered fertilizers; pulverizers, bellows, and injectors for vines and trees; grape-crushing machines; continuous wine-pressing machines; centrifugal cream separators and parts thereof; all kinds of newly invented or perfected agricultural machines and implements ordered by experiment stations and museums.....	Free....	.75
	11. Spare parts of agricultural machines and implements imported together with such machines and implements—		
	a. For any of the machines enumerated in subdivision 6 of the present number (187).....	Free....	(1)
	Note 5.—Implements and apparatus for destroying animals noxious to agriculture, as set out in the list prepared by the Minister of Finance in concurrence with the Ministers of Agriculture and Imperial Domains.....	Free....	(2)
	Note 6.—The parts of agricultural implements and machines named in the following list, whether imported with the implements or machines or separately: Case-hardened steel cut in the form of moldboards for plows; steel teeth for horseshoes; steel disks for cultivators, plows, and cultivators (in finished state); guards, sections, and complete knives for reapers; seed tubes for drills; binder attachments for self-binders, and parts of such attachments; ribbed beaters for thrashing machines, finished or not; also shaped steel for beaters.....pood.....	Free....	(2)
190	Note 3.—Manila binder twine for self-binders, not exceeding 30 poods (1,083 pounds) with each binder attachment.....pood.....	Free....	1.06
194	Note.—Canvas for self-binders and sorters.....funt.....	Free....	.33

<sup>1</sup> At 4.20 rubles per pood, if of iron or steel, with or without parts of other materials, and not containing more than 25 per cent of copper; otherwise, 8 rubles per pood.

<sup>2</sup> Not specified; probably dutiable as apparatus not specially mentioned, at 2.10 per pood, when of iron or steel, with or without parts composed of other materials, and not containing more than 25 per cent of copper; and at 8 rubles per pood when containing more than 25 per cent of copper or its alloys.

## AUSTRALIA.

## Supplement to Customs Tariff.

Another supplement to the Australian tariff has been published recently by the Bureau of Manufactures as Tariff Series No. 17D. This supplement embodies all the amendments to the tariff which

were made in December, 1911 (see Foreign Tariff Notes, No. 5, p. 134), likewise a number of other changes in the tariff and the customs regulations which have been made since 1910.

### URUGUAY.

[Reported by Consul Frederic W. Goding, Montevideo.]

#### Postponement of New Pharmacy Regulations.

The Uruguayan pharmacy law, containing, among other provisions, regulations for the sale of patent medicines and pharmaceutical specialties, which was to take effect April 22, 1912, will not be put in force until April 22, 1913. An important provision of the law is that unless a pharmaceutical specialty has been authorized for sale by the National Council of Hygiene it shall not be sold except on prescription. Druggists are authorized to sell without a special ruling of the National Council of Hygiene medicinal preparations made in their pharmacies, the formulas for which are included in any official pharmacopœia. All foreign pharmaceutical specialties, whether or not the formula is included in an official pharmacopœia, may be sold only under authorization of the council. The name of the product must indicate the principal ingredient or ingredients, and the quantity of the ingredients must be indicated on the label. Those pharmaceutical specialties, authorization for the sale of which is requested, must be possessed of real pharmacological merit; applications for permission to sell such medicines must be accompanied by samples and a detailed description of their composition.

[Copies of the approved form for application for the sale of patent medicines and pharmaceutical specialties and the complete text of the pharmacy law are on file in the Bureau of Manufactures.]

### OPEN-END STAMPED ENVELOPES.

[Announcement of United States Post Office Department.]

Postmasters are notified that the department has available for issue a supply of open-end stamped envelopes which were manufactured under the contract ended June 30, 1911. These envelopes are all plain, and no special-request envelopes of the open-end pattern can be supplied.

The open-end envelope is intended for the mailing of matter of the third class. One of the end flaps instead of the top flap remains unsealed, and contents can be readily examined. The opening is smaller than in envelopes with top flap unsealed, affording less chance of loss of contents in transit or of other pieces of mail matter getting caught in the opening.

The open-end envelope can be furnished, while the supply lasts, in the following varieties of 1-cent denomination: No. 5, white and amber; No. 6, white and manila; No. 8, white and amber; No. 13, white, amber, buff, and blue.

The selling prices of open-end envelopes are the same as for corresponding varieties of the regular unprinted open-top pattern. Postmasters are directed to advise interested patrons that these envelopes are available.

### Agricultural Exhibition at Prague.

Consul J. I. Brittain suggests the exhibition of American farm machinery at the annual agricultural fair at Prague, Bohemia, this year's event continuing from May 15 to 19. An effort is now being made to introduce gasoline traction plows on large Bohemian estates. Exhibits for the fair will be carried freight free on the return journey over Austro-Hungarian railways.

**FOOD CONTAINERS FOR TROPICS:**

[From Consul Thomas R. Wallace, Fort de France, Martinique, French West Indies.]

Manufacturers and exporters of cereal products and food preparations intended for tropical countries should change the material of the containers in which such goods are packed, if the trade therein with tropical countries is desired. The American exporter at present sends to tropical countries the same packages as are prepared for home consumption. The wrappers or containers are found to be unfit to meet the conditions to which they are subjected in the hot and humid countries of the Tropics.

Packages of cereals or other food preparations when inclosed in paper containers are soon infested with destructive insects, which cause them to be unfit for use. Merchants who have attempted to carry such goods, delivered to them in paper or cardboard packages, after a trial gave it up, as the losses greatly exceeded the profits and further orders were withheld. The purchaser would also find that before a package could be used at his home the insects would work through the paper or cardboard covering and destroy much of his purchase or render it of no value.

The container for such products should be of tin or glass when intended for the tropical trade, especially in the countries subject to great humidity. Cereal food preparations should meet with ready sale in tropical countries, and if put upon the market properly prepared to withstand the conditions to which they would be subjected, increased sales would eventually follow. Continuing the practice of sending such goods in paper or cardboard packages will ultimately result in closing the market against them, unless a method is devised to protect such products from the attacks of insects common to tropical countries and which are almost impossible to guard against by ordinary means.

---

**MILK-BOTTLE TRADE IN JAPAN.**

[From Consul General Thomas Sammons, Yokohama.]

Milk is handled in Japan in much the same way as in the United States, the bottles having much smaller necks. Ordinary corks are used. The following prices per 100 milk bottles in Japan, with embossed marks as desired, indicate the possibility of introducing paper bottles: 1 go (0.4 pint), \$1.55; 2 gos (0.8 pint), \$2.80; and 4 gos (1.6 pints), \$5.50.

Japan enjoys quite a good export trade in bottles, principally beer bottles which are shipped to South America, aggregating 1,868,282 dozen, worth \$210,538 in 1909; 2,716,486 dozen, worth \$301,368, in 1910; and 3,677,180 dozen, worth \$382,897, in 1911. In the absence of any authentic statistics covering the production of bottles in Japan, these figures afford some idea of the size of the business.

As the Japanese are thrifty, there would seem to be prospect of a good market for paper bottles both from an economical and sanitary point of view.

---

Consul Edwin N. Gunsaulus states that hundreds of small houses are being built in Johannesburg, South Africa, estate agents and building societies having interested many people in owning their homes, for which they pay in monthly installments.

## MILK SUPPLY IN SPANISH CAPITAL.

[From Consul Charles L. Hoover, Madrid.]

Owing to the present system of milk distribution in Madrid there would be but little sale for improved American containers until conditions change radically. There are no really large dairying concerns in Madrid. Part of the milk supply comes from goats and a few cows pastured near the city and kept in "lecherias" in the city, where they are milked; some is brought in from near-by farms, usually about 6 gallons in tin cans in straw baskets slung across a horse upon which the rider mounts; some from neighboring villages by train or wagon, all in tin cans; and a small amount from northern Spain by train—a 24-hour trip. Deliveries to regular patrons are made by "mozas" carrying a frame from which are suspended about 18 small pails or bottles, each holding about a quart, but it is probable that most of the families in Madrid do not receive regular supplies, such as is needed being brought in by some member of the family or a servant, who carries any convenient vessel or a pitcher from the house. This milk is secured from small milk shops, called "lecherias," of which there are about 550 shown in the city directory. The milk is always boiled as soon as it is brought into the house. It costs about 18 cents per quart. Most of the butter used in the city comes from France and costs about 60 cents per pound. It is almost impossible to secure cream and it is almost invariably sour when obtained.

---

## WATER IN CANNED TOMATOES.

[From the California Fruit Grower.]

The canned-goods trade is beginning to speculate as to what will be the result of the Government ruling with regard to canned tomatoes. The decision reached by the pure-food board some months ago forbids the addition of water and of any more of the juice of the tomato than is just necessary to properly process it. It is of course impossible to prepare tomatoes without some liquid.

It is agreed that the effect which this new regulation will have will be the standard of the pack will be raised by the elimination of a large percentage of the inferior grade called seconds and off-standards, and this will probably reduce the pack somewhat.

Growers' prices, it seems, are improved by the situation. Only those packers who have been putting out an inferior article will be injured by the Government ruling; the trade as a whole will be benefited because improvement in the pack is certain to bring about an increase in the consumption of canned tomatoes.

---

## TRAVELING POST OFFICE IN RHODESIA.

[From the London Times.]

From March 1 last, a traveling post-office van has been attached to the Rhodesian mail to and from the Rhodesian border, making the six or seven hours' stop at Buluwayo, while the local mails are being re-sorted, unnecessary, and allowing of a corresponding decrease in running time between Cape Town and the Rhodesian capital. It is proposed shortly to run a Rhodesia limited mail every Tuesday upon the arrival of the overseas mail at Cape Town dock, following the practice which has for some time been usual between Cape Town and Pretoria. The return journey will be similarly timed, and the outward mail will be delivered to the home-going steamship. The new traveling post office was built at the Rhodesian Railway works at Umtali, and contains sleeping accommodation.

---

*Guayule* shipments from Mexico during the four months ended October, 1911, aggregated in value \$1,299,000 gold, against \$2,077,000 in the same period of 1910.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 8764. Railway material.**—An American consular officer reports that a foreign Government will soon hold an adjudication for 40,000 tons of standard-size rails to be purchased for local railways. It is understood that the Government will receive bids from interested manufacturers for some time. The consular officer expresses a hope that American concerns will not fail to bid for these supplies, as further contracts for rails are in sight. Copies of the specifications and drawings relating to this adjudication can be obtained from the Bureau of Manufactures.
- No. 8765. Amyl acetate.**—A report from an American consular officer in the United Kingdom states that a request has been received from a local business firm for the names of American manufacturers of amyl acetate. The concern states that it uses about 1 hundredweight per week.
- No. 8766. Motor cars suitable for the Tropics.**—A Government official in a foreign country has informed an American consulate that he desires to receive particulars concerning motor cars suitable for the Tropics. He particularly desires information regarding medium-priced cars. Correspondence with this official may be in English.
- No. 8767. Safety-razor stropping attachment.**—An American consular officer in the United Kingdom reports that an inquiry has been received from a publishing house in his district for the names of manufacturers of safety razor stropping attachments. This firm states it is particularly interested in the "Twinplex" make.
- No. 8768. Harbor shelter for lighters and pier extension.**—A telegram has been received from an American minister relative to bids for the construction of a harbor shelter for lighters and extension of a pier in the country in which he is located. Firms that desire to submit bids for this work, which approximates a valuation of \$350,000, are required to register their names and references before June 25, 1912, with a special committee in charge of this matter. The minister adds that he has mailed notices of the proposed awards, and these will be loaned to interested firms by the Bureau of Manufactures when they are received.
- No. 8769. Motor cars and upholstered furniture.**—An American consular officer requests catalogues from the manufacturers in the United States of the very finest motor cars. These catalogues should show details of the cars, especially the interior upholstery and fittings. A car was recently purchased by a resident of his district for \$8,000, and at the present time it is the best machine in the market, but other residents are desirous of securing a better car, and American manufacturers should take advantage of this opportunity. The price of the car will be no object. Catalogues are also desired from manufacturers of upholstered furniture.
- No. 8770. Concession for electric tramways.**—An American consular officer calls attention to an adjudication which has been opened for a system of electric tramways for a certain Asiatic city, including several important suburbs. Bids will be received until June 15, 1912, and American contractors having the proper financial backing are urged to consider this concession. Copy of the conditions of contract, etc., can be obtained from the Bureau of Manufactures.
- No. 8771. Water supply.**—The municipality of Saarburg, Germany, will receive tenders for work on its water supply, the estimated cost of which will be about \$300,000. Specifications, particulars, conditions of contract, etc., may be obtained of the Burgermeister.
- No. 8772. Fire apparatus and dredger.**—The Minister of Justice and Home Affairs, Rio de Janeiro, Brazil, will receive tenders for motor fire engines, fire alarms, fire extinguishing appliances, etc., at a cost of about \$40,000; also for a dredger at an estimated cost of \$110,000.

## WORLD RAILWAY DEVELOPMENT.

### RAILWAYS IN BRITISH COLUMBIA.

[From Consul General David F. Wilber, Vancouver, Canada.]

One of the greatest handicaps to British Columbian development has been limited transportation facilities, a problem that has been under serious consideration by the provincial and Dominion governments.

The principal lines of railway in British Columbia are: The Canadian Pacific Railway and subsidiary lines, owning vessels for coast-wise traffic; the Grand Trunk Pacific Railway, which also has a coast-wise fleet; the Canadian Northern Pacific Railway; and the Great Northern Railway and its subsidiary lines. All these, upon completion, will be transcontinental roads, the first and last of which are operating transcontinental service. The other two will be completed from coast to coast by 1914. Besides these, the British Columbia Electric Railway is engaged in interurban passenger traffic and freight transportation in the vicinity of Vancouver, serving nearly one-half the population of the Province.

The Government policy may be said to be the granting of subsidies and debenture guaranties to railways for constructing certain extensions that will open up regions now inaccessible and bind the Provinces together. These extensions as feeders for the main lines will, in time, probably prove valuable, but were it not for the expenditure to be made by the Province they could not be profitably built or operated for some time.

It should not be assumed that this railway policy and the projected lines mentioned in this report are to be consummated in the near future. Certain of the lines probably will be; others may, and still others will probably not be undertaken for several years. Before completion of all the lines there may be some changes in plans, based upon the interests of the different regions affected. At present, however, the extensions mentioned herein are the Government plans and those of the railway companies interested.

### CANADIAN PACIFIC RAILWAY.

The extensions to be carried out by the Canadian Pacific Railway will provide it, when a few further extensions are made, with a second

line across two-thirds of the southern part of the Province and will give it a line along the whole eastern coast of Vancouver Island.

**Mainland Lines and Branches.**

The new mainland line will run from Hope, on main line 89 miles east of Vancouver, to that part of the Alberta division which enters British Columbia near Crows Nest. This will be bound to the northern line by four cross lines. The new sections are the Kootenay Central Railway, several small branches, including the Kaslo & Slocan Railway, the Shuswap & Okanagan Railway, and the Kettle Valley Railway.

(a) The first mentioned will connect Golden on northern line, with Fort Steele, Jukeson, Elko, and Fernie, on southern, and is assisted by a Dominion subsidy. (b) The Shuswap and Okanagan diverges from the northern lines at Sicamous, running to Armstrong, Vernon, and Kelowna, where it will connect with the Kettle Valley Railway by a boat service until completion of the extension to Penticton. (c) Between this cross line and the Kootenay Central will be one from Revelstoke via Arrow Lakes, or via Upper Arrow Lake, the Kaslo & Slocan Railway, and Kootenay Lake, for service upon which a \$160,000 vessel is being built. [See Daily Consular and Trade Reports of April 12, 1912.] (d) The other and most western cross line will be effected by extension of the Nicola branch, connecting Spences Bridge and Merritt to nearest point on the Kettle Valley Railway.

**Crows Nest Pass and Kettle Valley Lines.**

The Crows Nest Pass division, the Columbia & Western and boat services (operated by the Canadian Pacific between the Crows Nest Pass division and Midway), and the Kettle Valley Railway, from Midway via Carmi, Penticton, Summerland, and Princeton to Hope, will constitute the southern line. The Kettle Valley Railway from Midway to Coldwater is provided for by a \$5,000 a mile subsidy. It is generally understood to be controlled by or allied to the Canadian Pacific Railway and is so regarded in this report, although it is outwardly an independent line. The new railway policy provides approximately \$500,000 (\$10,000 a mile) for carrying the road from Coldwater over the mountains 50 miles to Hope, where a bridge, for which the new agreements with the Province provide a grant of \$200,000, will span the Fraser. This will give direct and unbroken railway connection from Vancouver to Proctor (22 miles east of Nelson). From Midway east to Nelson and Proctor there is a line in operation, as well as a line from Kootenay Landing, via Creston and Cranbrook, to Fernie. The only existing gap in the eastern section and the only one in the southern line provided for by the new policy will be on Kootenay Lake between Proctor and Kootenay Landing. These towns will, however, be connected by boat service and, it is presumed, will have rail connection before many years, but not in the immediate future.

The new railway policy, besides providing \$500,000 for the Kettle Valley line and \$200,000 for the Fraser River bridge (for which the Dominion gives a further subsidy), requires 145 miles' extension into the Okanagan by absorption of the Shuswap & Okanagan Railway by the Canadian Pacific Railway, linking Sicamous, Grand Prairie, Enderby, Armstrong, Vernon, Kelowna, and Penticton; 51 miles of line from Sicamous to Okanagan Lake have long been built and operated by the Canadian Pacific Railway. Absorption of the Kaslo & Slocan Railway by the Canadian Pacific Railway is provided for. It is to be entirely reconstructed and changed to a standard-

gauge road at a cost of \$500,000, of which the Province will provide \$100,000. Further, the Province repurchases certain lands ceded to the British Columbia Southern and Columbia & Western Railways (now absorbed by the Canadian Pacific) at an expense of about \$1,000,000.

#### **The Vancouver Island Division.**

On Vancouver Island, the Esquimalt & Northern is to be leased to the Canadian Pacific Railway and becomes a part of the system, to be known as the island division. The Esquimalt & Northern is already completed to Alberni and Port Alberni. It follows the eastern coast to Nanoose, whence it runs across the island to Barclay Sound. The new railway policy provides for building this line up the eastern coast from Nanoose to Courtenay (3 miles north of Comox) before the end of 1915. The railroad will undertake this extension at once. It is stated that, although the railway agreement does not compel it to do so, the Canadian Pacific ultimately will extend the Esquimalt & Northern up the whole length of the eastern coast of Vancouver Island to Hardy Bay, providing for a ferry at Seymour Narrows (about halfway between Vancouver and Hardy Bay) to connect with a projected line on the mainland to Fort George.

With regard to the Esquimalt & Northern, I have previously reported that the Canadian Pacific is providing for oil-burning locomotives and for the erection of oil tanks at Esquimalt. Storage tanks will probably be built at other points along this line.

#### **Other Plans and Improvements.**

Oil-burning locomotives are to be used on the mainland line from Field to Kamloops. I have also reported that the Rossland branch and possibly certain mountain sections of the Canadian Pacific are likely to be electrified; that train dispatching is soon to be done by telephone instead of telegraph; and that considerable expenditures will be made in and about Vancouver.

To double track the entire mountain section as far east as Calgary is one undertaking that the Canadian Pacific Railway management is reported to be arranging for at present. The work is to be carried out by the summer of 1915 in order to enable the Canadian Pacific to meet all competition that will arise in connection with the western grain shipments and other traffic expected to follow the Panama Canal opening.

The railroad shops are, according to present advices, to be at Coquitlam, 17 miles east of Vancouver and 40 odd miles up Fraser River. With announcement of the railway's plans for its shops, sidings, etc., speculation in real estate there became keen. Real-estate dealers have flooded the country with announcements as to the marvelous developments to occur, but it should be noted that the Canadian Pacific Railway has not promised and is not likely to do as much there as many who are purchasing lots probably believe. The town is rather too far up the Fraser River to become much of a seaport, not to mention the difficulty in connection with the bar at mouth of the Fraser. They merely intend to establish in time shops and train-handling facilities near Vancouver, where land could be purchased more cheaply.

**Harbors and Shipping Facilities.**

Port Moody, on Burrard Inlet, 5 miles nearer than Coquitlam to Vancouver and much more accessible for deep-sea vessels, has failed to attract seagoing ships. With an eye to the future, the Canadian Pacific has laid route plans before the Dominion authorities for a branch line along the north shore of the inlet to North Vancouver. Its plans are before the Dominion Railway Commission for approval. As the Canadian Pacific controls nine-tenths of the wharfage in Vancouver, with an extension of its lines to North Vancouver, it will have ample shipping facilities in Burrard Inlet close to the gulf for the future. The railway ultimately will be built through North Vancouver and extended up the coast for a connection by ferry, or otherwise, with its Vancouver Island lines.

It is probably unlikely that Port Mann, Coquitlam or New Westminster will ever attract any considerable amount of shipping, for the reasons given.

The Canadian Pacific is to spend \$2,000,000 in this city, extending Hotel Vancouver, increasing its yard trackage, and building a new passenger station, some of the work to be undertaken this year. The company is adding a number of vessels to its coastwise fleet and providing better coastwise service. It has ordered two new vessels for its trans-Pacific traffic which will not be completed this year.

**GRAND TRUNK PACIFIC RAILWAY.**

The main Grand Trunk Pacific Railway, to run through central British Columbia via Yellowhead Pass, Tete Juan Cache, Fort George, and Hazelton to Prince Rupert, is being constructed rapidly. The track is laid eastward from Prince Rupert about 164 miles, and the line is built westward from Yellowhead Pass to Tete Juan Cache, the expenditures being upward of \$20,000,000. The company expects the road to be completed to Prince Rupert next year. This line is being assisted by the Dominion Government. A 150-mile branch line is projected from Hazelton to Groundhog coal basin.

The railway policy of the provincial government provides for a 450-mile railway from Vancouver to Fort George, via North Vancouver, Howe Sound, the Squamish River, Lilloet, and the Fraser River, construction on the southern end to be started before July 1. Most of the route has not been surveyed and, therefore, not definitely outlined. Over this Pacific Great Eastern Railway the Grand Trunk Pacific is to have running rights and first option of purchase. Timothy Foley (St. Paul, Minn.), Patrick Welch (Spokane, Wash.), John Stewart and Donald McLeod (Vancouver), D'Arcy Tate (Winnipeg), and Vernon Smith (Hazelton) are the persons interested in construction of the Grand Trunk Pacific Railway. The provincial government guarantees the company's bonds to the extent of \$35,000 a mile. This company is expected to absorb the 10 miles or more of road already built by the Howe Sound & Pemberton Meadows Railway at head of Howe Sound. The road will enter Vancouver by the proposed Second Narrows Bridge.

**BRITISH COLUMBIA & ALASKA RAILWAY.**

The British Columbia & Alaska Railway is expected to abandon its provincial charter for a line between Vancouver and Fort George,

according to latest reports, and concentrate its attention upon financing and constructing a line from Fort George through the coal fields of upper Pine River to the agricultural areas of Peace River region and thence on to Edmonton.

#### VANCOUVER, WESTMINSTER & YUKON RAILWAY.

The Vancouver, Westminster & Yukon Railway has a charter to build from New Westminster through Vancouver, across the projected Second Narrows Bridge, through North Vancouver, up the mainland coast and into Yukon Territory. It built a line from New Westminster to Vancouver, but this section, which is the only part constructed, was sold to the Victoria, Vancouver & Eastern (Great Northern system) and is the latter's main line link between here and New Westminster on its branch running to Everett from Vancouver. As a result, the Vancouver, Westminster & Yukon is, at present, only a railway on paper and has no plans for any early construction.

#### CANADIAN NORTHERN PACIFIC RAILWAY.

The provincial government guarantees bonds up to \$35,000 a mile and the Dominion Government subsidizes at \$12,000 a mile construction of the 525 miles of the Canadian Northern Pacific Railway from Yellowstone Pass to Vancouver, which is now building and must be completed within 4 years. This line will run southward from Tete Juans Cache (west of Yellowhead Pass) along Thompson and Fraser Rivers. It will go through Kamloops, Ashcroft, Hope, Chilliwack, and Port Mann.

Port Mann will be to the Canadian Northern Pacific what Coquitlam will be to the Canadian Pacific. Lots in the town are being exploited with energy. It is unlikely that all the predictions made by real-estate men as to Coquitlam will come to pass. It is hardly to be doubted that, although the Canadian Northern Pacific will have shops and works at Port Mann, it will eventually require a tide-water terminal for passengers and freight closer to the sea than Port Mann.

In fact it has been reported that, from a point a few miles east of Port Mann, the Canadian Northern Pacific will cross via Douglas Island to the northern bank of Fraser River and build along the north shore, over the mouth of Coquitlam River, into Fraser Mills. Track construction will end there, but the railway has secured running rights over the Great Northern into Vancouver and it will share terminals that the Great Northern Railway is establishing in Vancouver. I understand, however, that although this route may be used and may even be under consideration, no decision has been reached by the company. It is likely that this matter will not be determined for some time.

#### Steady Construction Work.

Grading is being done along the Fraser and Thompson Rivers, some rail is being laid, and, generally, construction work is being pushed. A strike has brought work to a standstill on this portion of the main line, but it is not likely to continue long. Unless many difficulties are met with, it is expected that the roadbed of the Canadian Northern Pacific in British Columbia will be practically complete before the end of 1913. Six thousand men are employed on the company's

British Columbia construction work and the monthly expenditure is about \$1,000,000. The road is built westward to a point about 150 miles east of Yellowhead Pass. If the company's expectations are fulfilled, the main line will be completed within two years—certainly not later than the beginning of 1915.

#### **Feeders and Hydroelectric Power.**

The Canadian Northern Pacific, as well as the Canadian Pacific, is to have a feeder extending into the Okanogan region 150 miles long, with a provincial guarantee of bonds of \$35,000 a mile. Mackenzie & Mann, who control the Canadian Northern Pacific Railway, last year purchased the rights and property of the Coteau Power Co., whose charter provides for a hydroelectric plant at Shuswap Falls, north of Vernon, near Lumby. The power was to be used for an electric railway running north and south through the Okanogan Valley district as well as the supplying of light and power to cities along the right of way. From requirement of the new provincial policy, it appears that the Coteau Power Co. and the Canadian Northern Pacific feeder are to be closely allied in the Okanogan. This branch will leave the main line near Kamloops, on North Thompson River, and will run southeast, crossing the Shuswap and Okanogan (the Canadian Pacific branch above mentioned) at or near Armstrong and thence southerly to Vernon, along Long Lake and across a low summit to Kelowna on the eastern shore of Okanogan Lake, with a branch from Vernon to Lumby.

It was recently reported, also, that the Canadian Northern is to build a 90-mile line from Stewart up Bear Valley to the Groundhog coal fields, to which it is understood the Grand Trunk Pacific Railway is to build a 150-mile line northward from Hazelton.

#### **Vancouver Island Extensions.**

Under the new railway policy of the Province, the Canadian Northern Pacific Railway must build, within three years, 150 miles northward from the 100-mile post on its Barclay Sound extension on Vancouver Island. The line under construction skirts the southern coast west of Victoria and then runs northward through the central portion of the island by way of Cowichan Lake toward Barclay Sound. The section now provided for will start west of Cowichan Lake, through Port Alberni, Alberni, and Cumberland northward to the east coast at or about Seymour Narrows, where the Canadian Pacific, as noted, plans to cross by ferry when its mainland line from the coast to Fort George is undertaken. The Canadian Northern Pacific also plans for a line, branching westward about 40 miles north of Cumberland, that will swing through Strathcona Park (which is to be the Yellowstone Park of British Columbia) and the north central part of Vancouver Island in a wide detour to Hardy Bay. This branch will not be built for several years. The section now assured, from Cowichan Lake northward toward Cumberland, is to receive aid from the provincial government by a bond guaranty of \$35,000 a mile.

#### **GREAT NORTHERN RAILWAY.**

A branch of the Great Northern Railway runs from Everett to Vancouver, northward along Puget Sound shore. Its Nelson and

Fort Sheppard branch runs northward to Nelson, and the Spokane Falls & Northern division taps British Columbia at Laurier and Chapaca.

The Victoria, Vancouver & Eastern Railway is a subsidiary of the Great Northern. Its original charter provided for a line from Cascade to Vancouver via Grand Forks, Phoenix, Midway, Fairview, Princeton (over the Hope Mountains), Hope, and Fraser River Valley. The line would have been entirely within British Columbia. This plan has not been adhered to fully. The line was started at Laurier, in Washington at the border (connecting with the Spokane Falls & Northern division of the Great Northern Railway), running west in British Columbia along the south side of Kettle River (with a branch to Grand Forks and Phoenix), ending at the international boundary line, where the Great Northern rails in the State of Washington via Danville, Curlew, and Ferry are used. In this way a route via the river valley level in the United States is obtained instead of a passage over the hills in Canada. The route runs from Danville to Midway, entering Canada again, westward from Midway in Canada to Bridesville, thence into the United States again to a connection with another branch of the Great Northern at Oroville, thence toward British Columbia again, entering at Chopaca and running northwesterly via the Similkameen Valley to Princeton and Coalmont, the present terminus.

#### **The Kettle Valley Controversy.**

The road is being constructed with Vancouver as its objective terminal. From Princeton and Coalmont its route must closely parallel the Kettle Valley and Canadian Pacific lines. Under the new agreement between the Province and the Kettle Valley Railway, and by virtue of its power under its Dominion charter, the Great Northern will have a right to use the rails of the Kettle Valley road to cross Hope Mountains; and it will come down toward the coast over rails of the Canadian Northern Pacific to a junction with its own line, from Everett to Vancouver, now in operation.

Should the Great Northern accept this opportunity, the 50 miles of road provided for by the new provincial railway policy between Coldwater Junction and Hope will bring two new railway lines from the boundary region of British Columbia to the coast.

It is reported, however, that the Great Northern, or its subsidiary, will protest the Kettle River Valley agreement, claiming that the Great Northern is ready to build at once and that its plans, which with surveys are stated to represent an investment of over \$100,000, were the first filed with the Dominion Railway Commission. It would appear that, if a protest is really made, it will be based on the fact that the proposed line of the Kettle Valley Road will lie along the same route, in whole or part, planned by the Great Northern.

It is regarded as likely that the railway commission will require building of at least a 26-mile section jointly by the Victoria, Vancouver & Eastern and Kettle Valley lines down the grade on the Coquahulla River, which would result in a saving, it is said, of \$1,000,000.

West of the Hope Mountains, a line between Abbotsford and Millers Landing, in the Fraser River Valley, is nearly completed.

**Union Station Arrangements.**

Under an agreement with the city of Vancouver, concluded during the past winter, the Great Northern Railway is to build a large passenger station on the north shore of False Creek in this city several blocks to the eastward of its present station, which is on land owned by other interests and must soon be vacated. Instead of approaching the peninsula—upon which is the business region of Vancouver—over a bridge, the road is to carry out an extensive reclamation scheme about the east end of False Creek and will run along the shore into the new station on the north side. This station is to be a union depot available to any road desiring to use it. The Canadian Northern Pacific will be one of the roads to do so.

The reclamation scheme will afford a large area to the Great Northern for freight yards and sidings. A spur is to run through the eastern part of the city to the large dock for deep-sea vessels on Burrard Inlet, now being built by this railroad with other interests. It has been rumored that on the completion of the dock the *Minnesota*, of the Great Northern trans-Pacific service, will make regular calls at Vancouver. The whole scheme is to involve an expenditure of several million dollars in the course of a few years. Work has already begun on the reclamation and the docks.

**AMERICAN RAILWAY BRANCHES TO BRITISH COLUMBIA.**

The recent purchase of the Bellingham Bay & British Columbia Railway from the estates of D. O. Mills and P. B. Cornwall has led to a belief in British Columbia that the Chicago, Milwaukee & Puget Sound, or the Union Pacific, intend to use it as a link in a branch to Vancouver. It is claimed that the line will parallel the Canadian Pacific into North Vancouver and that an area for large terminals has already been secured at Roche Point in that city. No definite information has apparently been given to substantiate or contradict these rumors. Other reports have it that the Union Pacific is to build an entirely distinct and new line into Vancouver.

The provincial government is considering the question of aid to the Idaho & Northern Washington Railway for a 27-mile extension from the international boundary to Trail. Construction crews of this road are already north of Metalline, Wash., in the Pend d'Oreille Valley. Its present terminus is Metalline. The projected extension to Trail would tap a mining and agricultural region.

**INTERURBAN ELECTRIC LINES.**

The British Columbia Electric Railway not only holds the franchises for city car lines in Vancouver and its suburbs, including North Vancouver, Point Grey, and South Vancouver, in New Westminster and in Victoria, but it operates, also, several interurban lines. Those on the mainland connect Vancouver with New Westminster and Chilliwack, about 80 miles from Vancouver on the Fraser River. This company and its subsidiary, the Vancouver Power Co., have supplied electrical current for light and power over most of the region in and about Vancouver. In all of these lines it has had practically no competition up to recently, when the Western Canada Power Co. completed its power plant and transmission lines.

With this new competition, it is regarded as certain that several electric lines tapping agricultural lands near Vancouver will be built at an early date. In reports the desire of the Western Canada Power Co. for the organization of a system of electric railways for which it shall provide power is evident.

**Line to Mission City.**

The plans for one of these lines have been laid before the Dominion Railway Commission but will not, I understand, be approved in their entirety until more satisfactory plans for the terminals are completed. The concern which is to establish the road is termed the Burrard, Westminster, Boundary Railway & Navigation Co.; president, Wm. McNeil, of Vancouver, who is vice president of the Western Canada Power Co. The first section, to be built at once, will connect Westminster Junction and Mission City. Later, connections will be made with Port Moody, New Westminster, and Vancouver. Pitt River must be bridged, for which it is understood an estimate of \$750,000 is made. The provincial government will probably be asked to cooperate in building the bridge. The road will be over 40 miles long and will tap a fertile region.

**Line to Ladner.**

The delta region, southeast of Vancouver and immediately south of the Fraser River, is also a fertile agricultural section. Last year there were over \$1,000,000 of agricultural products of excellent quality. Direct electric railway connection with this region may lower the high price of provisions in Vancouver. The British Columbia Electric Railway has not, however, acceded to the desire of the delta for a tram line to Ladner post office. Incidental to establishing such a line is the expensive task of spanning Fraser River. Two plans are under consideration—one to connect the delta with New Westminster, which would make the region somewhat more accessible even to Vancouver; and the other to build directly to Vancouver which would make a much larger market available and serve Lulu Island and Sea Island as well. The latter plan would be much more expensive, but of far greater benefit, and, if the municipalities of South Vancouver and Richmond muster sufficient support, will probably be the one adopted. Such a plan would link up well with the British Columbia Electric Railway's system and this company appears now, since interests allied with the Western Canada Power Co. have shown desire to build and own such a road, to be much more anxious than formerly to build it themselves. There appears, therefore, to be every prospect of a line being built before long, to the great benefit of this part of the Province.

The International Railway & Development Co. of which H. T. Thrift, of Hazelmere, is reported to be secretary, and which is said to be composed of Vancouver business men, plans to construct a large power plant northeast of Vancouver, capable of generating several hundred thousand horsepower, and an electric railway connecting the municipalities of the delta, Surrey, Matsqui, Langley, and Sumas. Eventually the line will be extended to Bellingham and Seattle, if the promoters meet with success. It is stated that nearly \$1,000,000 is already available and banked by the company.

**Continuation to Boundary Line—Problems Involved.**

If the British Columbia Electric Railway builds to the delta, it is not unlikely that it will continue to the boundary of the United States. There have been persistent reports regarding the sale of the old right of way of the Great Northern Railway near Blaine. It is in the region south of the Canadian Pacific and west of Agassiz that over half the population of the Province resides, and the development of this section has been rapid. There is a greater need for transportation facilities in consequence, and the projected lines, it is thought, should prove profitable.

With regard to the British Columbia Electric Railway's activities, it should be noted that it has been obliged to spend large sums for city street lines—a number of which will not be very profitable for a time—has had to make large additions to its plant and rolling stock, and is involved with the municipalities of Vancouver, Point Grey, and South Vancouver over the problems of unifying its franchises and satisfactory tram fares. Hope is expressed that, as these problems will be taken up soon at the head office of the company in London by Premier McBride on behalf of the Province and cities, some agreement will soon be effected, giving the company a more definite footing and giving it more assurance in extending its lines. As pointed out in Daily Consular and Trade Reports for April 12, 1912, its plans for this year involve expenditure of several million dollars, principally for urban systems and exclusive improvements in and about Victoria.

**SUMMARY OF PROVINCIAL POLICY.**

To summarize the provincial government's railway policy:

**Canadian Pacific Railway.**

Provision is made for extension of the Esquimalt & Northern to Comox. The Government agrees to repurchase 2,500,000 acres of lands granted to the Columbia & Western and British Columbia Southern Railways at 40 cents an acre, amounting to \$1,000,000. A bill provides for repair and operation of Kaslo and Slocan line as a standard-gauge line.

**Grand Trunk Pacific Railway.**

Guarantee of bonds to the extent of \$35,000 a mile to Foley, Welch & Stewart for a line from North Vancouver, via Howe Sound and Pemberton Meadows to Fort George, with ultimate extension to Peace River; connection with Vancouver over Second Narrows Bridge.

**Canadian Northern Pacific Railway.**

Canadian Northern Pacific bonds are guaranteed for a line from Kamloops to Vernon, with a branch to Lumby. Canadian Northern Pacific bonds are, also, guaranteed for an extension of Victoria-Barclay Sound line to Strathcona Park. This policy requires the expenditure of about \$1,850,000 of provincial funds and the guaranteeing of not more than \$25,000,000 of bonds to secure construction of 800 miles of railroads. In the agreements provisions are stated to have been made for a "fair-wage" clause and for employment of white labor exclusively.

It has been suggested by the attorney general that the provincial railway policy has as one of its purposes clothing the provincial gov-

ernment with authority to fix railway rates to a certain extent within the Province and without reference to rates elsewhere in Canada, if it should ever become necessary to do so.

#### SUMMARY OF DOMINION POLICY.

The railway bill brought down by the Dominion Government in March gives an indication of the railway policy of the Dominion for this Province, which the provincial policy aims to complement. It provides in part for:

##### **Extensive Renewals.**

To the Vancouver, Westminster & Yukon Railway, from Vancouver northerly 100 miles; to the Kootenay Central Railway, from Golden to a point on the British Columbia Southern near Jukeson, 175 miles, and from Caithness toward the international boundary, 25 miles; to the Kettle Valley Railway, from Grand Forks up the north fork, 50 miles; to the Esquimalt & Nanaimo Railway, from Wellington to Alberni, 60 miles, from McBride Junction to Sandwich, 45 miles, and from Sandwich to Campbell River, 38 miles, in all 143 miles; for a line from Esquimalt & Nanaimo Railway near Campbell River toward Fort George on the Grand Trunk Pacific, 100 miles.

##### **General Subsidies.**

To the Burrard Inlet Tunnel & Bridge Co., (a) from Eburne to Seymour Creek, (b) from Seymour Creek to Deep Cove, 5 miles; (c) from Seymour Creek to Horseshoe Bay, 14 miles; (d) from Pender Street, Vancouver, to North Vancouver, 3 miles; to the Grand Trunk Pacific Railway, from Harte to Brandon, 25 miles; to the Cariboo, Barkerville & Willow River Railway, from a point on the Grand Trunk Pacific near Barkerville, 87 miles; to the Naas & Skeena River Railway, from Nasoga Gulf to Ground Hog Mountain, 100 miles; to the Kettle Valley Railway, from Penticton to a point on the international boundary, 50 miles; to Calgary & Fernie Railway, from Calgary to Fernie, 100 miles.

##### **Bridge Subsidies.**

To the Vancouver, Westminster & Yukon Railway, for a bridge across Burrard Inlet, not exceeding \$500,000; to the Kettle Valley Railway, for a bridge over the Fraser River near Hope, not exceeding \$250,000; to the Cariboo, Barkerville & Willow River Railway, for 20 bridges over the Willow River, not exceeding \$95,000.

The Canadian Northern Pacific gets \$12,000 per mile for a line 525 miles long, from the Yellowhead Pass to Vancouver.

#### BENEFITS TO ACCRUE FROM NEW RAILWAYS.

In his speech supporting the new railway policy before the provincial parliament on February 21 last, Premier McBride drew this summary of the railway situation:

I should like to direct the attention of the House to the very striking evidence of the part played by late railway construction in the development of the Province. In 1904 there were, in British Columbia, but 1,650 miles of standard roads. In 1912 the mileage, constructed or assured, is not less than 2,435 miles—built or under contract. If we add to this the 845 miles in addition which are provided for by the policy of the Government embraced and expressed in these bills, we have the result of constructed and assured railways in British Columbia of over 3,000 miles of standard road, as against but 1,650 a few years ago. Included in the approximate total I count this Vancouver and Fort George line, with an estimated length of 450 miles.

Needless to say the expenditure of \$50,000 for labor and materials will contribute toward the prosperity of the Province. Vancouver is in the market for much of the materials and supplies. It is also the outfitting point for a considerable portion of the railway laborers. Vancouver merchants feel that they have reason to expect that 1912 will be a very good year.

Those railway projects will serve to put Vancouver and Victoria in touch with all British Columbia. The Grand Trunk Pacific Railway will make Prince Rupert an important point. Vancouver business men desire this city to be the jobbing center for the Province, north and south, and do not wish to be displaced by any city east of the mountains. Great expectations are based on the development of "the hinterland" (very sparsely settled yet) as a result of the provision of better railway facilities. The fact that the section near the boundary has been more accessible to cities in Washington than to Vancouver has long been a source of dissatisfaction to the citizens of the Province, particularly those in Vancouver. It is evident that the new railway policy seeks to correct this condition. The Premier, in his speech before the provincial parliament, referred to this problem, as follows:

In these times, with the completion of the Panama Canal in sight, and the generally rapid development that is taking place through western America, we can not afford to prolong the policy of waiting. We must be in a position to take advantage of the opportunities which are presenting themselves. The conditions of the times do not brook longer delay, and we have come to the conclusion that it will be good business for us to bring the Kootenay district into close touch with Victoria, Vancouver, and New Westminster, so as to secure, preserve, and protect for the benefit of our own people the trade of the various sections of our Province, and prevent the diversion to the country south of the line of this business which belongs by right to British Columbia.

The Government and people of British Columbia realize that if the Province is to profit to the fullest extent, the arteries of commerce from the Pacific ports to the interior must be ampler and more numerous.

[Previous exhaustive reviews from Winnipeg of railway development in western Canada appeared in Daily Consular and Trade Reports for Apr. 7, July 3, and Aug. 7, 1911, and Feb. 26, 1912.]

#### NEW MONTREAL RAILROAD TERMINALS.

[From Consul General Wm. Harrison Bradley, Montreal, Canada.]

The most important event in real-estate and railway circles, and one which strengthened speculation in real estate on Montreal Island more than anything else, was the completion of plans of the Canadian Northern Railway for large terminal facilities in both the suburbs and city. The company has bought 4,000 acres north and west of Mount Royal, reaching from the mountain to where the Riviere des Prairies leaves the Lake of Two Mountains to form the northern boundary of Montreal Island. Along this right of way will be built shops, factories, and suburban towns. Mount Royal will be pierced by a double-track tunnel 3.3 miles in length, which will come out on the south side of the mountain in the center of the city near the present Windsor station of the Canadian Pacific Railway. Here a passenger station will be built somewhat on the lines of the new Pennsylvania Railway Station in New York, the line being also extended

toward the harbor on elevated tracks to a great projected freight depot, through which the railroad can load directly into its own ships. From the north entrance to the tunnel electricity will be the motive power. To accommodate the suburban traffic rapid trains will be run at frequent intervals. It is estimated that the total expenditure will be about \$25,000,000. Construction plans are being prepared and the company hopes to begin work soon.

It is of interest to note that McKenzie and Mann are said to have just raised the last money they will need (\$35,000,000) to complete their road from the Atlantic to the Pacific, over 7,000 miles of track.

#### LINES FOR QUEBEC PROVINCE.

[From Consul Frederick M. Ryder, Rimouski, Quebec.]

While there has been no railroad construction in this district during the past year, a number of provincial subsidies in land grants have been made for several new roads, the most extensive being a grant of 2,000 acres per mile for 190 miles to the Canada & Gulf Terminal Railway to continue the line from Matane to Gaspé Basin, passing through the interior of the peninsula of Gaspé, a total grant of 380,000 acres. There is some prospect of the Rimouski & Edmundston Railway being constructed in 1912; at least the promoters of the enterprise are sanguine of a beginning. Financial assistance has been tendered by foreign capitalists, the land grant from the Province (some 200,000 acres) being an inducement.

#### THE TRANS-PERSIAN RAILWAY.

[From Consul Stuart K. Lupton, Karachi, Indk.]

Mr. Johns, the chief engineer of the Oudh & Rohilkand Railway, with a corps of assistants, is making a preliminary survey of the country between Karachi and Guadur over which a part of the projected Trans-Persian Railway will be built if the Russian and British Governments can agree upon conditions. Mr. Johns informs me that this portion of the route presents few difficulties.

It seems to be settled that the northern portion of the line will be from Baku through Aliat and Astara to Yezd, but there is much uncertainty as to its further course. The two routes spoken of are from Yezd to Kerman and thence to Guadur, and from Yezd to Guadur by way of Bunder Abbas. Via Kerman the length of the line from Baku to Karachi is estimated at 1,994 miles, while the deflection to Bunder Abbas would increase the total to 2,056 miles.

#### Estimated Cost and Income.

The entire cost of the line from Aliat to Karachi is approximately estimated as follows:

	Via Kerman.	Via Bunder Abbas.
Aliat to Astara.....	\$6,652,505	\$6,652,505
Astara to Guadur.....	133,074,442	134,602,746
Guadur to Karachi.....	32,673,681	32,673,681
	172,400,628	177,928,932

The portion of the line from Guadur to Karachi would be coastal and almost unproductive. On the basis that the gross receipts would amount to \$8,547 per mile, except in certain portions of the coast section where they will be somewhat less, and that the working expenses would amount to 70 per cent of the gross receipts, the estimated net receipts are as follows:

	Via Kerman.	Via Bunder Abbas.
Gross receipts.....	\$16,991,433	\$17,262,526
Working expenses.....	11,894,001	12,683,564
Net receipts.....	5,097,432	5,178,762
Interest on capital.....	7,578,489	7,824,780
Annual deficit.....	2,481,057	2,646,018

It is hoped that this estimated deficit would be wiped out by subsidies from the Russian and Indian railways based on those allowed under the Indian branch railway terms, namely, amounts equal to the net earnings of interchange traffic.

#### Gauge Connections and Effect on Trade.

The chief point remaining to be settled seems to be as to where the break of gauge demanded by the British Government from the Russian gauge of 5 feet to the Indian of 5 feet 6 inches shall be. The Russian Government demands that this should be at the border of Baluchistan; the British Government, on the contrary, desires that it should be at the point where the line enters the British sphere of influence in Persia. Even if the British carry their point, it would seem that India will be largely cut off from participation in the trade of the so-called neutral zone of Persia.

The most noticeable effect of the proposed line at present evident in Karachi is a wildcat speculation in land situated in the northern portion of the city. Nothing definite is known as to the probable line of entrance, but there have been cases where land sold for two or three times the amount demanded for it two months ago.

### RAILWAY BUILDING IN MESOPOTAMIA.

[From Consul Emil Sauter, Bagdad, Asiatic Turkey.]

#### Bagdad Tramway Concession.

The El Reyad, a local Bagdad paper, states that the Turkish Imperial Government has approved the concession granted by the municipality of Bagdad to Mr. Shabunder to build a tramway from Moazzem, 5 miles north of Bagdad, to Garara, about 5 or 6 miles south of Bagdad, and that Shabunder has left for Europe to contract for material and engineers. Such an undertaking, however, could not be carried out without widening a street through the city of Bagdad, which would be an expensive undertaking.

#### Electric Lights, Telephones and City Improvements.

The municipality of Bagdad has opened bids for installing an electric lighting plant, and the army post is considering introducing a telephone system all over the city. This will open here a limited market

for American electric lighting fixtures and telephone fixtures. The municipality has recently authorized a loan of \$132,000 to carry out city improvements, including the widening and paving of streets.

**Construction of Railroad from Bagdad to Mosul.**

The Bagdad Railroad Construction Co. has completed surveys for the railroad between Bagdad and Mosul and sent in the plans early in March. A large corps of engineers has been in Bagdad all winter (Meissner Pasha, chief engineer in charge) and expects to start construction work at Bagdad by June 1 next and build toward Mosul, whether the plans have been approved by that time or not. Three or more vessels will be put on the Tigris by the construction company to carry the supplies.

---

**GERMAN LINE TO MESOPOTAMIA.**

[From Consul Edward I. Nathan, Mersin, Asiatic Turkey.]

There has been considerable progress for the past year in construction of the Bagdad Railroad. This line, which commences at Konia, the terminus of the Anatolian Railroad, is to run to Bagdad, and when completed there will be through railroad communication from Constantinople to Bagdad. In 1911 a new section of 40 kilometers (kilometer=0.62 mile) from Ouloukishlou to Eregli was opened to traffic and about 80 kilometers of roadbed across the Adana Plain was constructed which will soon be in use. The work of tunneling the Taurus and Anti-Taurus Mountains was begun and in a few years the railroad will be open to Aleppo. This railroad is a German concession and the construction material is principally from Germany.

The company which has this concession is also furthering the irrigation of the country adjacent to its line and has already executed a plan for the irrigation of the district of Konia. Its engineers are now studying the feasibility of irrigating the plain of Adana to make it more productive. An aerial railway for the handling of cargo at the port of Mersine was also built by the Bagdad company which, however, seems to have abandoned its original intention of constructing harbor works at Mersine and is preferring the port of Alexandretta as its terminus for Syrian and Mesopotamian traffic.

---

**RAILWAY BUILDING IN ASIA MINOR.**

[From Consul General George Horton, Smyrna.]

Smyrna has communication with the interior of the country by two railway lines: The Smyrna-Cassaba prolongment railway, running inland eastward, for 324 miles, with branches of about 60 miles, and the Smyrna-Aidin Railway, running 234 miles due east inland in the southern section of Asia Minor, with branches amounting to 87 miles. Both these railway companies have started a further extension of their respective lines and work is in progress.

**Constantinople to Smyrna in 12 hours.**

The Smyrna-Cassaba Railway is extending the Smyrna branch (for 112 miles) northward to the port of Panderma on the Sea of Marmora. Work was commenced last year and its completion is announced for 1912. The trip from Smyrna to Constantinople by this line will be made in 12 hours, of which 8 by rail to Panderma

and 4 by steamer to Constantinople. This will effect a saving of 12 hours on the present sea trip and 36 hours on the present overland route, via Afion Karahissar on the same line. The saving of time which will therefore be effected through this new route, will be of the greatest benefit to Smyrna, as nearly all the passenger and mail traffic comes through Constantinople.

#### **Smyrna-Aidin Extension.**

The extension of the Smyrna-Aidin Railway from Dinair, its terminus, to Egherdir is being continued with great zeal. Unless adverse weather conditions and unforeseen engineering difficulties are encountered, the line will be completed in 1912. This extension will tap the most fertile part of Asia Minor, and the exploitation of rich forests and mines existing in those regions will be thus made possible.

#### **Street Railways.**

There are in Smyrna and suburbs about 12½ miles of street railway. The most conspicuous of these is the one that runs along the quay with its one-horse cars. It is entirely owned by a French company, and the cars are made in Smyrna. The other street car lines of the town are owned by the municipality or by a Belgian company. Some of these operate two-horse cars.

---

### **LINES IN THE CAUCASUS.**

[From Vice Consul Frederic W. Cauldwell, Batum, Russia.]

#### **Vladikavkaz Line Improvements.**

The concession of the Vladikavkaz Railway Co., which expired in 1911, was renewed for 15 years. This line traverses the north Caucasus from Baku to Novorossisk and Rostoff-on-Don, and is the outlet for this rich agricultural district. With the renewal of the concession the railway company is to effect improvements. At Novorossisk the docking will be extended, and a new elevator is being built which will hold, it is estimated, 60,000 tons of grain. The railway already has at Novorossisk what is claimed to be one of the largest elevators in the world. The improvements at that port will afford housing for an enormous quantity of grain and alleviate such inconvenience as attended the large crops of 1910, when great quantities of grain were stored in the open and covered with tarpaulins.

#### **Traffic over the Transcaucasian.**

The report of the operation of the Transcaucasian Railway, which connects Batum with Baku on the Caspian Sea (558 miles), shows for first 8 months of 1911 the following figures: Number of trains run, 112,500; number of passengers carried, 5,639,325; goods by *grande vitesse* (express), 39,700 tons; by *petite vitesse*, 2,217,383 tons; 795,379 tons of railway material belonging to the line were carried.

The revenue derived from the passengers and goods amounted to \$9,983,042, an excess of \$754,900 over the corresponding period for 1910. The expenditure of the railway during the same period amounted to \$3,321,595, an excess of \$730,630 over the corresponding period of 1910.

# DAILY CONSULAR AND TRADE REPORTS

ISSUED BY THE BUREAU OF MANUFACTURES, DEPARTMENT OF COMMERCE AND LABOR

## CHAMBER OF COMMERCE OF THE UNITED STATES OF AMERICA.

[By A. H. Baldwin, Chief, Bureau of Manufactures.]

The Bureau of Manufactures has, by direct communications, already invited the attention of many commercial organizations to the significance of the establishment of a national chamber of commerce and has printed the tentative draft of by-laws of the association (Consular Reports of May 4, 1912).

The conference of April 22-23 was so completely representative in character, commercially and geographically, that its action may fairly command the interest of all local and special trade organizations. It seems unlikely that it would again be possible to launch a national commercial organization under conditions more favorable than were obtained at this meeting. No general locality and no important commercial interest lacked representation. This makes it reasonable to hope for the complete success of this movement to nationalize the general promotive commercial spirit of the country.

A study of the by-laws, which it is explained are really a broad outline of the basic principles of the organization rather than the completed scheme, indicates clearly the earnest effort on the part of those to whom the duty of preparing the plan was assigned to give fair representation and share in control to every association of standing in the United States.

The method of organization proposed, it is believed, will prevent selfish control of the national chamber by any geographical section or by any special commercial interest, as all questions which are to receive the support of the association must first be submitted to all the constituent members for approval and every trade body, through its selection of an advisory councilor, will be in direct communication with the national organization.

The wisdom of the conference in adopting at the beginning a somewhat flexible scheme is obvious, and this plan will permit a logical and sane evolution of the service of the chamber. The fundamental principles which are expressed in these by-laws received the practically unanimous assent of about 400 commercial organizations, both local

and national, and between 600 and 700 trained and representative business men from every section of the United States.

The board of directors is given wide discretion and is authorized to take such action with respect to the smaller organizations, in such details as annual dues and similar matters, as may seem fair to those trade bodies and to the national association. This desire to give adequate opportunity to all classes of commercial chambers to aid in the movement is made evident by a portion of Article V of the by-laws, as follows:

Members from cities of less than 50,000 population may be admitted by vote of the board of directors upon the payment of such dues as the board of directors shall fix.

The spirit which characterized this national commercial conference was so plainly earnest and fair that the cordial cooperation of the Government in the development of the service of the Chamber of Commerce of the United States of America is assured as long as its growth is dominated by this same spirit.

It is suggested that commercial organizations everywhere take formal action on this subject by appointing a "committee on the national chamber of commerce" in order that every association may give adequate consideration to this important movement.

### CHANGES IN SWISS POSTAL SERVICE.

[From Consul General R. E. Mansfield, Zurich.]

From an income of \$11,664,875 in 1911 the Swiss Postal Department made a net profit of \$723,995, due to increased volume of business and economies in administration. The general commercial and industrial prosperity last year in Switzerland, the large tourist traffic, and free-postage restrictions caused heavier mails. Statistics follow, the increases over 1910 being shown in parentheses: Letters, 205,390,023 (13,663,494); foreign post cards, 116,801,715 (7,251,719); printed matter, 90,848,889 (8,377,973); newspapers, 185,771,649 (1,039,722); local post cards, 3,236,726 (174,425); post checks, 7,776,495 (1,226,388); reimbursements, 3,241,905 (196,435); parcels, 39,774,265 (2,022,281).

A new law which became effective in 1911, requiring all publications mailed for advertising or business purposes to pay the rate of postage prescribed for printed matter, instead of being classed as newspapers, increased the revenues of the service to considerable extent. There was a large increase in the number of parcels carried, but newspapers and periodicals show only a slight increase in number.

Stamping and canceling machines are being installed on trial, among which are some of American make.

In order to modify, simplify, and improve the service, four persons were selected last year from each of the different departments to constitute a committee to make recommendations for the adoption of new and improved methods of handling the mails.

The question of establishing a Federal savings bank is being seriously discussed, and plans for a law creating that branch of service have been submitted to the Postal Department for consideration and approval.

*The great bazaar of Damascus, Asiatic Turkey, was destroyed by fire on April 29; loss, \$10,000,000.*

**RUSSIAN NOTES.**

[From Consul General John H. Snodgrass, Moscow.]

**Colonizing Turkestan.**

The journey of the director of the land settlement department to Turkestan is reported to be undertaken with two objects in view. He is said to wish to investigate the question of a rapid colonization of Turkestan, especially at the border of China and Afghanistan, with emigrants from the south of Russia. In consequence of the law passed in 1910 in regard to the utilization of the surplus land belonging to the native nomads, there is land to be disposed of in the Syr-Daria, Ferghana, and Samarkand districts. In this manner the discontinuation of the emigration movement to Siberia is to be compensated by the emigration to Turkestan. The other object in view is to gather information as to the development of Russian cotton culture in Turkestan.

**Promoting Trade with Italy.**

At a recent meeting of the Moscow section of the Russian-Italian Chamber of Commerce the following resolutions to promote trade between the two countries were passed: (1) To issue twice-a-month bulletins with the prices for Russian and Italian goods. (2) To keep Italian trade chambers informed of Russian goods which might find a market in Italy, giving prices and stating the places where the goods could be obtained. (3) To organize in Moscow an exhibition of samples of Italian goods brought into Russia and of Russian articles which could find a market in Italy, it being suggested that a similar exhibition might be arranged in Genoa. (Since 1911 the Italian language has been taught in the Moscow Institute of Commerce.)

At the same meeting it was decided to petition the Russian and Italian Governments as follows: (1) To permit the forwarding of Italian fruit, in the wintertime, in specially heated cars attended by railway employees in transit, with payment of custom dues in Moscow. (2) In view of the conditions fixed by the Italian exporters and of the questions that have arisen in regard to the quality of the goods received, it is necessary to grant to the consignee the right to examine the goods upon their arrival at a port of entry before taking out the bill of lading from the bank. (3) To request that the railroad tariff on Italian lemons, oranges, and mandarins be lowered to that on apples.

**Railways for Transcaucasia.**

The two most important railway projects under discussion for the last few years were both planned to connect Transcaucasia with the railways of European Russia. One, the Tchernomorsky Railway, was to run along the coast of the Black Sea, over a narrow tract of land between the shore and the mountains, connecting Tuapsey, Sotchi, Gagri, Sukhum-Kale, and other seaside places which form the so-called Russian Riviera. The other, the Perevalny Railway, was to cross the mountains through the Arhotsky Pass and to form a direct line to Tiflis, which up to now has been reached by the round-about Beslan-Baladchary route along the coast of the Caspian Sea. Preference has now been given to this second project.

The Tchernomorsky line would certainly bring life into the coast district of the Black Sea and further the development of the various

sea resorts, which are laboring under the disadvantage of very poor means of communication, as they are to be reached only by steamers which, because of the lack of good harbors, are not always able to enter. This line, however, does not promise to be a very lucrative one, as the transportation of goods will be minimal in view of the competition of the cheap sea freight. The cost of construction will be heavy in consequence of the great number of bridges across mountain streams, the construction of embankments, dikes, etc.

The cost of the Perevalny line will not be less, as the project includes a tunnel 20 miles in length. This road will not bring about an immediate development of the country through which it will run, though it will without doubt in due time be a factor in the exploitation of the mineral wealth of the Caucasus. Its chief object is to create a rapid line for the transit of passengers and goods between European Russia and Transcaucasia. With its construction the journey from Moscow to Tiflis will be shortened by one day for passengers and by three days for goods, and much merchandise that now takes the Beslan-Baladchary-Tiflis route will undoubtedly be sent over the Perevalny Railway. The principal advantage, however, is in the strategical importance of this railway, promoting a much more rapid communication with the southern borderland of the Russian Empire, and it has been decided to begin the construction of this line without delay.

#### **Joining the Volga with the Black and Azov Seas.**

Among the many gigantic propositions for the industrial advancement of Russia that are receiving the attention of the Government is the project for connecting the Volga River with the Black and Azov Seas. The plan contemplates the construction of a canal, with the excavation of the Don to make this river navigable, for ships of the Volga type that would then have a direct route to the sea.

Prince Sherbatoff and associates have applied for a concession containing the following terms: The company constructing the canal will have the right to issue shares and bonds to the amount of \$4,000,000 and \$36,000,000, respectively. The Government guarantees 3 per cent interest on the shares for the period of construction and also the payment of interest on the bonds and the amortization of the same during the life of the concession. The company will have the right to divide the profits proportionally among the shareholders and bondholders, the same as the railway companies. The concession is for 99 years, but the Government is entitled to purchase the canal 30 years after the opening of navigation. There are to be four groups of locks. The total length of the canal is to be 60 miles, the depth about 11 feet and the width about 140 feet. It has been calculated that it will take 20 hours for ships to pass the canal. The canal, it is estimated, will be able to admit 54,000,000,000 pounds of freight during the year.

One of the chief advantages is the economic importance of the canal, not only for the Volga and Don districts, but also for Transcaucasia and especially Siberia if a further joining of the River Kama with the River Ob takes place. The bulk of the grain from the Volga would go by the canal instead of the Baltic Sea. From the Kama district timber may be transported by this canal. From the southwestern district sugar may be exported via Odessa, the Azov ports, and the

canal, and naphtha from the ports of the Caspian Sea and the Volga. By the same route, cotton may be brought from Transcaspia. Lastly, enormous supplies of grain and other products may be brought along the canal from Siberia, especially from the districts of the Rivers Ob and Enissei.

The cost of constructing the canal is estimated at \$43,000,000. The work on the River Don will perhaps approximate \$10,000,000.

[From Consul John F. Jewell, Vladivostok, Siberia.]

#### **Trade Directory of the Russian Far East.**

A 1912 directory published in Vladivostok not only contains nearly all the different calendars of the world for the use of the many peoples with different religions that live in this region, but has a great amount of other valuable information covering the Russian Far East. It contains descriptions of the Provinces of the Priamur, Yakutsk, Transbaikalia, Maritime, Kamchatka, and Sakhalin, that of the Priamur being divided into historical, geographical, colonization, the fishing, timbering and agricultural industries, mining, manufacturing, and trade. Under the Maritime Province are given directories of Vladivostok (89 pages); St. Olga district; Nikolsk-Usurisk and district; Iman district; Khabarovsk, city and district; Nikolaiefsk, town and Udsck district; territory of Usuri, Cossack lands; and stations of the Usuri Railroad.

In the Amur Province section there are directories of the city of Blagovestchensk; town of Zeia-Pristan; settlements on the Shilka and Amur Rivers; and the Amur Railroad. Under Transbaikalia may be found directories of Tchita, Aksha, Barguzinsk, Verchniudinsk, Messoovsk, Nertchinsk, Selenginsk, and Troitskosavsk. Directories are given of Vilyuisk, Olekminsk, Verkhoyansk, and Sredne-Kolymsk in the Yakutsk Province; Port Alexandrovsk in Sakhalin; and Petropavlosk, the capital of the Province of Kamchatka. This work also has added a directory of Harbin, Manchuria, and of stations on the Chinese Eastern Railway.

The volume contains an alphabetical table of names of persons and firms of all trades and industrial undertakings in towns and other settlements in the different Provinces mentioned, and supplies tariffs, navigation lists, and maps of the principal towns of the Russian Far East.

[The directory is printed in the Russian language, and the copy forwarded by Consul Jewell has been added to the collection of similar volumes from many countries on file, for public reference, in the Bureau of Manufactures.]

---

#### **TENDERS IN CHILE.**

[Reuter dispatches from Santiago; sums being stated in United States currency.]

Tenders for the new harbor works at Valparaiso were presented on April 20 as follows: Galtier, \$13,267,300; Holzmänn, \$14,344,000; Sir John Jackson, \$16,470,000; and Pearson & Son, \$13,708,000. [The blue prints and specifications of this undertaking were presented to various American firms by the Bureau of Manufactures at Washington.]

The Chilean Minister of Industry states that the Government is considering three proposals made by French, Belgian, and American financiers for leasing the State railways, with a view to improving their working.

**HEMP, RAPE, AND CASTOR SEED IN TURKEY.**

[From Consul General G. Bie Ravndal, Constantinople.]

Regarding the production of hemp, rape, and castor seed in Turkey, after making inquiries through the various consulates in the Turkish Empire, the following information is presented:

Between the towns of Orfa and Severek, in the central part of Asia Minor, there are rich plains covered with hemp, which yield considerable crops every year. A small amount of hemp is raised near Jaffa and the fiber is used by the natives for simple rope making. In the vicinity of Damascus the common variety of hemp seed is grown. None is sent out of the country or crushed for oil extraction, and the only use to which it is put is as food for birds—birdseed. A few kilos of hempseed oil or cake is imported into this country by a few retail druggists who dispense it for sundry pharmaceutical purposes.

In the vicinity of Orfa, Beridjik, Zor, and the Amouk plains, near Antioch, a certain amount of hemp is cultivated. There are no statistics as to the amount produced. Very little oil is extracted—no cakes are made—the seed being roasted, salted, and eaten by the natives. The retail price is equivalent to 2.1 cents per pound. The hemp is used entirely for rope making locally and for mixing cement used for roofing.

About 5,000 to 6,000 sacks are exported annually from Smyrna, principally to Australia, Germany, and the United States. There is only one variety of this seed. For sales abroad, samples are submitted merely for the purpose of ascertaining the percentage of extraneous matter contained. Hempseed is chiefly used in foreign countries for oil extracting and for feeding birds. The present (Mar. 30) local prices for hempseed are 15.75 to 18.50 piasters (69 to 81 cents) per kile (1.1 bushels) of 15 okes (42 pounds), according to the quantity of extraneous matter contained. The oil of this article is not imported into Smyrna.

A certain amount of hempseed imported from Erzerum is exported from Trebizond. The amount varies from 500 to 2,000 bags a year, and it is sold at about 2 piasters (9 cents) per oke (2.82 pounds).

The exportation of hempseed from the district of Samsun amounts to 2,000 to 3,000 sacks a year, most of which is sent to Austria-Hungary, a small quantity going to America. The best-known qualities are those of Fatza, Hagi-Keuy, Urmiah, and Tsharshamba. The hempseed value varies always according to the quality and demand. Its current price fluctuates between 60 paras (1½ cents) and 70 paras (1¾ cents) per oke (2.82 pounds).

Throughout the interior rope is made with hemp. This article is exported in small shipments to Trieste and Hamburg. The loose manner of packing operates against large orders being received. The exportation of canary seed and linseed is considerable, amounting to over \$1,000,000 each year, and hempseed could likewise be developed into an important part of Turkish trade, and is only waiting some kind of organization.

Rapeseed is planted in the Samsun district in small quantities and is mostly consumed locally. There is no exportation of any kind.

In the district of Mersina a few castor beans are picked up from wild plants; no marketable quantities are secured. Castor beans

grow wild all through the Haman, Aleppo, Damascus, and Alexandretta districts, but are not cultivated nor utilized in any way whatever. They are cultivated on a very small scale in the vicinity of Aleppo and in various outlying districts of Idlib, but no statistical information can be given.

The time of harvesting the hemp and castor beans is the same as that of cotton, i. e., during the months of October and November.

The seed of hemp, as also that of castor beans, is imported from Europe, but no figures can be given of the amount thereof, nor of the limited exportation of the latter, which goes principally to Italy.

#### AMERICAN IMPORTS OF SEEDS.

The importation for consumption of the foregoing seeds into the United States, as well as of other seeds, together with the value per unit of quantity, for the past two fiscal years was as follows:

Seeds.	Duty.	1910.		1911.	
		Pounds.	Unit value.	Pounds.	Unit value.
Anise.....	Free.....	938,957	\$0.047	1,144,845	\$0.058
Beet, except sugar beet.....	4 cents per pound.....	624,120	.094	638,703	.103
Cabbage.....	8 cents per pound.....	161,970	.229	261,129	.341
Canary.....	Free.....	6,768,334	.090	6,552,722	.021

<sup>1</sup> Bushels.

Over half of the imports of castor beans are shipped from England, about one-third comes direct from British India and most of the balance from Brazil.

*Cotton ginning firms* and agencies in the Ferghana, Samarkand, Syr Daria, Bokhara, and Kniva have been listed by Consul General Snodgrass, of Moscow. Copies may be had from the Bureau of Manufactures at Washington.

**FOREIGN HAIRPIN TRADE.**

[From Consul General John L. Griffiths, London, England.]

**British Makes Sold in London.**

There are 15 manufacturers of hairpins listed in the London directory, but in almost every case the actual factory is located at or near Birmingham. There are no available sources from which to obtain estimates of their individual sales or of the capital invested. These firms do not confine themselves to the making of hairpins, but also manufacture needles, pins, and similar articles.

There is no duty on hairpins imported into England; and while there are some foreign brands on the market, the volume of the trade is said to be small, and, in fact, has little influence on the industry. Inquiries at various retailers for hairpins of foreign manufacture have, without exception, been met with the reply: "We do not sell them; we handle only British."

Hairpins are sold by the manufacturer direct to the retailer through salesmen, who call periodically, but who represent and sell, besides hairpins, a great many other articles made by their firms. Practically no advertising is done except for the introduction of a newly invented hairpin. At present there appears to be no such advertising. The cartons used are merely ordinary common card boxes, not particularly attractive in appearance, labeled with the trade indication of size and style. When empty they are destroyed by the retailer. It is customary in England for retailers to require the manufacturers to print their (the retailers') names upon the packet, in lieu of those of the makers. The usual retail price for a packet of hairpins is 1 penny (2 cents), the number in the packet varying with the size and style of the pin.

In my opinion, from information gained from retailers and users, there is not a very favorable prospect for introducing American hairpins into England unless they are of a novel character, and even then it would require continual effort on the part of active salesmen to secure any trade, the British makers being in control of the market.

[From Consul General A. M. Thackara, Berlin, Germany.]

**Varieties and Prices of Hairpins at Berlin.**

According to the city directory there are only five hairpin factories in Berlin. Hairpins are sold both direct to the retailer and through jobbers. The following is a list of the kinds handled by one of the larger department stores of Berlin:

The "De Long Jet Japan," made by the De Long Hook & Eye Co., of Philadelphia, are pins  $2\frac{1}{2}$  inches in length, and are put up in a red wrapper. They sell for 20 pfennigs (4.76 cents) per package of 24. The "Best Cast Steel No. 9," wrapped in a yellow cover, are priced at 10 pfennigs (2.38 cents) a package of 24. These pins appear to be made in England. The "Best Bronzed," manufactured by Kirby, Beard & Co., of Birmingham and London, retail for 25 pfennigs (5.95 cents) a package of 24.

The "Ada," a heavy type of pin and put up in a pink cardboard box, sells for 8 pfennigs (1.9 cents) a dozen. This is probably a German pin. The H. A. Dubois plastic steel pin, made in Duren, Germany, retails for 25 pfennigs (5.95 cents) a package of 24. "No. 30 Epingles à cheveux à la Nègresse," which is manufactured by

Louis Renner & Co., of Paris, sells at the same price. The package is of blue cardboard.

"No. 33 premier choix" appears to be made in France and sells for 5 pfennigs (1.19 cents) a package. "No. 36 premier choix," which is made by the same company, sells for 7 pfennigs (1.67 cents). "No. 21 Epingles de politure speciale" is put up in a carton the printing on which is all in French. However, the words "Manufactured in Germany" appear. The cost of this pin is 10 pfennigs (2.38 cents) per package of 24.

To find a possible market for their wares in this city, it is suggested that American hairpin manufacturers correspond with the large Berlin department stores, a list of which will be supplied, upon request, by the Bureau of Manufactures.

[From Consul General Frank H. Mason, Paris, France.]

#### **French Market Supplied by Foreign Firms.**

Curiously enough, very few hairpins are made in France, almost the entire supply being imported from Great Britain, Belgium, and Germany. The kinds most sold are the ordinary black japanned wire hairpin, generally straight and plain, but some with waves and curved places in the wire to prevent them slipping out of the hair too easily. Still another kind, made wholly in Great Britain and called here "Epingles Anglais," have the two shanks of the pin wound with brown, auburn, or black cotton floss, to match the color of the hair, and also, by thus presenting a more adhesive surface, to prevent the pin from slipping out and being lost.

Hairpins are sold very cheaply and in large quantities by the principal department stores. While the market of Paris seems to be fully supplied, there may be an opening for American goods that can compete in quality and in price after paying the long freight haul and import duty.

[A list of Parisian department stores and of the principal wholesalers handling hairpins in that city may be obtained from the Bureau of Manufactures.]

---

#### **A RESTRICTED FIELD FOR TELEPHONE SUPPLIES.**

[From Consul William F. Doty, Riga, Russia.]

Relative to frequent inquiries from the United States as to the possibility of furnishing electric supplies to telephone companies operating in Riga and elsewhere in the Baltic Provinces, it may be stated that the Ericson telephone (under a Swedish patent), manufactured at St. Petersburg, can alone be employed in the public telephone service in the large cities of this district. There are, however, a number of private telephone unions in the rural districts, formed by owners of the large country estates, affiliated to the telephone company, and here there might be a field for the sale of American telephone apparatus. These unions would be reached readily through firms dealing in telephones and supplies, a list of which can be obtained from the Bureau of Manufactures.

The value of telegraph and telephone apparatus and supplies (which have not been segregated in the published official statistics) imported in 1910 at Riga was: From Germany, \$5,345; Sweden, \$3,594; Great Britain, \$3,584.

**BEER NOT POPULAR AMONG CHINESE.**

[From Consul General George E. Anderson, Hongkong.]

The attempt of a corporation organized in Hongkong with foreign capital, largely from Honolulu, to establish a brewing business on the South Asiatic coast has been unsuccessful. The concern erected a modern brewery on a portion of the mainland opposite Hongkong in 1909, but lost money from the beginning. The company has gone into voluntary liquidation and is attempting to sell its plant.

The concern was organized with a capital of \$500,000 gold. The plant established here was finely equipped, mostly with American machinery and appliances, including an outfit of glass-lined steel tanks, and was modern in every respect in installation and operation; in fact, one of the reasons for the failure of the enterprise as a business undertaking is that the capacity of the plant (100,000 barrels of beer annually) is so far beyond present possible sale that its economical operation has been difficult if not impossible. However, the chief obstacle has been the lack of success attending the firm's efforts to attract the patronage of the Chinese. In some parts of the new Republic there is a fair consumption of beer among the natives, but, as a rule, the Chinese prefer their own alcoholic beverages, or, at most, take to foreign drinks other than beer.

**Hongkong's Imports of Foreign Beers.**

For a time there was some reason to expect the successful introduction of beer among the Chinese of Hongkong. Sales of the company's output increased considerably, and growing popularity gave some practical ground for anticipating a change in Chinese tastes. The concern also operated an ice factory in connection with its brewery, and income from this source lent some support to the business. The fact finally became plain, however, that for the time being the Chinese do not take to beer.

There is a considerable consumption of foreign beers among foreigners in Hongkong and in the Chinese ports deriving their supplies through Hongkong. The figures of the import and export office of the Hongkong Government, which are complete in that they represent taxation on imports of such goods, show that at the beginning of 1911 there were in stock 95,535 gallons of ale, beer, and stout. During the year importations amounted to 748,900 gallons. Of this total stock of 844,435 gallons, 322,711 gallons were exported to various Chinese ports near at hand, 325,548 gallons were consumed, and 196,176 gallons were left on hand. During 1910 the stock on hand (78,894 gallons) and arrivals (605,212 gallons) totaled 684,106 gallons, of which 271,142 gallons were reexported and 317,429 gallons were consumed.

These two are the only years in which Hongkong's tax on alcoholic products has been applied and for which reliable figures are to be had. They seem to indicate that, in spite of the failure of the local brewery to establish itself here with a high-grade product brewed to suit the climate, there is an increase in both reexports and consumption. This is probably accounted for by the fact that the imports of high-grade beers, ales, and similar drinks in this part of the world are largely of special English, German, and Austrian brands for which foreigners here have a special liking, in which sentiment plays an important part. Many of these drinks are used by prescription to avoid the depressing effects of a difficult climate. The cheaper-grade

goods come largely from Japan and as a rule do not attempt to reach the better trade.

**Trade Uncertain.**

Several years ago, particularly soon after the Spanish-American War, American beer had a rather strong hold on this market, and several of the larger American brewing interests gave considerable attention to the trade, especially in the ports of the north and through Hongkong. Cheap Japanese beers have been cutting into the sales of other countries, however, and the trade also has been very irregular—averaging something like \$400,000 gold annually for all China at the present time; but once (in 1905) running as high as 1,200,000 taels, or more than twice its present average volume and value. All China in 1910 bought beers to the value of \$393,780, of which about one-half came from Japan direct and one-fourth from Germany direct; American beers had no part whatever in the trade. The experience of the Hongkong brewing enterprise seems to indicate that the immediate future of the trade is uncertain.

### **JAMAICA PREPARING FOR PANAMA CANAL SHIPPING.**

[From Consul Julius D. Dreher, Port Antonio.]

At last the Government of Jamaica has taken a step which shows that it recognizes the importance of the opening of the Panama Canal and the necessity of providing additional shipping facilities at Kingston. The legislative council of the colony has just unanimously appropriated \$12,000 to purchase a tract of land south of the railway and along the water front of the fine harbor at the capital. It is announced that the primary reason for acquiring this land is to provide a coaling station or a dock, or both. The advantages of Kingston Harbor for such purposes and the need of such facilities to accommodate the increased shipping after the opening of the Panama Canal were set forth in a report from this consulate on "The Panama Canal and the West Indies," published in Daily Consular and Trade Reports for January 26, 1912.

The United Fruit Co. has decided to improve the shipping facilities at Bowden, on Port Morant Bay, where it owns a wharf to accommodate its fruit ships and also keeps on hand a quantity of coal. During the recent coal strike in Great Britain it was found necessary to coal at this wharf the ships of the Elder & Fyfe Line, of London, which is under control of this company. By employing all available local labor and East Indian coolies from the neighboring banana plantations, it was possible to load a maximum of 40 tons of coal an hour. To facilitate the coaling of its fruit ships, as well as to provide against emergencies, the company has taken steps to enlarge and improve its wharf accommodations and to install a crane at Port Morant in order that a minimum of 50 tons of coal an hour may be loaded without employing the coolie laborers needed on the plantations for cutting and hauling bananas to the port. As this harbor is so much nearer the eastern end of the island than Kingston, that ships could save from three to four hours by coaling at Port Morant, it is probable that the United Fruit Co. may decide to make Bowden a general coaling station for ships on voyages to and from the Panama Canal. While this harbor is not nearly so large as that at Kingston, ships drawing 25 feet of water may easily be accommodated at Port Morant.

**SOUTHERN CHINA TRADE NOTES.**

[From Consul Julian H. Arnold, Amoy.]

**Secondhand Clothing in Demand.**

The sudden demand which has arisen all over China for foreign clothing, shoes, hats, underwear, etc., continues in this district unabated. The low purchasing power of the ordinary Chinese makes cheapness a prime consideration in the demand for these wares. Good secondhand American clothing ought to find a market, as evidenced by the fact that good prices are realized for secondhand clothing here.

Buttons and tailors' supplies are also in demand. This office will be pleased to furnish American dealers the names of local merchants interested in the above items.

**Sugar Industry Developing in Amoy.**

The high price of sugar abroad during the past year and the success of the Formosa sugar industry have stirred the Chinese of this section of China to consider the possibilities of the development of the industry in this district.

South Fukien has produced sugar cane for centuries, but it has been allowed to deteriorate year after year until now the cane is of a very inferior quality. A lesson is being taken from the Japanese in Formosa, who replaced the native cane there by Hawaiian and Java canes and increased the island's annual production of sugar from 60,000 tons to 325,000 tons in 12 years' time. Shoots are now being imported from Formosa by local Chinese. Already three small modern sugar mills have been erected in this district and, with the reestablishment of stable political conditions, substantial developments in this industry will undoubtedly be made, for there are here many Chinese of wealth and good business ability.

**Sales of American Flour in Amoy.**

During 1911 Amoy imported 150,000 barrels of American flour, or three times as much as during 1910. Famines, floods, and the revolution reduced the wheat production in central China to such an extent as to practically close the Shanghai flour mills. The price of rice during the past year has been the highest in years, which favored the consumption of flour. Favorable silver exchange and cheaper flour in America during 1911 as compared with prices the few years preceding all helped the American imports to China. Indications point to a continuance during 1912 of the conditions favoring American flour imports into China. The China trade takes the low-grade flours only. Strength is preferred to whiteness.

The Hongkong native flour importers sell flour to the Amoy merchants on long-time credit basis. One-fourth is paid down when the flour is shipped, one-fourth three months thereafter, and the balance is collected at the end of the year, the great settling time for the Chinese people.

**Condensed Milk.**

American manufacturers of condensed milk are not pushing their goods in China with the vigor which the opportunities in this market warrant they should. British dealers are carrying on an extensive advertising and sales campaign, using literature and advertising matter printed in Chinese. One company furnishes its representative with a motor launch to be used in travel in the interior in his adver-

tising campaign. Last year the imports of condensed milk in this district doubled over those of 1910. In Formosa, across the channel, \$100,000 worth of condensed milk was imported in 1911. The Chinese people do not raise milch cows, but are gradually learning the use of milk and appear to take readily to the use of condensed milk. A splendid market offers here provided live American business methods are used in pushing the business. Its possibilities are without limit. But only the man on the field can get the business.

### NEW GOVERNMENT PUBLICATIONS.

The Superintendent of Documents, Government Printing Office, Washington, D. C., has for sale the following new publications, at the prices affixed:

#### Bureau of Standards.

*Ampere*.—Determination of international ampere in absolute measure; 124 pages, 3 plates; price, 20 cents.

*Cement*.—Tests of absorptive and permeable properties of Portland cement, mortars, and concretes, with tests of damp-proofing and waterproofing compounds and materials; 127 pages, 6 plates; price, 20 cents.

*Helium*.—Luminous properties of electrically conducting helium gas.—Reproducibility; price, 5 cents.

*Neon*.—Wave lengths of neon; price, 5 cents.

*Potentiometer*.—(1) Deflection potentiometers for current and voltage measurements; price, 10 cents, (2) Outline of design of deflection potentiometers with notes on design of moving-coil galvanometers; price, 5 cents.

*Sodium oxalate*.—Hydrolysis of sodium oxalate and its influence upon test for neutrality; paper, 5 cents.

*Sulphur*.—Determination of total sulphur in india rubber; price, 5 cents.

#### Immigration Commission.

Immigrants in Industries, Part 2—Iron and Steel Manufacturing, 807 pages, 4 maps, 1 plate; price, 65 cents.

#### Nautical Almanac Office.

American ephemeris and nautical almanac [calendar] year, 1914; 742 pages, 2 maps; price in cloth, \$1. The American nautical almanac in paper, 30 cents.

#### Tariff Board.

Wool and manufactures of, 5 parts, and index in 2 volumes; 1,278 pages, 18 plates, 2 maps, 1 table. This is a reprint, with addition of lists of contents and illustrations, of House Document 342; paper, \$1.30 per set (2 volumes).

#### Panama Railroad Commission, Special.

Advisability of establishment of Pacific steamship line by Isthmian Canal Commission (S. Doc. 409); price, 5 cents.

#### Library of Congress.

Orchestral music catalogue: Scores. Compilation of Division of Music; 663 pages, with copious class and title indexes; price, \$1.

#### United States Senate.

*Arbitration*.—List of 74 arbitration treaties and conventions submitted to and acted upon by the United States Senate (S. Doc. 373); presented by Mr. Lodge; price, 5 cents. Senate Document 353 also includes the speech of Senator Lodge, as well as the list of treaties; price, 5 cents.

*Fertilizers*.—Senate Document 190 on the fertilizer resources of the United States; with plates and map; price, 75 cents.

*Employers' liability*.—Senate Document 338, volume 1, contains the message of the President transmitting the Report of the Employers' Liability and Workman's Compensation Commission, in which he commends the report and advocates the passage of the bill drafted by the commission. Volume 2 is much larger, containing hearings, briefs, tables of cases, and general index; price of both, 15 cents.

#### Lighthouse Bureau.

*Medical handbook* for use of lighthouse vessels and stations; price, cloth 30 cents. Useful also to others whose occupations put them out of reach of doctors.

## MANCHURIAN COMMERCIAL NOTES.

[From Consul Albert W. Pontius, Dalny.]

**Sugar Imports—Dust Coal for Japan.**

While, with imports of sugar aggregating 7,021 tons, 1911 showed an increase of nearly 2,000 tons over the preceding year, the receipts from Tokyo and Yokohama fell off nearly two-thirds; on the other hand, those from Takao (Formosa) increased fourfold.
